2142. Without a workshop as extensive as that at Blackwall?—Yes, Sir. I study economy in every possible way that I can in connection with the shops both in stores and materials, and our system of inviting tenders for materials and stores, and so on. We invite quarterly tenders for all stores that we use in the Department. Here are the forms of tender that we issue, and the competing firms fill in their prices under each article. (*Form exhibited.*) When these come in they are analysed, and we send to the shops to let them know from which of the firms they are to purchase the various articles for three months.

Cost and annual output of,

2143. Will you state the annual cost of the official staff at Blackwall?—£1,484.

2144. And the total yearly output?—£28,000.

2145. That official staff is outside of the staff of the Engineer-in-Chief which you have already described to us?—Yes, Sir; it is under the control of the Engineer's Department in the House.

Work done at,

2146. What does it consist of, the official staff at Blackwall?—There is a Superintendent of Works, and an assistant superintendent and three clerks, four storekeepers and an engine driver—that is for the motive power running the machinery—and a messenger. I should like to say, in addition to what I have already said, that we have a proving station in connection with our Blackwall shops, where all materials that are used in the service are dealt with, chain cables and all steel, iron plates, all cement, and every kind of ropes, and so on; they are all tested there. Then we have there a very small gasworks, where we make the gas for the buoy and beacon illumination of the service. There is the repairing of the cables—that is all done at the shops, and as I have said before, the machinery of the steam vessels, viz., those of the London district and from Harwich and Ramsgate. The machinery is repaired there. Outside vessels we send to the nearest engineering firm of their district. For instance, we have a vessel at the present moment, the "Triton," from Holyhead, at Clover and Clayton's dock at Liverpool; she went there yesterday; she will be there probably about 10 days.

Experiments: On Illuminants.

2147. You have mentioned experiments in connection with fog-signals; do you carry out experiments in any other direction for the general improvement of apparatus?—In illuminants. I am working, as I explained to you, on an experiment at the moment with the incandescent system, and I am also working with acetylene gas and with catoptric apparatus with floating lights.

Cost of,

2148. How much have you spent on an average annually on experiments?—About £500 a year. In 1901-2 we spent £923, in 1902-3 £753, in 1903-4 £247, in 1904-5 £266, and in 1905-6 £426. That would be about £500 a year.

2149. Do you consider it would be advisable to spend more money in carrying out experiments than you do now?—I do not think we could very well do so with the staff at my disposal. You were speaking just now of the French system. The Engineer and staff in France, which is considerably larger than my own, have nothing whatever to do with lighthouse construction excepting the lanterns, dioptric or catoptric apparatus, as the case may be, and the burners, etc., with fog-signals. The lighthouses themselves and the dwelling houses and the general upkeep of the service are under another Department.

2150. Does the Engineer's staff in France spend large sums in experiments, do you happen to be aware?—Yes, Sir, I should say so, but I should like you to distinctly understand that although I believe that that is so, I do not think that lighthouse illumination in France is in advance of the lighthouses in England. I am sure the coast of England is lit and guarded by fog-signals as efficiently as any coast in the world. I realise that this is a very important statement to make, but that is so.

2151. I think you stated that the French Engineering staff would communicate the results of any experiments to you?—They would, yes.

2152. You mutually benefit by each other's experiments?—We do. That is what I was going to say. M. Ribière and myself are in close communication with each other, and if he had anything in view that he thought would be of advantage, or I should feel an interest in, he would let me know. For instance, the last time I was in Paris I saw him and told him what I had been doing with the flame carbons, and since that date they have introduced them at Calais. I merely mention that in order to show you how we are working together.

Engineering Department of Trinity House: Work done by, for Government Departments

2153. Does the Engineering staff give assistance to the Colonial Office and the India Office, and the Admiralty, if necessary, where required?—Yes, Sir.

2154. And the Board of Trade?—Yes, Sir. I believe with regard to the Admiralty all the works in connection with the new works at Gibraltar and at Portland and at Dover have passed through our hands, and it is only this last week that I was reporting to my Board on the contemplated improvement of the lights at Malta.

2155. How is anything that is done in the way of designing or obtaining apparatus for the Colonial Office or the India Office paid for?—Do you mean for engineering fees, or do you mean the apparatus itself?

2156. Either engineering fees or otherwise?—At first the routine is this: we report, make them recommendations, and after a certain time they indent, probably through the Trinity House, for the supply of the apparatus which has been suggested in that report. Then we should obtain tenders for the apparatus, and it would be sent through the Trinity House, and the Trinity House would pay the accounts in connection with it, and obtain the money through the Crown Agents, the Colonial Office, or the India Office, as the case may be, once in every three months.

2157. Are fees paid for the Engineer's reports?—On those invoices?

2158. Let us say the Colonial Office or the Admiralty ask for advice from the Trinity House, and you are requested to write a report in consequence, and make suggestions, is that report paid for?—No, Sir.

2159. That is part of the ordinary service?—Nothing is paid for that, but if the suggestions in the report are carried out and actual work is done, they pay me a fee of 2½ per cent. on the value of the work which I pass.

2160. That would be in addition to your salary?—Yes, Sir; that would average about £150 a year, and approximately one quarter of that I give to the gentlemen in my department.

2161. (*Sir Frank Adam.*) The Lighthouse Authority is out of pocket nothing in connection with this?—Nothing whatever.

Age for superannuation.

2162. (*Colonel Herbert.*) With regard to your own appointment, is there any term of superannuation?—Yes, Sir, the same superannuation as Civil Service servants.

2163. What is the age?—The ordinary age is 65, I think. I am sorry to say I cannot tell you much about that. I mean that it has not exercised my mind in any way, because I believe if I go on till I am 60 years of age I shall be entitled to my maximum pension.

2164. Exactly; but with regard to the whole Department?—65.

2165. The whole of the Engineer's Department staff is on the Civil Service superannuation scale?—Not all; seven are on the permanent establishment.

Allocation of duties of,

2166. You gave us the particulars of the personnel of your department; could you give me some more particulars as to the manner in which the duties are allocated, because you have very various duties?—Yes, Sir. The Chief Assistant is a Civil Engineer, and his work principally is in connection with civil engineering work—that is the construction of the lighthouses themselves, the towers, and the dwellings, and fog-signal buildings and the approaches—in the case of Strumble Head we have a bridge connecting the mainland with the island—and the general upkeep of the service. The duty of the Chief Mechanical Engineer is more particularly in connection with fog-signal machinery and the designing of fog-signal machinery. The duty of the Marine Engineer, who holds a first-class Board of Trade certificate, is the maintenance more particularly of the steam vessels. I have tried and I have succeeded in improving the system under which our vessels have been maintained and their machinery. We have a log, which I thought, perhaps, if it is not troubling you too much, you would like to see. It is issued to each of those vessels and shows what she is doing.

2167. I think that is getting a little bit away from the subject I am on at present.—This is the engineering log of the "Mermaid." The logs are sent to the Trinity House, and we keep a register of these quarterly statements, checking them as to their consumption of all the stores, mileage done, and so on.

2168. The point I was on chiefly was to see what is the general organisation of the Department into sub-branches or departments, and I understand you have a department for buildings, one for marine engineering and one that deals with the stationary lights and so on. That would be a sort of general distribution of the work?—Yes, it would, but it is all one department.

2169. One department under you?—Yes, that is the way the work is distributed; what you have stated.

2170. In fact you exercise a general supervision over these; and the other gentlemen whom you have mentioned here, I suppose are in charge of the various departments?—That is so.

2171. Is there any power of expansion in your system; supposing you were called upon to take on extra duties, could your present staff extend their duties, or are they doing as much as ever they can?—Yes, we are.

Blackwall Workshops: Necessity for extension of gasworks at,

2172. With regard to Blackwall, I would ask you the same question; the power of Blackwall is about limited to what it is doing now?—Yes, it is. I would like, if I may, to say this; we laid a proposal before the Board of Trade this year for some new power plant, because we want to get more out of our machinery if we can, which we could do if we had more power. What I had in my mind was to utilise the present power of plant and boilers at the shops in connection with our gas works, which we must extend because our gas buoy and gas beacon system is so much extending that we must have some more gas producing plant to meet it, for we find in actual practice there is a great advantage in having a plant of our own; we can produce the gas so much cheaper than we can buy it.

2173. Must that all be concentrated at Blackwall, or could not gas be produced at other parts of the coast?—If we produced it ourselves at other parts of the coast, we should have to establish gas works, and have men there to look after them. What we have done is this—because we think it best in the outlying districts—we purchase gas of the railway companies. For instance, we have recently established an unwatched light at Berry Head near Torquay, and the illuminant is gas, and we purchase the gas from the Great Western Railway at Exeter, because we save the difference of carriage between London and Exeter; but, on the other hand, we pay them a little more for it than we could produce it for ourselves.

2174. That is the point I was directing my remarks to.—But it is cheaper to do it in that way, than it would be to rail it from London.

2175. Then at the branches, are any of your employees interchangeable, your engineering staff and the Blackwall staff, or are they entirely separate?—The gentlemen in my department at the Trinity House are interchangeable. I mean, for instance, the mechanical engineer is sometimes working on work in connection with steam vessels, and sometimes the marine engineer is working on iron work in connection with lighthouses.

2176. Then the personnel of the steam vessels; are they again a separate branch, or do they come under you?—They come under the Lights Committee of the Trinity House. Any question whatever in connection with machinery passes through me, but their pay and their control are under the superintendent of the district through the Lights Committee of the Trinity House. Their appointment is made on my recommendation, from men selected from the mechanics in the workshops at Blackwall.

Steam-vessels:

2177. Would the engineers employed in those vessels come under you; are they under your control?—No, Sir, and yet to a certain extent they are. The engineers of a vessel must be under the direct control of the master of the ship, but we have a detailed report from every engineer in the service every week as to the condition of the machinery of his vessel, and if there is anything in that report which I consider requires explanation or dealing with at once, I write to him, because it is a technical matter.

Weekly reports of engineers of,

2178. Therefore, for technical matters, they do come under you?—Exactly, and the tendency of the Lights Committee and of the authorities is to assist me in that.

2179. (*Sir Frank Adam.*) Where does the marine engineer come in then?—Those matters would go through his hands. All those reports go through his hands. For instance, the marine engineer, to whom I have referred, is in Liverpool to-day. The "Triton" was docked yesterday afternoon, and he went down to Liverpool last night. He will to-day go over the repairs. We have a contract with Clover and Clayton at schedule rate. The marine engineer will go over the work on board that vessel to-day, and be back in town to-morrow, and then the detailed letter will go to Clover and Clayton as to what they are to do. I get a report every week from the engineer of the ship, who is on board and in charge. He issues an order for any stores that are required from Clover and Clayton, and he checks the time sheets of the men daily.

Interchange of information with Foreign Lighthouse Authorities.

2180. (*Colonel Herbert.*) You have stated that there is a tendency towards an interchange between authorities, both in this country and in foreign countries?—There is.

2181. But there is no systematised international exchange?—No, none.

2182. Therefore, the relations to which you referred just now between yourself and the head of the French service are purely personal?—Quite, but the desire of the Elder Brethren of the Trinity House is to encourage that.

2183. Exactly, and being purely personal, no doubt they are far more valuable than any official ones?—That is so.

2184. But in the event of any break occurring in these personal relations, it might not be immediately taken up in the same way?—That is so.

2185. In your Department you have nothing that corresponds to what we should call, in the military or naval sense, an Intelligence Department?—No.

2186. For collating or collecting information on those establishments?—Nothing whatever.

2187. And you are entirely dependent upon your own personal exertions in collecting the information as to what is going on elsewhere?—Quite.

2188. There are no Consular reports, are there, of that sort, that deal with this point?—Well, the French Authorities invariably invite us to all exhibitions, and in connection with those exhibitions they write long descriptive pamphlets of what they are exhibiting. For instance, take Milan; they exhibited very largely there, and M. Ribière wrote a detailed statement of what they were exhibiting. At the Congress last year at St. Louis they did the same thing, and I also wrote.

2189. There are International Congresses on this particular subject?—Yes; M. Ribière wrote a paper which was read at St. Louis, and I also wrote a paper which was read before the same Congress.

2190. But do you think it would be a valuable addition to your service, and an aid in your duties, to have a branch specially charged with the duty of keeping up to date the information of what is going on?—I do not, Sir; not so long as the good relations exist which obtain at the present moment between the Lighthouse Authorities of England and other nations; I do not think it would be justified; I do not think there is sufficient work to demand it—not for a department to be formed, I mean.

Mr. T. Matthews.

5 Dec. 1906.

2191. Of course, it might be a very small one?—I do not think so, Sir.

2192. I mean, as a means of bridging over that breach which might occur, in the event of the personal relations not being just what they are at present?—I quite see your point, but you must remember that whatever has been done, a description always appears in the papers—I mean in engineering papers—and we get it at the institutions, and so on. If I thought such an arrangement desirable, I would bring the idea before my Board.

2193. Do you think your work could be developed in any way by international agreement; has that ever occurred to you?—I do not see in what direction it could be. I believe, as I stated just now, that our coast at the present time is the best lit, and the best guarded by fog-signals. I do not mean to say there is no room for improvement by introducing more lights or more fog-signals, but I think that our lights are certainly of the greatest brilliancy of any that there are in existence, and I am sure that our fog-signals are as good as, and probably better than, any fog-signals in existence.

2194. You would recognise that there should be an equal efficiency all over the world for the good of the public?—Of course; what I say in reply to that is, that the French authorities, the Canadian authorities, and the Germans, know what we are doing; they have had copies of our drawings, and also full information about our gas-buoy system.

New works: Initiation of,

2195. Now, with regard to the initiation of new works; you have stated what is done when it is decided to establish a new work, but how are the new works initiated? What is the first step; as far as you know does it come from local bodies, or the shipping interest, or where does it come from?—Largely from the shipping interests, Sir, by petitions to the Trinity House, or to the Lighthouse Authority of the district with which the proposed light is concerned. They will have petitions pointing out the advantage of establishing a light or a fog-signal in a certain position, and that has been so in connection with what I have told you as to the fog-signal at Flamborough. That was a very strong shipping representation that it was necessary to improve the fog-signal.

Advisory Committee: Limitation of duties of,

2196. The Advisory Committee, which represents the shipping interest, only comes in, you told us, with certain limitations?—New works, Sir.

2197. Entirely with regard to new works of a particular class; that is entirely new works?—Entirely new works, but the Chairman was quite right in the correction he made with regard to Smalls. That was considered, I presume, by the Board of Trade, owing to the amount sufficient to justify it placing it in Abstract L. Abstract L is new works, and it is on Abstract L only that they consider.

2198. (*Sir Frank Adam.*) The Advisory Committee?—The Advisory Committee.

2199. (*Colonel Herbert.*) I may take it the Advisory Committee is consulted on all cases where it is considered that the shipping interest is very seriously affected?—Quite. For instance, you will find in this year's estimates before the Board of Trade that what I have been speaking to you about—Flamborough Head, the Strumble Head, and the other stations—will be laid before them.

Illuminants: Relative advantage of electric light and incandescent oil.

2200. (*Mr. Ennis.*) You have told us with regard to electric lighting that the intensity of the electric light is so much greater than the intensity of any other form of illuminant, that although the rays—red and yellow—which I think you said you obtained by the incandescent system of oil lighting, are produced, yet the electric light is able to penetrate through a fog to a greater distance?—That is so.

2201. Arising out of that—it being important that it should so penetrate—I should like to ask you, assuming the question of cost did not enter into your calculations at all—cost was a matter of indifference—which would you select: electric lights that you have on the Lizard, Foreland, St. Catherine's and Souter Point, or the best incandescent light that you have, assuming that cost was no factor in the question?—The position in which the light was to be established would have a very great influence on that question, and the character of the light which you could establish in the position selected; and I will tell you why, Sir. Now, for instance, you take St. Catherine's or the Lizard; those are both land fall lights. We have had it reported to us, after the establishment of the Lizard and St. Catherine's, which was about two years ago, when they were altered, the Elder Brethren took steps to obtain the opinions of men coming home crossing the bay, and we have had cases reported where those lights have been seen, not the light, the beam of the light passing over your head, 70 or 80 miles off.

2202. The lights from the Lizard and St. Catherine's Point?—Yes, those are land fall lights. If you had to establish a light in such a position as that, and the question of cost was under consideration, that is a very important point.

2203. In that case you would select the electric light?—Well, on the other hand, as I tried to explain to you just now, owing to the introduction of larger panels you get much greater intensity now by the incandescent system than it has been possible hitherto to get. And then it would be a question for the Lighthouse Authority to decide as to whether they would consider the expenditure of adopting the electric light system over the incandescent oil was justifiable for the additional number of miles which they would get in the beam.

2204. I understand that, but then my question is, assume cost were to be obliterated from your calculation altogether, that you had your choice and you had not to pay for it—a matter of choice between the two lights without consideration of cost—would you consider the electric light the more important of the two for these land fall lights?—It would have greater intensity. But I am speaking as a Lighthouse Engineer, and that would be a question for the Board, not for me to decide. The Elder Brethren, the Nautical Board, decide that a light is desirable or not in a certain position, and then the position of the Lighthouse Engineer is to say, "I can give you in that position lights of the following character at a given cost," and then it is for the Lighthouse Authority to state which of those characters and intensities they consider that the position demands.

2205. As I understand your evidence, there has been a considerable advance in incandescent lighting; you have made yourself a very considerable advance in that direction?—Yes, that is so, Sir.

2206. And there has also been an advance in electric lighting by the flame carbon system?—Yes, that is so.

2207. At the present moment, at the point at which both systems have arrived—without taking into consideration what the future may bring forth—the electric light gives greater intensity?—Absolutely.

Difference between French and English methods of calculating intensity of,

2208. Could you give us any figure as to what you estimate to be the highest candle power light you have of the incandescent system on the coast of the United Kingdom; we have figures of the electric light elsewhere?—Well, if I am to make a statement on that I should like to say there is a great deal of difference between us and the French authorities on the system of calculating the intensity.

2209. You have said that, and I bear it in mind; you have said you are not satisfied with the system?—If you are to use those figures, I should like to explain that in a very few words, if I may. The lights in France are calculated on a formula that all lights were calculated on for many years, and the experiments to which the Chairman has referred as being carried out at South Foreland some years ago in lighthouse illuminants, were really to some extent to clear up that point, as to whether the formula was sound or not. We found from the photometric measurements which were taken from the actual beams of the lights themselves, that the calculation which the French people have been using is much too high, and from the date of these experiments to the present time we have always calculated our lights from the photometric measurements which were taken there.

2210. Could you give us any idea of the percentage of difference?—My point is this, that the French authorities, you will find, say that the intensity of the light at Cap de la Hève is about 19,000,000 candles. Well, I have told them that I do not know what the intensity of our electric lights is.

2211. Is that at Grisnez?—The French Authorities say the intensity of the light at Grisnez is 29,000,000 candles; but whatever it is, ours is greater.

2212. (*Chairman.*) At the Lizard?—At the Lizard and at St. Catherine's Point. Then naturally you say, "How do you know it is greater?" Well, it is greater for this reason, Sir, that the dipotric apparatus which we have is very much larger, the voltage of the current which we are putting through the carbon is greater, and the carbon we are using is larger.

2213. (*Mr. Ennis.*) This is the flame carbon?—Well, no, it is not.

2214. The flame carbon is only in the experimental stage?—It is only in the experimental stage till we see the result. We have a lightship, "Swin Middle," at the entrance to the Thames.

2215. But before we leave the other point, could you just give me your calculation on the photometric experiments made at the Foreland, when you arrived at the conclusion as to the highest?—Of the oil light?

2216. Yes; on your highest oil light?—The Bishop Rock 622,750 candles. The light at the Round Island, Scilly Isles, which is red flashing—there is a possibility of that being changed to white, and if that is done it would be over 1,000,000 candles. Just a moment; as an illustration we have a lightship at the entrance to the Thames, the "Swin Middle," which has a dioptric apparatus; and the French authorities have a lightship in Sandettié which has just an identical apparatus. Now, the intensity they give of that light is 33,000, and the intensity we give is 25,000; that is, the difference between 25,000 and 33,000.

2217. There is a difference of about 33 per cent. on your calculations?—Yes; which, of course, when you come to deal with these very large intensities, is very large.

2218. Can you give us any rough idea as to the length of coast line—the French coast line—for lighting purposes, as compared with the English?—No, Sir, but I will put it in if you allow me. As compared with the English coast?

2219. As compared with the English coast; that is to say, with the line which your Board controls?—Yes.*

2220. Because, assuming that the electric light is the most powerful light, assuming that other considerations had not to be taken into account, and that it is the most powerful light, we have four electric lights on the English coast?—Five, Sir, on the English coast; four under the control of the Trinity House, and one under the control of the Scotch Board.

2221. I am not taking the Scotch into account?—Four of ours.

2222. The Lizard, South Foreland, St. Catherine's, and Souter Point?—Yes.

2223. As against thirteen on the French coast, including Cape Grisnez?—Yes, that is so.

Motive power at electric stations.

2224. I am anxious to get as much information on the electric light as possible. How do you provide the motive power for your electric light; in these stations what is the motive power—an oil engine, or what?—At the Lizard the motive power originally was caloric engines, because we could not get water, and it was before the days of oil engines; electricity was established at the Lizard about thirty years ago.

2225. Are they caloric engines now?—Well, there were three; one which broke down has been replaced by an oil engine, with the idea of ultimately working the station by oil engines. In addition to that we have a siren fog-signal, and we work that with two horns on the system I have already explained. Then at St. Catherine's we have a portable boiler and engine combined—steam, on the Robey system. At the South Foreland we have two Cornish boilers, and two horizontal engines which were established when the light was first introduced, about 35 years ago, and Holmes' old magneto machine.

2226. What horse-power do you require for the motive power in each of these stations?—Well, Sir, at the Lizard the engines are ten and fifteen horse-power respectively.

2227. And I assume you have considerable accumulator batteries?—No, Sir, none.

2228. You drive direct?—We drive direct at the Lizard; we have De Meriten's magneto machine, and we have the same machines running now as were put down at the establishment when it was first lit up.

2229. I was going to ask you a question, but your answer makes that unnecessary. If you had an accumulator service, of course, an accumulator service is the most expensive part of an electric light installation?—Quite.

2230. The life would not be more than ten years?—Quite.

2231. You dispense with that part of the cost?—Entirely, because our men must be on watch through the night, and when they are in the engine room there is communication between the lanterns and the engine room by speaking tubes.

2232. So that you have no necessity for ——?—No necessity whatever.

2233. But in the event of any breakdown in the machinery, you have spare machinery?—We have it in duplicate.

2234. So that you can harness on another engine if one breaks down?—It is driven by counter-shafting; we can drive any other machine from either engine.

Vertical beam not projected upwards by French electric lights

2235. While making this comparison—I am very glad to hear you say our system is so perfect—is it true that in the French lighthouses they have a system in the larger lighthouses of projecting a vertical beam upwards?—No, Sir, it is not true.

2236. We have been told by shipmasters that it is?—If you will allow me, I will explain it to you.

2237. As to what you said just now about the beam of light over your head, I have been told with regard to that, that it is a vertical beam, and that where there is a low lying bank of fog it enables ships at a distance to locate the position of the lighthouse?—You will see in an instant how they would be wrong. If you could always have cloud conditions at a certain elevation that might be useful, but inasmuch as that is impossible, and they are always varying, you could not design a beam of light to meet those requirements. What has happened is this, that if you will assume that that is the surface of the sea—(*indicating*)—there is a light there, and its geographical range is that. That beam of light is sent out horizontally. Very well, a man is there, and he is coming up for that light, and what he sees is that beam of light passing over his head horizontally, and that is what has led to the belief that it is a vertical beam of light, because it has the appearance, Sir, of the spokes of a wheel. You can readily imagine that passing over your head, a very powerful flash every five seconds, and in the case of the Lizard every three seconds.

2238. I am very glad I asked you the question, because shipmasters are not engineering experts, but they give you information which may be, from their point of view, correct, but which you explain now is not in actual practice at the French Lighthouse Department?—You may take it from me, from the intercourse which takes place between M. Ribière and myself, that such a thing is not in existence, because I have often talked to him about it.

New works: Construction of Strumble Head Light.

2239. You have given us the figures with regard to new works, and as you have promised a return I do not need to ask you anything on that point. How long has the Strumble Head Light been erected?—It is now in course of formation.

2240. It is not ready yet. I have passed a couple of times in the night, and what I have seen is the old light?—No, Sir, that is a light which has been established by the Great Western Railway people.

2241. As a temporary measure?—As a temporary measure.

Supervision of, executed by Trinity House staff.

2242. You spoke also with regard to effecting economies by carrying out work yourself, instead of by contract; have you a permanent staff of artisans in your employ; I mean have you a permanent staff of masons, carpenters, and men of that kind?—The only permanent staff of carpenters we have is at our works at Blackwall.

2243. Do you utilise these men for new buildings?—No, they are utilised as foremen sometimes for small works, but we have in our service a staff of resident superintendents of works.

2244. That is, clerks of works?—Clerks of works.

2245. Who will be placed in charge of jobs you do yourselves?—That is so. For instance, at the South Bishop we have a resident superintendent of works, and the masons, and carpenters, and smiths, and so on, that have constructed that work, have been men whom he has picked up in Wales, the nearest point to the place

* *Note.*—The witness subsequently sent in the following figures:—
Length of English coastline (Scotland and Ireland excluded), 2,317 miles.
Length of French coastline, 2,970 miles.

W. T. Matthews.
5 Dec. 1906.

where they were working, but the mechanic and his assistant, who are entering the fog-signal machinery, are two of the permanent mechanics from the Blackwall workshops. I am speaking now of the machinery only; that is, they are men who must have a knowledge of fog-signalling machinery.

Lightkeepers' Dwellings: Erection of,

2246. Would it come within your province at all, or would it be a different department of the Trinity House establishment, the building of lighthouse-keepers' dwelling-houses?—That comes through mine; I am responsible for them.

2247. Well, do they chiefly erect those dwellings by contract?—Yes, if possible.

2248. I suppose you have considered the question very carefully? They are generally erected in rather inaccessible positions—that is, positions generally distant from a town?—Always.

2249. And distant from good roads?—We have four stations only that are in the vicinity of the town; one is at Lowestoft, one is at Withernsea, one is at Southwold, and the fourth at Dovercourt.

Steam-Vessels: Work of,

2250. Have you taken the matter into consideration whether a staff of your own, and the service of your own steamers for delivering the building materials necessary in these cases, would be a saving on the contract work?—Well, the best answer I can give to that is the lighthouse that is being built at Strumble Head.

2251. I would just like to put it in this way to you; you have given us evidence about a considerable saving in the lighting, £2,100 per annum, in the case of oil. That does not seem to bear on this question, but indirectly it does in this way. You formerly used 2,200 gallons of oil for the lighthouses, you told us, and 600 gallons of oil you only need to use since you adopted the incandescent light?—That was only at one station. That varies enormously. For instance, at the Bishop Rock, at Scilly, we used to consume—I do not know exactly—but approximately about 8,000 gallons. Now we are burning there probably about 2,000 gallons.

2252. Well, I am only concerned with the fact that there is a very large diminution in the quantity of oil used?—Exactly.

2253. And consequently a very large reduction in the quantity of oil that wants to be carried by your steamers?—Certainly; that is an important point.

2254. In view of this great reduction in the quantity of oil—one of the chief articles you have to carry—may I ask whether there would be a possibility of reducing your fleet of steamers, and coupled with the question I am now asking you, whether the work of carrying materials for buildings erected by staffs of your own could be substituted for the work which has now been taken off their shoulders by reason of the shortage of the oil that needs to be carried? That is, that you would find employment for steamers who now find their duties lessened by reason of these oil-carrying conditions, in carrying materials; whether you could effect economies in that direction?—I think our Secretary has promised a return of the steam vessels with their employment. I added to that a statement showing exactly what they have done, and now we have embraced in the statement which he is sending you the information which is here, which will give you an idea exactly of the amount of work that each vessel does per annum. That is rather a difficult question to answer, Sir, because there is no doubt that by the introduction of our incandescent system the work on the steam vessels, to some considerable extent, has been lessened.

2255. (*Chairman.*) Since what date has this saving in oil been effected?—Well, the first burners were introduced about three years since, and each year we have converted about twenty establishments, and, as I have already told you, I hope to extend that.

2256. (*Mr. Ennis.*) This system is being extended, and its consequences are being extended?—Yes. Before that reduction began the work of our steamers had been very much increasing. That was especially so with some of the vessels in the London district, because the gas buoy illumination is very largely extending; we are always laying down additional gas buoys, and that involves a great deal of work on the steam vessels of the service. I do not think you could reduce the number of the vessels for this reason, again, that that would mean interfering with the area of the various districts—the superintendents.

2257. I simply put the matter to you for consideration, whether you might by direct labour, and by direct work on these lines, effect an economy?—Yes, Sir.

2258. In view of less work for the steamers?—Yes. Might I reply to part of your question with regard to Strumble Head? That is a case where to land materials from a vessel, considerable expenditure would be involved to make a landing quay, and so on, to get the materials on to the island, and we came to the conclution after going into the matter very closely, that the money which would be expended on the construction of a landing quay would be better expended on the construction of a bridge.

2259. Between the island and the mainland?—Between the island and the mainland, so as to join the station to the mainland, rather than laying out the expenditure on a landing quay, and thus couple with it the loss of time which often occurs in going to a station when they cannot land because they could only land there at high water.

Beachy Head Saving effected by erection of lighthouse by Trinity House staff.

2260. You have told us that a saving had been effected of £5,556 in the case of the contract of Sir John Jackson?—No, Sir, what I said was this, that a saving had been made of that amount of £5,556 on the lowest tender which we received from Sir John Jackson, but I did the work myself.

2261. Oh, yes, I quite understand that?—Certainly.

2262. But the only question I wanted to ask you was, in order to enable me to size up for myself the value of that illustration, what was the amount of the tender upon which you saved £5,000?—The total value of the works was about—£56,000.

2263. That is, you saved practically 10 per cent.?—Exactly so.

2264. Otherwise I did not know what that meant.—Precisely, Sir.

2265. That was a saving of 10 per cent. by doing the work yourself?—I will give you the exact figures. Had the lowest tender for Beachy Head been accepted, the total cost of the work would have been £61,284, and the actual cost of the work was £56,268.

2266. (*Chairman.*) We shall have all these details in the statement which you have undertaken to put in?—Very well, Sir.

Areas of silence of fog signals:

2267. (*Mr. Ennis.*) Well, I gather from what you have told us—it is a question which has occupied our attention before—with regard to fog siren signals, and to the area of silence, as I understand your evidence, that you have actually found, tested, and arrived at the conclusion that, from some conditions which you have not been able precisely to define, these areas of silence do occur?—Quite.

2268. And furthermore, your attention was directed to it by evidence given in the case of the "Montagu" at Lundy. My attention was directed to that fact in the first instance by that evidence, but I now gather from you a further piece of information, that the area of silence is not a constant quantity?—Quite.

Variableness of,

2269. That there may be an area of silence to-day in a particular locality, and it may not be there to-morrow?—Quite.

2270. And secondly, that, whilst you know that these areas of silence do occur, you are not able yet to locate the reason for them occurring?—That is so.

2271. And you are not able to provide against their occurring?—No.

2272. And the shipping of the kingdom, which depends upon fog-signals, have to contend with that difficulty?—They have.

2273. That they may get into an area of silence which it is not within your power, as far as your present knowledge goes, to avoid?—That is so.

2274. And for that reason anything in the nature of experiments which might be undertaken on submarine fog-signals, or any other form of experiment which would tend to eliminate that danger from the mariner's life, would be a very important matter?—Quite.

2275. And you would be in favour of any reasonable expenditure that might be incurred, which you considered would be incurred judiciously, for the purpose of solving that problem?—Certainly, Sir.

2276. Because I notice from your evidence also—I am quite sure what you are saying is true—that practically the lighthouse service in England is better than anywhere, that the service is as effective as in any other country, but it seems from what you have told

us, that the French Government or the French Lighthouse Authorities are more liberal in their expenditure of money on experiments?—That is so.

riments: 2277. And furthermore, that the staff of France is larger than that of England?—Yes, Sir, for experimental purposes.

2278. Quite so, and I await the information with regard to the length of the French coast line for lighting purposes, but if they have a larger staff for a coast line which is smaller, or not in excess of ours, it follows that the French people are willing to expend more money in that direction than we seem to have been?—I think you will find their coast line is considerably more than ours, and, not only that, they do the work of the local lighting, which we do not.

tvessels : *ttended,* 2279. Quite so; I understand that. Have you made any experiments also on the automatic lightships—are they in existence in the area controlled by the Trinity House? If not, I take it you have knowledge of them, because are there not some in Scotland?—I should say not, Sir; there are gas buoys in Scotland.

2280. But lightvessels?—No, Sir, the Scotch Authorities have only one lightvessel—the North Carr—and that is illuminated by—I do not know the number—several small dioptric apparatus slung round a ring round the mast with oil burners.

2281. Have experiments been made?—Do you refer to the Otter Rock?

2282. I do not know the precise locality?—They have gas buoys.

(*Chairman.*) I think Mr. Ennis refers to unattended lightships.

2283. (*Mr. Ennis.*) Unattended lightships?—The smallest lightvessel we have is the Swin Middle, where we have a very small crew, and that is a gas light, with a dioptric apparatus.

2283a. What is the crew?—There are four men.

2284. While we are on the subject of lightvessels, could you give us the dimensions of the lightvessels on your coast for comparison, say, with our Irish lightvessels?—Yes, Sir.

2285. And the number of crew, and the wages of the crew?—I can give that, Sir.

2286. It will be sufficient if you put it in?—I have a statement here which I have prepared, showing the particulars of our lightvessels, with their fog-signals, the number of their crews, and so on.

2287. That would be very interesting, but what I was anxious to ascertain was, whether with an automatic lightvessel or boat with the new gas arrangement it is possible to provide something more efficient than a buoy; something that would carry its light at the masthead?—Yes.

2288. And that can be established in position at less important stations without the cost of crew?—That is a point we are experimenting with at the present moment, and we contemplate—as a matter of fact we have gone to the Board of Trade for sanction this year for a larger gas buoy than has hitherto been constructed with that idea, but there is a very important point, you know, about that in dealing with the question in actual service, and it is this. It is of the greatest importance to us, if we possibly can, to handle these buoys on our vessels, so we take them aboard in bad weather, and place them below deck. That is of the greatest importance. I think, Sir, that the point really, if you will allow me, that is in your mind, as to a lightship or lightbuoy turns again on the question of intensity, because, if the position in which you wish to place your light is such that a man has a light of a certain intensity, then you can only produce it from a flashing or revolving light, and it would not be prudent, at least, as far as my knowledge goes, to introduce a revolving lens into an unwatched light. You could produce a light on a buoy or a ship with a fixed lens, because you could produce the character of that light by valves, just turning on and off the gas, but that is a very different thing from what you would have to do if you had to rotate the lens, because it is when the lens is rotating only that you can obtain a greater intensity.

2289. My question was not really with regard to an important unattended light; it referred to what I may call the border light between the local authorities, the Harbour Authorities, and the Coast Lighting Authorities?—Yes.

Mr. T. Matthews. 5 Dec. 1906.

2290. Because it seems to me from information we have received, and from my own personal observation, that there is such an area in many places, that there is an area which the Harbour Authorities have not the power to light, and which the Coast Authorities do not consider useful for general navigation, and yet which if lighted by an intermediate light between the system of lights of the Coast Authorities, and the system of lights of the Harbour Authorities, might be made useful to shipping seeking the harbour?—We have a considerable number of our buoys now having an intensity of 50 candles, and we have a lantern which I developed some years ago, which is capable of being put on a buoy, which will give an intensity of 130 candles. Well, you might say, "Why not put it on the buoys?" Then you have to consider the amount of work on your vessels, because the one apparatus consumes a foot of gas per hour, and the other consumes 2½ feet of gas per hour, so that the Elder Brethren in considering the question say, "We will put in that position a buoy of a certain intensity."

2291. But would not a lightvessel properly moored—a very small lightvessel which would require no attendance—be safer from accident or danger from being parted from her position than a buoy would be?—No, Sir, I do not think there is the slightest advantage in a gas boat beyond a buoy, excepting the capacity of the gas, the period for which the ship will run without recharging.

Type of anchor used for, 2292. You have spoken of cases in which lightvessels have parted their cables. You have spoken of the importance of cables, which I quite agree with. May I ask what is the type of anchor you use on all your lightvessels? Is it the mushroom type?—That does not really go through my department, but I think it is the Martin. We formerly used the mushroom, but with some of our larger vessels we have been using the Martin anchor.

2293. You have told us that in the case of the vessel running ashore there was no loss of life, but do you know a case where a vessel's cables held, but she went down at her moorings, for example Daunts Rock?—No, never. I remember that case.

2294. I believe it was understood at the time that that disaster was ascribed to the studding of the steel mast giving way, and the mast going by the board, and taking some of the deck with it?—Yes, Sir, it was.

Fog-signals: Cost of Flamborough Head,

2295. I do not need to go much into the distance off Flamborough Head that you can hear an explosive signal, as compared with the fog siren signal, but after all the difference would not be very large, because if you spend £500 per annum on this, and if to avoid that £500 per annum, or at least in lieu of it, you have to spend £4,500—the interest on that——?—3 per cent.

2296. You get money so cheap; if you take £100 per annum for oil and so on, and take depreciation, reasonable wear and tear and depreciation of the apparatus, the saving is not such a large one, but you will be able to make the signal for 2½ minutes, in place of every 5?—No; if you will allow me, Sir, I think the point is this: the desire is to change the character of the signal, and if you change it from 5 minutes to 2½ it is £1,000 not £500 as an explosive. If you keep it as an explosive fog-signal, you will spend £650 per annum more than you will if you convert it to a siren, and debit your siren with the 3 per cent.

2297. That is if you increase the intervals to 2½ instead of 5 minutes?—We must do that, we could not let it go on as 5.

Blackwall workshops: Number of men employed at,

2298. You stated the total number of men in the Blackwall works is 150. Is that the total number, because you spoke to Colonel Herbert of a man going out to do work, and coming back? Are the 150 all in the works at the same time, or is there an additional staff beyond the 150 who are permanent in the works?—No, Sir; what I mean by our 150 men is that is our Blackwall wages sheet; that includes our men in and out.

2299. You have a certain percentage in the works, and a certain percentage at out-work?—Yes. Last night, for instance, there was a telegram. The engineer of our vessel at Penzance was ill, and he sent a medical certificate. A man had to go down there last night. That man is a qualified marine engineer, and holds a marine engineer's certificate.

2300. Of course, you do not interfere with the local

Mr. T. Matthews. 5 Dec. 1906.

Harbour Authorities in the lighting of their harbours, beyond supervision?—They have to submit to the Trinity House every proposal when establishing a light for statutory sanction as to character.

Local Lights:

2301. But I mean, beyond having to supervise that they do their work properly, and having to sanction their proposals, that is all that you wish with regard to local authorities generally?—Yes.

Maintenance of Thames lights.

2302. Now, with regard to the port of London. Who lights the port of London?—The Trinity House.

2303. The buoys and beacons?—All these beacon lights on either side of the Thames are under the jurisdiction of the Trinity House. They are unwatched beacon lights.

2304. But would not these lights up to Tilbury ordinarily be looked upon as lights within the meaning of the Harbour Authority?—I am afraid I could not reply to that, Sir. They are all unwatched beacon lights from our lighthouse at Maplin right up, and gas buoys.

2305. The expenditure on those and gas buoys up to that point is borne by the Trinity House?—By the Trinity House.

2306. (*Admiral Henderson.*) Many of the questions I shall ask you touch upon points which have been raised before, I want to know can you tell me what is the average annual amount of money expended for minor improvements and alterations which you were talking about at the beginning of your evidence?—I am afraid not, but that will be in the Return which I have promised.

2307. How is that sum obtained: is it submitted in the regular way, the same as everything else?—Yes.

2308. For the specified purpose to the Board of Trade?—Yes, for the specified purpose to the Board of Trade all expenditure is detailed, and we get their sanction before we proceed.

Incandescent oil burner: Introduction of,

2309. Now, as to the question of the incandescent oil-burner, was that first introduced by the Trinity House or by the Scotch Board?—By the Trinity House, Sir.

2310. All the Boards of the United Kingdom have taken advantage of that, have they not?—Yes, but I think I explained that the system in the Scotch lighthouses and in the Irish is not the Trinity system, but it is the same principle. The burner is of rather different construction.

2311. All the improvements that you mentioned about the lightvessels and that sort of thing have also been adopted by the other Boards, have they not?—Yes, Sir; I have also mentioned in the case of the Scotch Commissioners, they have one lightvessel only, the North Carr, and it is not very important, and it is now lit on the same system as it was originally, many, many years ago, but the Irish lights have what was known as the two-wick Trinity House concentric burner, in 21-inch reflectors, on the Trinity House system.

Intercourse between the General Lighthouse Authorities.

2312. Is there any consultation between the three Boards, and a determination as to what is really the most efficient and economical form of optical apparatus?—No, Sir.

2313. There is no work together of that sort really?—No, there is not.

2314. What I understand is that it is just by correspondence between the Engineers, who discuss those questions amongst themselves?—Scarcely that, Sir. What takes place is that the Lighthouse Authority communicate with the Trinity House, and ask for statutory sanction to exhibit a light of a certain character, and then if in our opinion there is not sufficient information in that letter for us to form an opinion, we write them and ask them to give us replies to questions, in which we ask for details of the construction of the dioptric apparatus, the illuminant, and the details of the estimate of expenditure, which they always supply; and sometimes the site is visited by a Committee of the Elder Brethren.

2315. Do you use gas engines anywhere?—Yes, Sir, but to a very small extent. You are speaking, I take it, of coal gas?

2316. Yes, coal gas engines?—Yes; that is they have to be limited because of the difficulty of supply. Where we can get them we do so.

2317. Have you attempted any experiments on the use of suction gas plant?—We are now going to introduce that as a power plant at Blackwall.

2318. You are?—Yes.

2319. Suction gas?—Suction gas, yes. I have been investigating the best means of power plant, and that is what I recommended my Board to adopt.

Gas-buoys: Refilling of,

2320. You were speaking just now about gas buoys. How often does a gas buoy require refilling, those that you are making now, the most recent?—A buoy would probably maintain a light for from two-and-a-half months to three months.

2321. That is the average buoy?—Yes, but I should like to qualify that in this way as to what really takes place. When our vessels go out on service they would take with them transport receivers—that is, holders of gas—on their deck filled with gas.

2322. That is the lightvessels?—No, Sir, steam tenders; and on their way back to the depôt, or if they are in the vicinity of buoys, even if the buoy is not empty, they call and fill it.

2323. They make economical use of their voyage?—Yes, the boats have to embrace the opportunity of smooth water, because you want smooth water, but the buoys will maintain the light for from two-and-a-half to three months.

Seamarks: System of repairing,

2324. You are conversant with the Scotch system of repairs?—Well, not in detail, but I know approximately how the work is done.

2325. Is it your practice to have each light annually overhauled?—No, Sir.

2326. Can you give the definite number of mechanics who are sent out yearly and the cost of their travelling expenses?—Yes, Sir, certainly.

2327. If you have not promised to produce it, will you produce it?—Certainly, if it is your wish, Sir.

2328. Is not the cost of labour of this sort very great?—Yes, Sir.

2329. And their travelling expenses?—Yes, Sir.

2330. Because we have it in evidence already from the Scotch Board that they actually maintain the whole of their apparatus in working order by three men doing eight months' work?—Well, of course, their number is not really as great as ours, and they have only one lightship.

2331. I do not think the number of actual lights varies very greatly except as far as lightvessels, and that is enormous?—That is so, Sir.

2332. But, still, that does not bear any comparison with the figures which you have given us roughly. You only repair when things are reported as requiring repair?—We have many instances of mechanics not being at the station for two and three years, and in the case of fog-signal stations not for three or four years.

2333. It is not the cost of this labour, it is the travelling expense that is very great?—Well, it is very considerable; if you will pardon me, Sir, I have not in any way attempted to give you that account. I gathered rather from what you said, bearing in mind the largeness of the amount which I have stated, that you thought I had already made a statement as to the amount expended on that work annually.

2334. No, I asked whether you had or not?—I have not, but I will; I will let you have a statement.

2335. Can you give me any idea what the actual cost of transport of the material that you have to send to and from the Blackwall works and the various lighthouses and stations amounts to?—No, I could not.

2336. Is it shown anywhere?—No, it is not.

2337. But it must amount to a very considerable item?—I take it you mean in the Corporation's vessels?

2338. I take it you employ 150 men at Blackwall?—Yes.

2339. And when you send a man to a district lighthouse or lightship, perhaps some part of the optical apparatus or other machinery has to be brought back for repair to the shop?—You shall have that.

2340. You will give us that?—But I cannot give you the cost of conveying the mechanic from the shop to the lightship when he is on one of the Corporation's vessels, nor can I give you the cost of conveying the material.

2341. (*Sir Frank Adam.*) Everything that you have to pay for?—Everything that we have to pay for.

2342. (*Admiral Henderson.*) Now does it not mean, taking the cost of transport of material, that if everything is sent from the various outlying stations to Blackwall, that the cost of transport is very much enhanced?—Nothing is sent to Blackwall that I can possibly avoid. Take for instance—because it is a very important point—supposing we have a lightship in Milford under repair, and there is some part of the machinery which requires repairs which must go through a shop. Very well, until quite recently we had an arrangement with the Great Western Railway people, that they allowed us to execute those repairs in their shops at Neyland, and they charged us the net cost. We have the same arrangement at Holyhead with the London and North Western. Now the Great Western have left Neyland, and now we have asked the Admiralty to kindly allow us to have the same arrangement with them, and we are now doing those repairs in the Pembroke Dockyard, because that saves both ways. It saves the carriage and it saves the men's time.

2342a. Therefore it is correct for me to say that if you take all the work that is done in the far distant stations, it is done locally wherever arrangements can be made?—Yes, Sir.

2343. It is not sent to Blackwall?—No, Sir, it is done by a Blackwall mechanic. If we had a vessel into Pembroke Dock that comes in after being, say, seven years upon her station, which is the time, then the mechanic will go down from London, and he overhauls the lantern, optical apparatus, or fog-signal machinery, after it has been inspected by an official from my department, and detailed instructions sent by me in writing. Then such portions of the machinery as require repairs, which must go through a shop, say through a blacksmith, or through a turner, or whatever it may be, would go to Pembroke Dock. We can do it there; at Harwich, we can do it there.

2344. Then your man will put it together again when it is finished?—Certainly.

2345. He remains there until it is done in that dockyard?—He goes on with other work while it is being done at the dockyard, and then it is re-erected on board the ship.

2346. (*Sir Frank Adam.*) On board the ship?—On board the ship, because that saves the towage to London.

2347. (*Admiral Henderson.*) Do you think that on the whole the system you pursue is the most economical that can be done?—I do, Sir.

2348. Is all the gas that you use in the service made at Blackwall?—No, Sir.

2349. Have you any other gas-making stations?—No, Sir, but we purchase from the railway companies at the nearest place at which our buoy is located.

2350. Do you send gas round to the west coast?—No, Sir.

2351. Can you give the limits within which you distribute gas from Blackwall?—Well, we deliver gas approximately, from Blackwall, over the whole district between Ramsgate and Harwich. Then for Yarmouth district we get the gas from the Great Eastern Railway Company. The Yarmouth buoys extend to Pakefield Gatway. Gas for the Isle of Wight we get through the South-Western Railway Company. Then further west we get it from the Great Western Railway Company. Then when we come down to theWelsh coast, we get it from the London and North-Western Railway Company.

2352. That is sufficient for me, what you only supply from Blackwall. Can you give the number of days that each of the steamers has been laid up for repairs annually?—That is in the statement which the Secretary is returning.

2353. And the cost of the repairs; that will be shown in the statement?—And the cost, Sir.

2354. Do you lend assistance to the other Boards at all?—Yes, Sir, in plant.

2355. I would say in a more general way, but I am speaking more particularly in your department, do you give them assistance and advice?—Yes, Sir.

2356. Have they asked for it?—Oh, certainly, and we should lend anything. As a matter of fact sometimes we have done so both to the Scotch and to the Irish Commissioners; actual plant. At the present moment we are just lending to the Irish Commissioners a buoy for Rosslare.

2357. But do you lend them any of your most recent plant?—Oh, everything they desire.

2358. To compare?—Yes, Sir, everything desired.

2359. And you acquaint them with the results of your experiments?—Yes, Sir.

2360. Do you take any joint action about experiments?—Yes, both the Scotch and Irish Commissioners took action in connection with the fog-signal experiments, and the Engineers were present at the fog-signal experiments at St. Catherine's.

2361. Have you compared directly the engineering cost of the three different establishments?—No, Sir, I have no means of doing so.

2362. I mean the cost of lighthouses particularly, maintenance of buoys and different houses and the vessels, and maintenance and repairs?—No, Sir.

2363. You have never made any attempt to see whether one Board has worked more economically than another?—I have not done so.

2364. And do not know that it has been done?—I do not know that it has been done.

2365. It has never been brought to your notice that it has been done?—No.

Lightvessels: Repairing of.

2366. I think you have answered these questions, but just looking over your district I want to know whether the lightvessels that are on the out-stations—I mean to say the Milford and the Penzance district, and so forth—are repaired locally; they are not brought to Blackwall?—No, Sir, there is no place at Penzance where we can deal with them; they would go to Neyland, Sir.

2367. And then those that are up north go to Liverpool, I suppose, or some other place up north?—No, we have no lightvessels further north than the Spurn.

2368. I am not speaking of the east coast, I am speaking of the west coast now?—Then those vessels would all go to Neyland.

2369. That is in the Irish Sea?—Well, the Irish Commissioners; of course, I am only speaking of our own service.

2370. You have one in Cardigan Bay; I do not know what is the most northern of these?—Selker, Sir, and then we have the Bahama Bank off the Isle of Man. Well, she goes to Neyland; the steam vessels at Neyland would fetch her.

2371. How far north of the Thames do the lightvessels come into Blackwall works for repair?—Well, Sir, that would depend entirely on the extent of the repairs. Assuming that a vessel on a station has good fog-signal machinery, and a good illuminating apparatus, she would go to Harwich, because the shipwright's work is done very much cheaper in Harwich than we can do at London; and then the small amount of repair in my department we should do through our mechanics from London to Harwich.

2372. Send them up?—Yes, as in a case quite recently, they had to condemn a pair of caloric engines in a lightship, No. 62, and fit her with oil engines. Well, that involved considerable expenditure, and then we towed her to London, because we should save money. We got her by the side of our shops and cranes.

New Works: Contemplated by Trinity House.

2373. Is there now any really very urgent new work for the Trinity House to undertake?—At the present moment?

2374. Yes?—We are building a new lighthouse at Strumble Head.

2375. I am speaking in general terms. Is there very important new work to be undertaken on the coast of England and Wales?—Those that we have in the estimates for next year are the most important that I could mention.

2376. Beyond, when these are completed?—Yes, Sir, we want to improve, if we can, the lights in St. George's Channel, to correspond with what we have done in the English Channel. We have had petitions from the shipping interest expressing their pleasure with what was being done in the English Channel, and hoping that the Elder Brethren would do the same in St. George's Channel, and it has been the desire of the Elder Brethren to do so.

Mr. T. Matthews.

5 Dec. 1906.

2377. Is the cost of your department increasing or diminishing?—It has been increasing, Sir.

2378. And the whole of the work not put out to contract is done by your own departmental people?—Yes.

Engineer's Department: System of accounting or work done by,

2379. Are the charges of such works shown anywhere?—Yes, Sir.

2380. Supposing that you undertake to build a lighthouse, are all the departmental charges put into this new work?—You mean separated to that particular work?

2381. Separated.—No.

2382. I mean that you say you are able to construct a lighthouse at a very much less rate than the lowest tender?—In certain positions, Sir.

2383. Now, I want to know whether the various departmental charges, the charges for work that is done by the Trinity House as a whole, are added to the cost of this new work or not?—I am afraid not.

2384. And they are therefore, of course, not abstracted from the estimate of new work?—I am afraid not. Might I ask to have the opportunity of correcting that if I am wrong, because I should like to verify that?

2385. What you are talking about just now is your plant; you have the use of the Trinity House plant; the steamers, for instance, your own and your engineer's and foremen's services. Now, is the cost of that put on to the cost of the new work and subtracted from the Trinity House vote, because that would make a great difference in the saving of £5,000? If it were spread over the period of three years of construction of a large lighthouse it would make a very great deal of difference if you put in the value of the departmental time?—I believe, Sir, the answer I have given you is correct, but you have been kind enough to say that I may correct it.

2386. When constructing works by your own staff you have the use of the Board's steamers and plant?—Yes, Sir.

2387. If so, is any charge made, and you said no by anticipation?—Quite so.

2388. If you employ the Board's steamers—I think this is a question that was touched on by Colonel Herbert—if you are able to use the Board's steamers for new construction work, does it not show that they are not on the whole fully employed for all their time?—Well, Sir, what has actually taken place this season? I have been using for my department the "Siren," which is a vessel at Neyland, and she has not been able to do some work which it is her duty to do in the ordinary way, and those duties have been obliged to be divided.

2389. Postponed?—No, Sir, not postponed, because it means shifting lightvessels to new moorings; new buoys, and so on.

2390. You then had to hire?—No, Sir, it has been done by placing more work on the vessel at Cardiff and the vessel at Holyhead.

Blackwall Workshops:

2391. You say that the output of the Blackwall workshops is of the value of £28,000 a year?—Yes.

2392. That means, of course, labour and material?—Quite so.

2393. Do you manufacture any apparatus or appliances there?—Yes, Sir.

2394. Do you find that more economical than buying them by contract?—Very much so, all those things that we make. I mean, for instance, the whole of the incandescent system in the service has been constructed in the Blackwall workshops.

2395. I want you to give me a list of the trades of the men employed at Blackwall Works?—The most important department is that of the fitters.

2396. Neither the Scotch nor the Irish Boards have works comparable to yours?—I do not think so; no, I think not.

2397. You do not know how they manage their works?—No, there are fitters, Sir, and coppersmiths.

2398. It would be quite sufficient if you would just let me have detailed numbers of the various trades, including labourers and the whole of your permanent establishment?—You would like the 150 divided into classes.

2399. The fitters, the boilermakers, the coppersmiths, and the various trades?—Quite so.

2400. You do not know from what you said before, I suppose, whether the engineering costs of the Scotch and Irish Boards for maintenance are more or less, either on the details or the groups, of smaller character than yours?—No; I have no knowledge, Sir.

2401. At Blackwall do you have anything to do with repairs to the lightvessels and steam tenders. Your answer is a portion of them?—Those vessels which are near London, because it pays us to do so.

2402. Who does it?—It is done through the Blackwall workshops; my department.

2403. Entirely?—Entirely.

2404. But you do not do the hulls, do you?—No; that is done under the Surveyor of Shipping.

2405. Of the Board of Trade?—No, of the Trinity House.

Duties of Trinity House Surveyor of Shipping:

2406. You have a Surveyor of Shipping?—We have a Surveyor of Shipping.

2407. What are his duties?—The maintenance of the hulls of the steam vessels and the lightvessels.

2408. Is that done by contract?—Yes.

2409. And are all current repairs undertaken by contract?—Yes.

Steam-Vessels: Repairing:

2410. This is what I call a current repair. There may be some repairs not necessary to bring a ship in for, or something of that sort?—Well, general upkeep of the vessel.

2411. And for the steamers?—Well, I do not think so, Sir.

2412. I am not speaking of the machinery, I am speaking of the vessels themselves?—That is why I am rather doubtful. I do not think so, if you mean such things as fittings for boats and so on.

2413. Say the "Irene" has some damage done to her, or some special repair, is there a special contract obtained for that?—If the "Irene" has some special damage done to her there would be a survey held, and the owner of the craft that caused the damage would have to pay it. That is what would happen then; that is what does happen, as a matter of fact.

2414. In your department the cost of new works is separate from those of renewals and repairs, is it not?—Oh, quite.

2415. But in the detailed account we shall get it clearly?—Oh, yes.

2416. You are going to give us a return for 1905-6, which is for that amount?—Yes.

2417. Will you let us have the stations of your steamers?—I will see that is put on the statement which will be returned through the Secretary.

2418. And the places where they are generally repaired; their headquarters, so to speak?—Yes, Sir.

One Central Lighthouse Authority Would be economic:

2419. Now, do you think that if the three Lighthouse Boards were put under one control and management, with a properly decentralised system, there would be in many ways a great economy?—Yes, Sir, I think there would be.

2420. Under such conditions could not one Engineer do the work, supposing he were supplied with a properly decentralised staff?—Yes, I think he could.

2421. Have you any suggestions to put before the Commissioners that would further the efficiency of the lighthouse administration of the three kingdoms?—Well, Sir, that is a very important point.

2422. Have you ever thought of it?—Yes, I have. I believe if there was one lighthouse administration that economy would result, and I believe it would be principally due to uniformity of administration and of practice in the service.

2423. (*Chairman.*) Are you expressing your own personal opinion?—Yes, Sir.

2424. (*Admiral Henderson.*) I am speaking to you now in a public sense, for the interests of the nation, not for any regard to the Trinity House, or the Scotch Board, or the Irish Board?—You have asked me a question; I am bound to tell you what I believe.

2425. In the national interest?—Yes, Sir, and I believe the result would be what I have told you. I

think a very important point would be the uniformity on the question of stores, and matters of that kind.

2426. Would you favour the Commissioners with a memorandum embodying your ideas by which strides could be made; you would rather not?—I would rather not, Sir. Of course, if the Commissioners call upon me to do so, I must do so.

2427. (*Sir Frank Adam.*) With the consent of the Commissioners, you would have no hesitation, I suppose?—Well, I should like it to go through my Board.

2428. I mean your Board—the Trinity House?—Yes.

Colonial Lighthouses: Maintained by Trinity House.

2429. (*Admiral Henderson.*) I want to pass from high politics to minor detail for a minute. Do any questions connected with Minicoy, Bahamas, the Basses, come before you?—Constantly, Sir.

2430. I am asking this question, because I want to know whether there have been any recent questions, and what is the nature of the questions that have come to you?—Well, Sir, it came to my knowledge in the autumn of last year that there was an undermining taking place in the rock of the Little Basses Lighthouse, which I reported to my Board, and my Board reported to the Board of Trade. The result of that has been that there have been various representations on it to the Board of Trade, and the matter is now in abeyance until the Engineer at the station at Colombo arrives in England, when he will be interviewed by the Trinity House, and we have to advise the Board of Trade as to what should be done. And, again, the Elder Brethren within the last few weeks have reported to the Board of Trade, and have pointed out the advantage of the incandescent system of lighthouse illumination, and recommended that they should carry it out in the lighthouses with a view of saving annual expenditure.

2431. Do you know anything about the administrative system of France and Germany and other foreign nations?—No, Sir. All I can say to you on that subject is this, that I have tried on several occasions to get at the first cost of their works in France, but we have entirely failed to do so. Owing to their system of accounts, it is impossible to get at it.

Blackwall Workshops: Accommodation of,

2432. Is there any room for additional buildings at Blackwall?—Well, very little, Sir. We have, as I explained to you just now, a small space where I hope to expand our gasworks, and then we shall be full.

2433. And is there much room for extension in the number of employes; room for employes?—Oh, yes, Sir.

2434. What would you consider the maximum number of tradesmen you could employ as a total?—As a matter of fact, when I told you 150, that means the mean; sometimes we have had as many as 180.

2435. What is the maximum you can accomodate there?—I daresay we could accomodate 200, Sir.

2436. Have any members of the Trinity House, or yourself, visited any of these foreign exhibitions where there have been great lighthouse shows?—One of the Elder Brethren visited Milan this season.

Contracts: Allocation of,

2437. (*Sir Frank Adam.*) In the matter of tenders for stores, I think you tabled a form which showed that you asked for certain tenderers a number of articles?—Yes, Sir.

2438. In dealing with these, do you pick out and accept the lowest price for the tenders of each tenderer?—Yes, Sir.

2439. You do not deal with them as a whole?—What happens is this: The tenders are received, and they are all scheduled, and we go to the firm for the lowest items contained in their tender.

2440. In regard to the Blackwall works, do you find that as a rule your staff there is fully employed, year in and year out?—Oh, yes; you see, they are always fluctuating.

2441. I understand that; you have explained that already?—We should pay them off, Sir.

2442. There is certain work you find you can do cheaper by your experience at Blackwall than by giving it out elsewhere?—Yes.

Blackwall Workshops: Accommodation of,

2443. Supposing that you found that work increasing very much, is there a possibility of expansion at Blackwall; could you increase your plant and machinery?—We cannot increase our shops very much, but we could give more accommodation to the men we have. As I have already stated, we have had as many as 180, 182, or 183 men. I think we could work 200 men.

2444. Have the Trinity House Board ever considered whether it would be advisable and economical to have similar works started in other parts of the country?—They have considered the question of having gasworks in other parts of the country, but at that time our demand from the out-districts was much smaller than it is now, and that is why we get it from the railway companies.

2445. Because I gathered that you followed the principle and the plan of sending whatever work you require to be done to ships, and in other ways, to the nearest point, for economical reasons?—Quite, Sir.

2445. But my question was rather with a view to ascertaining whether you had considered, or the Trinity Board had considered, even under those circumstances, whether it would be advisable in certain localities, where there was constant work going on, to do it yourself, and whether you could not do it cheaper with such works as the Blackwall workshops, instead of giving it out to local people?—We have done that, Sir, and two or three years since we went into the matter and considered the question of removing the whole of the works to Harwich, but we found it was cheaper to remain where we are.

2447. Then one other question from another point of view, not in regard to this. I suppose you would have no difficulty, supposing you found the general work of your department increasing very much, and you found that your present staff could not efficiently undertake it, in appointing additional assistant mechanical and civil and marine engineers, working under you, to do the extra work?—Oh no, Sir.

2448. Looking at it as a matter of departmental system, there would be no difficulty in increasing that to any extent?—I think that could be done.

2449. You would find suitable men, and divide their work under you, as would be necessary, and practically do almost any amount of work; is that so?—Yes.

2450. (*Colonel Herbert.*) That does not quite agree with the answer you gave me on the same point. Possibly you may have misapprehended what I was asking. I asked, I think, a question as to whether there was power of expansion, and you said there was not. I was on the very same point?—I am sorry I misunderstood you.

2451. I thought possibly there was some little misunderstanding, but perhaps that will be corrected in the proof?—I will do so.*

Steam-vessels: Increase of, in last ten years.

2452. (*Sir Frank Adam.*) Has the number of steamers increased of recent years that are used for carrying material and for other purposes?—Yes, Sir; by one vessel.

2453. In how many years?—In about 10 years. It was in this way; we had a wood vessel, a sailing vessel, at Cowes. She had to be condemned, and we put one of our small vessels there from Penzance, and then put a new vessel at Penzance, because the Elder Brethren had handed over to the Penzance district the Channel Islands.

2454. And although you have only had an increase of one vessel in 10 years, you have had a great diminution, owing to improvements which you yourself have introduced, in connection with the carriage of oil in that particular branch?—In that particular branch, but it has increased in others.

Work of,

2455. But I understand the general increase of work has been set-off against that decrease in that special department?—That is so.

2455. Had it been otherwise, you would have had a larger number of vessels to be added, if your general work is increasing?—Yes.

2457. And supposing there had been no economy in the use of oil and the carriage of oil, you would have more steamers now than you have?—Probably.

2458. Probably, not certainly?—I am not certain; no.

2459. Is it your opinion—I daresay that will be put in in some tables or statistics you give us—that your vessels that you have now are fully employed all the year round?—Well, not in the sense that they are at sea every day; certainly not. No, the table which the

* See Q. 2171.

Mr. T. Matthews.
5 Dec. 1906.

Secretary is preparing will show you the exact number of days that each vessel is absent from her moorings per annum

2460. Have you any plan or general system by which you endeavour to save money when you are not using them as constantly as possible?—Yes, Sir, the steam vessels of the service do all the work that has to be done by steam vessels for the service. We never—when I say "never," it is very very exceptional indeed—hire a tug. For instance, in executing special repairs the vessels are taken during the time when they are not required in connection with relief or gas buoy work, and they will be on service again before the reliefs of the lighthouses or the lightships are due.

2461. In taking into consideration a plan for keeping your vessels as effectively, as constantly, employed as possible, I suppose you consider also the question of the carriage of materials and stores to those works which you have undertaken yourself, because you think you can do it more cheaply?—Yes, Sir.

2462. And at any rate if the cost of these works is not debited, that the amount is set off against what you would have to pay for carriage, did you not use your own steamers; at any rate that you secure by the use of those steamers an actual saving, because otherwise they would not be employed?—Yes, Sir.

One Central Lighthouse Authority: Would be economical.

2463. (*Mr. Ennis.*) One supplementary question. In reply to Admiral Henderson you gave it as your personal opinion that one Board controlling the lighting of the United Kingdom would be an improvement on the three Boards existing at present. I think that is so?—Well, hardly that I think, was it?

2464. That is what I understood your reply to be?—What I intended to have said was this, Sir; that I believe that with one authority economy would occur, because you would have one administration, one practice throughout the three services, and the greatest economy I think would accrue in connection with the purchase of stores. Other things of course would follow.

2465. (*Chairman.*) You were speaking entirely from the point of view of economy?—I was, Sir.

2466. You did not express an opinion on policy?—No, Sir, that is not my function.

Trinity House: Control of, over Scotch and Irish Boards.

2467. (*Mr. Ennis.*) With regard to the difficulties that might arise in the constitution of such a single body, I just wish to ask, is it not a fact that you exercise a certain limited amount of control over both the Irish and Scotch Boards?—That is so.

2468. That is to say, these Boards have to submit to you their proposals, and obtain your sanction before going further?—Yes.

2469. But then they have, as a court of appeal, the Board of Trade?—That is so.

2470. And is it not a fact that both the Irish and the Scotch Boards have on a considerable number of occasions made proposals which were not sanctioned by your Board, but which on appeal to the Board of Trade were sanctioned by the Board of Trade, and carried into effect?—I do not think so, Sir. I think this; that it has occurred on some occasions when they have appealed to the Board of Trade, that the Board of Trade have agreed, but I should not go so far as to say on many occasions.

2471. I do not put it as many; a considerable number; the two Boards?—Well, not in proportion. What happens really is this; that we correspond with the Irish or Scotch Commissioners, and if it is possible we come into line, and then, if we cannot come into line, they appeal to the Board of Trade, and in some instances the Board of Trade agree with the Authority against the decision of the Trinity House, but those cases are exceptional, and when they occur, it is generally for financial reasons.

2472. That is to say, that in those cases, whether the number be large or small—I do not assume they are large, but there is a certain number of cases—if it had been in the hands of the Trinity House only, those works would never have been carried out, because they never would have gone to the Board of Trade unless the other Boards had existed to put them forward?—I would not say that, because if the Trinity House were the one authority they would carry out that particular work probably when other and more important work, in the view of the Lighthouse Authority, had been carried out. You see, if it were one Lighthouse Authority you would have a certain amount of money to expend on new works, and naturally they would expend that amount of money wherever it was of the greatest advantage.

2473. In the opinion of that authority?—In the opinion of that authority.

2474. (*Colonel Herbert.*) May I ask you then if it would be stating your view correctly to say, that having regard to the fact that the Trinity House is a controlling authority over the others, it would appear somewhat as an anomaly that the different branches of your authority were so little in touch with the others; that would be about the feeling which you have?—Yes. Might I say one word? I will not keep you a moment. I should like to say this in addition to what I have mentioned about experiments, that we are now carrying out experiments also in connection with the diaphone. You have mentioned the question of sirens, Sir. Last year we carried out some experiments with the diaphone against our siren, and we are making certain alterations and developments during the winter, and we are to go on with these experiments in the early spring. I thought I should like to mention that. And then we are also going on with the question of submarine fog-signals, and the question of the incandescent system for catoptric lights and acetylene.

Experiments with Diaphone, present being tried.

2475. I suppose the experiments with the diaphone will also be watched with regard to its effects on the area of silence?—Yes, and the Scotch and Irish Authorities will know exactly what we are doing, Sir.

Mr. David Alan Stevenson, called in; and examined.

Mr. D. A. Stevenson.

2476. (*Chairman.*) You are Engineer to the Commissioners of the Northern Lighthouses?—I am.

Mr. D. A. Stevenson: Qualifications of,

2477. Will you describe your qualifications?—I am a Bachelor of Science, a Member of the Institution of Civil Engineers, and of the Institution of Mechanical Engineers, and a Fellow of the Royal Society of Edinburgh. I have been engaged in lighthouse engineering since my earliest days under my father, David Stevenson. I was appointed Joint Engineer to the Commissioners with the late Mr. Thomas Stevenson in 1885, and on the death of the latter in 1887, Engineer.

2478. You are a member of the firm of D. and C. Stevenson?—I am; and my firm, which consists of my brother and myself, and our staff of draughtsmen and clerks, carry on the engineering work of the Commissioners. We have a general engineering practice; but Lighthouse work is a speciality with us, and the Northern Lighthouse work is, of course, the principal part of our business. Besides the Northern Lighthouse work, we are consulted by a number of other Lighthouse Authorities, such as the Clyde Lighthouses Trustees, the Dundee Harbour Trustees, and numerous local authorities in Scotland and England. We also advise the New Zealand Lighthouse Authorities, and have been consulted by and designed work for the Indian, Chinese, Newfoundland, and Japanese Lighthouse Authorities.

2479. You have had, of course, very large experience of the coast of Scotland?—Yes, I know it very well; I have known it since my earliest days.

2480. In addition to experience acquired in Scotland, have you visited lighthouse stations elsewhere?—I have, both on the Continent and in America.

2481. In the United States?—In the United States.

2482. Are you familiar with the lighthouse system in the United States?—It is about 15 years since I was there.

Duties of Engineer to Northern Lighthouse Board.

2483. Will you describe to us your duties?—My duties consist in attending all meetings of the Board and such committee meetings as I am summoned to; in advising and drawing up reports (which number about 90 per annum) on all matters remitted to me by the Commissioners—such as the necessity or otherwise for new lighthouses, fog-signals, beacons, and buoys that are applied for, the best position for such, should they be entertained, and the powers and the characters to be given them to distinguish them from other seamarks in the neighbourhood. I prepare and submit estimates of the probable cost. I also advise and re-

port to the Commissioners on all applications from local authorities desiring new or altering the existing seamarks under their jurisdiction. There are about 139 of these jurisdictions in Scotland. I carry out any experiments and report on any new inventions or improvements brought before the Commissioners in the methods of lighting and fog-signalling, etc. I advise on any question of repair or maintenance of existing seamarks that I may be consulted on, *i.e.*, any of the larger repairs, not the general or ordinary repairs. My duty is also to examine and report on the lighting apparatus and machinery of all the lighthouses and other seamarks in the service once in five years—now numbering 318. That does not mean that the examination is all done in one year, but it is spread over the five years. Once in five years I have to report on each station, and I try and divide the work when I am going round the coast so that the Board get a report once in five years on every lighthouse, the state of the optical apparatus, the state of the machinery generally, and the houses and buildings. Of course, I make frequent intermediate visits without formally reporting. I also examine and report on all the harbour and local lights round the coast once in three years—numbering about 260, many of which are in Orkney, Shetland, North-West of Scotland, Skye, and the Island of Lewis, and absolutely inaccessible by rail or mail-boat. That, in the same way, is not all done in one year, but it is spread over the three years. I have to do a great many of them by the steamers of the service. I advise, when consulted, as to the lighting and disposal of wrecks when they are a danger to navigation. I draw up the draft Notices to Mariners of new, and alterations on existing, lights and beacons and buoys, and their bearings, and make the feuing plans for any land required. I also correct and adjust the Admiralty Light List, giving the characters of the lights, their bearings, their candle-power, etc., both of those under the Northern Lighthouse Board and under local authorities. It includes all the lights round the coast. For the above work I am remunerated by fees for the services of myself, my brother, and my assistants at fixed rates—for myself £5 5s., for my assistants £3 3s. and £1 1s. per day of eight hours. In addition to the above, I design and prepare working drawings and specifications of any new works or special repairs undertaken by the Commissioners. Special repairs mean any of the larger repairs—such as the necessary towers, houses, piers, slips, roads, dioptric apparatus, lanterns, lamps, machines, and fog-signal machinery, as well as buoys, gas-boats, moorings, storehouses, etc. I examine and report on the tenders for the work which are received by the Secretary. The Secretary receives the tenders. I conduct the works during their progress, inspect them, conduct all correspondence with the contractors and inspectors or clerk of works, make up certificates for payment of instalments to the contractors, and of the final accounts. For the above work I am paid 5 per cent. on the estimated cost of the work, which covers my own, my brother's, and my assistants' time.

2484. In short, you are Consulting Engineer to the Commissioners; but you are also the Commissioners' Architect?—Yes, Sir.

2485. As Consulting Engineer you are paid by fee, and as Architect you are paid by percentage on the work?—That is so.

2486. Your duties, I think, are not exactly the same as those of the Engineer to the Trinity House?—No. Of course, I advise on points as to the lighting of the coast, which I do not think either Mr. Matthews or Mr. Scott do. I think neither of them advise on these points.

2487. On the other hand, I do not think you undertake what is undertaken by the Engineer to the Trinity House—that is, the actual execution of works. All your works are done by contract?—I would not say absolutely in every very small thing. Making a base for a concrete beacon has occasionally been done by day's wages; but it is a matter of £200 or £300, nothing larger than that. We always, if possible, do the thing by contract—the Commissioners prefer it.

2488. Those are the principal differences between your work and that of the Engineer to the Trinity House?—I think so.

Travelling allowance of,

2489. Then are you paid in addition for your travelling expenses?—Yes; I get an allowance of £80 per annum. That covers all our expenses and our assistants'.

Mr. D. A. Stevenson.
5 Dec. 1906.

2490. Whatever they may be?—Whatever they may be. I may say the reason why that was made a fixed sum was, of course I do go about a good deal for the Fishery Board and otherwise round the country, and the accountant found some difficulty when I divided the expenses of my travelling between the two Boards. They thought it was difficult to account to the Board of Trade. They like to see the full figure down, so that they can check it from the time-tables, and see how much you pay actually for your travelling expenses. When I divided it up, and put half, say, to the Fishery Board and half to the Northern Lights Commissioners, that was impossible. It came to this, but they did not like it, so that was the origin of that sum being fixed.

Remuneration of,

2491. Can you give us an indication of what your total remuneration from the Lighthouse Authority amounts to in the year on an average?—£2,130 I think is the average for the last 10 years.

2492. That is including both fees and percentages?—Fees and percentages, and also the sum for the travelling expenses, the whole thing, that is the money my firm have received.

Northern Lighthouse Board: Policy of, as to lighting of coasts.

2493. What is the general policy adopted by the Commissioners as regards the lighting of the coasts and the erection of new works?—Their policy has been where there are parts of the coast unlighted or inefficiently lighted to erect new lighthouses, buoys and beacons, and they have in past years framed their estimates and applied for funds to the extent of from £20,000 to £25,000 per annum for the purpose of new works. That is what they have sent up to the Board of Trade. They aim at that. That is what they have done in putting forward their estimates for the year.

2494. They have a general programme on hand, and select each year which of the items in that programme they think most important?—Yes, that is what they do.

2495. And then to the extent of £20,000 or £25,000 they ask the Board of Trade to sanction it?—That is what they do. They have followed the policy of gradually improving the lighting of the coast under their charge as funds are available by the construction of new fully-equipped lights where they consider such necessary, the cost varying from £6,000 to £8,000 for land stations, about £12,000 where a fog-signal is established in addition to the light, and rising to £19,000 in very difficult situations such as Flannan Islands. That is an island about ten miles west of Lewis.

2496. That was work recently executed was it not?—Yes, within recent years.

Lighthouses: Improvements of existing,

2497. Then of course also you undertake the improvement of existing lights?—Yes, strengthening them and making their character such as to be distinctive instead of the old fixed light which was previously in vogue.

2498. When the character of a light is altered do the Commissioners regard that as a new work which has to be submitted to the Board of Trade and to the Advisory Committee?—They do.

2499. Will you describe the character of the improvement in the existing lights?—Substituting for catoptric and catadioptric, dioptric apparatus, and lights of a distinctive character—flashing, group flashing or occulting—for the old fixed lights. The catoptric lights are the old reflector lights, nothing but reflectors, and the catadioptric lights are the old reflector lights with prisms in front of them, which was a subsequent improvement, and the latest form, of course, is the dioptric apparatus, that is the best, and that the Commissioners aim at putting in.

2500. And that is invariably put in now, the dioptric?—Invariably. We never put in reflectors in a new light or even catadioptric apparatus. It generally costs something about £2,000 to convert one of the new lights to the dioptric. It varies a good deal, and depends upon the state of the lantern whether it is large enough to take in the new dioptric apparatus. If it is not large enough it will cost more than £2,000. £2,000 may be taken as a sort of average.

2501. For converting a light?—For converting a light. Then they have also largely adopted the erection of beacon lights and laying down lighted buoys, the beacon lights costing £400 to £600, the buoys, including moorings, £300 to £400 at places where stronger lights are necessary. They have also installated fog-

Mr. D. A. Stevenson.

5 Dec. 1906.

signals at existing stations where they would enable passing trade to proceed on their passage with little or no detention, costing about £5,000 each.

2502. Fog-signals?—Fog-signals, yes, that is, as a rule, the siren, and, lastly, by the installation of unlighted beacons and buoys, where such are considered sufficient.

2503. What is the cost of laying down beacon lights?—A beacon light costs from £400 to £600.

2504. And the buoys?—And the buoys from £300 to £400.

Lighting Apparatus: Efficiency of,

2505. As regards lighting apparatus, you are quite satisfied with the efficiency now attained?—Yes, it is admirably kept; there is no doubt about that, judging from my inspection at least once in five years. The district superintendents are very careful, they go round every year, and they keep the machinery and everything in excellent repair. Very little requires to be done. And the focussing of the burners—which, of course, is one of the principal points—to see that the burner is kept properly in the focus of the apparatus, so as to give the best effect of the light, that also I have almost invariably found quite satisfactory.

2506. How many of the catadioptric lights are there now left?—Thirteen catoptric and catadioptric, the remaining 67 are dioptric.

2507. Would you put in a statement of the various lights with their respective candle-powers and method of illumination?—Yes, I shall do so.

2508. Electric or otherwise?—Yes.

Illuminants: One electric light in Scotland.

2509. You have only one electric light?—We have only one electric light.

2510. That is the Isle of May?—It is. Of course the electric light is the best illuminant for a lighthouse, but it is very costly. It is not worth the cost.

2511. The additional expenditure?—The additional expenditure, no. Our Isle of May light costs about three times as much to maintain as an ordinary oil light would do.

2512. You do not anticipate that electric light will be used in any further installations for lighthouses?—I do not think so, Sir, because when it really comes to weather so thick that you cannot see a really good oil light, then I am afraid it is necessary to go to something else, sound signals, or something of that description. Light is no use. That is my experience.

2513. At what date was the light on the May Island put up?—1886.

2514. There was a general impression at that time I think that electric lighting would come in largely for lighthouse purposes?—Yes, our friends in France, the engineers there, took a very pronounced view about what electric light was going to do.

2515. Was electricity adopted by the Commissioners on their own initiation?—No, the question of gas and oil lighting and electricity was very much to the front at that time, the question which was the best illuminant. The Irish Commissioners were very much in favour of gas, and Trinity House were very much in favour of oil, and I think, my recollection is, that the Board of Trade requested us in Scotland to try the electric light to see what could be done with it.

2516. That is to say they suggested to you that you should try it?—They suggetsed to us that we should try it as an experiment. Some people think it is not a good illuminant for a lighthouse, but it is; it is the very best. I have not the least doubt in my own mind it is the best illuminant for a lighthouse, bar the expense.

Advantages and disadvantages of electric light.

2517. (*Sir Frank Adam.*) Under all circumstances?—Under all circumstances. It is disappointing in this way, that having so much of the higher refrangible rays in the light, it is very much cut down by fog. You expect very much more from it than you get. When it comes to fog you are disappointed. I should say that you would not see the Isle of May perhaps above half a mile further than you would see our best oil light, but you do get that half mile.

2518. At great cost?—At great cost; I do not think it is worth it.

Lighting Apparatus: Improvements in dioptric,

2519. (*Chairman.*) Have your firm had an important share in introducing improvements in dioptric apparatus?—Yes, my predecessors and my brother have been the leading improvers of dioptric apparatus since the days of Fresnel; practically, in fact, every improvement in dioptric apparatus has been introduced by them.

2520. I suppose you co-operate with Trinity House as regards improvement in lighting apparatus; you are in constant communication with them?—Yes, and also with the Irish Board. We, the engineers, correspond with one another and interchange all drawings and ideas.

Incandesc oil burner

2521. It was Trinity House, I think, that first adopted the incandescent oil burner, was it not?—I do not know, Sir, whether they absolutely had it in first or not; I cannot be sure as to that, into a lighthouse. What we have done is we have examined all the forms of the Kitson burners that were extant, the French burner, Mr. Matthews' burner, and the Chance burner, and we have adopted Chance's burner. We think it preferable as regards management; we think it is more easily managed than the other burners. The French burner we did not approve of. We found it was very irregular in action; the weather affected it very much; it often went out. We put it into Inchkeith lighthouse at a very early date to try it there.

2522. Did you try the Trinity House burner?—Yes, but not in a lighthouse. They very kindly sent us an installation to try it. We tried it in the lighthouse store along with Chance's burner.

2523. And on the whole you preferred Chance's burner?—Yes, in the working of it we thought it was more likely to work well in the hands of our lightkeepers. I would not like to say that if both burners were worked by an expert that you might not get a shade more candle power out of Matthews' burner; I would not like to say that, but that is the conclusion we came to, I and our inspectors. We tried the burners to see what was likely to be the best thing, and we have adopted it, and we get 1,200 to 2,150 candle-power quite easily out of Chance's burner depending on the size of the mantle.

2524. What have you found to be actually the saving in oil and the increase in light from the incandescent system?—Well, we get about three times the power.

2525. With a diminished consumption of oil?—With about half—from half to a third the consumption of oil. It has not affected us so much as it does the other services, because we have never adopted the larger size of burners which they have. They have very large burners, 10 and 8 wicks; we have never used anything larger than 6. We never adopted the larger sizes because, in our view, the size of the burner made the light ex-focal and of little use. They have gone in for these larger burners and the putting in of this burner of small consumption has reduced their total consumption very much. I do not think the putting in of the incandescent burner, if put into the whole of the lighthouses in Scotland, which, I think, it will be next year, will have saved us more than about £600 a year. But we have got a very greatly increased candle-power. It is a most admirable lighthouse burner, and has made a great improvement in our lights.

2526. What is the most powerful incandescent light you have now?—Kinnaird Head. We have got there 881,000 candle-power. I think it is the most powerful light on all the three coasts. But, then, it is not altogether due to the candle-power of the burner, the apparatus there is very effective.

Illuminan Pintsch's gas used f buoys and beacons.

2527. Do you use compressed oil gas for the most part for the illumination of buoys and beacons?—Yes, we introduced that at a very early date. Pintsch's compressed oil gas.

2528. And that has been found perfectly successful?—Yes, perfectly successful. It has enabled the Commissioners to light the Western Sounds in a way they never could have done without it, both with buoys and beacons.

2529. Are any lighthouses lighted with gas?—Yes, we have converted some of the smaller lights to gas which has enabled us to reduce the staff to one keeper. The oil light must have constant attention, you cannot leave it, but a gas light you can leave, and hence the Commissioners resolved to put gas into some of those smaller lights in the Sounds.

2530 What was the cost of the change?—It costs about £300 on the average.

2531. And you save the wages of one man?—And we save the wages of one man.

Acetylene was used for beacons.

2532. Annually?—Annually, yes.

2532a. Have you made any experiments with acetylene, or have you actually adopted acetylene?—Yes, we have acetylene in four beacons on the coast of Scotland now.

2533. And has that proved successful?—Very successful indeed. The old oil beacons are not found to be very reliable; we cannot get a reliable character out of them very well. The only way in which a character can be got is by the heat from the flame going up through a vent on the top and driving shades round the burner and so occulting the light. The result is that if it is still weather these shades go slow, and if it is breezy weather they go fast, and you cannot get a regular character out of them. Well, what we can do with gas is this, by putting in what is called a flasher we can get an absolute character, a steady character, showing two seconds light, four seconds dark, etc.

2534. Are you speaking now of acetylene?—Of acetylene. I am giving the reason why we have adopted acetylene instead of the oil burners at unattended lights. These are what we call unattended.

Lightships: Unattended, are satisfactory.

2535. You have, I think, some unattended lightships have you not?—Yes, we have two now.

2536. Have they proved successful?—Yes, very successful.

2537. Where are they?—One is at the Otter Rock, off the south end of Islay, and the other is at Skerinoe, in the Minch.

2538. Do you consider they have an advantage over lighted buoys?—Yes, they can carry a better light and at a higher elevation; it is more easily seen.

2539. While the cost is very much less than that of a lightship?—The cost is very much less than a lightship, both in first cost, and, of course, the maintenance is very small.

2540. What is the maintenance?—For the gas it is a mere fraction; I should think something like perhaps £30 or £40 a year; that is including repairs.

2541. As compared with the expense of a lightvessel amounting to about——?—£1,400 a year.

2542. And the first cost?—And the first cost; about £11,000 to £12,000 for a fully-manned lightship, the unattended vessel only costs £3,000. Of course, there is this disadvantage attaching to an unattended lightboat, namely, that we can have no fog-signal, bar a bell.

2543. That is, as compared with the manned lightship?—Yes.

2544. As compared with a buoy it does not have that disadvantage?—No, but as compared with the vessel, the unattended lightvessel, we have no really effective fog-signals on board; we cannot have it.

Fog-signals: Relative advantages of different kinds of,

2545. Well, as to fog-signals, what are the fog-signals which you regard as most satisfactory?—The siren, undoubtedly.

2546. Do you work the siren with oil engines?—With oil engines now since their invention.

2547. Explosive fog-signals you only use where you are compelled to use them?—That is so. There are several objections to them. The annual cost is very high. The cost of the explosive charges is very great, and then, we can only fire them about once in five minutes and that is not sufficiently often to give an effective warning to the seaman. We want something to give a report every minute-and-a-half or three minutes at the outside, and we find we cannot work an explosive fog-signal any faster than once in five minutes.

2548. How many explosive fog-signals have you altogether?—Five, I think it is.

2549. Out of a total number of fog-signals of 37. Are the rest sirens or reeds?—There is one reed and the rest sirens, one reed at Pladda.

2550. You greatly prefer the siren to the reed?—Oh, yes, it is very much more effective.

Experiments: Undertaken by Northern Lighthouse Board.

2551. Now, as to experiments. I gather that the Commissioners do not spend very much on experiments?—No, Sir, not in making direct experiments, not in carrying out large experiments upon illuminants or anything of that kind; no, we do not do that, but, of course, we are always experimenting in this way, that we invite anybody who will come forward to give us an exhibition and show us what they can do; if we are satisfied it is a satisfactory thing we carry it out. Perhaps you would like me to give you some details about that?

2552. Yes, we should like that, if you please.—Well, the South Foreland experiments I suppose you have no doubt heard about from others. In that case the Elder Brethren invited the Commissioners to see those experiments carried out, and I personally attended and saw them, and reported to our own Board on the subject.

2553. Trinity House would, as matter of course, invite you to any important experiments?—Yes, I think so; they have always done so. In the same way if we have anything we always invite them. Then the intensity experiments at the South Foreland. In 1893 there was a series of experiments carried out under Sir James Douglass and Mr. William Douglass and myself. We three were appointed to have those experiments carried out for the purpose of testing the candlepower of burners in different kinds of apparatus and arranging tables for fixing finally the candlepowers of lights, and all the candlepowers of lights as published are founded upon these tables. We did it jointly between us, the three Engineers of the three Boards. Then the Otter Lightship, for example, was, to some extent, an experiment which the Commissioners resolved to carry out. After very careful consideration we convinced the Commissioners and the Board of Trade it would be a good thing to try the unattended lightship, and the Otter Lightship was put down, and it has proved quite sucessful.

2554. The system of measuring candlepower established by you has now been adopted by all the three Authorities in the United Kingdom, has it not?—It was a joint thing; it was carried out by the three Boards jointly—Sir James Douglass, Mr. William Douglass, for the Irish Board, and myself. We three were appointed by the Boards jointly to carry out the experiments and publish the results, and that was done.

2555. You came to the conclusion that the system previously in use gave too high a candlpower?—Yes, certainly. Then the motor siren; that was a thing which we did ourselves, in the workshops, while the sirens were being made in the contractor's workshop. It occurred to me that the note of the siren was not homogeneous; that the pitch rose as the air rushed through the siren and got so shrill that its carrying power, I thought, was defective, and no means that we then employed would brake it so as to keep it running at a constant speed. It occurred to me that if we could drive the siren with a small air motor like a windmill this defect would be got over, so we put a small motor on the next fog-signal we had in hand. We designed a small motor to put on the siren, a thing costing perhaps £4 or £5, and found it was eminently satisfactory, and practically all our sirens have been altered to that. The increase of power has been so great that it has made a wonderful effect on our signals, and we now use it universally.

2556. (*Admiral Henderson.*) Has that been adopted by the other Boards?—No, Sir, I do not think they have adopted it. It was tried at the St. Catherine's experiments, and I think it proved itself to be satisfactory. I do not think they have adopted it. Then there were the St. Catherine's fog-signal experiments. The Elder Brethren invited the Commissioners to send an instrument to try, which they did, and they also asked them to give any suggestions as to how the experiments should be carried out. That, also, the Commissioners did, and the results have been published. I do not think that they quite gave effect to what we suggested, but I was down there and saw some of the experiments tried, and reported to my own Board.

2557. At all events, in all these experiments the three Boards were co-operative?—We were. I do not know what was done by the Irish Board, but we were certainly invited. Then acetylene gas; well, with that I experimented, and this was done, not for the Commissioners, but for the Clyde Lighthouse Trustees, and there we introduced acetylene, and subsequently, seeing the effect of it on the Clyde and at other places in Scotland, the Commissioners have adopted it, but they had nothing to do with the introduction of it. Then there were these experiments I have told you of, that were made about the incandescent oil-burner—the French burner, Mr. Matthews' burner, and Chance's burner. Then in 1902, a Canadian firm approached us with an instrument called the diaphone,

Mr. D. A. Stevenson.
5 Dec. 1906.

which promised to be a very effective fog-signal, and the Commissioners said to them, "Well, if you think it is worth your while we will be very glad if you will put down a diaphone alongside our signal at Girdleness; we will try it and see whether it is of any use or not." They accepted the terms, the experiment was made, the instrument was put down, and we tried it, and although it was good it was not as good as the siren, and they were satisfied that it was so. But I may say, within the last six months, they have returned to the charge, and I hope we may have another trial of it. They say next spring they will come over and let us try it again, as they have now greatly improved it. There are points in it that one can see, from a scientific point of view, that make it possible that it may be a better instrument, especially that very point, getting a note of constant pitch that I was trying for with the motor siren. If this diaphone will work and carry out what they say, it will be better still, from the point of view of keeping an even note without that rising and falling—a homogeneous note.

Fog-signals: Areas of silence of,

2558. (*Chairman.*) Have you had experience of zones of silence in connection with sirens?—Oh, yes, Sir. We were very much troubled at Stroma with that, but we found that pointing the horn into the zone eradicated the defect to a large extent; I do not say altogether, but it is very much eradicated.

2559. We have had evidence from Mr. Matthews that areas of silence vary greatly with the different conditions of locality and weather?—Yes, I should think that is so. I think myself, as I pointed out in a report I made to my Commissioners, that it has something to do with the different temperature of the water and air. We generally find, where there is a pretty strong tide, there is the place where we get this silent area. That is my experience, and I think it must have something to do with colder water or warmer water, I do not know which, brought by the tide race from down below and running past the lighthouse, encountering the air of a different temperature, making currents ascending and descending, which interfere with the passage of the sound.

Experiments: Undertaken by Northern Lighthouse Board.

2560. But that is a suggested explanation of a matter which is still obscure?—Oh, quite obscure. That is merely my theory. Then the Reavell Compressor for compressing air for fog-signals. When we were introducing a new fog-signal, instead of putting in our old compressor to all three engines, we put a Reavell compressor to one of them to see what the effect would be. There was a good deal of trouble with what we call lift-valves in the ordinary compressor, and noise which interfered with the proper attention to the engine. This Reavell Compressor did away with that, and the last two installations have had the Reavell Compressor put to it, and they are giving every satisfaction. Successful experiments in wireless telegraphy for lighthouse communication were made by the Commissioners before the days of Marconi, and recently a system substituting wireless telegraphy for sound fog-signals was also experimented on by them. Then a small matter: We found in our unattended lights where we were burning oil that they very often took fire and did considerable damage. The flame seems to rise and set fire to the oil in the burner, and on several occasions considerable damage was done to the prisms. The place was not burned down in any case, because we build them of iron, but there was considerable damage done to the lens. It occurred to me the only cure for that would be to put what we call a fusible plug into one side of the burner, with a chain attached to it, supporting a lever which actuates the cock of the cistern where the oil came from. If the flame rose and the burner got too hot, this plug melted, the chain released, the lever fell and shut off the oil, with the result that the only damage that was done then was the burning of the oil in the burner, and it did not flow out of the receiving chamber and cause damage. This was effected by a small experiment, probably three days of a mechanic in a workshop. And, lastly, we have the dissolved acetylene. Well, we are in correspondence now with the London Acetylene Company, who propose to give us a demonstration of what dissolved acetylene can do, and the Commissioners, I think, are prepared to give them an opportunity of showing what they can do in that way.

2561. Do you consider that it would be an advantage to spend a larger sum than is now spent out of the Lighthouse Fund on experiments?—Well, if any important question arose, such, for example, as was tested at St. Catherine's or at the South Foreland in the old days; if any questions of that kind arose, then I think it would be important. So far as I know I do not know any good that we could do with it.

2562. You think you ought to have in sight a definite experiment before spending money?—That is my idea; I think so.

Contracts: Allocation of,

2563. Well, now, as to contracts, I suppose it is the fact that practically all your new works are executed by contract?—Yes, all our new works by contract. Tenders are invited on detailed plans and specifications, with the exception of the dioptric apparatus, which is obtained now under an arrangement with Messrs. Chance.

2564. That is a special arrangement with Messrs. Chance?—That is a special arrangement with Messrs. Chance. It has been in vogue now for eight years.

2565. Messrs. Chance are the only British makers of dioptric apparatus?—They are the only British makers. At first the Commissioners were very much against it, because we did not consider that the work supplied by Messrs. Chance, the class of the work, was so good as what was produced in France, and it was not at one time, but I must say that since we have been at them they have improved considerably, and certainly within the last six years there is a great improvement, so the Commissioners, when the arrangement was again gone into, did not oppose it very strongly.

2566. I imagine it was the feeling of the other Authorities and of the Board that it would be undesirable to be dependent entirely on foreign countries for dioptric apparatus?—I believe that was so.

2567. Do you think you get the dioptric apparatus at a reasonable price from Messrs. Chance?—Yes, I think we do; I do not say you would not get it a shade less if you did go to open contract.

2568. But the difference would not be substantial?—I do not think it would be substantial. You see, there are several makers in France who might compete and bring down the price. The lanterns and machinery of all kinds are obtained by competitive tenders from firms, if possible, in Edinburgh or Glasgow. The object of that is to enable me and my inspector and my assistants to be constantly on the spot where work is being executed. We have an inspector who is for ever going about through these shops in Edinburgh and Glasgow seeing every detail of the work turned out, and, of course, I personally, can very constantly see the work as it goes on in these shops.

2569. There are several of those firms?—There are four.

2570. So that sufficient competition is secured?—We are getting very low prices just now. A good deal depends on the amount of work which is going on, generally, what your prices are, and for example, just now things are very low.

2571. Now as to buildings, it is the duty of the Engineer to make plans, I suppose, for buildings?—Yes, I prepare the plans.

2572. Tenders are always invited for construction?—Always invited. We generally invite fifteen or twenty contractors. We try to get contractors in the neighbourhood who know the general run. Occasionally we are not able to invite so many as that where we have got to take the men out in the steamers to inspect the situation and have them away, perhaps, for two or three days. You will see it is expensive for us to take out so many as that, so the Commissioners make a selection of six or eight, but that is very seldom, only for places like Flannan Islands.

2573. Have the tenders sent in corresponded pretty closely with your estimates?—Yes, as a rule very closely.

2574. Has there been very much difference between the highest and the lowest tender for buildings?—Oh, yes, sometimes 50 per cent.

2575. But on the whole, your estimates have fairly corresponded to the lowest tender?—Well, when you say correspond to the tenders, the whole work has been completed within my estimates, as a rule, but sometimes the tender that is accepted is a little above or below my estimate; it is very close.

2576. You would always accept the lowest tender unless there was some special reason?—Unless there was some special reason. I only know two cases where the lowest tender has not been accepted.

ightkeepers' wellings : Description f,

2577. It think at meetings with the Advisory Committee criticism has been passed more than once upon the cost of cottages in particular?—That is so; that is one of the great points that they always urge.

2578. Will you tell us how the matter stands in your view?—Yes, Sir. As regards the accommodation: The maximum accommodation provided in a lightkeeper's dwelling-house in the Northern Lighthouse Service in cases where their family resides with them consists of one kitchen and three bedrooms, scullery, coal store, provision store, privy, ashpit, and a washing house, which is shared by all the families at the station. Each of the four rooms measures about 12ft. by 13ft. by 10ft. high ,the total area, including the offices, being about 1,081 square feet of floor space for each house. As these houses must be large enough to accommodate a keeper, his wife, and in some cases as many as six or seven children, the Commissioners do not think less accommodation than a kitchen with three rooms could be provided with any regard to health and decency, especially as the visiting officer and mechanics, when any repairs are required at the station, have to be accommodated in the houses for a week or two at a time, no separate accommodation being provided for them. I may say I have nothing to do with the accommodation; that is a matter which is fixed by the Commissioners and their advisers on these points, I have nothing to do with it; they specify what accommodation they want and I prepare the plans. Then construction: The dwellings are built of rubble masonry quarried on the spot, or if not obtainable, of brick in cement and rough cast or harled, with dressed freestone lintels, sills, scontions, corners and copes, the dressed stones being made of as small a scantling as possible, that is to keep down the cost; larger stones cost more and small stones cost less. For over sixty years the houses in the Northern Lighthouse Service have been constructed with no architectural embellishment, either inside or out, the sole endeavour being to make them wind and water tight. The walls are made a few inches thicker than would be necessary in a sheltered position, and flat roofs covered with concrete and Val-de-Travers in place of slates are adopted in exposed places, and these are the only extras which could be dispensed with in less exposed positions. Flat roofs have been used in this service at practically all exposed places since the Northern Lighthouse Board was established (lead being used in the early days), as it is found that slates are too easily stripped off the roofs by gales, and to effect repairs at such remote places as the most of our exposed houses occupy would entail a heavy expense. At some of our exposed stations, soon after 1854, when the advisers of the Board of Trade took a very strong view about the cost of the construction of houses, some of the houses then were built in exposed places with slate roofs, and otherwise of a rather inferior class. Well, the result is, we have very heavy expenses in repair of those now, but we are not interfered with now in that way, and our recent houses cost very little for repairs at all; I do not think it averages above £5 or £6 a station at the outside, and that covers roofs and roads and walls, and everything connected with the station.

use of avy expenditure on,

2579. I suppose the initial expense of the flat roof is considerably more than that of the slate roof?—It is—if you can make the roof with one ridge—between £35 and £40 per house additional. If you cannot do that, if it must be a double-ridge roof, being too wide a span, then it is just about the same price as slates. The walls are made thicker and built with cement in place of lime mortar, because thinner walls in such exposed places are liable in storms to be thrown down or damaged during construction before the roof can be put on to support and protect them, a source of trouble and expense not unknown even with the heavier walls. Often, if a heavy gale comes on while the buildings are being constructed, the walls are twisted with the force of the gale before the mortar can dry. The positions where the dwellings are placed are necessarily very exposed, because naturally the best site for the lighthouse tower is the most exposed in the neighbourhood, and the dwellings must be placed as close to the tower as possible to facilitate the passage of the keepers to and from their duty in the tower. We cannot put them in any shelter, they must be kept out in the most exposed part of the headland. Wherever it may be, they must be close to the tower. It is difficult for anyone who has not experienced it to conceive of the weather these houses have to withstand during on-shore gales. In their elevated position they encounter a force of wind much greater than is experienced at lower levels, and there is absolutely nothing between them and the sea to afford the slightest shelter, while the wind raises sheets of water from the sea which are driven with hurricane force against the buildings, with the result that the houses may with little exaggeration be said to be at such times almost submerged, the courts and roofs filled and standing several inches deep in sea water. Thin-walled, slated-roof houses, in such circumstances, would become uninhabitable in a very short time. The strength of the wind in some of these stations is tremendous. Pieces of stone are hurled up against the windows, carried by the force of the gale from the face of the cliff, the wind coming up the cliff and rushing past the exposure is tremendous. A serious item in the expense of the houses in many cases is the foundations. Most of our headlands are covered with peat to the depth of three to ten feet, so that the walls have to be brought up from that depth, with the result that in some cases, such as Noss Head and Tiumpan Head, there is actually nearly as much walling below the surface as appears above, almost doubling this, the heaviest part of the work. The houses are substantially built, and though carefully built under strict inspection, there is nothing extravagant about them. They would, if erected in Edinburgh or Glasgow, probably cost about 6d. per cubic foot, but of course in out-of-the-way places, in which most of our exposed stations are placed, a very considerable increase of the cost must be expected, and the price has sometimes been as much as 1s. 2½d. per cubic foot. The work is invariably executed by contract, the lowest tender being almost without exception accepted. The following are the principal causes for the high rates contractors find it necessary to ask for the work. At few of our stations is it possible to find lodgings for the workmen near the work, and the contractor has to erect temporary bothies, stores, and stables, etc., for the accommodation of men, material, and horses. In most cases the material and plant have to be brought by sea, transferred to and landed in open boats on the shore, and then carted to the site. Contractors find it necessary to allow a considerable margin for insurance of the material during transit to the site, for loss and damage caused by the frequent handling of the material, for delays caused by bad weather, both in landing the material and the impossiblity of the men working in such exposed places in wet and stormy weather; they have also to allow for the constant attendance of a really responsible foreman, as being so remote they cannot give the work anything approaching constant personal attendance. A few examples of recent cases will illustrate these points:—Sumburgh Head in Shetland—the nearest town is Lerwick, twenty-seven miles distant. All the material, such as cement, timber, ironwork, etc., has to be brought from the South (Leith) 320 miles distant; it must either be taken to Lerwick and carted the twenty-seven miles or landed from the vessel that brings it in small boats in a neighbouring bay, from where it is carted to the site two miles distant and up to a height of 250 feet. Cape Wrath—here the nearest village—is thirteen miles distant over an arm of the sea. The material, as before, had to come from the south (Glasgow, 360 miles); it could be landed only in fine weather on the slip three miles from the site, and thence carted up to the lighthouse at an elevation of 350 feet. Similar descriptions apply with more or less force to such places as Island Glass, Noup Head, Tiumpan Head, Tod Head, Killantringan, Noss Head, Dunnet Head, and only in a less degree to Holy Island, Barnsness, Breasclete, etc., at all of which dwellings have been erected during recent years. At all new stations roads have to be formed, sometimes several miles in length and over difficult ground, water supplies provided, drains cut, and often landing slips formed; while cottages erected in a village or town have merely to be connected up with the water supply and drainage system, and need no special roads or landing places. It cannot be a matter of surprise then that houses erected in such situations cost on an average about £1,000.

Mr. D. A. Stevenson.

5 Dec. 1906.

2580. Would that £1,000 include the cost of the roads?—Yes, over all.

2581. Everything?—The cost per house at Cape Wrath was about £1,153, at Killantringan £840, Tod

Mr. D. A. Stevenson.

5 Dec. 1906.

Head £850. In the few cases where houses for light-keepers have been erected in comparatively easy and sheltered positions, such as Port St. Mary, in the Isle of Man, Oban, Stromness, though by no means cheap places to build in, the cost per house has fallen to between £580 and £700, the accommodation provided being the same as in the other cases, viz., kitchen, three rooms and offices, with the addition of a bath-room.

2582. What would it cost to erect a cottage of that kind in the neighbourhood of Edinburgh or Glasgow, say?—I should think about £450 or £500.

2583. That is with the flat roof and the thicker walls?—Yes.

2584. An ordinary cottage with this accommodation would not cost anything like that?—I cannot tell you that just at the moment. I have given the means of doing that, the cost is about 6d. a cubic foot.

2585. That is allowing for the difference in the character of the cottages?—Yes.

2586. An ordinary cottage such as would be erected in the neighbourhood of a town would not cost that sum?—Oh, no; what I meant was that that house built in Glasgow, the house we build of the necessary strength.

2587. And with flat roofs?—And with flat roofs.

2588. Have you been able to check your expenditure by comparing it with expenditure on other cottages similarly placed?—Yes.

2589. Lloyd's, for instance?—Yes, I have here a statement of that.

2590. Will you let us have that statement?—The coastguard houses have been cited as being erected on a less expensive scale. Lloyd's have recently created houses at Dunnet Head—that is one of our stations—to be inhabited by the coastguard, the details being submitted and approved by the Admiralty, and there the accommodation is practically the same as that of the Northern Lighthouse houses, and the cost has been about £1,029 per house. Lloyds' are also erecting houses at St. Abbs' Head—where we also have a lighthouse station—a comparatively easy place, and there they are providing five rooms per house in place of four, the rooms being rather smaller in area, the lowest tender received amounts to £800 per house. They are also erecting stations at Butt of Lewis and Cape Wrath, with five rooms in each house, and the lowest tender received in each case amounts to about £1,100 per house.

2591. Were those figures supplied to you officially by Lloyds'?—No, Sir, I am carrying out the works for them; they came to me because they found the houses they had already erected in exposed places were unsatisfactory. I should explain, of course, that the Admiralty Engineers have gone fully into the details of each of these, and have made alterations and suggestions, and we have had several schemes to try to reduce the cost, and in fact more than once we have re-issued the schedules to the contractors to see if we could not get lower prices, but it is no use.

Staff: Cost of.

2592. (*Mr. Ennis.*) Could you give us a return of the total cost of the engineering staff? You gave us some details as to the amount of your own personal remuneration?—What I gave includes the whole staff; that is the whole engineering staff of the Commissioners of Northern Lighthouses. It does not go to me personally. I have to remunerate my brother and the whole of my staff from the payment made to me.

2593. That covers the entire staff?—The entire staff, yes.

2594. With regard to travelling expenses, of course I take it when you are visiting a lighthouse you have the service of one of the Board's steamers?—When possible.

2595. And a Committee of the Northern Lights go round and visit these stations themselves?—Yes, they do.

2596. How many steamers have you on the Commission?—We have four.

2597. And would it be correct to say that one of these steamers would be required for your visit, that would occupy about the time of one steamer?—Oh, dear me, no.

2598. Not so much as that?—Oh, no; a very short time.

2599. I mean not your own time, but your assistants' time?—I should think about perhaps six weeks at the outside.

2600. (*Chairman.*) In each year?—Yes, as a maximum, for we inspect most of the local harbour lights by railway, and some of the main stations.

2601. (*Mr. Ennis.*) That would cover the entire time expended with the steamer and her crew in inspections?—Yes, for the engineering inspection.

New W Averag penditu

2602. Now, you say in recent years the Commissioners as a rule frame their estimates and apply for funds to the extent of from £20,000 to £25,000 per annum for the purpose of new works. Was there not a question some years ago of a witness on behalf of the Northern Lights stating that a sum of £10,000 per annum would be more than sufficient to estimate for new works, but that your Board disowned it?—I think Sheriff Guthrie Smith gave that.

2603. (*Sir Frank Adam.*) That was Lord Courtney's Commission?—That was Lord Courtney's Commission.

2604. They reported that £10,000, in their opinion, would be a satisfactory amount to spend annually?—He stated it, and I think the Commissioners themselves——

2605. Adopted that?—No, I think they repudiated that.

2606. That was in 1896, was it not?—Yes.

2607. (*Mr. Ennis.*) And your statement now is that you ask each year £20,000 or £25,000?—Yes, Sir.

2608. How much on the average have you got?—Something very like that, I think; I think it is £21,000, yes, I am sure it is, it is £21,000 we have got.

2609. Each year?—Yes.

2610. And you estimate that £21,000 is not an exorbitant sum to expend on new works, and that you would need fully that amount in the future?—That is the view of the Commission.

2611. That you would need fully a sum of £20,000 to £25,000 to provide for new works in order to have your service effective?—Well, in order to improve the lighting of the coast and to make it what we think is necessary.

Illumin Advant and disa vantage electric

2612. Well, you have told us very distinctly that the electric light is the best light?—Yes, that is my opinion.

2613. You do not approve of adopting it because of its cost?—That is so.

2614. But you would hold that the electric light is the best light?—That is my view.

2615. It is the best illuminant?—That is my view.

2616. That being so, as far as my information goes, I think I am correct in saying there are only five lighthouses on the coast of the United Kingdom which are electrically lit?—It is about that.

2617. One by you?—Yes, one by us.

2618. Four by the Trinity House?—Yes.

2619. And I think none in Ireland?—No, I do not think there are any.

2620. That would be five on the coast of the United Kingdom, but on the French coast there are 20?—Yes.

2621. Therefore, irrespective of cost altogether, the lighting of the French coasts is superior in that respect to the lighting of the British coast?—Yes, but it must be kept in view that the French Lighthouse Authorities have dropped the electric light. With a rush they went into the electric light at the time it was first adopted, and every important light was to be made an electric light. They put in these electric lights. Now they have dropped it; recently they have put in none.

2622. They may not have increased the number, but at the present day there are 20 electric lights in France to 5 in the United Kingdom?—Yes.

2623. That is in the proportion of 4 to 1?—Yes, but I do not think M. Ribière would put in an electric light to-day.

2624. (*Chairman.*) Given an electric light and an incandescent light of equal candle-power, do you consider the electric light is superior?—No; the point is we can get so much higher candle-power with electric arc than by an incandescent oil light.

2625. (*Sir Frank Adam.*) May I put one question in regard to the adoption of the electric light by the French? I suppose they may possibly have adopted the electric light when the power required from the electric light was more than was required at that particular site at the time they adopted it?—No doubt they made a scheme for the whole coast. They were going to convert every important light to the electric light; the whole coast was to be lighted with electricity.

2626. From the mere fact of them having electric lights, it does not follow, coast for coast, they are better lighted than we are?—No. I am quite sure that now they are not putting them in. They have changed their minds again.

2627. (*Mr. Ennis.*) But, so far as the lights go, light for light, their 20 electric lights are superior to 20 incandescent lights?—I would need to see the apparatus they put in before I could give you an opinion of that kind.

2628. Your own lights; the highest candle-power that you have of an incandescent light is 881,000, whereas your Isle of May electric light is 6,000,000?—That is so.

2629. You have stated that the Irish Lights Board favour gas?—At that time; I was merely explaining how the thing arose.

2630. Was it not, as a matter of fact, that a Mr. Wigham in Ireland patented some invention of his which referred to gas burners?—That is so; he patented gas burners.

2631. And the Irish Lights, I assume, took up this invention?—That is so.

2632. You have effected a saving on the oil lighting by the incandescent of 50 per cent. of the oil, and an increase of nearly 250 per cent. in light?—Yes.

2633. And with regard to the French estimate of the candle-power of their electric lighthouses, we are led to believe that they have not adopted the photometric method which was established by the experiments on the South Foreland, and that their estimate should be taken as some 30 per cent. over the actual?—Yes, I would say at least that. It is not a material point, the mere figure stated for the candle-power of the light, as far as the sailor goes.

2634. And as far as your experience goes for unattended lights, acetylene is superior to any other illuminant that you have tried?—Well, I would not say than compressed oil gas. I am not sure about that. You see, we are still in our infancy with acetylene, but certainly it is better than the unattended oil burners.

2635. You have given us some interesting information with regard to the two lightvessels; two, I think you said?—Two, yes.

2636. At Otter Rock and Skerinoe?—At Otter Rock and Skerinoe.

2637. These are practically an experiment. They are practically lightvessels, which are unattended and automatic in their operations?—They are so, but are past the experimental stage.

2638. And you say the only difficulty with regard to those vessels is that you cannot have an efficient fog-signal, you must depend upon a bell?—That is so.

2639. But would a bell which would be mounted on the top of the mast of a vessel of this kind carry sound further than a bell at a lower level in a buoy?—Oh, yes, it would. It is not on the top of the mast; we erect a separate standard on the stern of the boat.

2640. Are you under the impression that the higher you can mount your bell in your lightvessel, the further the sound will carry?—Oh, undoubtedly, because with a heavy sea, or a swell when the bell is low down, the sea interferes with the transmission of the sound from the bell.

2641. Do you think then that those unattended lightvessels for minor lights, and in situations such as, say, between your coast-lighting arrangements and the lighting of harbours, coming as a kind of intermediate light between the large coast lights and the lights of the Harbour Authorities, that they would be efficient in such a position as that?—That is our view.

2642. Could you put in the dimensions of these vessels, and the cost of building them?—Yes, certainly.

2643. Would you kindly give us the dimensions?—Yes.

2644. £30 or £40 per annum, you say, it would take to maintain them?—Yes, about £9 or £10 worth of gas, and the rest for repairs.

Fog-signals: Danger of areas of silence of,

2645. With regard to questions our Chairman has asked you on a very important subject, with regard to this area of silence, we have had from many witnesses references to this, and it seems to be a very important subject, because we are informed that this area of silence varies, and I think you say also that there is some condition—be it what it may, the temperature of the water or some other cause—that makes the locality in which the fog-signal sounds perfectly to-day have an area of silence to-morrow?—There is no doubt about that.

2646. And, therefore, so long as scientists are not in a position to precisely state what the cause is, and undertake measures to remedy the defect, the danger to mariners will continue of getting into an area of silence, and believing that they are not within measurable distance of such danger as the fog-signal may be taken to indicate?—That is so.

2647. And therefore you would consider, I take it, that the expenditure of money on experiments for the purpose of endeavouring to find a solution of that difficulty would be money well spent?—Yes, if somebody came forward with a suggestion of what might be done to effect that.

2648. But does your Board or any other Lighthouse Authority, to your knowledge, offer any inducements to inventors or to scientists to solve the problem?—Only this, Sir, that if it is successful we will adopt it; that is all.

2649. But it seems to me in the case of lighthouses that it is different from an invention, say, of general utility. If a man makes an invention of an article of general utility, if one person does not buy his patent from him somebody else will, but if he designs something for a lighthouse, and if the Lighthouse Authority will not pay him adequately for his invention or his trouble, he has no other market?—But I think the Lighthouse Authorities would be only too glad to pay him if he can produce what is wanted. I think there is no doubt about that.

2650. The incentive to inventors to get on the track of endeavouring to solve a problem such as that is not very great?—I really could not give an answer to that. I do not know really whether it is or not.

Diaphone.

2651. With regard to the diaphone, of course you watched the experiments, and you will watch the future experiments, I take it, with regard to that particular instrument as to how it affects the area of silence as well, because it seems to be a most important subject?—It is indeed; of course I will Of course the thing, if it ever could be carried out, is submarine signalling. From the experiments we have already tried ourselves, I should like to see that done.

Submarine signalling desirable.

2652. Questions have been put to a previous witness upon that subject. The submarine signal means the necessity of establishing an installation on board which, though perhaps not a very expensive installation, means that it must be installed if the vessel is to have the benefit of submarine signalling?—That is so.

2653. I mean that it is not an outside agency which would benefit all shipping. It will only benefit shipping which are properly fitted?—That is so.

Lightkeepers' Dwellings:

2654. With regard to the dwellings, could you give us some little information. First of all as to how many of these dwellings that you spoke of have been constructed of rubble masonry from stone quarries on the spot, because if you have stones that you can quarry on the spot the weight of the other materials that would be necessary to construct a house would not be very large, and it ought to reduce the cost in my estimation very considerably?—It would be a great deal more if we had to convey all the stone to the site.

Mr. D. A. Stevenson.

5 Dec. 1906.

Description and cost of,

2655. It is a subject I have some experience of, and the cost of 1s. 2½d. seems enormous for a building of this kind. What thickness were the walls of these buildings?—Two feet.

2656. But you do not estimate the building of rubble masonry 24 in. walls, in the vicinity of Glasgow, would cost £400 or £500?—Yes, with flat roof and cement mortar.

2657. How is your flat roof constructed?—It is iron beams and concrete and Val de Travers.

2658. Rolled iron joists?—Yes, and a very thin layer of Val-de-Travers.

2659. And yet you estimate that that would cost as much as £500 or £600?—Yes.

2660. Prices must be very much higher than in Ireland. The value of masonry 24 in. thick in Ireland would not be so much?—This is built in cement.

2661. The cost of a perch of masonry built in lime mortar would not be more than 11s., 8in. thick?—A perch, taking an average of three stations, costs 16s. 2½d. for cement mortar, and 11s. 9½d. for lime mortar; that would be the cost with us at out-of-the-way stations.

2662. It seems to me to be a very high price?—We cannot get it any cheaper.

2663. Prices vary in different countries. How can you arrive at the cubic contents of the houses that cost these figures that you give us. I mean is the method of arriving at it the same as mine would be, that is to take the cubic contents at half the depth of the foundations and half the height from the ridge to the foot of the roof?—That is so, practically; for a slated roof we take half the height of the ridge to the under side of the base course, and for flat roofs from lower side of plinth to under side of base course.

Engineer to Northern Lighthouse Board: Duties of,

2664. (*Admiral Henderson.*) I think you said just now that you have nothing to do with the administration of the Board?—No, Sir.

2665. You have only to do with the engineering work of new works and very large repairs?—That is all.

2666. Of course you are acquainted with the administrative system?—I am.

2667. Are you acquainted in any form with the administration of these various bodies that you have enumerated on page 1?—Yes.

2668. The Lighthouse Authority for the Indian Government and Chinese, Newfoundland, Japanese, etc.—do you know anything about their administrative systems?—No, only those at home.

2669. You are acquainted with the Trinity House and the Irish Board?—And with the Clyde Lighthouse Trustees, not the Clyde Trustees, they are two different bodies.

2670. But that is comparatively small?—Oh yes, quite small.

2671. Have you any idea what it involves—what is the annual cost of the system altogether—what do they pay. Do you know what is paid at all for the lighting of the Clyde?—No, but I could put in a statement for you.

2672. And the number of lighthouses?—I could get that.

2673. (*Sir Frank Adam.*) Over a series of years?—Five years.

2674. (*Admiral Henderson.*) Yes?—I shall examine the accounts and separate from the lighthouse maintenance what had to do with the dredging of the channel.

2675. Are the lights up to date?—Yes.

Inspection of Scotch Seamarks by Trinity House and Board of Trade.

2676. How long is it since the Elder Brethren and the Board of Trade inspected any of your lighthouses and sites. You mention here at page 2 that the President of the Board of Trade did, but how long ago is that?—Lord Ritchie, I think, was the last. I cannot give you the date.

2677. How many years ago. Is it correct to say not recently?—Oh yes, comparatively recently. Nearly every President of the Board of Trade has visited us.

2678. You do not know when the Elder Brethren were up last?—I cannot give you the dates. It is not very long ago. Would you like me to let you know?

New W Now urgently needed.

2679. Yes, let me know, because it has been asked about. Are there any other new works of pressing necessity now required?—Yes, the Commissioners think so.

2680. That is I mean after this next year's estimates have been put in; there are still more works of pressing necessity?—Yes.

2681. Will you indicate them?—Yes, certainly.

2682. And the amount that you would require to spend on them. I think I would rather have that; not to waste time by detailing it here, but put it in as a return what you consider absolutely essential?—What the Commissioners consider.

(*Sir Frank Adam.*) Do you mean what he considers essential for the complete and final lighting of the coast of Scotland?

2683. (*Admiral Henderson.*) Not what we would all like to have, not an ideal, but what is really an absolute necessity for all practical purposes?—Yes.

2684. I should like also to know not only the Commissioners' ideal but your own?—Yes.

2685. On the question of putting up new works, is there any local or political interest brought to bear on the Board?—No, County Councils apply, but otherwise none so far as I know. As a matter of fact, I am sure there is nothing of that kind.

2686. When you come to a question of improvements a little further down I want to ask you, are there many improvements of this character still required for the substitution of catadioptric?—Yes, there are 13 of these lighthouses still, and several fixed dioptric lights.

2687. Is there much more to do?—Yes, a good many. I will put them in along with the other list.

2688. Is the whole of the sum required for that improvement put down in the estimate for new works for the year and submitted to the Board of Trade?—The whole sum? I do not quite follow.

2689. Well, have you two sums, one this estimate for the expenditure for the year by the Scotch Board, the Commissioners for Northern Lighthouses, works in progress and works proposed. Now do you, in addition to that, spend any money on improvements?—No.

2690. The whole of the sums that would be spent in improving these lights, as mentioned in this paragraph, would come out of that and not the other?—Would come out of that and not the other.

2691. Now, I would say the same as to fog-signals?—Yes.

General Lighthou Authori Relative efficienc

2692. Now, as regards apparatus, do you think that you are ahead of the Trinity House and the Irish Board?—No, Sir.

2693. You are on equal lines right the way through?—Quite.

2694. Is the candle-power measured by the Trinity House system?—Not the Trinity House; it is the combined system of the three Boards.

2695. Then, again, you speak about improvements that you have introduced, a great many improvements. I want to know whether you considered that you were ahead of the Trinity House in those respects; were you ahead of the Trinity House in improvements?—These certainly were introduced by us.

2696. They were?—Yes, certainly.

2697. Is there a little rivalry between the Boards?—No, I do not think there is any rivalry.

2698. The length of time, which you say is a very great thing here, has that been adopted by the other Boards?—Yes, certainly.

2699. Then I would ask again about the use of incandescent oil: Were you before the other Boards in this respect?—No, I do not think so; just about the same time, I think.

Illumin Adoptio gas.

2700. I have another question to ask: Has the system of gas-lighted lighthouses been adopted anywhere else?—Oh, yes.

2701. By the other Boards?—Yes, certainly.

2702. The gas-lighted lighthouses?—Yes; lighthouses or beacons lighted with gas they all have, but they have not our system of gas lighting with one keeper.

2703. And also your small unattended lightvessel unwatched?—No, they have not got an absolutely unattended lightship; I think they have got a partially unattended one.

2704. Do you know whether the position of your unattended lightvessel is specially favourable to it or do you think there are positions on the Irish and English coasts that would be favourable?—I have not gone into that. It would not do as a substitute for the majority of their lightships, as the unattended vessels can have no efficient fog-signals.

Acetylene gas only employed by Scotch Board.

2705. And as to acetylene, do you know whether anything has been done by them with regard to acetylene?—They have not introduced it.

2706. They have not introduced it?—No.

2707. As to your fog-signals and engines, are you ahead of the other Boards in regard to those?—Well, I think our siren is better than theirs.

2708. (*Chairman.*) Have you adopted Lord Rayleigh's form of siren?—No, at the experiments it did not turn out so well as was expected.

2709. (*Sir Frank Adam.*) What siren?—Not a siren, a form of trumpet.

Experiments: Communication between Lighthouse Boards as to,

2710. (*Admiral Henderson.*) Are you in communication with other Boards as to what experiments are necessary?—I do not know that we have ever had any absolute consultation with other Boards.

2711. You do not put your heads together to say that experiments should be carried out in this direction or that direction?—Well, I think I may say that was done in the case of the South Foreland experiment on fog-signals, and also at St. Catherine's practically I think it might be said.

2712. Your action is independent so far as regards the experiments that you carry out?—So far.

2713. But the other Boards, of course, know, as you say here, about the experiments at the South Foreland and St. Catherine's. St. Catherine's were the latest, were they not? In what year were they?—1901.

2714. I understand you do not manufacture anything at all?—No, we have no workshops.

2715. Would there be any advantage in your manufacturing any instruments or machinery?—No, I do not think so.

2716. You know about the Blackwall works of Trinity House?—I have been in them.

2717. Do you believe in the efficiency of that system?—I do not know as to that.

2718. You are not in a position to judge from the administrative point of view?—No.

2719. Do you know what is the average amount of the Scottish light dues?—I am sorry I cannot give you that, Sir, you will get that from the Secretary.

2720. I am going to ask you a question from the national point of view. With your experience of the whole lighthouse system, generally, do you think that if the three Lighthouse Boards were put under one control and management with a properly decentralised system many economies could be secured?—That is a question I would rather you put to the Commissioners when they come before you.

2721. You have your private opinion, I suppose?—No, I cannot say I have ever considered that; I would like to see a scheme, and consider it before I could reply.

2722. Have you ever troubled your head about the whole question of the lighthouse administration at all?—No.

2723. Have you any suggestions to offer which would improve the system and further efficient and economical administration of the functions now appertaining to the three Lighthouse Boards?—No, I have no suggestion.

2724. Is the control of the Trinity House over your Board necessary, such as is exercised?—Would you not ask that, Sir, from some of our Commissioners. I think that is a question you should put to them.

2725. You are a man with enormous experience: you are an outsider, so to speak?—I can give you the facts, the results of our dealing with the Trinity House, an opinion of that kind is a thing you must take from the Commissioners.

2726. As to the annual cost; the total annual cost of the work in your department is only what we see in these estimates, these sums you gave just now for the salaries of yourself and staff?—Yes, Sir, that is so.

2727. Have you ever compared the expenditure of the Trinity House and the Irish Board with those of yourselves?—In regard to new works.

2728. Anything to do with administration?—No.

2729. But you are acquainted with their systems of administration, I suppose?—Yes, I am to a small extent familiar with it.

SEVENTH DAY.

Thursday, 6th December 1906.

PRESENT:

The Right Hon. G. W. Balfour (*Chairman*).

Sir Frank Forbes Adam, C.I.E.
Colonel I. J. C. Herbert, C.B., C.M.G., M.P.
Vice-Admiral W. H. Henderson.
Mr. M. A. Ennis.
Captain C. Bigham, C.M.G. (*Secretary*).

Mr. C. W. Scott, called in; and examined.

Mr. C. W. Scott: Qualifications and appointments of,

2730. (*Chairman.*) You are engineer to the Irish Lights Commissioners?—Yes.

2731. What are your qualifications? Are you a member of the Institute of Civil Engineers?—I am an Associate Member of the Institute of Civil Engineers.

2732. When were you appointed?—I was appointed Engineer in October, 1900.

2733. Have you held any office under the Irish Lights Commissioners previous to that?—I was appointed Assistant Engineer in September, 1894.

2734. That was your first connection with the Board?—My first connection with the Irish Lights was when I was appointed Assistant-Engineer in 1894.

2735. Will you describe to us the personnel of the Engineer's Department?—Well, I have one assistant-engineer, and there is one permanent draughtsman, and a chief clerk of works. The chief clerk of works is rather an anomaly. He chiefly works in the office, but his principal duties are to take personal charge of all the workmen doing work for the Commissioners direct on the coast. Whenever there is any work to be set out on the coast, he goes out to set it out. He brings the men out, and shows them what to do. I give my directions to him, and he gives them on to the men who are actually doing the work.

Engineer's Department of Irish Lights Board: Personnel and duties of,

2736. That is to say, when the Commissioners are carrying out work themselves?—Yes.

2737. He is employed on any particular job?—He is

Mr. C. W. Scott.

6 Dec. 1906.

Engineering Department of Irish Lights Board: Personnel and duties of,

the man who goes out. For instance, if we are starting work on a rock station, he will go out and spend a week on the rock, and get the work under way, and then he will go and pay two or three visits to the work whenever we think it necessary while it is going on, to keep things straight, and make sure that the work is being done in an economical manner.

2738. Is that the whole personnel of the department?—No; in addition to that, I have a clerk. He is not on the regular permanent staff; that is to say, he is not entitled to pension. In addition to that, at Kingstown there is a foreman mechanic or mechanical assistant. There is rather a doubt as to what his proper title is. He looks after all the work in the shops at Kingstown, and he inspects materials, everything in connection with iron and steel work, and in addition to that I have to lend him to the Secretary or Inspector's department to look after the machinery of the steamers. The machinery of the steamers is not under me personally at all; I have nothing to do with it, but my mechanical assistant looks after it for the Inspector in the case of the "Ierne," and for the Secretary in the case of the two big ships.

2739. I see; he belongs to your office, but he does work outside your office?—All orders to him are sent through me; I have to issue them to prevent conflicting orders going to him.

2740. He is responsible for the machinery of the steamers?—That is a thing that has never been perfectly clear to me, as to whether it is the Secretary or my mechanical assistant that is held finally responsible, but I think it is the latter. Whenever the Secretary wants anything done to the engines, or the boilers of the steamships inspected, he asks me to send the mechanical assistant to do it, but personally I have no responsibility in the matter whatever.

2741. I understand; really the responsibility lies with the Secretary, who borrows one of your officials for the practical work?—That is it, and in the case of the "Ierne," the small steamer which is used for attending the West Coast stations, the Inspector borrows my mechanical assistant for any work required to be done to her boilers or engines.

2742. Do you mean that the "Ierne" is not under the Secretary, and the other ships are?—The "Ierne" is under the Inspector, and the other two ships which do the general work on the coast are under the Secretary so far as repairs are concerned.

2743. And your mechanical assistant is liable to be requisitioned either by the Secretary or the Inspector?—Certainly.

2744. Are any orders given to him?—They just pass as a matter of form through me, to prevent us ordering him to do two things on the same day, and that sort of thing.

2745. That is all you have to say about the personnel of the Engineer's department?—That is practically all. There is a number of permanent workmen attached to my staff, but they are not on the office staff, and in addition to that we generally employ from two to four temporary draughtsmen.

2746. How many permanent workmen are there?—Well, there is a foreman lamp-fitter and an assistant lamp-fitter, a foreman carpenter, a foreman rigger, a blacksmith, an assistant blacksmith, a retort setter, and two painters.

2747. Are not the Kingstown workshops under you?—They are indirectly. I mean to say I am responsible for all the work done in them, but they are directly under the Superintendent.

2748. But the Superintendent acts under your orders?—He acts under my orders practically.

2749. When you say "practically," do you draw any distinction?—Well, what I mean to say is, if there was any difference between us at all I should get the Secretary to send him an order in writing. He is not on my staff; the bulk of his duties, which are looking after the stores at Kingstown, are not under me at all. Of course, all the workmen, both in the stores department and in the shops at Kingstown, are directly under his orders.

2750. He also is to some extent serving two masters. He obeys your orders, but he is immediately subordinate to the Secretary?—He is immediately subordinate to the Secretary.

2751. Does the arrangement work well?—It works very well. I have never known any friction, or anything of that sort to arise. It is a good thing in one way, because occasionally a difference of opinion arises, and it is a very good thing to have it thoroughly thrashed out.

Engineer to Irish Lights Board: Duties of,

2752. Now will you proceed to your own duties, please?—Do you want them in full detail?

2753. I should like those in full detail?—I have to answer all correspondence on all subjects connected with the maintenance in proper repair of all lands, roads, fences, buildings, lighting apparatus, fog-signal apparatus, gas plants, tools, instruments, machinery, cranes and derricks, flag-masts and signalling apparatus, wharves, boat landings, etc., in connection with all the lighthouse and fog-signal stations, beacons, perches and buoys, offices, workshops, stores, and buoy depôts; also the lanterns, lighting apparatus, and fog-signal apparatus, and machinery in connection with the lightships; order all materials, plant, tools, etc., in connection with the maintenance of above in proper repair, including all paints and oils, etc., required for the annual and quinquennial painting of above, and the replacing of worn and obsolete apparatus, buoys, moorings, etc. I am responsible to the Board for the efficient maintenance of above, and the accuracy of the character of all lights, signals, and day marks, in accordance with their published descriptions. I check the accuracy of all published descriptions of character of new lights and other marks and alterations in same. I test and am responsible for the quality of all oils, coals, and other consumable stores used for lights, fog-signals, etc., materials used in maintenance and repairs, buoy-chains and moorings, crane-chains and ropes, etc., etc. I employ, direct, and superintend all mechanics, labourers, and other workmen in the maintenance and repairs of above, in the workshops and on the coast. I certify all accounts for labour and materials employed for above purposes. I make surveys, prepare estimates and designs, and report to the Board on all special repairs, alterations, and additions required from time to time for above purposes. I instruct and supervise the work of all members of my Department employed in the office, workshops, and on the coast, and am responsible for their work, and the faithful and diligent discharge thereof. I have to make myself acquainted with all new apparatus, inventions, and methods relating to buildings, lighting apparatus, fog-signal apparatus, buoys, beacons, etc., and myself devise new apparatus, methods, etc., to test same when practicable, and to report to the Board on any of them that appear to me likely to be useful. I prepare programmes for, make all necessary preliminary arrangements, prepare apparatus, and carry out all experiments ordered by the Board, and report on the results obtained from such experiments. I superintend the instruction of light-keepers in the management and use of gas-making, lighting and fog-signal apparatus. I devise and prepare schemes, with plans and estimates, for all proposed new works, alterations, and improvements in the lighting, fog-signalling, beaconage, and buoyage of the coast, building of dwellings, stores, offices, workshops, etc., and report on same to the Board. I assist the Secretary in the drafting of letters and reports on technical subjects. When new works, etc., are sanctioned, I have to prepare drawings, specifications, bills of quantities, forms of tender, etc., and send them out to contractors; to report on tenders received, arrange contracts, employ clerks of works, choose sites, and arrange for purchase of land, supervise the work, inspect materials and apparatus, certify acounts for payment, and be responsible to the Board for the due fulfilment of the contracts. In cases where contractors are not employed, in whole or in part, I have to make all arrangements, order all materials, apparatus, etc., inspect same during construction, and when completed, employ foremen and workmen to carry out the work and bring the job to successful completion. I am held responsible for the due maintenance of the light or fog-signal, or such temporary lights or fog-signals as may be necessary during the progress of new works or alterations, and have to design, prepare, erect and arrange for the maintenance of such temporary lights and signals. When new apparatus, etc., is installed, I have to instruct the light-keepers in the use and maintenance of same, prepare and issue rules and instructions to guide them, and employ experts to do the work until such time as I am satisfied that the light-keepers are competent to do so without expert assistance. I certify all accounts for materials, labour, etc., in con-

nection with such new works and alterations. I prepare answers to all questions submitted to me on technical subjects. I prepare the annual estimates for all maintenance of structures and apparatus, special repairs, new works, maintenance of buoys, beacons, etc. I attend meetings of the Board and Committees when required, and accompany the Inspecting Committee on their annual tour of inspection. I condemn and arrange for the sale by tender of all obsolete, useless, and worn-out apparatus and materials which have been under my charge.

2754. Do your duties include periodical inspection of the lighthouses and seamarks, to see that they are all in proper working order?—I do that annually when I go round with the Commissioners. The Commissioners make an annual tour of all the lights on the coast.

2755. And you take the opportunity of going with them and seeing that everything is in proper order?—Yes, and of course there are numerous occasions when I visit individual lights in addition to that.

2756. (*Colonel Herbert.*) Is that all laid down in the regulations?—It is not all laid down in the regulations.

2757. There are regulations of the Board; do they contain any instructions?—Nothing in detail at all.

2758. (*Chairman.*) This is merely a summary that you have prepared for our use of your actual duties?—Yes.

2759. They are not laid down?—There is practically nothing laid down. I have never had any actual statement in writing as to what my duties are.

2760. Is it part of your work to attend meetings of the Board regularly?—Yes; well, not regularly, but whenever possible I am supposed to be in the office during the time the Board meetings are going on, and when anything crops up that they want me for, they send for me. I more often attend committee meetings than Board meetings.

New Works: Execution of, by engineer's staff or by contract.

2761. Are any works carried out by you and your staff?—Yes.

2762. As well as by contract?—I think on the whole more works are carried out by us direct than by contract. Whenever we are starting new works the whole question is gone into thoroughly, and if it appears to be a job on which it is likely that we will be able to get the work done at all economically by contract, we prepare forms of tender, get tenders in, and if any of them are lower than we know we can do the work for ourselves, we recommend them for acceptance. But if we know we can do it cheaper ourselves, I state so to the Board, and recommend them to get it done by our own men.

2763. Would you kindly put in a return of the various works which have been carried out by yourself and your staff during the past few years?—That is new works and repairs?

2764. New works and repairs?—There are a great many, I may say the majority of our jobs, in which portions are carried out by contract, and portions by ourselves.

2765. You are speaking now of new works?—Both new works and repairs.

2766. Both new works and repairs?—Any part of it that we think we can do more cheaply by contract we get a contract for.

2767. What we should like is a statement of the various new works and principal repairs carried out, let us say, within the last three years, distinguishing what has been done by contract and what has been done by the Engineer and staff?—And where a job has been done partially by contract and partially by ourselves, am I to say so?

2768. You had better distinguish so far as you can?—Thank you.

2769. And in addition to that, where work has been tendered for and the tender has not been accepted, we should like that made clear, and the amount of the lowest tender which was rejected?—All right, Sir.

2770. And the ultimate cost of the work as executed by the staff?—There is this to be said with regard to that, that it is practically impossible for me to give you that accurately, because by the method in which our accounts are kept, in order to meet the Board of Trade Regulations, there is no attempt made at what I might call prime cost. I mean to say, any one job is charged up complete, and there is no subdivision made of it at all.

2771. You are now referring to ——?—I may say, in a case where a portion of a job was put up for tender, and then we eventually decided to do it ourselves, because the tenders were too high, I could not give you accurately what it did cost us to do it. If it was a complete job I could.

2772. Well, where it is possible to do so, you can give us the information?—Where it is a complete job I could. That is for three years?

2773. Yes, three years, unless we make a written communication to you altering that term?—There are a great many of our repair works, perhaps the majority of them, for which we do not ask for tenders at all; for instance, putting new roofs on rock lighthouse dwellings, because our previous experience of getting tenders for such work is that the prices quoted are simply ridiculous; and, of course, preparing tenders and specifications, and getting in prices, take a lot of time and cost money.

2774. Repairs of that kind would not come under the general head of new works?—No, it is not under new works at all; it comes under the heading of special repairs, which I thought you wanted included. I have a statement here giving you a complete list of all the special repairs and additions during the last 10 years and all new works during the last 50 years, if that is any use to you.

List of, for last 10 years.

2775. I do not think we want a detailed list of the new works going back 50 years, but it might be useful to us if you have got there a list of the repairs for 10 years to have that list, and a similar list of new works; and give us such financial particulars with respect to them as you can, especially distinguishing those works which have been carried out by contract and those works which have been done by your own staff?—The great majority of them are partially one and partially the other. For instance, in altering a light in a lighthouse we will nearly always purchase the apparatus and pedestal by contract, and if there is to be a new lantern we will purchase the new lantern by contract. Then in the case of erection we generally ask the contractor whether he is willing to send in a tender for the erection at the lighthouse, but in nine cases out of ten they say they are not, because they do not know in the least what incidental charges will have to be met, and they nearly always ask us to either do the work ourselves, or let them send a foreman to superintend the work, the rest of the labour being supplied by us. All the work of pulling down the old lighting apparatus and erecting a temporary light, and so on, we invariably do with our own men. I now understand that what you want is a three years' return referring to our new works only.

2776. Well, if it refers to new works only, I think it ought to be a ten years' return?—I see. So far as giving you the total sums expended there is no difficulty about that at all; I have got that here. I can give it you now, but to look up to see what portions were done by contract and what portions were done by ourselves is rather a big question.

2777. Let us say three years?—I will give you three years' detail of the new works.

2778. Then I think we must have repairs included if it is three years?—Three years' new works and repairs.

2779. Important repairs, of course?—That means special repairs; what we get special sanctions for.

2780. (*Admiral Henderson.*) What we really mean is, that there is a large number of works carried out in addition to these proposals which are submitted to the Board of Trade?—Those are new works. We have spent on an average during the last ten years £18,000 on new works, and about £2,400 on special repairs; £2,466 is the average of the last ten years.

Average expenditure on.

2781. (*Chairman.*) Have the members of your staff special duties assigned to them?—Not very definitely; when they are originally appointed, they are told that they have special duties, but that they will be frequently asked to go outside them. The duties of the Assistant-Engineer are to carry out the instructions of the Engineer and assist him in any way he may desire with regard to any of the duties detailed under the heading of "Duties of Engineer"; to exercise

Engineer's Department: Duties of staff of.

Mr. C. W. Scott.
6 Dec. 1906.

direct control over the drawing office and draughtsmen under the directions of the Engineer; during the Engineer's absence from the office he has to take his place, and carry out any or all of his duties as the Engineer directs before he leaves.

2782. And with regard to the other members of the staff?—The regular duties of the permanent draughtsman are to make surveys, prepare plans, designs, specifications, and estimates; to take out quantities, to get out orders for materials, set out work and supervise building operations, etc., on the coast under the direction of the Engineer. The duties of the chief clerk of works are to take direct control of foremen, clerks of works, workmen, etc., employed on the coast, particularly in connection with building construction and the quinquennial and annual painting; to inspect buildings, lands, etc., with a view to repairs, etc., and to report on same to Engineer; to draw up instructions to clerks of works and foremen, prepare detail drawings, set out work, get out orders for materials, and supervise the execution of the work, prepare estimates, take out quantities, order materials, and inspect and test building materials; to prepare the annual orders and estimates from the lightkeepers' demands; to assist in the general office work and correspondence and arrange the work for the Engineer's clerk. The duties of engineer's clerk are to typewrite the correspondence, reports, etc., file and register all papers belonging to the Engineer's department, make out orders, index the copy books, and generally assist the chief clerk of works. The duties of foreman mechanic are to take direct control of the mechanics employed in the workshops and on the coast under the Engineer's instructions; to inspect and test materials and apparatus at the contractor's works and after delivery as directed by the Engineer; to be responsible under the Secretary and Inspector for the upkeep and repair of the engines and boilers in the steamers, and to inspect same when instructed by the Engineer; to superintend the erection of apparatus and mechanical structures on the coast when directed by the Engineer; to assist and advise the Engineer in all matters relating to mechanical engineering as and when directed.

Salaries of,

2783. Will you state the salaries of the Engineer's staff?—The Engineer's salary is £800; the assistant-engineer, £300; permanent draughtsman, £200; chief clerk of works, £182 19s. 3d. These are all the salaries at the present moment.

2784. Not the maximums?—Not the maximums in all cases. The Engineer's clerk, £90 10s. 4d.; foreman mechanic, £300; foreman lamp-fitter, £150. Do you want the permanent workmen?

2785. No; I think that will do?—The foreman lamp-fitter is really a workman. The foreman lamp-fitter's duties are to direct the work of the lamp-fitters, inspect lamps, etc., on the coast, and work in contractor's hands, repair all lamps, etc., sent to the workshops, test oils and other consumable lighting stores under the Engineer's directions; carry out experimental and photometric work, and any other duties in connection with burners, lamps, apparatus, etc., as directed by the Engineer; to supervise the erection and repairs of lamps, burners, etc., on the coast, as directed by the Engineer.

2786. You have put in a list of new works carried out since 1850, and the special works carried out in the last ten years?—Yes; this is the new works; that is special repairs.

Lighthouses: Efficiency of, in Ireland.

2787. Will you give us particulars as to the efficiency of the various lights?—We have got 12 lights which are really first-class lights, which have been brought up to date, or are at the present moment undergoing improvements to bring them up to date.

1. Fastnet.
2. Galley Head.
3. Kinsale, Old Head.
4. Ballycottin.
5. Howth Bailey.
6. Rockabill.
7. St. John's Point, co. Down.
8. Blackhead.
9. Maidens.
10. Blackrock, Mayo.
11. Inishtrahull.
12. Aran Island, North.

2787a. What is the illuminant used in those cases?—They are all incandescent oil, with the exception of Howth Bailey, which is incandescent gas.

2788. Can you state the candle-power of those lights?—The Fastnet is 750,000. I had better not state the others off-hand; I can give you that.

2789. You can let us have a statement put in?—Yes.

2790. Is the Fastnet the most powerful of those lights?—The Fastnet is the most powerful.

2791. 750,000?—750,000; I can tell you the others roughly.

2792. Please put a statement in?—I can send you a return.

2793. You say all of these lights but one are lit with incandescent oil?—They are all incandescent oil, except Howth Bailey.

2794. The system of lighting by incandescent oil is of comparatively recent introduction, is it not?—Yes. In 1900 we began to experiment with incandescent oil burners, but we did not put any actually into use, I think, until the winter of 1902.

2795. And since then?—And since then we have adopted them largely.

2796. In the case of all your powerful lights but one?—All the twelve lights mentioned except Howth Bailey, the apparatus for which was designed before the adoption of the incandescent oil burner. If it had not been, the apparatus which is now at Howth Bailey would not be there. The apparatus for Howth Bailey was designed with the view entirely to using a gas burner, which was at that time thought to be still the most reliable form of lighting. The Commissioners have always been very strong indeed on the point that the most important thing with regard to lighthouses was that whatever light you had you should be perfectly certain that the full advertised power of that light is really given at all times, and they have rather fought shy of going in for burners which require very skilled and careful attention in order to keep them up to their full power. Some of the multiple wick-burners, which give the maximum candle-powers, cannot be left at all, and in the case of having a careless keeper, who neglects his duties, he must turn the lamp down before he can leave it, and the chances are that with ordinary human beings as lightkeepers it will frequently happen that your light will not be burning at full candle-power. With gas lights and with the incandescent oil lights, the light is perfectly safe burning at full power, and there is no inducement whatever to the keeper ever to burn it at anything else. For that reason, until the advent of the incandescent oil burner, the Commissioners were very strong advocates of gas, because of its being so immensely superior in reliability to any other form of burner then in existence.

2797. It is now generally recognised that incandescent oil is the best?—Yes; it is quite as reliable as gas.

2798. In any new installation, incandescent oil would be almost sure to be used?—Almost sure, except in the case of small unwatched lights, in which case probably acetylene or town gas would be used instead.

2799. Will you proceed to tell us about the lights on lightships, buoys and beacons. The list you have now given us includes all the lighthouses?—Oh, no; those are only the 12 lights which at the present day are really what I call first-class and economically efficient. There are other lights in positions of importance which should eventually be improved to render them economically efficient first-class lights.

1. Hook Tower.
2. Tuskar.
3. Mew Island.
4. Rathlin Island.
5. Tory Island.
6. Aranmore.
7. Rathlin O'Birne.
8. Eagle Island.
9. Slyne Head.
10. Aran Island, South.
11. Loop Head.
12. Tearaght.
13. Skelligs.
14. Bull Rock.

2800. How are those lighted at the present moment—with gas?—Well, Hook Tower is a fixed gas light at

Lighthouses: Efficiency of, in Ireland.

present. It could be converted to incandescent oil with considerable saving of money and improvement of power.

2801. Has that been proposed to the Board of Trade by the Commissioners?—No, not yet. The Commissioners have already converted three of their gas lights. They are going ahead by degrees. They are afraid to put too much before the Board of Trade, because they will not allow too much money to be spent on new works.

2802. What does it cost to convert a gas light into an incandescent light?—In most cases of conversion it is advisable to get a new apparatus; it pays to get it. Rockabill is one case where we converted the old apparatus, as it was suitable for the incandescent burner, and we simply changed the burners, and the cost there was about £125.

2803. Was that reckoned a new work?—I think Rockabill was reckoned a new work, but I do not see it down here in the list.

2804. (*Admiral Henderson.*) Rockabill in estimates for 1906-7 is down as for shore dwellings?—No, that is not the one. Oh, no, it was not; it was reckoned a special repair, and it cost £110 6s. 3d.

2805. (*Chairman.*) Where the apparatus has been changed, as well as the illuminant, you have always reckoned it a new work?—Yes; then we have reckoned it as a new work. The cost of that varies, of course, with the cost of the apparatus.

2806. But your policy is to convert many of these lights, but to do it gradually, in order not too spend too much money in a given year?—Exactly, because although it would be possible to tackle most of the lights on the coast, and you would make so much saving in maintenance that it would pay very good interest on the money expended, there is no machinery to do anything of that sort at all. We have not the staff. It would be a very big job to make a complete programme, and take all the lights on the coast as one job; to convert the whole of them into modern, efficient and economical lights, and it would also result in the sending away of so many lightkeepers. It is a thing which could not be done in a hurry.

2807. Even if you were to put it out to contract it could not be done all at once?—Well, of course, a great part of the thing would be done by contract, in any case, but what I mean to say is we have not got the staff to prepare the schemes. It is absolutely necessary to go into the case of each individual light, and prepare a proper and suitable scheme for that lighthouse.

2808. You mean if these changes could be effected at once, there would be an economical gain?—There would.

2809. But there would be great difficulties in effecting them at once, in consequence of the limited number of the staff, and also the necessity that would be involved of dismissing a great many lighthouse-keepers within a very short space of time?—Yes; and it is very questionable whether dismissing a great many lighthouse-keepers and having to compensate them would not run away with all the profit on the transaction. Tuskar is a biform 8-wick apparatus. Mew Island is a triform gas light. Rathlin Island is a fixed light with an 8-wick lamp. Tory Island is a triform gas light. Aranmore is a monoform 6-wick lamp. Aranmore is a case where there would certainly be no new apparatus wanted; the present apparatus would do very well, the cost of the change would only be about £120. Rathlin O'Birne the same. Eagle Island is a light which, personally, I think, probably ought to have a new apparatus. It is at present an occulting light. That is a question that has not yet been before my Board, and I am only speaking for myself. Slyne Head is a biform fixed light at present, and it could be converted by simply changing the burners at small cost. Aran Island, South, is a fixed light, and it is questionable whether it ought not to have a new apparatus and be made a flashing light. Loophead is an occulting light, which, I think, certainly ought to have a flashing apparatus. Tearaght is a biform double-flashing light, which could be converted by simply changing the lamps. Skelligs; we have this year put forward a scheme for the alteration of the Skelligs, which is at present an old catoptric light. The Bull Rock is really a very first-class light, but we are at the present moment engaged in carrying out some experiments to see if we cannot make a very big saving in cost of maintenance at a small expense. It is a question whether the introduction of the incandescent oil burner in the existing apparatus will give as efficient a light as the present gas burners. The duration of the flash will be considerably reduced. The experiments we are now carrying out are to test the proposed new burners of two or three different forms against the existing gas light, to see whether there is any real disadvantage in the shorter length of flash. If we find there is not, then it is proposed at once to go ahead with that, because it would mean a big annual saving—about £200 a year, I think. The lights of secondary importance, which have been brought up to date, or are actually in hand now, are:—

Mr. C. W. Scott.

6 Dec. 1906.

1. Wicklow Head.
2. Kingstown East.
3. Dundalk.
4. Roan-Berehaven.

and the lights of secondary importance which could with advantage be modernised.

1. Roches Point, Cork, which is an occulting oil light.
2. Mine Head, occulting gas light.
3. Haulbowline, Carlingford, occulting oil light.

4 and 5. Inishowen; there are two lights, both of them catoptric.

It was proposed a few years ago to make an improvement at Inishowen, the proposal at that time being to do away with the two lights and substitute an improved single light, but the local people objected so very strongly to this that they were left alone, except for being slightly increased in power by putting in two wick burners instead of one wick burners. That is a pair of lights which certainly ought to be improved soon when money is available.

6. Fanad Point, Lough Swilly; we are proposing to take that in hand next year. The scheme has gone forward to the Board of Trade.
7. St. John's Point, Killybegs, is an old catoptric light.
8. Blackrock, Sligo, is a small fixed light which could be increased in power at any rate.
9. Broadhaven is a small fixed light again, which could be improved.
10. Blacksod Point is a small fixed light which could be improved.
11. Clare Island is a lighthouse which has been built on the top of a mountain, and which would be very much better if it were put somewhere else.

2810. That is an old lighthouse I think?—Yes, Clare Island is a very old lighthouse, and it is an expensive lighthouse to maintain, because I think the buildings were originally badly built, and the amount we have had to spend on repairs there has been very great. Then all the eleven lightships are now revolving or flashing lights of from 4,750 to 20,000 candle power with the exception of Blackwater, which is now being altered, and Skulmartin, which it is proposed to improve when the alterations at St. John's Point are completed. Experiments are now in hand with a view to testing dioptric apparatus of 40,000 candle power on lightships which the Commissioners propose to adopt if the experiments prove that any real advantage will be gained thereby. Fixed lanterns which can accommodate fourth order dioptric apparatus have been fitted on five of the lightships, and are gradually displacing the old objectionable form of rising and falling lantern. I think we were the first in this country to go in for the fixed lantern. They greatly reduce the power required to revolve the existing catoptric lights and make them much more reliable. They keep much better time in heavy weather. Up to about four years ago all lightship lanterns were lowered down on the deck in the day time, the idea being that they had to be lowered down to trim the lamps and then hoisted up again at night. This necessitated having the ship ballasted so as to ride equally well with the lantern down or aloft, which meant that it never rode as well as it could do in either position, and we find in practice, since we have adopted the fixed lantern, that the trimming of the lights is more easily done and as efficiently, without lowering the lantern on deck.

2811. Has that system been adopted by the other Lighthouse Authorities?—The Trinity House have adopted it. I do not know to what extent, but they have adopted it on some ships. I have seen one of their lightships which has a fixed lantern. I believe they adopted it immediately we did.

Mr. W. Scott. Dec. 1906.

2812. The Scotch Lights have only one lightship?—They have only one manned lightship. Then we have 31 of what I call harbour lights; they are all very small lights.

2813. Are those local lights?—No, they are not local lights; they are lights under the Commissioners, some of them are lights which ought to be local lights if there was any local authority to look after them, but in most cases there is not.

Harbour Lights maintained by Irish Lights Board.

1. Spitbank.
2. Youghal.
3. Dungarvan.
4. Dunmore.
5. Duncannon Fort.
6. Duncannon North.
7. Kingstown West.
8. Howth Pier.
9. Balbriggan.
10, 11, and 12. Drogheda, N., E., and W.
13 and 14. Carlingford Leading Lights.
15. Greenore, Carlingford Lough.
16. Ardglass.
17. Donaghadee.
18. Larne.
19. Dunree Head.
20. Buncrana.
21. Rotten Island, Killybegs Harbour.
22. Inishgort.
23. Straw Island.
24. Mutton Island.
25. Kilcredaun.
26. Scattery Island.
27. Tarbert.
28. Beeves Rock.
29. Samphire Island.
30. Valencia.
31. Crookhaven.

2814. Are there no Harbour Authorities in any of those cases?—In the case of Spitbank, at Cork, there is a Harbour Authority.

2815. Is there not a Harbour Authority at Killybegs?—No, I think not. Killybegs has a pier now, which was built by the Congested District Board, but the Killybegs Light is at Rotten Island, which is a couple of miles away from the town. At Carlingford there is a Harbour Authority, but we have four lights at Carlingford, of which one is a rock lighthouse at the entrance; another is at Greenore, close to the pier, which the London and North-Western Railway Company's boats run to, and the others are a pair of leading lights leading into the entrance channel.

2816. Was the Harbour Authority in this case established subsequent to the erection of the lights by the Irish Commissioners?—I think so. Well, certainly the old Greenore Light and the Rock Lighthouse of Haulbowline were established long before Greenore was thought of as a port at all It was simply a harbour of refuge and the entrance to Newry. The two leading lights were put up in 1870; that was when their erection was commenced. I think that the London and North-Western Railway Company came there at that time.

2817. Were the London and North-Western Railway Company a Harbour Authority?—Practically; I believe that they are the Carlingford Harbour Commissioners, who have a large number of lighted buoys there, which go right outside our outside lighthouse.

2818. Do you know under what circumstances it was that the Commissioners agreed to put up these lights, notwithstanding there was no Harbour Authority established?—Oh, I do not know at all; it was long before my day, so I know nothing about it, I am afraid. All the others are small. Of course, Ardglass and Donaghadee and Larne are all, you may say, in harbours; so is Dunmore; they are nearly all actual pierhead lights. So are Balbriggan and Howth. I think in nearly all of these cases these are lights which have come on to us from the old Ballast Board. They built the harbour and the light at the same time, I think. I fancy they are all Government harbours.

2819. Where a Harbour Authority has been established, I presume it is not the practice of the Commissioners to erect lights at the cost of the Light Fund?—Oh, no. I may say where a Harbour Authority is in existence, if they apply for lights or anything the Commissioners always tell them that it is a matter for them entirely; but, of course, we have a large number of those old lights which came to us from the old Ballast Board.

2820. And which you continue to maintain?—And which we have continued to maintain. And there is a very large number of those which could be converted into unwatched lights, but, as I say, it is a very big question. The Commissioners are attacking it gradually. We have a certain number of unwatched lights now:—

Unwatched Lights: Maintained by Irish Lights Board.

1. Mugglins Beacon.
2. South Burford Buoy.
3. North Burford Buoy.
4. South Briggs Buoy.
5. North Briggs Buoy.
6. Hunter Rock.
7. Chaine Tower Beacon.
8. Highland Rock Buoy.
9. Lough Foyle Buoy.
10. Rinalan Point Beacon.

and at the present moment we are engaged in erecting six new unwatched lights, at Sligo. Sligo is a case where we have old lights, which rather overlap the Sligo Harbour Authorities, but the Commissioners have always lighted the entrance into the river opposite Rosses Point, and the channel outside has completely changed now, so that the present lights are absolutely misleading, so they are doing away with one of the existing lights and putting in six unwatched lights. The cost of maintenance will be no higher, and the total cost of the works is only about £2,000. Then there are also at the present moment proposals to light the South Shear and Rosebeg Buoys. Do you want any statement at all, Sir, as to the Commissioners' policy with regard to apparatus?

2821. Yes; if you have anything to tell us on that subject we should like to hear it?—In the fifties the Commissioners were the first people to introduce the use of the Wigham Gas Lights, and 28 years later multiform dioptric apparatus, and their strong advocacy of the value of these lights, chiefly on account of their reliability, and not being dependent on the constant watchfulness of the keepers to maintain them at full power, was a very strong factor among the various causes that gave rise to the general improvement in the power of lights which commenced about this time and led to the famous South Foreland experiments. Although they are now gradually replacing most of these gas lights, it is on account of subsequent inventions which enable them to produce better results—which were then unobtainable—at a great reduction in the cost of maintenance. The Commissioners now install biform apparatus for all their most important lights, as they are satisfied that they have great advantages over monoform apparatus in most cases where great power is required. The principal advantages are: first, the enormous advantage of having the apparatus in duplicate, so that if any accident should happen to extinguish or reduce the power of one of the burners the light is not extinguished, but only reduced down to a minimum of 50 per cent. of its power. Secondly, a flash of greater power can be obtained by a biform apparatus with panels of 90 deg. or 100 deg. vertical aperture than from a monoform apparatus of the same cost and giving flashes of the same nominal duration. Thirdly, the duration of the flash of maximum intensity, which is the important part of the flash, is greater than that thrown from a similar monoform apparatus, with a complete set of prisms. Fourthly, the biform type permits the use of a form of lantern with intermediate cleaning galleries which obstruct no light and which enable the apparatus and lantern glass to be much more easily cleaned, which results in practice in the saving of considerable losses of light due to dirty glass, particularly during snow or heavy gales, when without the intermediate outside gallery it is almost impossible to keep the glass clean in a first-order lantern. When there is driving spume the glass gets so obscured very often as to cut down the light to less than one-fourth of its power, and where you have got a lantern about 14 ft. or 15 ft. high the keepers try to clean it with syringes and that sort of thing, but it is impossible to clean it efficiently, and by using intermediate galleries, by which they can reach the glass by hand, they are able to increase the power of their light by 100 per cent. on a very great number of occasions every year.

Lighting Apparatus Policy of I Lights Bo as to,

Early in 1900 the Commissioners commenced to experiment with incandescent oil burners, and shortly afterwards introduced the first efficient burner of that type which does not obstruct any of its own light above an angle of 60° below the focal plane. There had been one or two experimental burners made before, I believe, which had no overhead obstruction of the light, but this

was the first that was ever put into practice as being really efficient. This burner is as efficient as any, is probably the cheapest to construct, the easiest to manage, and the most economical of all to keep in repair; the cost of replacing burnt-out vapourising tubes—a heavy item with some burners—averages only about 12s. 6d. per annum. The burners are made in the Commissioners' workshops at Kingstown, such parts as can more cheaply be obtained from contractors being purchased from them. These burners are being installed in all important and secondary new lights, and are gradually replacing wick and gas burners in such old apparatus as they are suited to, with a great gain in power and economy. All burners, valves, lamps, piping, etc., are in duplicate and can be interchanged in a few seconds. A few years ago the Commissioners recognised that it was a mistake to vary the power of their lights according to the state of the atmosphere, and consequently they now burn all their lights at full power at all times, except in the case of eight stations, at which, owing to the nature of the burners used, the alteration would result in a very large increase in the cost of maintenance, and they hope to replace these apparatus by degrees, as they have already done several similar ones, with more efficient and economical apparatus which can be kept constantly at full power without extravagance. Constantly aiming at securing economy, where it can be done without sacrificing efficiency, the Commissioners in the case of Larne effected a reduction of cost of maintenance by combining a number of lights under the control of a single principal keeper and a sufficient staff of assistants, and are about to institute a similar system at Crookhaven. They have also introduced the use of electrical machinery to enable the keeper on watch in the lantern to ring the bells at Barr Point and Kingstown, thereby saving the cost of two assistants in the one case and one in the other. In a similar manner they are now preparing a scheme for working a distant explosive signal at Skelligs from the lantern, thereby saving the cost of an additional keeper. With the same object in view they are gradually converting lights to the unwatched principle, and erecting new lights which require attention only at long intervals, such as the Chaine Tower, Mugglins, Rinalan Point, Oyster Island, and the five new unwatched lights at Sligo, most of which will be equal to or greater in power than many of the old lights which require constant attendance. The new dioptric lights erected since 1902 are supported on mercury floats, and considerable improvements have been effected also in the clockwork machinery for rotating the lenses, which can now be accurately regulated while running. Great attention has been paid to the ventilation of lanterns, which has now been brought to great perfection. Attention has been given to the value of lighthouse towers as daymarks, and the colour has been changed wherever it was found that the existing colour did not show up well against the background. The Commissioners have constantly kept experimenting whenever opportunity offered with a view to obtaining more perfect results from dioptric apparatus, and habitually make careful photometric tests on all new apparatus, in addition to a thorough examination of the direction in which the light is thrown by each element of the apparatus.

2822. Is it your duty to carry out those experiments?—Entirely.

ncandescent
l, saving
ffected by,

2823. What do you estimate the saving to be by the use of incandescent oil?—Well, it all depends on the circumstances. It will vary. Where there is a four-wick burner in use the saving is a few shillings a year only, practically nothing; then where a six-wick burner is concerned you save over half the cost of oil, which would be about £20 a year. Going on to a case like Rockabill, a gas station, the saving is about £120. If I remember right the saving at some of the bigger gas stations will be as much as £250 a year.

2824. You are comparing incandescent oil with gas?—Yes; but comparing it with the old wick burners the saving on a four-wick lamp is a very small matter indeed. If a four-wick lamp were always burned at its full power, which it is supposed to be burned at, it would consume a great deal more oil in the year than it really does. On paper I mean you can show quite a considerable saving on a four-wick burner, but in practice you do not realise that saving because the keepers seldom keep these burners at their full power.

2825. I think we have evidence put before us by the Engineers of the other Lighthouse Authorities to the effect that the saving of oil was from one-half to two-thirds?—Well, when you go to anything above a four-wick burner.

2826. And that the increase of light was very great?—The increase of light is enormous. It is, roughly speaking, about four times the power. We have got a very careful record of actual true consumptions. I have been following very carefully what has been done with similar burners outside in France and in Germany, by the Mersey Docks and Harbour Board, by the Colonies, and so on, and all returns that I get shows that in these people's hands an ordinary 50 or 55 millimetre mantle burner has a consumption of one pint an hour—and some of the lights as a matter of fact go even less than one pint an hour; well, I know the burners that they are using, and I have very carefully tested some of them, and the makers of one of the best of them have carefully tested some of them, and we know to a certainty that when you are burning a pint, say, or less than a pint per hour, the candle-power of that mantle is only 1,000 or less, and in order to get a power of about 1,250 candles you must burn very nearly a pint and a quarter. It is almost exactly that you get 1,000 candles to a pint. The result is that where the consumptions are less, as small as they are in practice apparently at most of these stations, they are not burning these burners at full power.

and increased efficiency obtained by,

2827. So that in practice, according to your experiments, the real advantage arises in the increase of light?—In the increase of light, only if you are comparing them with a four-wick burner. In a six-wick burner you save half the cost of oil, and in an eight-wick burner you save two-thirds the cost of the oil.

2828. Will you tell us now what improvements have been made in fog-signals?—Well, a great deal of time and care has been spent in experimenting with fog-signalling apparatus, and a large amount of information has been gained which has been utilised in the design of new apparatus. The Commissioners have formed an adverse opinion against the employment of more than one note in any signal as they have proved that it is impossible to rely on both the high and low notes being heard at equal distances in all kinds of thick weather. Sometimes the high note will carry further and sometimes the low note will carry further with the same signal.

Fog-signals:

Disadvantage of double note.

2829. Is that view concurred in by the other Lighthouse Authorities?—Not entirely. I fancy that Trinity House agree with it and the Scotch do not; but I am not sure about that. One of our best experiments on that point is gained from a Scotch signal, in which we can frequently hear their low note, and we have, I believe, twice or three times in two or three years heard the high note.

2830. It is the low note that carries the best?—As a rule, but on two or three occasions the high note has carried and the low note has not.

2831. (*Admiral Henderson.*) Where do you hear those?—We hear the Killantringan Signal at Mew Island, and at Larne. At Larne, they have never heard anything but the low note, I fancy, but at Mew Island they have heard the high note occasionally and not the low note. It is about 25 miles.

Improvement of, resulting from recent experiments.

2832. (*Chairman.*) I suppose you were present at the experiments carried out by Trinity House at St. Catherine's Point with fog-signals?—Yes, I was. We have carried out systematic tests to ascertain the most efficient area and shape of siren ports in different sizes of instruments and the best methods of efficiently distributing the sound over sectors of different widths, the best method of rotating the drums, the most efficient form and size of trumpet, etc., etc., and have kept ourselves informed of the various improvements made by other workers. These experiments have led to various valuable improvements in the instruments. but it cannot be suggested that anything approaching to full knowledge of the subject or perfection in the instruments has yet been attained. We have also considerably improved the efficiency of our automatic whistling buoys, and are experimenting with what we hope will prove to be a much more efficient form of automatic bell-buoy. We have now obtained and are about to test the value of the addition of materials to our explosive signals, which will give a powerful flash at each discharge.

Mr. C. W. Scott.
6 Dec. 1906.

Great attention has been paid to the speedy starting of fog-signals immediately on the approach of fog or mist which obscures the view within three miles of the signal station, and all our signals are now efficient in this respect with the exception of Poer Head, which will be altered during the coming year. We have 14 explosive or gun-signal stations and 11 sirens:—

Advantage of explosive,

2833. You appear to have a larger proportionate number of explosive fog-signals than the other Lighthouse Authorities?—Yes, much larger.

2834. Do you believe in them?—Very much. Bull Rock is a case in point where we changed from an explosive to a siren, with the view to economy, and also because, the Fastnet being near—it was also an explosive—they thought it would be more distinctive, but there is no question about it that you cannot rely on hearing the siren to the same extent that you used to be able to rely on the explosive signal. The "Ierne," the boat which attends on the rock stations there, noticed the difference very much. She is the only boat which is really constantly dodging round the rocks there, and she says in the old days she used to almost count on hearing the explosive at quite a considerable distance, and nowadays it is always a toss-up whether she will hear the siren or not until she gets quite close up.

2835. Do you attribute the difference of opinion which appears to prevail on this subject of explosive fog-signals to differences in the coastline in the different parts of the United Kingdom?—No, Sir, I do not. I think one reason of the difference of opinion is this—that the explosive signal, of course, is very expensive in maintenance, exceedingly expensive, and for that reason the great majority of the explosive fog signals have very long intervals—ten minutes, and five minutes, and so on—between the shots, while with sirens you can get them at quite short intervals. The sirens are practically at never more than two-minute intervals, and I think one of the principal reasons why the siren is the more popular signal in a great many places is on account of the not having to wait. You see, to make quite sure of a signal being the one you want, you may have to wait half-an-hour with an explosive fog-signal; with a siren you can do it in a few minutes.

2836. But, notwithstanding that drawback, the opinion of the Commissioners is in favour of maintaining this large number of explosive fog-signals?—I think so; I do not think they would have any idea at all of changing our existing explosive fog-signals to sirens.

2837. And that is your own view, too?—To a certain extent, but I think the Commissioners and myself both consider that every individual case ought to be considered on its merits. There are cases where a siren is decidedly better than an explosive, on account of its being able to be much more frequent. For instance, at the entrance to a harbour, a place where a ship is coming in, getting into a dangerous position, and where it would be unsafe for her to stop for any length of time to listen, there it is of prime importance that the signal should be at short intervals, and therefore in a case of that sort a siren has an enormous advantage over the explosive fog-signal, if cost of maintenance is to be taken into account; but if cost of maintenance is not to be taken into account, if you are prepared to spend thousands of pounds on your fog-signals instead of hundreds, then I have no hesitation in saying that the explosive fog-signal is the best.

2838. (*Sir Frank Adam.*) In all circumstances?—I think so. I have never yet come across any circumstances in which I have known the siren to be more reliable than the explosive fog-signal, and I have come across many instances in which I have found the explosive fog-signal to be more reliable than the siren.

2839. (*Admiral Henderson.*) The increasing speed of ships would affect the question?—Oh, yes, very much, but in order to get the explosive fog-signal really equal to the siren for all cases, you would have to explode every half-minute, and if you are going to explode every half-minute the cost is going to be enormous.

Areas of silence of,

2840. (*Chairman.*) Have you found the silent areas to which sirens seem liable prove in experience a serious drawback?—Yes. My own impression is that all signals, not only sirens, are subject to silent areas; I do not think it is confined to the siren at all.

2841. Even explosive signals?—I think even explosive signals. I do not think that anything will ever get over silent areas except increase of power, and the only means of increasing power that we know of at present is to adopt diaphones instead of sirens, and that is a thing which has not yet been sufficiently tested in this country. There are going to be experiments carried out in the spring by Trinity House, I understand.

2842. (*Admiral Henderson.*) Have you any idea what is the number of hours of fog you get on the Irish coast in the year?—It varies very largely. This year the number of hours of fog has been so great that our stations have been constantly running out of ammunition, and the makers of the ammunition ran short of their stock, and it was just by a pure accident that one station happened to have, I think, I am not sure, something like two and a half years' supply, owing to the amount of fog in the two previous years having fallen far below the average, and if it had not been for that our fog-signals would have been stopped.

2843. That is explosive?—That is explosive.

2844. That is a danger of the explosive?—Well, I do not think that danger will occur again; we have been warned once. We have 14 explosive or gun signal stations, and 11 sirens.

List of si and expl sive, in I land,

1.	Fastnet - - -	Five minute explosive.
2.	Kinsale - - -	Double shot six minute explosive.
3.	Daunt's Rock - -	Alternate ten and five minute gun.
4.	Roche's Point -	Thirty seconds siren.
5.	Poer Head - -	One minute siren.
6.	Hook Tower - -	Double shot seven and-a-half minute explosive.
7.	Conningbeg Lightship.	Double blast two minute siren.
8.	Tuskar - - -	Five minute explosive.
9.	Codling Lightvessel.	Triple blast two minute siren.
10.	Kish Lightvessel -	Double shot five minute guns.
11.	Howth Bailey -	One minute siren.
12.	Haulbowline, Carlingford.	Ten minute explosive.
13	St. John's Point -	Double blast one minute siren. We are going to improve the siren this year; it has never been a satisfactory one; it is one of the earliest.
14.	South Rock Lightvessel - - -	Three minute explosive.
15.	Skulmartin - -	Double shot ten minute explosive.
16.	Mew Island - -	Double blast two minute siren, high and low note.
17.	Blackhead - -	Five minute explosive.
18.	Rathlin Island -	Eight minute gun.
19.	Inishowen - -	Double blast one minute siren, high and low note.
20.	Inishtrahull - -	Double blast two minute siren.
21.	Tory Island - -	One minute siren.
22.	Loophead - -	Ten minute explosive.
23.	Skelligs - - -	Double shot ten minute explosive proposed for next year.
24.	Bull Rock - -	Double blast two minute siren.
25.	Mizen Head - -	Double shot seven and-a-half minute explosive in hands.

2845. (*Chairman.*) Have you tried reed signals?—Yes. We use manual reed signals—at least, we are putting them on now; we are copying the Trinity House in that respect—on all our lightships in place of gongs.

2846. You only employ reed signals where very small power is required?—That is all.

2847. They do not compare with sirens?—They do not compare with sirens at all. I do not think it is possible to make a reed as powerful as it is possible to make a siren for the same expenditure of energy. I think that a reed is better than the siren for quite small powers, but there is a limit to the amount of power that it is worth while expending on a reed at all.

List of bells and horns in Ireland.

We have, of second-class fog-signals, four bells and five reed horns:—

1.	Ballycottin - - -	Twelve-second bell.
2.	Barrels lightvessel -	Hand reed horn.
3.	Lucifer lightvessel -	Hand reed horn.
4.	Blackwater lightvessel -	Hand reed horn.
5.	South Arklow - -	Hand reed horn.
6.	North Arklow - -	Hand reed horn.
7.	Kingstown - - -	Six-second bell.
8.	Dundalk - - -	Ten-second bell.
9.	Barr Point - -	Ten-second bell.

both Kingstown and Barr Point being rung from the lighthouse lantern by electricity. In the case of Barr Point the bell is more than a mile away from the lighthouse.

Buoys: Whistling and bell,

2848. Have you anything else that you would like to tell us on the subject of lights or fog-signals?—Well, we have a number of automatic sound signals on buoys:—

1.	Pollock Rock - -	Whistling buoy.
2.	North Shear - - -	Whistling buoy.
3.	South Burford - -	Bell buoy.
4.	North Burford - -	Whistling buoy.
5	Carlingford Lough -	Whistling buoy.
6.	Hellyhunter - - -	Bell buoy.
7.	Hunter Rock -	Bell buoy.
8.	Highland Rock - -	Whistling buoy.
9.	Lough Foyle - -	Whistling buoy.
10.	Limeburner - - -	Whistling buoy.

A whistling buoy is proposed for South Shear.

2849. Do you find the whistling buoys satisfactory?—Very. A whistling buoy is not a signal which a ship can expect to pick up when she is running full speed. If she expects it she will be disappointed. But if she wants to know her position, and knows she is in the neighbourhood of a whistling buoy, and will stop to listen for it, it is exceedingly useful. The whistling buoy on the North Burford I am frequently very much annoyed by at night, and I live more than 12 miles from it. The Commissioners are constantly receiving deputations from all the country round telling them that it is a most awful nuisance. That is practically all I have to say about that, except what I would say under the heading of buoys on the subject of lighted buoys.

Maintenance and repair of,

2850. Yes. Will you proceed to that, then, please?—The majority of the buoys on the coast are of old patterns, but of late years the Commissioners have been pursuing the policy of replacing a number of them every year with new buoys of improved design. Two buoys are kept for every station, one afloat and one on shore, the latter being kept in readiness to replace the one on the station at a moment's notice in the event of its being damaged or breaking adrift. If no accident occurs, each buoy remains on its station for 12 months, when it is replaced by its duplicate, and brought ashore to be repaired, cleaned, and painted. The North, East, and South Coast duplicate buoys are kept in depôts at Larne, Kingstown, and Roche's Point, but the West Coast duplicates are kept in the hands of local buoy-carers, as close as possible to their respective stations, in order to avoid the necessity of sending a steamer a long distance to replace a buoy which suffers from collision or breaks adrift; the duplicate, being close to its station, can be placed at small expense by a local boat. These West Coast buoys, however, are liable to be maintained in less good condition than those at the depôts, because of the difficulty and expense of sending to out-of-the-way places to inspect the work of cleaning, painting, etc., and because there are no proper appliances to handle them, and they have to be brought to Kingstown for repairs. In the majority of cases, a buoy, after it has been painted, has to be rolled over rough ground, or down a shingly beach, in order to get it into the water, with the result that it has a way of arriving in the water with most of its paint off. But we are so short of ships—we have only got two ships to do the whole work of the coast and the headquarters of those ships are necessarily at Kingstown—that it is practically an unavoidable thing that they should be kept in these local places, where they cannot be really kept up anything like so well as those on the East, North, or South Coast are kept up.

2851. Is it your opinion that it would, on the whole, conduce to the economy of the service to have an additional ship?—Well, that is a case I have never really gone into in detail. I think it is quite a possibility, but I would not like at all to express an opinion on it. I think it is very doubtful.

2852. The substitution of a new and improved buoy for an old counts as a new work?—No.

2853. It does not count as a new work?—No.

2854. Never?—Never. In fact, that does not even come under the head of these special repairs.

2855. Under what head does that come?—Under the heading in our Abstract C—the upkeep of buoys and beacons. We put down a sum of about £500 each year for the replacing of old obsolete buoys by new ones.

Cost of,

2856. (*Admiral Henderson.*) What does a buoy cost?—It depends on the size, and it also depends tremendously on the market. That is work we always do by contract—it is much the cheapest way of doing it. The prices we have had to pay for first-class buoys has varied from £100 to £185, for identically the same pattern buoy, within the course of two or three years. Our third-class buoys have varied from about £50 to £85, and our second-class buoys cost about £100. We have obtained very few of these of the new pattern.

Gas used for lighted.

2857. (*Chairman.*) Are your lighted buoys lighted with compressed gas?—Yes; the lighted and sounding buoys have been enumerated under the headings of unwatched lights and automatic fog-signals. All the lighted gas-buoy bodies are welded throughout, in order to avoid the risk of leakage, which is unavoidable with rivetted joints. They are all of the same pattern, with a large central tube to which can be attached a tail-tube, which enables them to be used as either whistling or bell buoys as desired, and renders them much steadier supports for a light than the ordinary patterns. The whistling buoys have proved most satisfactory, and more efficient than the Courtenay type, owing to the fact that the diaphragm is adjustable. With the old Courtenay buoy the diaphragm was at a fixed height, and that buoy was only really efficient in a certain depth of water. As the water gets deeper the weight of the mooring chain is greater, and therefore the buoy sinks deeper. The Commissioners are now experimenting with a new form of automatic bell-striking machine, actuated by a float in the centre tube, which promises to give very much better results than the usual forms with freely suspended clappers or rolling ball strikers. The top marks are of conical, can, or spherical shape, built up of timber battens on a light angle-iron framework, and the battens are radiating, in order to give free exit to the sound from bell or whistle. The buoys are charged to a pressure of 90 lb., and require to be recharged once in three months. The power of the light is about 90 candles. That is the highest power, I think, on any ordinary buoys—not counting some of the extra big French buoys, which have higher powers.

Contemplated improvement of,

Recharging of,

2858. Do you produce the gas at your own gas stations?—Yes. Owing to the fact that the Commissioners only have two steamers to do all the ordinary work of the coast, it would be impossible to ensure the prompt recharging of any buoy which might lose its gas owing to an accident if it was necessary to have the work done by one of these steamers. Consequently they have provided barges fitted with storeholders, which lie ready charged at Kingstown, Larne, and Lough Foyle, which can be towed out to the buoys by any available tug in an emergency—an arrangement which has been found to work well. When the Commissioners proceeded to purchase their first gas-buoys and storeholders, they found that the welded buoys were the monopoly of a German firm, and the prices very high; but, after a considerable amount of trouble, they succeeded in persuading several English firms to send in tenders, and eventually accepted that of Mr. John Thompson, of Wolverhampton, at prices far below those of the German firm. Subsequently the Elder Brethren and the Northern Lights Board have followed their lead, and obtained buoys from Mr. Thompson. The gas is made and compressed into the barges at Larne and Howth Bailey, the gasworks employed for the lighthouse at the latter station having been adapted for this purpose. The Hellyhunter bell-buoy, which is not lighted, is of the usual Trinity House pattern, with freely suspended clappers. The Pollock Rock, South Shear, and Carlingford whistling buoys, which are not lighted, are of the Courtenay type. The Limeburner Rock buoy is of the same form as the gas

Mr. C. W. Scott.

6 Dec. 1906.

buoys, and its tail-tube and top mark are interchangeable with those of the gas-buoys; but the body is built of much lighter plates, with rivetted joints, and is of less than half the cost. It is now proposed to place a similar buoy in the South Shear, fitted with portable cylinders charged with dissolved acetylene, and a light of 200-candle power, which will be considerably more economical than the oil gas buoys, both in first cost and maintenance, while the power of the light will be much greater, and it can be charged by means of a rowing-boat, without the assistance of barge or steamer.

2859. (*Mr. Ennis.*) Is that a buoy that we had evidence about before, that the Trinity House proposed to lend you?—Not that buoy. The Trinity House have objected to our placing this buoy, and they have refused to sanction our placing this buoy until we have actually ourselves had it for a certain length of time on a station. We are going to place this buoy alongside the South Burford buoy, and during the time that the experiment is going on the Trinity House are lending us a buoy.

Number of, in Ireland.

2860. Because Mr. Matthews told us they were lending you a gas-buoy for Rosslare, which, of course, is South Shear?—They are lending us an oil-buoy. We have 7 gas-buoys, 1 unlighted bell-buoy, and 4 unlighted whistling buoys. There are 18 first-class conical buoys—5 of the new pattern, 13 of old pattern. There are 22 first-class can-buoys—8 of the new pattern and 14 of old patterns. There is 1 first-class spherical buoy of new pattern. There are 13 second-class conical buoys—1 of the new pattern and 12 of old patterns. There are 12 second-class can-buoys—1 of the new pattern and 11 of old patterns. There are 5 second-class spherical buoys—2 of new pattern and 3 of old patterns. There are 18 third-class conical buoys—3 of new pattern and 15 of old patterns. There are 8 third-class can buoys—3 of new pattern and 5 of old patterns. It is proposed to replace four of the above buoys, one second-class and three third-class, with new spherical buoys next year, in order to conform more accurately with the uniform system of buoyage. There are duplicates kept for all the above 109 buoys. Twenty-two wreck buoys are held in readiness to be placed when required, and five similar buoys as marks for lightship moorings in places where the lightships are so far from the land that they cannot rely on getting bearings for refixing them—making a total of 245 buoys, including gas buoys, of which 118 are afloat. The new pattern buoys of first class are 10ft. in diameter, the second class 8ft. in diameter, and the third class 6ft. diameter; the old patterns are of various sizes. All small repairs are carried out by the Commissioners' staff of workmen; but tenders are obtained for heavy repairs, and the lowest from a reliable firm accepted unless the work can be done more cheaply by the Commissioners' men, which is sometimes the case. The annual cost of cleaning and painting the buoys, preparing them for sea, and delivering them out to the steamers, varies from about £1 10s. to £7 each; and the total cost, including repairs and replacing worn moorings, etc., amounted to £1,145 last year—an average of £9 14s. per buoy in use on its station (including wreck buoys). This does not include the cost of gas, etc., for lighting the buoys, nor steamers' expenses in placing them on their stations, etc.

Cost of maintenance of,

Experiments

2861. (*Chairman.*) Well, now, will you please tell us approximately how much the Irish Lights Commissioners spend every year on experiments?—Well, the great bulk of the experiments cost nothing; I mean the great bulk of the experiments are simply carried out by me and my assistant and the foreman lamp-fitter. We are all on the permanent staff, and no charge is made for them. The great bulk of our experimental work is on existing apparatus, and just making small improvements thereto. For instance, when we get a new apparatus we set up at least one panel, or generally more, at Kingstown, and make very careful photometric tests of it, dividing up the lenses into small pieces, and measuring them at short distances, and adding the lot together to get the total; and then, as a check on that, we make a single measurement at a long distance. In addition to that, when the lenses are in the contractors' hands, before we take them over from them, we make a regular analysis of the light from every element. We find out what the exact divergence of the light is, and the exact direction it is thrown in. There is room for considerable improvement in the actual manufacture of photometric apparatus. So far as the design of dioptric apparatus is concerned, it has pretty nearly reached finality. I think any alterations which are made now are simply for special cases, but, so far as the actual execution of the work is concerned, they are a rough job.

2862. Your experiments on dioptric apparatus are confined to experiments on apparatus supplied to you by contractors?—Yes, and when the next apparatus is in hand we try to get the contractors to make improvements on them.

2863. You do not attempt systematic experiments on a large scale, such as those conducted by Trinity House at St. Catherine's?—No, it is almost impossible for us to do so. We occasionally do, but not on a large scale.

Difficulty obtaining funds for

2864. What sort of experiments?—We occasionally do on a small scale, but when we ask the Board of Trade to sanction money for experiments, they expect us to tell them the results we are going to gain from the experiments, which is not exactly an easy thing to do.

2865. Have you often made application?—Oh, yes, we have frequently. For instance, we have obtained money for experiments with this bell-buoy machine, which we hope to substitute for the old bell-buoys. Before we did that we got an original experimental machine. Owing to the difficulty we always have in obtaining money for experiments, we went to Messrs. Chance and asked them to make an experimental machine for us for nothing, and we said that if they turned out a success we would allow them to have patent rights for it, except so far as we were concerned. We would retain our power to obtain them by tender from anybody, but for anybody else they would have control of the machine; and they agreed to that, and they made an experimental machine for us; so when we tried that we found it was most satisfactory in harbour. We could not get a day still enough to stop it from being a very great nuisance, but as soon as we put it out into a seaway it knocked itself to pieces. It was really too energetic, so we, having got that amount to go on, went to the Board of Trade, and they then sanctioned money, after laying the matter before the Elder Brethren, to enable us to go on with those experiments, as we had proved that we had got a good thing, and that we had simply to find out how we have to regulate it, and they have sanctioned money for a new machine, which is just at the present moment being placed on a station.

2866. The Board of Trade has been reluctant to allow money for experiments at large?—Very reluctant. We used always to have a sum of £100 inserted in the estimates for experiments. When we attempted to spend this the Board of Trade objected. They wanted to have full particulars of all experiments sent to them before we started. Well, it is almost impossible to give them, I may say. Then they sanctioned expenditure for experiments on dioptric apparatus on lightships. That experiment is in hand now. They have also sanctioned small sums on several occasions for siren experiments, and we have done a considerable amount of further experimental work on sirens in this way. When we first start on a new job, before we complete our designs for it, we get two or three parts which we are not sure about which we think we could improve, and experiment with them, and put the cost into the cost of this particular station. For instance, Inishtrahull. When we were starting this job we got three or four different patterns of revolving drums for the siren, in order to test thoroughly the effect of altering the shape of the port. We put these instruments on the spare lightship at Kingstown, put them in place of the ordinary siren there, and carried out a long series of tests, and got a lot of valuable information as to the shape of ports.

Facilities given to inventors

2867. Do you ever give inventors facilities for trying experiments at their own cost?—Yes, I am always begging them to do it. At the present moment we are putting up these unwatched acetylene lights at Sligo, and two inventors are sending me apparatus at their own cost to test, with the view to having them used there. Messrs. Thompson, the people whom we got to make our buoys for us, found that they were very much handicapped in competing with Messrs. Pintsch for foreign contracts—and indeed for some of

the local Harbour Authorities in England—because nearly all the people require them to tender for a complete installation, and there was only one form of flasher on the market, and that is Pintsch's patent, and when they went to purchase Pintsch's patent to put it into their contract Pintsch charged them as much for the flasher as the whole of the job was worth; so they asked me if I could help them at all in that way, and I said that if they would work out competitive lamps I would be very glad to help them in every way I could. I gave them designs, and they have spent a considerable sum of money in experimenting on them. As to whether they will bring it to anything or not I do not know.

2868. Do you think that more money could be usefully spent by your Board in experiments?—Yes, sir, I do. I think it would be a very useful thing indeed if our Board were allowed to spend up to a certain fixed sum annually without obtaining special sanction—reporting any success afterwards—but without previous question.

2869. A small sum in each year for the carrying out of experiments?—A small sum in each year for the carrying out of experiments. I think it would be a very useful thing indeed.

2870. (*Admiral Henderson.*) Is there any conjoint action between the Trinity House, the Scotch Board, and yourselves as to experiments?—Occasionally, but only when we are going in for a big thing. It is very hard to manage any conjoint action in the small every-day experiments, as I call them. We are practically always experimenting on something. We have been experimenting, for instance, for the last three months now with dissolved acetylene at Kingstown. That has been entirely at the cost of the inventor, who has handed us over the apparatus and given us every facility.

2871. But if there is a very big experiment required you represent it to the Board of Trade?—Yes. Those big experiments are practically always carried out by the Trinity House, and the Scotch and Irish Boards joined with them.

2872. (*Chairman.*) Do you communicate the results of your experiments to the other Lighthouse Authorities?—No, not as a rule, unless I am asked. If I am asked I reply.

2873. Do they communicate to you any results of any experiments carried on by them?—Only the big experiments which are carried out, of which there is a regular printed report. For instance, there were the fog-signal experiments at St. Catherine's three years ago.

2874. But in point of fact are not the Engineers' departments of the different Authorities in constant communication with each other?—They are; but the experimental work we do is in such a small way, most of it, that it would be a very difficult thing to keep a constant interchange of experimental work between one another. I may say a great deal of it we do not even make reports on. We simply adopt that improvement in a particular instrument.

2875. You think the co-operation that does exist is sufficient for practical purposes?—I think it is. Whenever we obtain money from the Board of Trade for experiments they practically always inform the Trinity House of the fact, and Trinity House nearly always write and ask us for the results, which we send them. Practically speaking, the Board of Trade seldom, if ever, sanction any expenditure by us for experiments, without asking the Trinity House whether they approve of our getting the money first of all or not.

2876. Are you in touch with any Lighthouse Authority abroad?—Well, not really in touch. We have occasionally written to the Canadian people for information about some of their work, principally in connection with buoys, and whenever we do they are always very civil in giving us any information we ask for. And, of course, the French people publish from time to time complete records of all their works, which they send round to all Lighthouse Authorities without being asked for it.

2877. And the German Authorities?—The German Authorities we never hear from at all.

2878. (*Admiral Henderson.*) Do you think there might be improvement in the management of experiments, particularly in minor matters. I may say the least trifle, if it is of advantage to you, is of advantage to the other Boards?—It is, except in this, that, as a matter of fact, the apparatus used by the three Boards is not the same. We have all our own fads, and there has always been, I think, a certain amount of emulation between the three Boards to try to get ahead of one another, which, I think, on the whole, has been rather a good thing. If one starts a new thing the others have immediately tackled it and tried to go one better, and I think in the end it results in efficiency.

2879. (*Colonel Herbert.*) While we are on this subject might I ask a question. Do you not think there might be a danger of a duplication of experiments unless there was the control which is now exercised by the Board of Trade?—Oh, yes, there would.

2880. You might be experimenting on things which had already been thoroughly experimented upon by some other authority?—Well, the only answer to that I have is this, that if it had been a thorough experiment, then it would have been an experiment which would have been communicated to us.

2881. Does not that argue in favour of a more thorough and constant communication between the Engineers?—Oh, I would say the more thorough and constant the communication between the three Engineers on that matter the better, most decidedly, but it would be rather difficult to say that every little experiment that we carried out should be immediately communicated, because, of course, I have been experimenting for five years at least with one very small point in connection with incandescent burners, and which I have not yet got any real result from at all. If I had communicated every little step I took only as I took it to the other Boards I should have spent quite a large amount of time writing letters which would have produced no result.

2882. (*Chairman.*) Something must be left to your discretion?—Yes.

2883. (*Sir Frank Adam.*) But if you had been successful you would have communicated at once?—If I had got any tangible result. The Commissioners of Irish Lights, when they completed the Fastnet Lighthouse, decided to publish a complete and full account of the building of the Fastnet Lighthouse

2884. (*Chairman.*) Has that been done?—It is in hand; it is illustrated with copies of the working drawings, and a full description of the work from start to finish.

2885. Was that lighthouse designed by you?—The actual stone structure was designed by my predecessor, but all the fittings and the lighting apparatus and lantern, etc., were designed by me. He resigned just after the erection of the tower had been commenced.

2886. Passing to another subject, will you tell us about the repairing shops at Kingstown; what work do they carry out?—Well, the repairing shops at Kingstown are very, very small. We have a carpenter's shop, in which we employ one permanent foreman carpenter and nearly always there is one other journeyman carpenter there. Then we have a lamp-fitter's shop, in which there is the foreman lamp-fitter and the assistant lamp-fitter; and now that we are making all our own incandescent burners, we have got four daily lamp-fitters there. Well, then, there is the fitting-shop. We have six fitters, and as a general rule there are, I suppose, about two or three of them at Kingstown and the other three or four are out on the coast actually effecting repairs. Then there is a blacksmith's shop, in which there is a blacksmith and an assistant, and we generally have a second assistant there as a day man. *Kingston Workshops: Description of,*

2887. The whole thing is on a very small scale?—A very small scale.

2888. Have you an engine plant there?—We have a small 5-horse-power engine, which drives a lathe, a drill, and a saw bench. At present we are making all our incandescent burners. We repair all our oil-burners and gas-burners in the shop. We do all our repairs to buoys, all the ordinary small repairs, and for big repairs, such as buoys which have been in collision and require half-a-dozen new plates or something of that sort, we get prices from outside contractors; but as a general rule they put on so much on every tender for carriage, etc., that in the majority of cases we do the work ourselves. We employ labourers then to cut the plates out; then we have a contract rate with some firm to supply us with boiler makers at so much a day, and we get them down then just to do the actual

Mr. C. W. Scott.

6 Dec. 1906.

replacing of the plates and then our own men do the rivetting up.

2889. What are your duties in connection with the ordering of materials and stores?—Well, of course, I order all materials required for new works and repairs, and in the matter of stores I order all the paints and oils for the lighthouses, not for the light-ships or steamers, and I order all the ladders, and I order all the gas stores; that is to say, the retorts, bricks, fireclay, etc., required for renewal of gas benches, and the tools, the rakes, and barrels, etc., required for use in the gas works.

Engineer's duties:

2890. And do you test all the materials ordered by you which require testing?—Yes, and I test, in addition, all the oil and wicks they use in the lanterns. Though the oils and wicks are ordered by the Inspector's department, no oil is issued to a station until I have certified that it is up to the mark. We test every consignment.

2891. And as regards checking accounts, is that part of your duty?—One of the clerks in the cashier's department is detailed as check clerk. He is entrusted with the checking of the accounts, both for my department and for the Inspector's department. When the accounts come in they go to him, and he has to go through them and check them against the orders, and if there is anything doubtful he brings them to me and gets me to clear it up. When he has got them all done, he brings in the accounts for the week to me and calls my special attention to things which he thinks I ought to notice. I just go through them cursorily only.

2892. Are you responsible or is he responsible?—He is responsible to me; I am responsible to the Board.

2893. But he is responsible to you?—He is. I sign the accounts, then it goes on from me to the Secretary, who has to look through them, and he is responsible also.

2894. For all the accounts passing through your department both you and the Secretary are jointly responsible?—Yes, and I have this check clerk, who is delegated from the Accountant's department for the purpose, to do the actual checking of the accounts. It takes him all his time, so naturally I could not do it.

Engineer's Department:

2895. (*Colonel Herbert.*) You stated the officers who are employed under you; what subordinate staff have they got under them? For instance, you said you had an assistant, a draughtsman, a clerk of works. Say the draughtsman; I suppose he has got subordinates under him?—Well, no, he has not. As a matter of fact, the permanent draughtsman is kept practically to work connected with the permanent work of the coast, I may say the repair work almost entirely, and the design of new houses. We occasionally give him charge of one or two of the special repairs, but if so he keeps that entirely in his own hands. We have a number of temporary draughtsmen; they vary according to the amount of work in hand from two to four, and one of them is at the disposal of the permanent draughtsman at any time he wants assistance. At the present time one of the temporary draughtsmen is the son of our permanent draughtsman, so I give him free leave to order his son to do anything he wants for him; the other draughtsmen are directly under the assistant engineer, not under the permanent draughtsman.

System of employing temporary draughtsmen.

2896. Has not that temporary employment a tendency to drift into permanent employment?—It depends on what you mean by drift.

2897. It becomes so frequent that it is practically permanent?—Except that they are not entitled to pensions, for one thing, and it remains in the power of the Engineer to get rid of them at once if he wishes. I may say I frequently take on and send off men. When I get hold of a good man I keep him as long as there is work for him, but when I get hold of a man who, I may say, is not much use, as soon as the actual job I take him on for is finished I send him off at once.

2898. Does not that support what I say, that there is a tendency to find work in order to keep men on?—There is no attempt to make work. My difficulty is to get sufficient temporary assistance. As soon as the job is finished I send a man away if there is no other job waiting for him. If I put a draughtsman on to get out the drawings for a contract for a lighthouse, I do not want to change that man on that job if he is a slow man, or anything of that sort; I keep him on till he has finished that job. As soon as he has finished it I get rid of him and try to get another man in his place.

2899. The principle you work on is of having only temporary employment?—That is all; it is all that has ever been allowed to us by the Board of Trade, and I think on the whole it is a good plan, because it gives me much more control over them. A permanent man who is appointed by the Board, with a permanent salary and prospects of a pension—if there comes to be a dispute between him and the Engineer—always has the feeling that he has got an appeal, whereas these temporary men are appointed solely by the Engineer, and they are dismissed by him at any moment, I may say, without question. I practically agree entirely with what Admiral Henderson said. It is just that very thing that I found; that having these temporary men I am able to take on men and send them away as occasion requires; and sometimes I want a man at a higher salary, at other times at a lower salary. I had an interview with the Board of Trade about a couple of years ago, at which I explained the thing thoroughly to them, and since then they have allowed me to have practically a definite sum of money to spend on draughtsmen every six months, instead of specifying a definite number of men; and I may employ sometimes half a dozen at £1 a week, and at other times a couple of men each at £3 3s. a week, according to the work in hand, or whatever will be most satisfactory.

2900. Following on the same idea, to give an example, what would be the course followed on the initiation of a new work?—Well, first of all, as a general rule, in the case of new works, the Board instruct me to report to them on what will be the best method of erecting a light, say, or a fog-signal, as the case may be. In the first instance I do not go down there, but from my own personal knowledge of the place and from the assistance we get from maps and so on, I give them a preliminary report; showing what I think will be the most suitable scheme, or proposing two or three alternative schemes, which I detail, and I give them along with that a rough preliminary estimate of the probable expenditure. Well then that report of mine is sent to the Inspector, and he reports on it to the Board, and those two reports together are considered by the Inspecting Committee. It very frequently happens that the Inspector and I do not absolutely agree on all details, and very likely the Inspecting Committee will not agree with either of us. After the Inspecting Committee have first considered it they generally return the matter to us for a further report, considering the remarks they have made to us, and sometimes certain written instructions which they give us. I then prepare a revised scheme with a revised estimate, and the Inspector again makes his remarks on that, and that as a general rule is practically what the Inspecting Committee have decided upon. They will probably adopt that report and send it to the Board. The Board in nine cases out of ten adopt the Inspecting Committee's recommendations, and give orders that the sanction of the Trinity House is to be obtained. Then the Secretary writes to the Trinity House and asks their sanction to the placing of a light of such and such a character to be maintained by such and such an apparatus, and up to about four years ago I think the Trinity House never asked us to give them any details as to the apparatus or cost. We simply gave them the broad principles, the principal thing being the character of the light. But about four years ago, I think it was, they started asking us to give them the estimate of cost, and to describe in detail the apparatus to be used, and they have frequently refused to sanction apparatus, because they did not approve of the method that we were adopting to show it. Last year, for instance, we proposed a biform apparatus for St. John's Point, County Down, St. John's Point being a place where there had been a great demand for an improved light. The present light is a powerful red light, but it is not powerful enough owing to the fact that the great bulk of the traffic passes the light at a distance of six miles, and the light is very badly wanted by the traffic which passes there six miles off. Owing to that fact my Commissioners thought it was most important we should use as powerful a light as practicable, and they therefore put forward a biform apparatus. The Trinity House refused point-blank to sanction a biform apparatus at St. John's Point, because they said St. John's Point was

New Works Procedure fo imitation of

not as important a situation as the light outside Holyhead, Skelly Head, and they had just put a monoform light on Skerries, and therefore they would not sanction our placing a biform apparatus on St. John's Point. We appealed against that to the Board of Trade, and the Advisory Committee backed us up very strongly, and the Board of Trade sanctioned the biform light against the wishes of the Trinity House.

2901. What you mean is that there is a tendency on the part of the Trinity House to exercise its authority as a controlling power?—Yes. It is only quite within recent years that they have taken to interfering with us at all as to the method of exhibiting lights.

2902. What I was more upon, when I asked you the question, was, assuming that all this preliminary has been got through, and that you are going to set up a new work, then what course does it take?—As soon as the Trinity House has sanctioned it I then send down and survey the place, and prepare an estimate which will be something more like what the actual cost will be. The first estimate is simply an approximate estimate, but before sending on an estimate to the Board of Trade we in most cases send down and make a survey, and get a more accurate estimate made, which we send to the Board of Trade, and get their sanction to the expenditure. Then when we are starting the work, if it is a question of improving a light on an existing lighthouse, the first thing to be done is to get out drawings and designs for the lantern and apparatus, and we get tenders in for them. So far as the apparatus is concerned we have a five-year schedule contract with Messrs. Chance to supply them, but we get tenders for the other parts of it, and we recommend the lowest tender from a firm that we think is really competent to give us good work, and that is sent to the Board of Trade for their sanction to the acceptance of the tender.

2903. Every step has to be referred back to the Board of Trade?—Practically we cannot accept any tenders for any large amount. We accept what we call offers for quite a small thing, a matter of £5 or £6. We do not go to the Board of Trade for those. But for anything running into over £20 at any rate, we go to the Board of Trade to sanction the acceptance of the tender.

2904. But broadly speaking the new work would consist—either it might not be of all those different elements, or it might be buildings and dwellings, or lighting apparatus, or machinery in connection with lighting apparatus?—For buildings and dwellings and that sort of thing we prepare drawings and specifications; get in tenders and go through them carefully; and if they are reasonable we recommend one to the Board of Trade. Sometimes—for instance the shore dwellings for Eagle Island, if I remember right, the lowest tender we got was £6,500.

2905. (*Chairman.*) For how many cottages do you say?—For four houses. We reported that we could do the work for £4,000, and so the Board of Trade sanctioned our doing that with our men, and we completed that work for about £3,950.

2906. (*Col. Herbert.*) Yes, but my point is this; there is considerable diversity between those different elements?—Yes.

2907. But you are personally responsible for each of them, whatever they are?—Absolutely, whatever they are; for everything. For instance, at the present moment we are putting up a new fog-signal station at Mizen Head. The first estimate I sent in for Mizen Head happened to fall rather wide of the mark. I had never been at Mizen Head in my life, and the first approximate estimate we sent in was quite a small one. But then I asked, before I sent in the final estimate to the Board of Trade to have £100 sanctioned to carry out a proper survey of the Head, because I did not really know what the Head was like, and I knew it was quite possible it was going to be a very difficult place. I went down myself with the surveyor to start the work and show him exactly what to do. When we came to Mizen Head I found there was a gulley between me and Mizen Head; we could not get on the Head at all. As a matter of fact he had to wait there over a week to get on to the Head to begin his survey. The Mizen Head signal station has got to be on what is practically an island, and the cost of getting there is as great as my original estimate for the whole station was. That man made a complete survey of the headland and the island, and ran a line for a road to lead up to it.

2908. (*Chairman.*) A conjectural estimate of that kind is of very little use?—We have so very many schemes which never come to anything. If I were to go down and get surveys and true estimates for them in the first instance I would certainly want a considerably larger staff than I have got, and the cost becomes very considerable. The cost of that Mizen Head survey, for instance, was about £135, I think. Well, to go and embark on a cost of £135 for a survey, when it is still exceedingly doubtful whether it will be decided to spend any money on the place at all——

2909. But would not something much less than a complete survey have sufficed to prevent such a mistake as was made on that occasion?—Well, it would certainly if I had actually gone there, and gone out on to the place. To get down to Mizen Head and back again costs about £8 in travelling expenses. Then, also, it is more than a day's journey to get down there, that is to say to the nearest place where there is a house, and it is more than a day's journey to get back again, and it would take me fully a day to go out and see the place; so that is three days of my time taken up, and about £8 in travelling expenses; and if you tot that all up together it comes to about £17 or £18, and I do not think I could find time to go down to inspect the site of every proposal when it is first put forward in a tentative manner.

2910. (*Colonel Herbert.*) It is not the fact that a scheme is started on such information as that usually; that there is an insufficient inspection of the coast at all times?—I do not think so. We have no possible means of inspecting the portion of the coast where we have got no lighthouses.

Inspection of Seamarks:

2911. But there is the circular inspection of the whole coast, I understand, made every year, which lasts for a considerable time?—Certainly, it takes about three weeks.

By Inspecting Committee.

2912. During such an inspection as that?—During those three weeks they inspect practically every lighthouse on the coast, but if they were to inspect the rest of the coast, where there are no existing lighthouse stations, that inspection would take three months.

2913. It seems to be a question whether the inspection which is actually made of the existing apparatus is very satisfactory, what we should consider—I am speaking from a military point of view—a very efficient inspection; so long as the examination of the rest of the coast is not done at all?—The examination of the rest of the coast is certainly not done at all. In the case of the question of Mizen Head, if the Commissioners had had an idea of placing a signal at Mizen Head in their minds at the time they were going round; and if the weather when they were near there had been suitable for landing on Mizen Head, which is exceeding doubtful, I have no doubt they would have gone on to Mizen Head to look at it; but under ordinary circumstances the great probability is that they could not have landed at the Head, and it would have been necessary for them to land at Crook Haven, and to drive from Crook Haven.

2914. In fact the time would not admit of it?—It would have taken them at least an extra day.

2915. You have mentioned that your proposals are referred to the Inspector?—Yes.

2916. Do you take any part in the work of inspection which is done by the Inspector?—No, none whatever. The inspection that I do is simply this. I go round with the Commissioners in order to be able to answer any questions that may arise. If they see anything at the lighthouse they do not think is as it ought to be, they immediately call my attention to it, and ask for an explanation. It is my duty to keep the whole of the buildings, the whole fabric of the station and all the machinery and everything else in repair, and if the Commissioners find anything out of repair, they ask me immediately for an explanation of it. Well, then, just before the annual inspection the keepers send in a return, on which they make a list of all repairs or improvements which they think necessary on the station, and I take this return with me. I go through them. Of course a great many of them are small things which I decide on my own responsibility. Anything that is not very small I call the attention of the Committee to on the spot, and get them to look into it then and there, and decide whether or not I am to put forward the scheme for doing it. I

Mr. C. W. Scott.

6 Dec. 1906.

go with the Commissioners generally. If there is anything special to be looked into, I go and look into that, but if not I generally go up into the lantern with whichever Commissioner is examining the apparatus in the lantern.

By Inspector.

2917. We had it in evidence that the Inspector is constantly engaged in the work of inspection all the year round?—Yes.

2918. Therefore he is constantly examining what is practically your work?—Yes.

2919. The work that you have done?—That is so.

2920. You do not personally take any part in that sort of inspection. After the thing has been put up by you, then it is left entirely in his hands; you do not have anything more to do with it?—Oh no; that is not the case.

2921. Until you are called in again?—Until I am called in again; but there is a whole number of returns, for instance, coming from the light-keepers, which give me information as to the consumption of gas, and whenever any little irregularity occurs, or any accident happens, or anything of that sort, they report at once to me, or they report to the Secretary, and the Secretary sends it on to me. But so far as the simple inspection of the work done by the keepers is concerned, that is done entirely by the Inspector, except in so far as incidentally I may find out from returns that the keepers are not keeping the burners up to the mark, and that sort of thing. Then I write to the keepers. For instance, I have found in the returns from gas stations that a keeper is making gas in an uneconomical manner. I immediately write to him on the subject, point out what he is doing wrong, and make him report to me once a week, probably for three months afterwards, to see that he has got the thing in proper order.

Oil:

2922. There is a question or rather a different point I want to put, that is, you stated you have to certify the quality of the oil, and so forth?—Yes.

2923. Does that actually come within the province of a gentleman who is trained as an engineer, as you are?—I think so.

2924. Who has the experience to deal with that; your profession is a very highly technical one?—Exactly.

Method of testing,

2925. But I do not know that that would exactly come in?—I mean to say our oil is very carefully tested. We have a pretty full specification for our oil, and the things which we actually test for in every consignment which comes in, are the candle-power that we obtain from a standard burner, the consumption of oil, the number of grains burned per hour during that test. The test is run for 17 hours. We take the candle-power every hour, and we weigh the burner with the oil in it at the beginning of the test, and at the end of the test to get the consumption. We also take the specific gravity of the oil, and we take the flash-point by the Abel close test. If the oil passes those, if it has got a good colour and a good smell, we accept it. There is one other point which we are very particular about, and that is the action of the oil on the wicks. The actual test is carried out by the foreman lamp-fitter, and he sends up a full report to me upon it, and he sends up to me a small sample of the oil, that I may see the colour of it and smell it, and he also sends up three of the wicks which were actually burned for the 17 hours with the crust on them.

2926. The foreman lamp-fitter is the person who actually carries out the test, but you are held technically responsible?—Yes, he carries it out under my instructions. I teach him how to do it.

Steam vessels: Responsibility for upkeep of,

2927. (*Mr. Ennis.*) As I understand your evidence, the responsibility for the machinery and the fittings of the steam vessels rests primarily with the Secretary with regard to the "Alexandra" and the "Tearaght"?—Yes.

2928. But with the Inspector with regard to the "Ierne"?—Yes.

2929. But then you have a supervision, an inspection?—No, neither of them; all I have to do is to detail a mechanical assistant to go and do the work; that is all. I do not know what he does.

2930. You are not in any way responsible for the efficiency of the work of the mechanical assistant?—No, not in the least. So far as the repairs to the steamers are concerned, it is simply that I lend him to the other department.

2931. And when he passes from your department, the responsibility for his work passes with him to the Secretary and to the Inspector?—I take it that it does. I really do not know whether it passes to them, or to the Board.

2932. Then with regard to the permanent workmen in the Kingstown workshops and elsewhere, are they entitled to superannuation the same as the lighthouse men?—Some are entitled to superannuation, and some are not.

2933. How do you draw the line between the men who are entitled to superannuation and the men who are not?—That is a thing which is beyond me altogether. I never could make it out; that is a matter that has been decided entirely and altogether by the Board of Trade, I think, and on what basis is a thing which I have never been able to discover.

Kingstown Workshops: Supervision of,

2934. With regard to the Kingstown workshops, you exercise a duty of supervision these, but the administration of the work is carried out by the Superintendent?—That is practically it.

2935. You see that everything they turn out is as it ought to be?—So far as the actual working in the workshops is concerned. As a general rule I actually give the orders myself verbally, and I then put them in writing to pass through the Superintendent's hands. There is an order book which travels backwards and forwards daily between the stores at Kingstown and the office, and all orders, except very small matters of detail, have to be entered in that book. I put them in the book and I initial them, and the Secretary initials them too, and the Superintendent puts in anything he wants done by my men at the stores. He puts a note in the book asking me to authorise him to get it done.

2936. You have also told us that you do more works direct than by contract?—I think so.

Lightkeepers' Dwellings:

2937. And that, of course, applies to lightkeepers' dwellings and to building works?—Well, no; the great bulk of building work is done by contract.

2938. You referred to Eagle Island?—Eagle Island is the only actual new building we have done by our own men for some considerable time.

2939. Can you give us any idea as to the size of these cottages that you built at Eagle Point; as to the thickness of the walls, say, for the purpose of comparison with the Scotch?—The thickness of the walls in the lower storeys, if I am not mistaken, is 2 ft., and the upper storey 18 inches.

2940. And can you give us the cost per cubic foot of the cottages; I do not want details of the size of the rooms or anything like that of the cottages, but if you could give us the cost per cubic foot or cubical contents, that is, calculated on half the foundations and half the roof?—Half the roof to the ridge?

2941. Half the roof to the ridge and half the foundations. Assuming you have foundations 4 feet deep you would take 2 feet?—Yes. In our dwellings very frequently the principal cost is the foundations. We have had more than one case in which the foundations have cost nearly as much as the buildings. By foundations I include necessary excavations.

2942. But what was the cause of that; very soft surface or what?—Building on the side of a hill; that sort of thing. Some of our dwellings are built on a considerably steeper slope than 1 to 1. Excavating down on one side and building up foundations on the other side runs into a large sum of money.

2943. I think, if you could, you might give us the material of which the houses are built; whether it is stone excavated on the spot or whether it is brick?—That depends entirely on circumstances. In 9 cases out of 10 or more it is stone excavated on the spot.

2944. In the inaccessible positions in which this class of dwellings usually are, the cartage of heavy material is a very serious item?—A very serious item.

Average cost of,

2945. For purposes of comparison, if you could give us the cost per cubic foot of these cottages it would be of assistance to us?—Do you mean of particular ones or an average?

2946. The average?—Because I think that is a thing I have not actually worked out, but my impression is

the cost per cubic foot of our earlier dwellings is less than our later ones.

(*Chairman.*) Would it not be as well to take one or two typical cases?

2947. (*Mr. Ennis.*) If you could give us the maximum and minimum; we have had that in the case of the others. I am anxious to compare that with the cost of the Scotch dwellings?—And then, with flat roofs, are we to take to the top of the parapet or half way up the parapet?

2948. To the top of the parapet in the case of a flat roof?—From half depth of foundations; that, of course, means the average foundation.

2949. The average foundation?—And the half height of our slate roofs, and in taking the cost per cubic foot there is the cornice, for instance, round the flat roofs; are we to include the cornice or the dimensions of the walls only?

2950. The dimensions of the walls only?—Walls only.

2951. I did not ask that question of the others, but I imagine that is the way?—I think the usual method of measuring cubical contents is to take outside everything; it makes a good deal of difference.

2952. I think it would be sufficient for our purpose; it will not make such a difference. I do not mean to institute a close comparison. I want to see if they compare reasonably with each other?—Quite so.

Engineers' Department: Salaries of,

2953. You have given us the cost of the various salaries in the engineering staff?—Yes.

2954. And excluding the foreman mechanic and the foreman lampfitter, who, I assume, are employed in the Kingstown works?—Yes.

2955. They would be something analogous to the people in the Blackwall works, in the case of the Trinity House; the salaries total cost would be about £1,573?—You are not including the temporary draughtsman?

2956. Yes. You gave us, for him, £183?—I have got down here maximum salaries, I think.

2957. It is for the actual present salaries, I take it. I wish to compare it with the actual expenditure in other places. I make the total £2,023, but there is £450 to come off, and that will be £1,573, I think?—Yes, that is right. You have not the temporary draughtsman down. The temporary draughtsmen would run to about £300.

2958. What is the foreman mechanic?—The foreman mechanic is the man at Kingstown.

2959. Then what is his salary?—£300, and the permanent draughtsman is £200.

2960. The permanent draughtsman is £183?—That is the actual at present.

2961. £300 to be added for temporary draughtsmen; that is, £1,873 would be the total expenditure?—Yes.

Expenditure of Irish Lights Board: on New Works.

2962. You have told us that the average expenditure on new works for 10 years has been about £18,000 and £2,226 for repairs?—The actual average expenditure of the Commissioners on new works during the last ten years has been £24,469, but some proportion of that was spent on steamers and lightship hulls, which I, personally, have nothing to do with, so that the actual expenditure belonging to the engineer's department——

2963. But the total expenditure has been £24,000?—The total average has been £24,469.

2964. (*Chairman.*) That includes steamers?—That includes steamers and hulls of lightships, and the amount for which I am responsible has amounted to an average of £18,770. Of course, that does not include the special repairs.

2965. (*Mr. Ennis.*) Oh, no; £2,466 for special repairs?—£2,466 for special repairs.

2966. Now in that £18,770 in the department controlled by you during that period is included, I take it, expenditure on the Fastnet?—Yes.

2967. The Fastnet has been mainly erected during your term of office, is not that so?—Yes, it has, certainly.

2968. Could you give us the total cost of the Fastnet?—The total cost of the Fastnet is £89,705 14s. 1d.

2969. Have you any idea how much of that £89,000, or £90,000 in round figures, has been expended during these ten years to which you are referring here?—Oh, the whole of it, I think, because that ten years which I am referring to includes the whole of it, because my ten years start from the year in which the Fastnet was begun. My ten years are from 1896 to 1905, and the Fastnet was commenced in 1896.

2970. I take it that the Fastnet Lighthouse is a work of national importance?—I should say so.

2971. I mean, in your opinion, is the Fastnet Lighthouse of more use to the general trade of the nation at large, or to merely the coast of Ireland? If it was not for the passing trade would the necessity for such an expensive light as the Fastnet exist there?—No, I think not. The Fastnet was built there with this powerful light as being the first landfall from America.

2972. That is my own view of it, and therefore what I want to ask you is, in the event of excluding the Fastnet from the calculation altogether, it would reduce your annual expenditure to practically £9,000—we will say £10,000—instead of £18,000?—Well, £10,000 it would.

2973. It would practically reduce it to that. Of course, it would not be fair to exclude the Fastnet altogether, but there has been an exceptional expenditure during those ten years by the Board of Irish Lights, and that £18,000 per annum for these new works would probably be an expenditure that would not be necessary over the period of the next 25 years, say?—It all depends on what is considered necessary, Sir, because, as I remarked before, when I was giving the list of lighthouses the great majority of the lighthouses could, with great advantage from the economical point of view, be altered, and to get the greatest possible saving from the economical point of view they should, I suppose, be all altered straight away, if it is possible to dispense with lightkeepers' services without compensating them, but I do not suppose it is.

2974. But, in any case, would not the total cost of the Fastnet—£90,000 in round figures—exceed the total cost of altering all the lighthouses?—That I could not say offhand.

2975. From the figures you have already given us, I should say, as a rough calculation, it probably would?—No, you have a large number to alter. I cannot say definitely; it is a thing I have not gone into. But, supposing it would really pay to alter all the lighthouses which we have not at present made really modern, it means that there are over 50 to alter, and it would certainly cost, I should think, more than the Fastnet to alter the lot of them.

On Lighting Apparatus.

2976. The average cost of new apparatus, I do not think you have given us, and it is a question I intended to ask you?—It varies enormously.

2977. You gave us converting the Rockabill cost only £110; that is the existing apparatus?—I can give you some of these. Maidens, where we did away with two old catoptric lights, and put in biform apparatus lighted with incandescent oil on one of the lighthouses, and at the same time we put new roofs on the dwellings, and we built landing-places there—there had been no proper landing-places previously made on the rock—and dismantled the old station on the West Rock, and put a new stone roof on the tower, and the total cost of that was about £6,300, I think, and that is about what would be a maximum, I should think.

2978. Well, £4,500 to £5,000 would probably be an average?—Oh, no, it would be a good deal less than that.

2978a. Less than that?—I think so; an average would probably give about £2,000 or £3,000.

2979. Well, then, the total cost of altering all the lighthouses, assuming you could undertake the work *en bloc*, and carry it out at once, would, roughly speaking, cost about £100,000?—Possibly £100,000 to £150,000.

2980. And then, assuming you had all the lighthouses modernised, put in proper order, your annual expenditure on new works then would probably drop considerably?—I should think so, certainly.

Efficiency of Lighting of Irish Coast.

2981. You consider the coast is fairly lighted, taking it as a whole, if the lights were brought into accordance with modern ideas?—Yes, I think so. There are one or two cases where it would be better, perhaps, to alter the lighthouses altogether; take one away, and put another in another place; particularly Clare Island.

2982. This is not a matter which comes within your own personal knowledge, I remember the case of Wicklow Head, where you had three lighthouses, one on top of the other?—Yes, but there is only one in use.

Mr. C. W. Scott

6 Dec. 1906.

2983. Yes, but that shows that the others were built in error by somebody?—No, not in error; the same happened at Skelligs. I do not think it is correct to say they were built in error at Skelligs or Wicklow. And Slyne Head is another case in point; at the time they were built no such things as revolving lights had been thought of, and the only method of distinguishing one lighthouse station from another was either by colour or multiplying the number of lights, and the result was that at Maidens, Slyne Head, Skelligs, and Wicklow, and some other stations, too, we had two of them.

2984. One over the other?—Not necessarily one over the other, but alongside one another. There was one on each of the Maidens, there were two on the island on which Slyne Head is built, and there are two on the Skelligs. Afterwards, when we began to get more characters, better means of differentiating between the lighthouses, the Tearaght was made a revolving light, and also the Fastnet, and Loop Head was made an occulting light. They then put out one of the lights at Skelligs; there was no longer the necessity for having two; they left only the one light, but that one light, as a matter of fact, is not in the right position for a single light. When they were putting up two lights, they put those two lights in probably the best position for two lights, but neither of the lighthouses was in the right position for a single light, and the Commissioners went forward last year with a scheme to place a new lighthouse now on the Skelligs Rock in the right position for a single light. But the expenditure was considered to be too great, and they are now going forward for an alternative scheme, simply to put a modern light in the existing lantern, though there is no question about it that that lantern is not in the right place.

Lighting Apparatus: Length of flash desirable.

2985. You spoke about the length of flash at the Bull Rock. What is the length of flash that you adopt as being the most effective?—Well, that is a question which I should say is unanswerable. I do not think there is any such thing as a most effective length of flash; it depends upon a great many things.

2986. I have seen it contended that a flash of one-tenth of a second is altogether too rapid?—Again, even that requires qualification. The French Lighthouse Authority stated some years ago—they made rather a bolder statement than they might, I think, when they stated that one-tenth of a second was the most effective length of flash to give, when you could give it exactly; and since then they have changed that view, and they now state again, in rather a bold manner, that no flashes ought to be less than .3 of a second—three-tenths of a second. Well, now, I maintain that both those statements are wrong when stated in that bold manner. On French apparatus the lenses and prisms extend over a total vertical angle of about 140 degs., and the divergence from the top prisms is I think, about half the divergence from the centre of the lens: what is stated as the length of the flash, in ordinary practice is the divergence from the centre of the lens; therefore, when a Frenchman speaks of one-tenth of a second flash, the real divergence of the beam of maximum intensity, which is the only part of the beam which is of importance, is only one-half one-tenth of a second. Well, now, if you take the Fastnet apparatus and compare it with that, the Fastnet is a biform apparatus in which the vertical angle is only 90 degs., and the consequence is that the proportion between the length of the beam of maximum divergence and the length of beam as ordinarily stated, instead of being only 50 per cent., is about 83 per cent.; and the consequence is that, supposing a French apparatus and the Fastnet apparatus were put up side by side, both of them giving a nominal flash of .3 of a second, the French flash would really be only .15 and the Fastnet would be about .25, so that it is impossible to make a definite statement of that sort, to say that the flash should not be below one-tenth or one-third, or anything else.

2987. In general terms, you employ a longer flash than the French?—Well, I do not know that we do. The French authorities, in their modern apparatus, have limited themselves to .3, and a great many of their modern lights are up to half a second, and our flashes also vary very greatly. The Fastnet, for instance, is rather over one-sixth of a second. The flash on the Fastnet is about the same as the flash at Ile Vierge. Those were two apparatus put up at about the same time, and though the Fastnet was probably our best way of doing the thing, and the Ile Vierge was their best way of doing it, the flashes are about the same in actual duration of flash of maximum intensity.

2988. What type of burners? You say you make them at Kingstown?—The incandescent oil.

Type of oil burner employed by each Light-house Authority.

2989. Is it a patent burner?—It is not a patent, but it is a design of my own; we designed it in 1900, and it was the first burner in which there was no obstruction to the light by any of its own apparatus.

2990. You are acquainted with the burner designed by Mr. Matthews, and used by the Trinity House?—Yes.

2991. That burner is not used by the Scotch?—No.

2992. And you do not use the same burner as the Scotch people use?—No. Mr. Stevenson, when he was starting to use incandescent burners, asked me whether we could supply him with our burner, and I advised him then to adopt Chance's burner. I believe that Chance's burner is for practical purposes as good as ours. I prefer ours myself; it is a little bit cheaper to make, but Chance's burner was a thing actually on the market, which Mr. Stevenson could buy. I told him that I thought ours was slightly the best, that Chance's was practically equal to it, and that as it was to be bought straight on the market I recommended him to get it.

2993. As a matter of fact, the three different Authorities are using three different types of burners?—Three different types of burners, but the Chance burner and my burner are identical in principle.

2994. They are more nearly allied than the Matthews burner?—Yes, the Matthews burner is an adaptation of one of the commercial burners, it has an overhead retort.

2995. It is of a more complicated type?—Oh, very much more complicated.

2996. And you use the mercury floats?—Yes, we use mercury floats.

Mercury floats.

2997. Which are a French invention?—They were a French invention originally; our mercury floats are similar to the French in that we can lower the mercury floats to clean them, and raise them again inside an hour, but our trimming stages and burners are stationary, whereas the French support them on the float, and revolve them with the lenses.

Fog-signals; Cost of explosive,

2998. With regard to explosive signals, you have told us that you attach considerable importance to the use of explosive signals; you consider them most effective, but you admit that they cost more than the siren?—Enormously more in maintenance.

2999. At what figure, roughly speaking, would you estimate the annual expenditure on an explosive signal used at 5 minute intervals?—Well, it varies largely in different cases.

3000. According to the prevalence of fogs in the locality?—Yes, the Fastnet is £260 a year, on an average. That is a 5 minute signal. Blackhead is another 5 minute signal; if you get the cost of it, it is very likely more than £100 different.

3001. Higher?—Or lower. I mean to say, there is very great variation.

3002. You have two lightvessels still equipped with sirens of high and low note?—Lighthouses.

Sirens with more than one note.

3003. Lightvessels?—Oh, no. We have lighthouses fitted with high and low notes; our lightships are both single note. Mew Island and Inishowen are the two lighthouses where we have a high and a low note, and Bull Rock is a high and a low note too—three of them.

3004. Three lighthouses?—Three lighthouses.

Experiments: Difficulties of carrying out, with fog-signals.

3005. Now, with regard to experiments, you have told us already—I think I need not say very much about that—that your general opinion with regard to experiments is that you consider that they are desirable—that experiments should be undertaken. I should say that experiments with regard to overcoming the difficulty of the area of silence would be important experiments. I mean, the knowledge on that subject appears to be still very vague?—The knowledge of sound signals from beginning to end is very incomplete. It is knowledge which, in my opinion, can only be obtained usefully during fog; and therefore, in my opinion, the expenditure of any large sum of money on experiments carried out on our coast in places where fog-signals are used, like at the Isle of Wight, in fine weather, with regard to silent areas or anything of that sort, I look upon as absolutely and utterly useless.

3006. But still, seeing that we have not any considerable scarcity of fogs in this climate in the winter time, you would consider that carrying out experiments during the time that fogs are prevalent would be desirable?—If you can devise a means of doing that without sending ships ashore. That is the difficulty. My opinion is that the place to carry out fog-signal experiments is in some locality where there is no fog-signal within some hundreds of miles, so that it is an impossibility by your experiments to mislead ships. And, of course, to do that, it will cost a great deal more money than carrying out the experiments on an existing fog-signal station. And, in my opinion, the experiments with regard to matters like the silent area are absolutely useless if carried out at a fog-signalling station, because it is necessary to maintain the true character of the signal; and if you try to compare different instruments with a view to find out the one that happens to be better than another, and with the different instruments to maintain the true character, the result is that sometimes a ship will hear one of the instruments and not the other, and that will destroy the character.

Difficulty of obtaining funds for,

3007. But you have found difficulty in inducing the Board of Trade to consent to the expenditure of money for experimental purposes?—Well, it is rather this: That the Board of Trade were not at all inclined to give money for experimental purposes without getting very full information on the subject of experiments; and it is rather a difficult matter to give full information beforehand on the subject of experiments, unless the experiments are going to be on a big scale.

3008. You tell us that the French publish their experimental work?—When I say "experimental work," I mean they do not publish it until their experimental work has come to some results.

3009. But still, you eventually get information?—They issue pamphlets, which they send to us. They send to all Lighthouse Authorities in the world.

3010. You receive these pamphlets, I take it?—Yes.

3011. From your perusal of these, would you be led to believe, in a general way, that the French Lighthouse Authorities spend more money on experimental purposes than we do?—I think so. Of course, I cannot say the amount of money; but what I do say is this: They experiment in a much more systematic manner than we do.

Control of Trinity House and Board of Trade over Irish Board:

3012. The Trinity House has refused to sanction some of your proposals. You say within the last three or four years they have insisted on details?—Yes, that is so.

Delays caused by,

3013. Have you, in a general way, found the necessity of obtaining sanction from the Trinity House to your schemes result in any considerable delay in carrying out your work?—Oh, in some instances it has—very much. If you will couple the Board of Trade with the Trinity House, my answer is decidedly yes; but I could not say offhand whether the delays more often occur through the Board of Trade or through the Trinity House. The Board of Trade and the Trinity House between them delayed the work of the Fastnet a matter of about four years, I think.

Mizen Head: Policy of Irish Lights Board as to fog-signal for,

3014. Well, with regard to the fog-signal station at Mizen Head, that you referred to in your evidence, is it true that the Irish Lights Commissioners for many years refused point-blank to establish a fog-signal station at Mizen Head?—The Irish Lights Commissioners always maintained that they thought it was a mistake to put a siren fog-signal at Mizen Head, and they still hold that opinion.

3015. They still hold that opinion, but you have it in the estimates for this year?—Yes; because we have been instructed by the Board of Trade, despite our opinion, to put it in. I may say it was in last year's estimates, and it is sanctioned, and the work is in hand—we have commenced it. The Elder Brethren originally backed up the Irish Lights Commissioners—I am speaking from memory—in saying that a fog-signal at Mizen Head would be a mistake. But the shipowners pressed for it so much that first of all Trinity House gave way, and subsequently the Irish Lights Commissioners yielded to the statutory instruction of the Board of Trade, and are placing it there. The Irish Lights Commissioners, when they did agree to this, recommended that, if there was to be a signal there, there should be a powerful light along with it; but the Board of Trade decided that there should not be a light—that there should be a fog-signal only.

3016. I understand the position to be, with regard to this Mizen Head fog-signal, that the Irish Lights Commissioners are practically erecting it under protest?—I think so.

3017. And they hold that if the fog-signal should be erected at all, it should be accompanied with a powerful light?—That is, or at any rate was, the opinion of the Commissioners. I am not authorised in any way to give an answer to that question. You must take that answer as being from me personally.

Irish Lights Board: Observations on alleged unbusiness-like methods of,

3018. I suppose you are aware that some cases have been laid before the Commission in which it is alleged that the Irish Lights Commissioners have not shown wisdom or diligence in the carrying-out of work?—Yes, I heard of it.

3019. And that there are some of those cases in which your department is specially concerned?—Yes.

3020. You might wish to have the opportunity of saying something with regard to one or two of those cases?—I did not prepare any replies to them, because I was under the impression that the Commissioners wished to reply to them themselves. There are one or two things I noticed on which I could give you an offhand reply. One is—the first thing—with regard to the "Princess Alexandra," it is stated that a mistake was made by the Commissioners' Engineer. Well, that was not I, because I have nothing whatever to do, as I have already told you, with the steamers. Then there is another question in there which I think I may throw some light on. It is a question of Barr Point.

3021. I should like to hear what you wish to say on it?—All I was going to say about that was that the original proposal—it was before I was Engineer—was to put up a fog-bell at Barr Point—to take the bell from Roches Point, which is driven by a clock, and erect it at Barr Point; and the cost of doing that was a very small matter, about £100 or so. But we would have required two keepers to attend to it. It is a mile away from the lighthouse, and could not possibly have been kept going without two keepers. So, when I came to deal with the matter, I pointed out to the Commissioners that it would be a great saving of money if they would allow me to put in an electric installation, which would enable the keeper at the lighthouse at Larne to ring that bell over a mile away; and they immediately agreed to it, and went forward for the extra expenditure of £500 or £600—I forget exactly what it was—and that has resulted in an annual saving of £250, I suppose.

3022. Therefore you hold that the extra expenditure afterwards incurred was more than justified by the saving effected?—Oh, very much.

Administration, economical.

3023. As you say the Commissioners purpose to reply to these various matters themselves, I shall not ask you any more on that point. I should like to ask you, as a final question: Do you consider that the Irish Light service as a whole, taking the number of lighthouses, buoys, and lightvessels on the coast of Ireland into consideration, and comparing that with a similar number of buoys and beacons on the coasts of England and Scotland, is carried out as economically and efficiently as in either England or Scotland?—Well, I have not really proper data on which to go, on which to give you a really proper answer to that. It is a question of accounts, and I have not any means of access to the accounts. But my impression, gained from the published Board of Trade accounts, is that the Irish Lights are very economical indeed.

3024. You think that they compare favourably with regard to economy of administration?—Very favourably; but I am simply going from the very incomplete returns which the Board of Trade publish. Of course, I may be completely mistaken; but, judging by them, the Irish Lights are the cheapest managed of the three Boards. The administration expenses, including office, stores, steamers, and miscellaneous, during the last 5 years amount to 33¾ per cent., 29½ per cent., and 25 per cent. of the total expenditure of the English, Scotch, and Irish Boards respectively.

3025. (*Admiral Henderson.*) Are you acquainted with the systems of administration of the Trinity House and the Scotch Board?—No, I cannot say that I am. Of course, I know something about them.

Mr. C. W. Scott.
6 Dec. 1906.

3026. You do not know enough to be able to say which you consider the best, or do you?—No, I am afraid that is a thing I have never gone into.

3027. Do you attempt to apply any part of their systems, either administrative or mechanical, to your own work?—I do not quite understand what you mean, Sir.

3028. I mean, do you attempt to make any study of their method of doing things, and taking up the best of it to apply to your own?—Do you mean as regards general administration?

3029. Anything connected with the administration? When I say "administration," it means a good deal to do with the repairs?—So far as the engineering work is concerned?

3030. Yes, I am speaking of that?—I have always done all I could to keep myself acquainted with what was going on, and the methods of doing work in Trinity House and Scotland, but I cannot say I have succeeded in making myself very fully acquainted; and certainly, in any case where I have found anything which I thought was an improvement on our methods, I immediately would adopt it.

Lighthouses: Efficiency of, in Ireland.

3031. With the exception that you have mentioned just now in your evidence, would you say that your lights are up to date?—Well, I gave a list of those which I consider are really up to date, and by "up to date" what I mean is, really good lights with economy.

3032. I mean, are they up to date from the point of view of efficiency for navigational purposes?—So far as the navigator is concerned, I should say very nearly all our lights—there are very few exceptions—are quite good enough for their purpose.

3033. Would you say generally that the Irish coast is as well lit as the Scotch coast or the English coast?—I should say it was quite; in fact, I think it is better, taking into account the requirements in each case.

3034. Would you say that the coast of the United Kingdom would compare favourably with the lighting by any other Powers that you know about, or any other coast?—I think the French coast, for instance, is more efficiently lighted. The French, I may say, have really gone into the matter of tackling the question in a big way, and have really gone and altered all their lights; nearly all their lights are modern, and it is not the case that nearly all our lights are modern.

3035. Are there really many important new works that the Irish Board want to undertake? I am not putting this question as to conversion. But are there really any new works of great importance that have to be undertaken that are of pressing importance, that you think the Board should undertake?—Quite apart from conversion?

3036. Yes?—I really do not know that there are; there are one or two very debateable points.

3037. But there is nothing that you think really very urgent?—There is nothing which I know of which the Board are particularly anxious about in the way of an absolutely new station.

3038. What are the debateable points?—One question is that at present there is a light on Inisteraght, and it is a matter which was very much debated before that light was placed there, as to whether it ought not to have been a rock lighthouse on the Foze Rock, which is a long distance outside Inistearaght, but which would be enormously more costly.

3039. What is the other point?—There is another point at Inistrahull; we have a light and a fog-signal on an island inside the Torr rocks. The Torr rocks are more than a mile outside Inistrahull, directly in the direction in which ships approach, and I do not think there can be any possible question that the right place to have the fog-signal would be either at the Torr rocks or on a lightship outside the Torr rocks.

3040. But it is not a matter of urgency really?—No, I do not suppose it is.

Repairs: System of executing,

3041. What is your system for the repair of the machinery and optical instruments of the lighthouses generally?—There is no annual repair of the machinery. The machinery is inspected by me annually. The keepers have their strict injunctions to keep me informed immediately of anything they see going wrong, and if during the inspection I find that a machine is showing undue signs of wear, or anything of that sort, which has not been reported to me, I drop on the keeper for not having called my attention to it. And the Inspector in his inspections looks over the machinery and that sort of thing, and sees that they appear efficient, and whenever we know of anything wrong we immediately send a man out to repair it.

3042. Where from?—From Kingstown.

3043. That is to the whole coast; it is your centre for all repairs?—You see, so far as repairs to lighthouse machinery and that sort of thing are concerned, it is a very specialised work.

3044. Do you have to send very much machinery back to Kingstown for any purpose?—No, very little.

3045. State the number of mechanics that you send out yearly for this purpose?—Well, as I say, we have six fitters whom we employ at Kingstown, and we send them out.

3046. Are they often all away, or are there sufficient to do it?—As a general rule, three or four are away; some repairs as well as new work are carried out in Kingstown.

3047. What would you estimate, so far as a year's work is concerned? How many men for the year?—Well, we do it all with those six men.

3048. But, as I understand you, they are not fully employed?—Not always outside, but we do keep six men fully employed. For instance, our spare lightships are kept in Kingstown, and the repairs to them, of course, are carried out in Kingstown.

3049. Will you give their cost—I mean, including their travelling expenses; what it costs for the annual upkeep in that sort of way? I do not want you to do it now; it will do if you send it in?—Do you mean the repairs to the machinery only; that is, the fitters?

3050. I mean the optical apparatus generally. The Scotch Board say they keep the whole of their apparatus in efficient order with three men a year; that these three men go round and visit every single lighthouse every year, overhaul it, and put everything to rights, and by this constant annual refitting an enormous amount of work is saved, because parts are not worn down?—I am afraid I cannot give you that; we have not that particular system, and these men are employed for new works and for special repairs, in addition.

3051. Inside?—Inside and outside.

3052. I only want to know what their work is outside?—It would be exceedingly hard to get it. If you like, I will see what I can prepare in the way of a statement on that.

3053. I am asking again if this is not an expensive system, the constant travelling of these men, and the necessity of conveying material to and fro?

3054. (*Chairman.*) Perhaps you will give us all the information you can?—Yes.

3055. (*Admiral Henderson.*) I mean, when you you take a centre such as Kingstown, and you are sending the men out in all directions to and fro, is it not rather an expensive system?—Well, travelling expenses and that sort of thing are very high.

3056. And you have to pay these men's subsistence?—These men get 6s. a day. One of our men gets 7s. a day; he is a sort of leading hand; and the others get 6s. a day. And then they all get 2s. a day personal allowance.

3057. I wanted to know really if there is any cheaper way of doing it. If you had the country divided into districts, with one man in each, for instance, the enormous and constant travelling could be avoided?—I do not think so. Ireland is a difficult country to travel about. There is only one centre to the railway systems in Ireland, and that is Dublin. Very often, to get from one place on the West Coast to another place on the West Coast, the shortest way is to go to Dublin and back again. We happen to be situated at the centre, and all lines radiate out from us, and I think you would find it exceedingly difficult to get centres.

3058. I only want to compare your Board with other Boards?—Yes.

3059. Now, I should like to know if you would give us a list of the trades of all men that you employ, not only at the Kingstown workshops, but on the coast; men you have at other places on the coast?—We have no other places.

3060. Nobody under your control? Have you not something on the West Coast—a base somewhere?—No.

Buoys: System of repairing,

3061. No other base at all?—No other base at all. We have buoy depôts. We have a buoy depôt at Roches Point, at Cork. The keepers receive the buoys there, and we give them an allowance per buoy, according to the size of the buoy. They get £5 for a complete gas buoy, with the whistle and bell on it, for scraping, cleaning, and painting it, and putting it out on the station again.

3062. That is, they are paid by the job, so to speak?—They are paid by the job, and they employ labour.

3063. On the job?—On the job, and this is the repairs to buoys at Roches Point, and at Larne, which is the other depôt. We send a blacksmith from Kingstown as soon as the lightkeeper has got all the buoys cleaned and ready for him. He sends up a report of all the repairs that are wanted, and if necessary, if there is anything at all doubtful, my mechanical assistant goes down and examines it. We prepare the necessary new parts at Kingstown, and send it out with the man to Roches Point or Larne, or wherever they may be, and in a couple of weeks he would do all that is necessary to repair these buoys in ordinary practice.

3064. I think you said you had nothing to do with the steamers at all?—I have nothing to do with the steamers.

3065. Do you lend any assistance or offer any advice to the other Boards, to the Trinity House or to the Scotch Board?—You do not communicate with them unless you are asked?—No, never, unless we are asked or unless we want to get something from them.

3066. Do you compare engineering costs of maintenance and repairs at all?—No, I do not think we do.

Engineer: Duties of,

3067. The lightships you have nothing to do with, you said; you do not trouble about their repairs. Where are they repaired?—I am absolutely responsible for the lanterns and lighting apparatus, and for the fog-signal apparatus.

3068. Where are they repaired?—They are repaired by tender, sometimes in England, sometimes in Scotland, and sometimes in Ireland.

3069. You have nothing to do with the hulls of the ships?—I have nothing to do with the hulls of the ships; that is done by the Inspector. The lighting and the fog-signals are done by me.

Engineer's Department: Method of accounting

3070. Are the charges for your work shown anywhere? I mean to say, the departmental charges?—No, there is no attempt whatever made in our accounts, according to the way the accounts are kept by the Board of Trade's desire, as I understand, to cost the work, and get at what the different parts really come to. Anything of that sort I have to do entirely by myself, and such prime cost accounts as I am able to keep with my small staff are not very satisfactory.

3071. Supposing you make use of the Commissioners' steamers for conveying gear for a new work, is that charged?—No, it is not.

3072. And none of the Commissioners' plant that is used is charged?—No.

3073. Therefore it really means that whatever the cost is, that should be added to the total cost to give the true account?—Exactly; certainly.

3074. Does that imply, when you are able to use the steamers for new works and so forth, that they are not fully employed for the actual purpose of maintenance?—A steamer makes up a cargo to go round the coast to land stores and building materials.

3075. But you constantly want building materials if you are putting up new works, do you not?—Yes, whenever one of our steamers is going round the coast we send the building materials with her. Whenever we have building materials and that sort of thing that I want to send I inform the Secretary, and ask if I can have a steamer to take them. If there is a steamer available or a steamer is running round that way and she has room on board she takes them.

3076. Supposing she has not room?—I have to send them overland.

3077. Or hire a boat?—Or hire a boat. Generally the quantities are too small to make it worth while to hire a boat; we generally send them overland.

3078. You do not do any manufacture of lights or their components?—We manufacture our burners; that is the only thing we actually manufacture as a regular thing, but we make various small fittings from time to time. Just lately, for instance, we have made entirely at the stores an apparatus for firing fog-signal charges.

3079. It is a small matter?—It is a small matter; quite a small matter.

3080. Not anything in comparison with the amount of manufacturing work which they do at the Trinity House. You know what they do; you have been over the Blackwall workshop?—I know what they do; I know what money they spend.

3081. Is that costly?—I do not know, because I do not know what they do for it; all I know is from the Board of Trade returns.

One Central Lighthouse Authority: Would not be economical.

3082. I am going to ask you a question which I want you to look at from a national point of view. Do you think if the three Lighthouse Boards were put under one control with a proper decentralisation system of management there would otherwise be great economy?—I very greatly doubt it. So far as I can see our present arrangement, whether it is up to date or not, seems to me to be extremely efficient from the economical point of view. I mean to say the amount of work which we get done without paying money for it is very big.

3083. In what way do you mean?—I mean to say the amount of work which our Commissioners do.

3084. Oh yes, but you have got a very big Board?—We have, but the number of men who really do the work is not very large. Of course it is the Inspecting Committee that do most of the work.

3085. You are speaking from the Commissioners' point of view entirely; I am looking at it from the point of view of administrative efficiency?—I am looking at it from the point of view of administrative efficiency. I do not see how the things are to be managed at all if you do not keep a department in Ireland, a department in Scotland, and a department in England. And I do not see what gain there is going to be at all on the present Irish Lights Board, because I take it that the present office expenses will have to be all maintained; I do not see how you could reduce them; they are exceedingly low for the amount of work done. And you will have to have a central body in London which, I presume, would have to be paid for doing work which at present is done for nothing by the body which is in Dublin. It is a thing I have looked into pretty carefully, and I cannot myself see where you are going to make any saving by it, so far as the coast of Ireland is concerned.

3086. Of course where you get separate bodies for the same sort of work over what is after all a comparatively small area expenses do increase?—There is a liability to it.

3087. It is a watertight compartment system, so to speak?—But I cannot see where we are going to save.

3088. Now, then, I will ask you another question. Under such conditions, supposing there was a central board here, could not one engineer do the work, supposing he is provided properly with a decentralised staff?—I presume he could.

3089. Supposing he had an assistant in Ireland who was well up in the work?—Yes, I should think so, but the assistant in Ireland would have a very great deal of work to do—must necessarily have it—on his own responsibility; and would require as large a staff as the present one, with the possible exception of the temporary draughtsmen.

3090. Have you any suggestions to put before the Commissioners that would further the efficiency and the economy of the lighthouse administration of these three systems. Is there anything when you are thinking over the matter you could tell us?—I did not know that I was going to be asked questions upon a general statement of this sort; I really have not considered the matter sufficiently.

3091. You say you have not given any consideration to the matter?—I do not say I have not actually given any consideration to the matter, but I have not considered it with the view to stating my opinions at all.

3092. In what light do you regard the control of the Trinity House and the Board of Trade. Do you

Mr. C. W. Scott.
6 Dec. 1906.

find that it gives you very much extra work; do you think it goes into too minute details?—Well, I think that the old arrangement when the Trinity House did not bother about our methods of doing work, but simply had to sanction characters of lights, was better than the present arrangement in which they go into details; but so far as the Board of Trade control is concerned I think it is sound. It sometimes gives a little extra work, but I think on the whole it is a sound principle; I think it works well.

Notices to Mariners: Issue of,

3093. Do you issue any Notices to Mariners?—Notices to Mariners are prepared by the Inspector. I have to check them over and see that his actual description of the light is correct and that sort of thing.

3094. And do you issue them?—No, that is done by the Secretary. I think it is the Secretary that does it; it is either the Secretary or the Inspector, I am not quite sure.

3095. You did not give a distinct answer as to the number of years you took for some of your returns; have you any idea as to the number of years you took?—I could not give you that at all; I could give you a statement of the number of years I took; you would want to get it for about 10 years at every one of our stations to be of any value. It varies so enormously.

Illuminants:

3096. I suppose what you say about incandescent oil that is being used now is not the last word about lighting. As soon as you are complete with incandescent oil you will probably find out some new illuminant coming along such as acetylene, and you will probably want to alter it all over again?—That is, of course, quite a possibility. I am very strongly in favour of acetylene for unwatched lights.

Inspection of Seamarks: Value of, by Commissioners.

3097. Are you of opinion that inspection by the Commissioners is of any real value the way they go round?—I think it is of very great value.

3098. As a body?—The Commissioners go round, from three to six of them; about four of them, I should say, on an average go round.

3099. Your Superintendent and your Inspector and yourself, if you go round, would be almost sufficient?—I always look on the Commissioners' inspection as being a check on me and the Inspector.

3100. You think that is a good thing?—Well, I think it is; possibly I may consider that I personally require no supervision, but I think anybody else might.

3101. (*Sir Frank Adam.*) You mentioned that you had to lend an engineer from your department, when you are requested, in connection with repairing or other works on lightships and steamers?—On the the steamers only, practically.

3102. Is he a qualified marine engineer?—Yes, he is.

3103. Has he a certificate?—Yes, he was the chief engineer in the "Princess Alexandra" for a number of years, and then he was appointed to this post.

3104. In fact promoted?—Yes.

Local lights: Control of,

3105. I wanted to ask you—from your experience and knowledge, where a harbour has been started with harbour lights and harbour authority in Ireland—whether any existing old lighthouse has been handed over to them at any time?—I do not think so.

3106. Never to your knowledge?—I do not think so; I am not aware of its ever having happened. My impression is that the Commissioners have never handed over a lighthouse.

3107. In connection with that you mentioned the terminus of the London and North-Western Railway at Greenore, that their buoys extended beyond your lighthouses?—Yes, we overlap.

3108. Their buoys are for their own particular traffic?—Yes.

3109. Do you think that the general requirements of navigation in these seas require your lighthouses still, apart from the London and North-Western use?—Yes, certainly, because it is the entrance to Newry, and a harbour of refuge, too.

3110. Your answer is quite sufficient for me that, in your opinion, it is so?—Yes.

Steam-vessels: Economy of system of,

3111. Have you or the Commissioners ever considered whether it would be cheaper on all occasions, when you want steamers for any purpose whatever, to hire tugs or steamers instead of keeping your own?—Of course, I have nothing to do with the steamers, but I can answer this so far. On two or three occasions we have hired owing to being compelled to do so. The Board of Trade delayed for a very long time sanctioning a new steamer to replace the "Princess Alexandra," but ultimately the "Princess Alexandra" broke down, and she was for a long time lying up in Liverpool while the Board of Trade were trying to make up their minds whether or not they would sanction the new steamer, and during that time we had to hire ships, and I believe that the difference in cost was very marked indeed, and they are much in favour of our having our own ships.

3112. It would only arise when you could not continually use your own ships. I do not want you, in your reply, to miss my point, because you might at a particular time want a particular steamer and do not get it, and you might have work which necessitated your hiring, but there might be other times of the year, extending over months, when you do not use the steamers you have, and my point was to get a general opinion from you as to whether, under all circumstances as you know them at present existing, whether there would be anything in the assertion that it would be cheaper when you wanted a steamer for any purpose whatever, to hire it than to have your own?—I do not think so, for two reasons in particular. I would say, apart from all other considerations, that the steamer that is fit to work buoys without damaging them wants to be a specially built steamer, and we have two steamers now which are fit to work buoys and do other work of that sort, and if we had to do without those two steamers I should have a very largely-increased expenditure on repairs to buoys. Not only that, but a large number of buoys would be out on their stations which would not be in proper condition. Secondly, I am convinced that hired steamers would prove far more costly.

Lighthouses: Alteration of position of,

3113. One more question only. You have mentioned that there is a lighthouse on the top of a mountain which you think would be better somewhere else?—Yes. Clare Island.

3114. You know there have been lighthouses which have been removed from their original position at great cost, and have practically been built on rocks in the sea?—Yes.

3115. Looking back on the past ten years, would you say that the expenditure on new works has largely been added to on account of permanent lighthouses or putting lighthouses in a better position than they were in in the interest of traffic?—So far as we are personally concerned in Ireland, such a thing has hardly ever been done at all. The only case that I know of really is an alteration at Sligo—the Oyster Island Light. There was a pair of leading lights there, leading through the channel. Well, the bank shifted, and the two leading lights led right over the middle of the bank, and they pulled the two leading lights down and put a new light which did meet the case.

3116. In the case of the experience of your Board, the added expenditure would not be so great as in the case of the Trinity House and Scotch Boards during the same period?—I really do not know how many the Trinity House and Scotch Boards have moved. I know the Trinity House have moved two or three.

Chain cables: Diameter of,

3117. (*Mr. Ennis.*) You have a large number of lightships?—Yes.

3118. What is the diameter of the chains for moorings?—It is $1\frac{5}{8}$, $1\frac{3}{4}$ on some of the ships. That is really not in my department, but in the inspector's department. I think he is using $1\frac{5}{8}$ inch now.

3119. (*Admiral Henderson.*) Are there any ports which the Commissioners light which you think should be turned over to the local authorities?—I think a great many of them ought to, but there are no local authorities to turn them over to.

3120. But where there are local authorities will you send in a list?—Yes.

Unwatched Lightvessels:

3121. (*Mr. Ennis.*) In connection with lightvessels, have you ever taken up the question of unwatched lights?—Yes.

3122. You have not experimented on that subject, and on unwatched lightvessels?—I do not want to speak too positively on it.

3123. I ask your opinion as to the efficiency of that system?—My own private opinion is that in any case where an unwatched light will do a lighted buoy would do.

Fastnet Lighthouse: Dispute with Board of Trade as to electrical communication with,

3124. There is just one more question I omitted, and it is with regard to this: It has been stated that the Irish Lights Board practically defied the Board of Trade with regard to the Fastnet, not with regard to the construction of the lighthouse on the Fastnet, but

with regard to the electrical communication with the shore. Can you give us any information on that point?—Do you say that the Irish Lights Board practically defied the Board of Trade on the subject of the Fastnet electrical communication?

3125. Practically defied the Board of Trade with regard to electrical communication?—I do not think so; we have electrical communication.

3126. With the shore?—Yes.

3127. At the Fastnet?—Yes, and not only that, but for years and years we have been experimenting with electrical communication at the Fastnet.

3128. How long has the electrical communication been in existence?—The existing satisfactory one since the new tower was built. The Marconi system of wireless telegraphy is in existence now. It was installed in the new tower before the new tower was completed.

3129. I do not speak of the Marconi system?—The system we had before was a matter of constant experiment. It was in use occasionally, but was constantly breaking down.

3130. You have no knowledge then of a dispute between the Board of Trade and the Irish Lights Commissioners with regard to it?—I was not aware there was a dispute; absolutely unaware of the fact. It may possibly be—yes, I remember there was some question about their asking us if we could put it up immediately at one time when there was no possible means of doing it as the rock was simply overrun with workmen. That delayed, I think, the putting in of the wireless system for about a year, but the moment we could possibly allow it to be done we did.

Mr. C. W. Scott.
6 Dec. 1906.

3131. There has been complaint of that kind?—I never heard it; there must be a mistake. There is one thing I did not give you at all. Do you want a return of the number of beacons and perches. There is one thing I wanted to mention, that at present we are carrying out experiments with reflectors, an invention of Sir Howard Grubb's, with which we hope to be able to enable passing ships themselves to light buoys and beacons. By showing a light from the ship you will get a reflected light back which will enable a great many buoys and beacons which it would not pay to put a light on to be easily picked up at night at very small expense.

Experiments: Grubb reflector.

Captain ALLISON WOOD, called in; and examined.

Captain A. Wood.

3132. (*Chairman.*) You are, I think, Secretary of the British Shipmasters' and Officers' Protection Society?—Yes, Sir.

British Shipmasters' and Officers' Protection Society: number of members of,

3133. And you speak on behalf of the society?—On behalf of the society, yes, Sir.

3134. Can you tell us how many members there are in the society?—Between 1,200 and 1,300.

3135. Is that a society which extends over the United Kingdom?—All over; all the different parts.

3135a. With its headquarters in Sunderland?—With its headquarters in Sunderland.

3136. And you represent the society as a whole?—Yes, Sir.

3137. I think you wish to make some suggestions with regard to the constitution of the Lighthouse Authorities?—Yes, Sir; as a representative of shipmasters I think it would be a good thing for navigators if the three Boards were formed into one central Board and controlled by gentlemen, constituted of gentlemen, who have distinguished themselves in the lighthouse administration, engineering and surveying, and also of members drawn from the Trinity Brethren and the principal Harbour Boards.

The Central Lighthouse Authority: Advocated.

3138. Your suggestion is that the present authorities should be swept away and an altogether new Board formed?—A new Central Board formed, Sir.

3139. I think you also suggest—so I gather at least from the *précis* which you have submitted to the Commission—that it would be desirable that there should be a minister?—Yes, a Minister of Commerce, Sir.

3140. Responsible for lighthouse administration?—Yes.

3141. How are those two proposals compatible with one another—administration by a Board and responsibility attaching to a Minister?—Well, I thought something similar to the Board of Trade.

3142. The Board of Trade is not responsible for the lighthouses now?—I thought they were. I thought the whole three Board were under the direct influence of the Board of Trade.

3143. All proposals for lighting the coast emanate from the Lighthouse Authorities. The Board of Trade has got a power of financial control?—Only financial control?

3144. That is all. You have not considered, perhaps, how these two proposals of yours could both be carried into effect, because if you entrust the administration of the lighting of the coast to a Board, how could you make a Minister of Parliament responsible for it unless he had absolute control of the Board?—That is what I mean, Sir, and that is what my society means, that he should have absolute control of the Board.

3145. Then your Board would resolve itself into an Advisory Committee?—Well, it would be a kind of Advisory Committee.

3146. The whole power and responsibility would be with the Minister?—Well, he would have the responsibility.

3147. If he has the responsibility would it not be necessary that he should also have the power?—Naturally, Sir, yes.

3148. So far as the Trinity House is concerned your view is that its administration has been satisfactory?—Capital, Sir.

General Lighthouse Authorities: Administration of, is satisfactory.

3149. If the administration of the Lighthouse Authorities throughout the United Kingdom was in the hands of Trinity House, would that meet your views?—We think it would be controlled better.

3150. Do you base that opinion on any actual facts?—On the constitution of the Board, Sir, taking into consideration the members of the different Boards, we do not consider them practical men—the Irish and the Northern Lighthouse Boards.

3151. You do not base your opinion on any actual facts in connection with the lighting of the coast; you merely think that boards with the constitution of the Irish Board or the Scotch Board are not likely to administer well?—That is our position, Sir.

3152. But you have no actual quarrel with their administration?—No, Sir.

3153. No definite complaints to make?—No, Sir.

3154. You say that in the administration of lighthouses the Advisory Committee should be composed of those interests most nearly allied and connected with the use of lights. Does that mean that you think the shipmasters ought to have a representative on the Advisory Committee?—I think so, Sir, and my society think so, too.

Central Lighthouse Authority: Suggestions for constitution of,

3155. Are there any other interests which you consider ought to be represented on an Advisory Committee which are not now represented?—No, Sir; just the Lighthouse Board.

3156. Any other interests which should be represented on the Advisory Committee besides those which are now represented. At the present time you have the shipowners and you have Lloyds; you think that the shipmasters also should be represented?—I think so.

3157. Are there any other interests?—No, Sir, we do not care about any of the others; we want the Mercantile Marine represented by practical seamen; others, I presume, are quite capable of looking out for their own representation.

3158. Have you any suggestions to make as to improvements of any particular lights?—Yes, Sir, there is Mizen Head especially. We have been agitating for three or four years for a light and fog-signal on Mizen Head, which is a very prominent headland.

New Works and Improvements at present desirable: Mizen Head light and fog-signal.

3159. You want a light there as well as a fog-signal?—Yes, Sir.

3160. Have you, as a body, made any representation to the Lighthouse Authority on that point?—The

Captain A. Wood.

6 Dec. 1906.

Shipping Federated Societies did, Sir, as a whole, but not individual societies. The Federated Societies, which comprise the Mercantile Marine Service Association of Liverpool, the Scottish Association, and the British Shipmasters' and Officers' Protection Society There was a representation made. I think it was in 1900; either in 1900 or 1901.

3161. Did they make a representation to the Irish Lights Board?—To the Board of Trade, Sir.

3162. What reply did the Board of Trade give?—About the necessity of a light being established at Mizen Head and a fog-signal.

3163. What reply did the Board of Trade give?—Oh, it would be under consideration.

3164. The Board of Trade did not refer you to the Irish Lights Board?—No, Sir, it would be under consideration, and I do not know of any other reply being made to the secretary. Of course I am not secretary to the Federated Societies now; I was at that time.

Flamborough Head fog-signal.

3165. Are there any other particular lights with regard to which you wish to make representation?—Now, there is Flamborough Head. I see there was a notice issued on the 29th of last month that it is going to be improved, but we would also like the fog signal improved. We made a representation in October, 1905, with reference to this fog-signal.

3166. Did you address yourselves on that occasion to the Board of Trade?—To the Trinity House, Sir.

3167. Are there any others?—When we have represented anything to the Trinity House we have generally had prompt replies.

3168. Why did you not address yourselves to the Irish Lights in the case of the Mizen Head?—Well, I could not say now whether it was sent to the Northern Lights Commissioners or the Irish Lights Board, or to the Board of Trade, but if I remember rightly it was sent to the Board of Trade, Sir. Of course that was by the vote at the committee meeting. They passed a resolution as to where the secretary had to write to, either the Board of Trade or the Commissioners who are responsible for the lighting.

3169. You mentioned two lights; are there any others?—Flamborough Head I have mentioned, Sir, and there is St. Mary's Island. We should like to have a fog-signal on the East coast.

St. Mary's Island fog-signal.

3170. Whereabouts is that?—It is between Tynemouth and the Farne Islands.

3171. Have you communicated with the Trinity House on the point?—No, Sir, not yet.

3172. Do you propose to do so?—Yes.

Cromer fog-signal.

3173. Any others?—Then there is a fog-signal at Cromer. There is none there now; that is a prominent headland.

3174. Have you communicated with the Lighthouse Authority in that case?—No, Sir. This matter is coming up at our monthly meeting next Wednesday.

East Dudgeon Buoy.

3175. Any others?—Well, there are buoys, Sir. There is the East Dudgeon Buoy. A bell buoy was put there some two years ago, on a representation made by my society to the Trinity House. They put a bell buoy; we wanted a gas-buoy, and this bell-buoy was, of course, of very little use. In smooth water, of course, the bell does not ring. It is right in the track of vessels; they take their departure from Flamborough Head, and this buoy lies right in the track, and we consider if we had a gas-buoy it would be a great advantage to mariners.

3176. Have you represented the matter to the Trinity House?—No, Sir, these matters have just been put before me lately, to bring before the meeting on Wednesday next.

3177. So far, the only case that you desire to bring before us, in which a representation has been made and nothing done, is the case of a light on Mizen Head?—Mizen Head, Sir, and also Flamborough fog-signal. A representation was made to the Trinity House about the Flamborough fog-signal; there is no alteration yet. We had a reply from the Trinity House three days ago. It is still under the consideration of the Trinity House.

Central Lighthouse Authority: Advocated.

3178. (*Mr. Ennis.*) You have expressed the opinion that you think that the three Lighthouse Boards should be abolished, and a new Central Board created?—Yes.

3179. You do not believe in the constitution of the Irish Lights Board or the Northern Lights Board, but you think the Trinity House are thoroughly qualified and expert men. I gather from your evidence that you have confidence in the administration of their business by the members of the Trinity House?—Yes, Sir.

3180. Well, then, why do you seek to abolish them? Well, so that we can get the three combined into one; the proportion would still be kept in the Central Board.

3181. But then are you aware what the constitution of the Trinity House is? I mean, have you considered what difficulty would arise in making a board representative of three countries on the lines of the present Trinity House, because the present Trinity House is so constituted that the composition of the Board rests in the hands of the Board's own members, and no one can interfere in that. I mean your proposal could not be carried into effect to leave the Trinity Board intact?—No, I do not suppose it would be left intact, Sir; in fact, those members we would like elected every three years; we would not like them to be permanent appointments.

3182. You do not like the Trinity House to be permanent?—No, let them be subject to election every three or four years.

3183. By what body do you suggest the Lighthouse Board or the Central Board should be elected?—That is a question I have not considered, who should elect them. Very well, it is a difficult question. I may say, Mr. Chairman, we have not given very much consideration to it, but having been requested by the Commission and asked if we were willing and wishful to send a representative, my committee decided that we should send one, else it is a matter we have not given our earnest consideration to. Lighthouse administration is, in fact, a question I do not like.

3184. I personally am extremely glad to get the views of shipmasters and the shipping community—I place great value upon it—but you see the difficulty that I put before you?—I do, Sir.

3185. You are aware that the Trinity House is a paid Board, and that the other two Boards are unpaid?—Yes, Sir.

3186. But if the Trinity House have done this work so efficiently as you suppose, another portion of your evidence would rather seem to contradict that, because you say the French lights are admittedly superior to the British?—Well, they are, I believe, Sir.

3187. And if they are admittedly superior to the British, and the Trinity House has been administering the British lights, either the Trinity House itself must be to blame for administration which has resulted in an efficiency inferior to that of France, or the controlling power of the Trinity House, the Board of Trade, must be to blame. On whose shoulders do you place the responsibility?—Well, I think the Trinity House has been hampered, by what I have read about it, by the Board of Trade. The Board of Trade has refused funds to carry out work—necessary work—so I have been informed by documents.

3188. And, therefore, you are inclined to ascribe to the Board of Trade more than to Trinity House any inefficiency that exists?—Yes, in restricting expenditure.

3189. With regard to this case you have placed before our Chairman as to Mizen Head, our Chairman asked why you did not apply to the Irish Lights Board. Are you aware that the Irish Lights Board recommended the light on Mizen Head, and were refused by the Board of Trade?—No Sir, I am not aware of that.

Representation of shipping interest on, advocated.

3190. You hold that whatever Lighthouse Authority would be constituted or remodelled in the three countries, or in any of them, that the shipping community, that is the shipmasters and the shipping community, as distinguished from shipowners, should have a representation on that Board?—I do, Sir.

3191. (*Admiral Henderson.*) You do not give any reasons in paragraph 1 for the suggestions contained there. Have you got any reasons really to put forward for them?—Well, it is more a matter of business, I believe; it is a matter that all shipmasters do not agree about, but I think it is business.

3192. Do you know that there is any difference in the general efficiency of the lighting of the coast of

Lighting of Coast of United Kingdom: Efficiency of,

Scotland and Ireland, as compared with that of England and Wales?—Well, I believe they go in for more electricity in England, Sir; more electric lights; I think they use more oil in Scotland and Ireland than they do in England.

3193. But I am speaking from the sailor's point of view, from the master's point of view, from the captain's point of view; is there any complaint that the Irish and Scotch lights are not so good as the English lights?—No, Sir.

3194. None?—No complaints.

3195. Is there any general complaint amongst mariners that our coasts are not, on the whole, with just two or three exceptions you have mentioned, properly lighted?—Yes, we can say they are properly lighted.

3196. You think they are?—Yes, Sir.

3197. You have no complaints to make?—No, with the exception of those two or three lights.

3198. The Commission would like to know from a body which you represent, who are accustomed to be always going round the three Kingdoms, whether they have any serious complaints to make?—Well, I put it just as I have given them.

3199. You do not think there are any general complaints?—No, Sir.

3200. Now, with regard to the question of expenditure, is it not the case that all the expenditure of Departments, such as the Trinity House, has to be limited by the question of cost?—Well, I presume it will have to be limited; yes.

3201. The whole of the money that can be spent comes from the General Lighthouse Fund?—Yes.

3202. That itself is limited; and another thing, it is a tax either on the shipowners or the community as a whole, and you do not want to do more than is absolutely necessary?—But so far as I understand, it is in no way attenuated, the Lighthouse Fund; they have funds in hand.

3203. Yes, but they have practically reduced the dues by 20 per cent.?—The lighthouse dues.

3204. Other people have to be taken into consideration, as well as an extreme state of perfection. Do you understand what I mean?—I do, Sir.

3205. Have you ever heard of comparisons? I ask you, do you know that the French coasts are superior to our own?—Well, I have proved it by experience; we can all see the French lights much sooner than we can see our English lights.

3206. How long is it since you have been to sea?—It is seven years since I have retired now, Sir.

3207. Our lights have been improving. Supposing you were over at the French Cape Grisnez, would you see the Foreland lights?—We should, in clear weather, see them.

3208. As well?—I will not say as well as we see the French light from, say, the Foreland. I have seen Calais light and Grisnez light long before I have seen the Foreland lights. I consider the Foreland lights are too high. Many a time they are capped in fog.

3209. Grisnez is pretty high?—Not so high as the Foreland.

3210. It may not be, but it is a good high light. The question about your Central Board: you want to be able to ask a Minister in the House questions. Well, do you not think that Parliament has got a great deal too much to do now?—I daresay they have a good lot to do.

Captain A. Wood.

6 Dec. 1906.

3211. And it would be better to avoid as many questions as possible in Parliament?—Yes. Well, the fog-light; I would like to say something about the fog, the electric light. Mariners find we cannot see electric light the same distance that we can see an oil lamp.

Electric Light: Deprecated.

3212. In a fog?—The electric light does not seem to pierce the fog. The fog seems to absorb the rays in some way or another.

3213. Is that the general opinion amongst shipmasters?—Yes.

3214. You do not approve of the electric light?—I do not approve of the electric light; of course, it is a powerful light in clear weather, but when there is any haze at all, the haze absorbs the rays.

3215. (*Chairman.*) Is it not a fact that there are five times as many electric lights on the French coast as on the English coast?—I think there are.

3216. In spite of that, you think the French coast is better lighted?—I think it is better lighted; there is not so often a fog on the French coast.

3217. (*Admiral Henderson.*) There are varying degrees of penetration. It depends on the state of the atmosphere. This is my personal opinion—I do not know whether you will agree with me—that you do not want lights to show at too great a distance. It is no advantage to you seeing a light at twenty-five miles?—No, not at all; as long as you can see a light in sufficient time to avoid getting stranded, it is quite sufficient, I think.

3218. There is an exaggeration and an unnecessary increase in cost in making lights too powerful?—I consider there is, Sir.

3219. (*Sir Frank Adam.*) There is no use making a light show six miles off, when three is sufficient?—No use at all. They are dazzling, these electric lights; in fact, we cannot judge our distance unless we have other lights by which to take cross bearings.

United States: System of issuing aids to Mariners advocated.

3220. (*Mr. Ennis.*) I am particularly anxious to get the views of mariners with regard to foreign lights as compared with our own. You have given an opinion as regards the French lights; can you give us an opinion as regards the lights on the coast of America—the United States?—They are all splendid lights, as far as I can remember. They have a capital system of issuing aids to mariners, which we do not get here.

3221. What do you call "Aids to Mariners"?—Well, they issue pamphlets gratis—a book giving a diagram and a picture of each lighthouse and each beacon on the coast of America, in a large form, and you see at a glance which lighthouse it is. It is a splendid thing, in fact, I brought it to the notice of the Board of Trade three or four years ago.

3222. And you consider such a system would be advantageous to this country?—I think it would.

EIGHTH DAY.

Tuesday, 11th December 1906.

PRESENT:

The Right Hon. G. W. Balfour (*Chairman*).

Sir Frank Forbes Adam, C.I.E.
Colonel I. J. C. Herbert, C.B., C.M.G., M.P.
Vice-Admiral W. H. Henderson.
Mr. M. A. Ennis.
Captain C. Bigham, C.M.G. (*Secretary*).

Sir Thomas W. P. Blomefield, Bart., C.B., called in; and examined.

Sir T. W. P. Blomefield, Bart., C.B.

11 Dec. 1906.

General Lighthouse Authorities:

3223. (*Chairman.*) You are the Secretary to the Financial Department of the Board of Trade?—I am the Assistant Secretary to the Finance Department.

3224. And you put in three tables?—Yes.

3225. Will you describe the contents of these tables?—Table "A" gives the annual expenditure of the General Lighthouse Authorities for the last seven years under each of the heads appearing in the annual Accounts of the General Lighthouse Fund, and the average annual expenditure*

3226. Table "B"?—Table "B" shows under each heading the percentage of cost based on the average expenditure of each Board for the last seven years.†

3227. And table "C"?—Table "C" gives particulars of the number and various particulars of the character of the lighthouses, etc., maintained by the three Boards.‡

3228. Do you consider that the materials provided by these tables are such as enable you to draw accurate conclusions in respect of the comparative cost of the three Boards?—I am afraid they are not.

Difficulty of comparing expenditure

3229. Why is that; will you give your reasons?—The geographical features of the coasts of the three countries vary very much, and necessitate very different kinds of seamarks; the numbers of such marks also differ. These remarks apply more specially to lighthouses and buoys and beacons, but even as regards lightvessels, in which there is not the same variation, there are differences which would make a comparison of little value. For instance, some of the Irish lightships require a crew of 12 men, whereas some of the Trinity House vessels require a complement of six only. Some of the vessels are fitted with sirens or other signalling apparatus which increase the cost, while others are not so fitted.

and administrative systems of,

3229a. There are also differences in the method of administration, are there not?—Yes, there are, Sir. In England the work is to a great extent decentralised by dividing the coast into eight districts, each with a superintendent, a separate establishment, and a storehouse; a steam tender being also attached to the district. In Scotland there are storehouses and steam tenders at three points only, Granton (two tenders), Oban, and Stromness. In Ireland the service is still more centralised, steam tenders being stationed at Kingstown (2), where there is a store, and Berehaven.

3230. How is the relief work of the three Authorities performed?—It is the practice of the Trinity House to perform most of the relief work, renewal of stores, etc., by means of these steam tenders, of which they have 11. It is impossible to apportion the cost of the work done by these vessels between the various services—*i.e.*, lighthouses, lightships, buoys and beacons, etc.—and the total cost is charged under the heading—Maintenance of Steam Vessels. In Scotland and Ireland, however, where there are only four and three tenders respectively, a considerable amount of relief work is done by boats employed under contract. The cost of these is charged under the various sub-heads to which they relate. There is also a difference of practice with regard to repairs. The Trinity House, who have a workshop at Blackwall, carry out by workmen sent from thence any work which cannot be done more economically and efficiently by the district staff or by contract locally. In Ireland repairs not sufficiently important to be put out to contract are for the most part executed by foremen on the staff of Engineer to the Commissioners of Irish Lights, but on occasion the work is done by tradesmen sent by Dublin firms. The Commissioners of Northern Lighthouses have a staff of district superintendents who are borne on the head office establishment, and who carry out all ordinary repairs on the spot with the assistance of one or more mechanics supplied by some good engineering firm.

3231. Do these differences of practice on the part of the three Boards also affect the comparison of the head office expenditure?—Yes, they do. The comparison can only be approximate in consequence of the differences in practice which I have referred to.

3232. Now do you think these differences of practice are justified by difference of circumstances in the case of the three Boards?—It is very difficult to give an answer to that question, Sir, I am afraid. I think the circumstances of the three countries do differ very much. In England, of course, the outline of the coast is less irregular than in Scotland and Ireland, and there are convenient harbours where steam vessels can be stationed and district storehouses established. In Scotland the seaboard, especially on the west coast, is very irregular.

3233. But, *primâ facie*, you would not be inclined to say that there were differences in the task set to each Lighthouse Authority?—Oh, I think so, certainly.

3234. Which might form some reason for the difference of practice adopted?—I think so, Sir. I do not think the Board of Trade have ever tried to impose one hard and fast set of conditions on all the Lighthouse Authorities; as long as the way in which they carried out their work was not extravagant the Board of Trade, I think, would wish to allow them a certain amount of discretion.

Expenditure

3235. Now would you kindly turn for a moment to table "B," please, which shows the ratio per cent. to the total average expenditure of the average expenditure on the various services. And will you look at that part of the table in which the percentages are given exclusive of new work?—Yes.

On Maintenance of Seamarks.

3236. The first five heads would, I suppose, cover, broadly speaking, what may be described as the expenses of maintenance?—I think so.

3237. Now if you add those five heads together, in the case of each of the three Authorities you get, I think, very nearly the same figure, do you not?—I have not added them, Sir.

3237a. For the Trinity House 79.2 per cent.?—Yes.

3238. For the Irish lights, 80.7 per cent?—Yes.

3239. And for the Northern Lighthouse Commissioners, 79.5 per cent.; is that right?—Yes.

3240. It would appear therefore that, if you take the average expense of maintenance under all heads together, there is a very remarkable resemblance in the figures which you reach?—Yes, there is.

3241. Do you consider that is merely coincidence?—I think it must be, more or less coincidence.

3242. You do not attribute any special significance to it?—No, not any special significance, I think.

3243. Well now, take the other three heads; head office expenses are approximately the same?—Yes.

* See Appendix A V. † See Appendix A VI. ‡ See Appendix A VII.

3244. There is a little more difference in the case of miscellaneous expenses?—Yes.

tems ncluded nder lis- ellaneous xpenses.

3245. And perhaps you would be good enough to explain to us what items are included under miscellaneous expenses?—Law charges, travelling, experiments, removal of wrecks, incidental expenses, which do not come under any other special head. These and other details have been inserted in the General Lighthouse Fund accounts for the last two years.

3246. Are these new accounts presented to Parliament?—Yes, Sir, Maintenance of Lighthouses. We have split that up into pay and allowances of staff, oil, coal, and other stores, repairs and renewals of lighthouses, rents, and incidental expenses. I have had a Table prepared, giving these details for the last fourteen years, seven years under the General Lighthouse Fund, and for seven years previous to that under the Mercantile Marine Fund, and I will hand that in.*

omparison f, for two eriods of even years.

3247. If you please. (*Tables D and E handed in.*).—I also hand in a Table of comparison of the average annual expenditure for the same periods of seven years—seven under the Mercantile Marine Fund and seven under the Lighthouse Fund, showing the percentages of increase and decrease.†

3248. I think those would be very useful to the Commission, but it would be desirable that we should have time to examine them, and possibly we may ask you to attend again at a later period, if there is any point arising out of these about which we desire information?—I am afraid it will hardly be possible for me to go into an explanation of the various differences. I think that must come from the Lighthouse Authorities. I do not think our records will enable me to go into details.

xplanation f increase , on uperannua- on.

3249. There is probably one point in connection with superannuation allowances on which you could give us some light, however. If you turn to Table A, it appears that the superannuation allowances in the case of the Irish Lights rise from the sum of £4,899 in the year 1900 to £7,946 in the year 1906?—Yes, Sir, that is so.

3250. That is an enormous rise compared with any increase shown in the figures of Trinity House, or of the Northern Lights. Can you explain that?—Yes, that is so. The increase of £3,047 in the amount of Irish pensions paid in 1905-6, as compared with 1899-1900, arises from the fact that 59 persons came on the list during that period, as against 25 pensioners who died. There has been a very large amount of new pensions.

3251. That is purely accidental?—That is purely accidental.

3252. It arises from the automatic operation of the system?—Yes, Sir. This is remarkable, but the only explanation is that it arises from the system. It includes a pension of £600 a year granted to the Engineer of the Irish Board.

3253. Is that pension still being paid?—That is still being paid; and the accountant £400. Those are two large pensions amounting to £1,000 a year.

3254. Between 1900 and 1902, I notice the increase was nearly £2,000. It was over £1,500 at all events?—Yes.

3255. Was it during those two years that those new pensions became payable for the first time?—I am afraid I have not got that particular, Sir. I can tell the Commission the number of pensions under the various headings, if they wish to know it, in the three establishments.

3256. Yes, I think it would be desirable that we should have them?—The Trinity House, official department, the amount of pensions is £1,642. The lighthouse service, light-keepers—there are 63—total pensions £3,445; lightvessel service, 79 masters, 8 mates, and 41 others, a total of £6,958; steam vessel service, there is one mate, four engineers, and 39 others, with a total of £2,165; district storehouses, 6 superintendents, 1 clerk, and 17 others, total £2,189; then there is a number of widows of light-keepers, lightvesselmen, steam-vessel men, and districts storehouse men, amounting to £979.

3257. Do widows of the lighthouse keepers get pensions?—They used to, many years ago, but these pensions are dying out.

3258. That is no longer permissible?—No, unless the husband is killed in the service.

3259. Unless the husband is killed in the service?—If the husband is killed the widow gets a pension. Then the Commissioners of Irish Lights: head office, £1,450; light-keepers—62 light-keepers—pensions, £3,069; lightships, 8 masters, 2 mates, and other members of the crew, £1,907; steamers and stores, £1,377; and widows and children, £150. And the Commissioners of Northern Lighthouses: head office pensions, £655, including £533 to the Secretary; light-keepers—60 light-keepers—£3,198; steam tender, buoy and boat service, £1,087. The Engineer of the Northern Lights is paid by fees, and is not entitled to a pension. (*Table handed in.*)

Sir T. W. P. Blomefield, Bart., C.B. 11 Dec. 1906.

3260. Can you give us a comparison between the head office expenses of the Northern Lights for the seven years prior to 1900, as compared with the expenses of the head office subsequent to that date?—That is shown in the Tables.

Northern Lighthouse Board: Change in method of keeping accounts of,

3261. It may be shown in the Tables you have just handed to me, but I have not had time to look through them. Perhaps you could give the result to me?—There is a large increase in the latter period, and that arises from the fact that prior to the first year of this later period the fees paid to the Engineer were charged partly to new works and partly to miscellaneous expenses instead of to the head office.

3262. It was a difference in the method of keeping accounts?—That was so, Sir; in the later period they are charged to head office expenses. You will see there is a reduction in the miscellaneous expenses.

3263. I see, yes?—They came under the heading "miscellaneous expenses" as incidental expenses.

3264. Are there not other special points in the Tables that you have submitted to us that you wish to call our attention to?—I do not think there is anything special.

Board of Trade Control over General Lighthouse Authorities: Nature of,

3265. Let us pass to the subject of the control of the Board of Trade. Mr. Pelham, I think, has already given evidence on this subject, and referred to the various sections that deal with the powers of the Board, but perhaps for clearness sake you will epitomise them?—Section 634 of the Merchant Shipping Act 1894 provides that the superintendence and management of the lighting and marking of the coasts of the United Kingdom shall be vested in the three General Lighthouse Authorities. Section 659 provides that the establishments to be maintained by the Authorities and the sums to be paid in respect of those establishments shall be fixed by Order in Council. Section 660 as amended by the Merchant Shipping (Mercantile Marine Fund) Act 1898 provides that no expense of a General Lighthouse Authority shall be paid out of the General Lighthouse Fund unless it has been allowed as part of the establishment expenses referred to above, or an estimate or account thereof has been approved by the Board of Trade. The Section further provides that for the purpose of obtaining such approval the Authorities shall submit estimates of all expenses to be incurred by the Authority, other than authorised establishment expenses or expenses arising under a sudden emergency, to the Board of Trade, who may approve them either with or without modification. Section 664 provides that the General Lighthouse Authorities shall account to the Board of Trade for their receipts from light dues and for their expenditure in such form at such times, and with such details, etc., as the Board of Trade require, and that they shall permit all their books of account to be inspected and examined by persons appointed by the Board of Trade. Section 665 provides that a General Lighthouse Authority may with the sanction of the Board of Trade grant superannuation or compensation allowances to their staff provided that no such allowance, etc., shall exceed the proportion of salary which may be granted to a person in the Civil Service.

3266. The general upshot is that the responsibility for lighting and marking the coast is imposed on the General Lighthouse Authorities, and not on the Board of Trade?—That is so, Sir.

3267. The duty of the Board of Trade is to exercise a financial control over the expenditure of the three Boards?—Yes.

3268. And to see that their administration is conducted with a proper regard to economy?—Yes.

Method of exercising.

3269. Will you describe how the control of the Board of Trade is exercised?—Towards the end of the year the General Lighthouse Authorities submit estimates of the sums that they will require for the following

* See Appendix A VIII. † See Appendix A IX.

Sir T. W. P. Blomefield, Bart., C.B.
11 Dec. 1906.

financial year. The estimates are prepared in considerable detail, and contain a comparison with those of the previous year, with an explanation of any important variation. The estimates are very carefully examined, and further information is asked for where necessary. As regards the portion of the estimates relating to new works, Mr. Pelham has described the procedure adopted. A preliminary meeting between the representatives of the General Lighthouse Authorities and the Board of Trade is held at the Board of Trade in November or December. At this meeting, over which the President of the Board of Trade usually presides, the proposed new works are discussed. If the President is not satisfied that any new work should be sanctioned it is struck out, and the revised estimates are discussed at a subsequent meeting with the Advisory Committee in the following January or February, after which the President comes to a final decision as to the amount that should be sanctioned for new works. Mr. Pelham handed in, I think, some tables showing the amounts applied for and sanctioned and the amounts expended for new works for a series of years.

3270. Where does the principal difficulty arise with regard to maintenance, apart from new works?—The principal difficulty arises with regard to special repairs to lighthouses and light and steam vessels, the cost of which necessarily varies very much from year to year, and as regards the estimates for these works a provisional sanction only is given. When the estimates have been examined and the necessary explanations have been given, and adjustments made, the approval of the Board is signified subject to the following reservation:—"On the understanding that no increase of salary, wages, or allowances shall be made nor any new works or extensive repairs undertaken, although included in the estimates, without the special sanction of this Board." Before commencing any new works or extensive repairs, detailed estimates are submitted to the Board of Trade for approval, and when the approval has been given and tenders have been invited, the tenders received are submitted to the Board of Trade, with a statement showing which of them the Authority proposes to accept, and if it is not the lowest tender, the reasons for selecting it. No tender of any importance is accepted without the sanction of the Board of Trade. Tenders for oil, coals, and other stores are submitted for approval in the same way.

With regard to accounts.

3270a. Then, with regard to accounts?—The accounts are rendered every quarter. They are carefully compared with the estimates and explanations of any substantial deviation therefrom are obtained. The accounts are also examined with a view to seeing that all the expenditure is properly authorised and vouched for, and that the payments under contracts are such as have been approved.

3271. Have the accounts to be submitted to the Auditor-General?—Yes, Sir. Under Section 679 of the Merchant Shipping Act, 1894, and Section 1 (c) of the Merchant Shipping (Mercantile Marine Fund) Act, 1898, the accounts are to be deemed public accounts within the meaning of Section 33 of the Exchequer and Audit Department Act, 1866, and are to be examined and audited accordingly, and they are to be laid before Parliament annually.

Value of,

3272. Can you express any opinion as to the value of the control of the Board of Trade in securing economy?—I think there can be no doubt that the control of the Board of Trade is of great value in securing economy in the administration of the lighthouse service. Perhaps its most important effect is in preventing ill-considered or extravagant schemes from being put forward. The fact that a Lighthouse Authority must be prepared to justify any expenditure for which sanction is sought must tend to secure careful administration.

3273. It was represented to us in evidence by Mr. Norman Hill that the control of the Board of Trade amounted to little more than an audit of accounts; you do not agree with that view?—I do not agree with that, Sir, at all.

Expenditure: Contrast between English and Scotch systems of,

3274. (*Colonel Herbert.*) Looking at the general expenditure, would you say that the English system and the Scotch system offer the most marked contrast?—Do you mean the way in which they carry out their works?

3275. The way in which they are generally administered. I mean in this way, that the English system appears to be one of maintaining a considerable permanent staff and doing the work themselves, and that of the Scotch Lights is of keeping their permanent staff to the lowest limits, and putting everything out to contract?—Yes; I think probably for what the Trinity House have to do it may be very economical for them to have the workshop. They have a very large number of buoys which are constantly wanting repair, and those buoys they repair in their workshops. They have a much larger number of buoys than either of the other Authorities, but it is extremely difficult to say which is the most economical system. I have done my best to compare them.

3276. But there comes out of that Trinity House system large non-effective cost on staff pensions and so forth; the same thing appears in Ireland?—I do not think it is more so than in Ireland.

3277. It is the same in Ireland; the large, or relatively large, permanent establishment makes a large number of persons for pension; larger than in Scotland?—The mechanics who go down from the Blackwall workshops are not pensionable men.

3278. Certain classes of them are, I think?—No, none.

3279. Not all of them are; some of them are?—None are pensionable.

3280. We had it in evidence that the present system in the Trinity House with regard to the Engineer was adopted about 1856. Previous to that it was similar to the existing Scotch system; do you know that?—I have not gone into that.

3281. What I was driving at was, whether that had created an increase in the permanent staff generally, and consequently an increase in the non-effective list?—The Engineer of the Trinity House is entitled to a pension, and the Engineer of the Scotch Board is not.

3282. But would not the introduction of a system of a permanent official, instead of an official who is only paid by fees, lead to the creation of a larger permanent staff? Would not the Engineer naturally collect round him a number of people?—It might, but on the other hand, it has been suggested that the payment by fees might tend to induce the Engineer to undertake works which might not be absolutely necessary.

3283. Yes, I was coming to that, to see whether you could give any sort of comparison as to the relative advantages of the two systems; whether in the end one might be cheaper, although increasing the cost in certain respects.

3284. (*Chairman.*) As a matter of fact, I think your table "B" shows that the superannuation allowances of the Trinity House are less in proportion than those of the Scotch Lights?—Yes.

3285. That is the fact, is it not?—That is the fact.

(*Admiral Henderson.*) I hardly think the percentage (Table B) is a fair comparison, because it is not a comparison really; it depends very much upon numbers, and a percentage for superannuation allowances on these depends very much upon the staff.

3286. (*Colonel Herbert.*) I say the figures, not the percentages, attracted my attention, one bein £4,800, and the other more than four times that amount?—With regard to the Scotch pensions, up to comparatively recent times some of their men were not entitled to pensions; the crews of their steamers, and the crew of their lightvessel. They were not entitled to pension, but some years ago they applied to have pensions granted to them, and that was allowed.

3287. Now, with regard to your functions as a controlling, and, I presume, as an auditing, authority?—We audit as well. *Accounts*:

3288. Do you think it would facilitate your work if there were some assimilation in the systems of the three Authorities?—It might to a certain extent, Sir; I do not think it would make any very great difference.

3289. I understand that the accounts that are submitted to you are upon forms that you give?—Yes. Form of, submitted to Board of Trade.

3290. But it has come out, I think, in evidence that those forms have to be specially filled up; they do not exactly fit themselves into the system in which the accounts are kept?—There may have to be some variations.

3291. They have to be rather arranged for the benefit of the Board of Trade?—Yes.

3292. Does that strike you as a sound system, or

would it not be better to have a system in which all the different parts would fit into one another?—The accounts of the General Lighthouse Fund were settled by the Treasury Officer of Accounts some years ago, but I do not think there has been any inconvenience caused by the form of the accounts.

3293. To what degree does the Treasury intervene?—The Treasury has nothing to do with the General Lighthouse Fund, but when the light dues were carried to the Mercantile Marine Fund and there was a grant in aid, the accounts had to be presented to Parliament as part of the Civil Service appropriation accounts, and then the Treasury settled the form of accounts.

3294. So that these forms are survivals?—These are survivals, yes.

3295. It has never then been seriously considered to establish a uniform system of accounting?—I think the system of accounting is uniform, Sir. Of course, you have to have different accounts for the workshops at Blackwall, but apart from that I think the system is the same for all.

3296. In fact, you do not think that your work suffers by reason of the different systems of administration?—I do not think so, Sir; no, I do not think it does.

3297. (*Mr. Ennis.*) You speak in your evidence of the decentralisation of the system of Trinity House as compared with the system of the Northern Lighthouse Board and of the still more centralised system of the Irish Lights Board?—Yes.

3298. You regard the decentralised system as superior to the others, I understand?—I do not know that I do that, Sir; it may be more satisfactory for the circumstances of England, but I do not know that it would be for the circumstances of Scotland and Ireland; they are so very different.

lackwall Vorkshops:

3299. With regard to the workshops at Blackwall, a question has been asked you on that subject, am I not right in saying that the Trinity House repair machinery of their own steamers at Blackwall?—They may do to some extent, Sir, not always.

3300. Because I think we have been led to believe that when you get outside of a certain radius the efficiency of the Blackwall workshop ceases, that the Trinity House find it much more economical to employ contract labour or to have their buoys and so forth repaired by private firms when they get a certain distance from the Blackwall workshops?—I am not in a position to answer that.

3301. That was the impression conveyed to my mind, that the Blackwall workshops, whilst admirably efficient for the repairs of steamer machinery and of the buoys and beacons within a certain radius of the shops, that would not apply to those repairs in the more remote districts of Trinity House work?—I have not gone into that particular point; I have no doubt I can get information on it.

perannua-n:

3302. With regard to the head office expenses, I notice here in Table "B" that both in the table including new works and in the table excluding new works that the Irish Lights percentage of head office expenses is considerably less in proportion to cost of administration than either the Trinity House or the Commissioners of Northern Lighthouses although their superannuations are considerably more? The percentage in the second page here is given for the Irish Lights head office expenses as 8.5, against 9.9 for the Northern Lighthouses and 9.3 for the Trinity House?—Yes, that is the ratio of total expenditure. I do not know that it really shows very much; I am afraid these comparisons are not of much real value.

3303. They may not show, but still the figures that our Chairman put with regard to the cost of maintenance so nearly tie, it follows that the cost of the three remaining items in the item head office expenses, miscellaneous expenses and superannuation allowances nearly tie also when taken together?—Yes.

3304. But yet the administration expenses in the case of the Irish Lights are nearly 1½ per cent. less than Scotland, and nearly 1 per cent. less than England, although their superannuation allowances are considerably higher?—That, I think, is accidental.

3305. The superannuation allowances?—The superannuation allowance.

3305a. What I wanted to ask you with regard to superannuation allowances was this: You have told us that a sum of £1,000 is accounted for by the superannuation allowances granted to the Engineer and the Accountant?—Yes.

3306. Can you tell us if the age for pension in the three different services varies?—No, it does not vary.

Age for,

3307. The age for pension is the same?—It is the same in all; it is the Civil Service scale; they have to comply with the Civil Service rules.

3308. I understood that 60 was the age for superannuation?—A man may be pensioned off at 60, or he may go at 60 of his own accord; otherwise he may stay on till he is 65; he must go at the age of 65.

3309. Quite so. I think we have had it in evidence that the system of the Irish Lights Commissioners is to pension their people at 60. Do you know does that vary from the practice of the other Boards—I have never noticed any difference in the practice.

3310. I mean if the Irish Lights Commissioners pensioned off their men at 60, and the Trinity House and the Northern Lights Commissioners allowed their men to remain until the age of 65, it might make a difference to the superannuation?—It would.

General Lighthouse Authorities: Difficulty of comparing,

3311. With regard to Table "C," you have told us that it is always difficult to make anything like an adequate comparison, the conditions vary so much with regard to the lighthouses, the type of light-vessels, and so on in the various countries?—Yes, they vary very much.

3312. Would it be possible to make an approximate comparison based upon the candlepower of the lights shown in the lighthouses of the different coasts, the number of rock and island lighthouses as compared with shore stations?—That would be the best way of making it.

3313-4. And the total number of staff in the lighthouse service, the numbers of the staff, the total staff?—I think the only possible way of making a comparison would be to take individual lighthouses of a certain type and work out the cost. I think the Commissioners have already asked for figures of that kind.

3315. It would be desirable that we should be able to make some sort of comparison of that kind?—I think that is the only possible way of making a comparison.

3316. Of course, I assume rock and island lighthouses are more costly to maintain than shore stations?—Yes, they are.

3317. And that would be a factor in the question?—Yes.

3318. And then the number of crew on the lightships would make a difference?—That makes a difference.

3319. The total number of crews on lightships under the control of one Authority and the same number under the control of another would afford some basis of comparison?—It would afford some basis, but not a very substantial basis of comparison. There are still differences. You would have to be very careful as to the cost of relieving. Trinity House very largely relieve by their own vessels; in Scotland and Ireland a good deal of the relief is done by hired boats, and you would have to make allowances for that. It is almost impossible to apportion the cost of the steamers amongst the various services.

3320. And also we have had it in evidence that the Trinity House relieve their rock lighthouses and lightships once a month only, whereas the Irish Lights Commissioners relieve theirs three times every month, which makes a difference also?—It is very difficult to compare. I have done my best to make out comparisons, and I have not been able to do so; it is extremely difficult.

Responsibility of,

3321-2. You also refer in the second portion of your evidence to the fact "that the responsibility for lighting and marking the coasts is imposed upon the General Lighthouse Authorities and not upon the Board of Trade. The duty of the latter is to exercise a financial control over the expenditure of the three Boards, and to see that their administration is conducted with a proper regard to economy"?—Yes, Sir.

3323. Does not the onus rest upon the Board of Trade also with regard to efficiency, or do the Board of Trade disclaim any responsibility in regard to efficiency?—I think the responsibility for that rests with the General Lighthouse Authorities.

3324. And not with the Board of Trade?—And not with the Board of Trade.

Sir T. W. P. Blomefield, Bart., C.B.
11 Dec. 1906.

3325. But, still, as a matter of opinion, I presume you agree with the view of Mr. Pelham, stated in reply to a question I asked him, that efficiency is the primary consideration in this question?—Certainly, I agree entirely with that.

3326. But then you say that the Board of Trade take no responsibility for efficiency; they simply take responsibility for economy?—I think so, Sir. You see the Act expressly places the responsibility for lighting the coast on the General Lighthouse Authorities.

3327. Quite so; but with regard to initiative, do I understand that the Board of Trade never takes the initiative with regard to it?—We have no power of initiative at all.

3328. But in practice has it never been done?—I think the Board of Trade have made representations to the Lighthouse Authorities.

Irish Lights Board: Unbusiness-like methods of

3329. It will be within your knowledge, I think, that Mr. Pelham handed in here with regard to the Irish Lights a number of cases stated by the Board of Trade to point to inefficient administration?—In Ireland?

3330. In Ireland?—Yes, Sir.

3331. Mr. Pelham when handing in that return said he did not regard any of the individual cases contained in that return as being of grave importance, but a number of them taken together had a tendency to show general loose administration on the part of the Irish Board?—Yes.

3332. We have had that return before us, but we have also had evidence with regard to a couple of cases not contained in that return, which, to my mind at least, seemed of considerably greater magnitude than the cases that are contained in the return. One of these cases is a case in which complaint has been made that the Irish Lights Commissioners absolutely declined to consider the establishment of a fog-signal station on Mizen Head?—Yes, Sir.

3333. And we have also had evidence that the Irish Lights Commissioners have that fog-signal station in their estimates for the present year, but representatives of the Irish Lights allege that they are still of opinion that that station is not desirable, and that they are practically placing it in their estimates at the request and by the compulsion of the Board of Trade?—Yes. I am afraid this is rather more a question for Mr. Pelham than for me; it is rather more a question of administration than finance.

3334. Shall we have the opportunity of seeing Mr. Pelham again?—I have no doubt he would be willing to appear before the Commission.

3335. Well, in that event, I assume I should also ask Mr. Pelham a question with regard to the second case, in which it has been stated in evidence here that the Irish Lights Commissioners defied the Board of Trade with regard to the Fastnet Lighthouse?—I think that is for Mr. Pelham also.

3336. It was stated in evidence here before us that the Board of Trade informed the Irish Lights Commissioners that the position was then such that they would bring the whole matter before Parliament unless the Irish Lights Commissioners gave way?—Mr. Pelham will deal with that.

3337. He will be able to give us information on those points, because they are undoubtedly important points?—Certainly.

New Works: Conference as to,

3338. You speak also as to the estimates for new works. There is a preliminary meeting of representatives of the General Lighthouse Authorities and the Board of Trade; who are the representatives who represent the General Lighthouse Authorities at that meeting?—Some of the Commissioners are present, some of the Elder Brethren of the Trinity House with the Engineer and their Secretary, some of the Northern Lights Commissioners with their Secretary and their Engineer, and the same with the Irish Lights Commissioners.

3339. There is a limited number, a committee, as it were of each Board?—Yes, Sir.

3340. Accompanied by their officers; the Engineers and Secretaries meet on this occasion?—They do, Sir.

3341. And the sanction or refusal rests in the hands of the President only?—Eventually it does, Sir.

3342. Are you in a position to give us any information as to whether the Board of Trade make inquiry as to the expenditure upon the lighthouse services of foreign nations?—I am not aware that we have done it.

3343. Or as to how that expenditure would compare with the expenditure in the British Isles?—No such inquiries have been made since I have been connected with the work.

Board of Trade Control over Lighthouse Authorities

3344. (*Admiral Henderson.*) With regard to Section 659 of the Merchant Shipping Act, 1894, have any special Orders in Council been issued lately?—Yes, within the last few years.

3345. That is to say, that an alteration has taken place in the establishments?—Yes.

Powers of inspection.

3346. With regard to Section 664, how often do you inspect the books of these various Authorities?—Very rarely we have to inspect the books, Sir, because the accounts are rendered to us in great detail.

3347. You practically do not find it necessary to inspect at all?—Very rarely, unless some special question arises.

3348. That is to say, it is an audit inspection and not a business inspection? What I mean is, that your inspection is an inspection for the sake of accounts, and not for efficiency of administration?—Yes, Sir; we do not inspect the books for the sake of efficient administration. The accounts are rendered in such detail that it is not necessary to inspect the books.

3349. No, but supposing you thought that money was being wasted by some system, and that some of their arrangements might not be up to the mark, we will say, would your inspection be to that end, do you attempt to interfere in any administrative sense with the Boards?—Yes, we should interfere if we thought their administration was too expensive; if we had reason to think that their administration cost too much, then we should interfere.

3350. But is it a point that you really go into?—Yes, if it appears that there is any extravagance. If our attention is directed to anything of the kind we should certainly inquire.

3351. In any concern the accounts may appear perfect, and may be perfect in every shape, but it does not follow that the system pursued, the business arrangements, are sound?

3352. (*Chairman.*) For example, supposing one of the Lighthouse Boards was to propose a large expenditure on the repair of one of their steam vessels, would you, or would you not, go into the question of the necessity for such repair?—We should certainly go into the necessity for the expenditure; if we had any reason to think it was extravagant, we should ask for further information, and we should go into the whole question, certainly.

3352a. (*Admiral Hendeson.*) But, I mean, to go a little further than that. For instance, take the workshops of Trinity House?—Yes, Sir.

3353. Do you attempt to inquire into the efficiency of the system that is pursued there, and what are its economical results?—I do not think that we have ever done that; not since my time.

Consideration of estimates for New Works.

3354. You say the estimates are prepared in considerable detail, and contain a comparison with those of the previous year, with an explanation of any increase. I think we are to have copies of the estimates as you get them from the Boards?—Yes, I think you are.

3355. Do the Advisory Committee discuss any proposals that are struck out by the preliminary meeting?—No, Sir.

3356. They do not?—No.

3357. Their opportunity is only that of considering proposals that are approved by the Board of Trade?—They have, of course, power to make suggestions themselves.

3358. (*Chairman.*) It is the case, is it not, that the Board of Trade very often decides to keep an item on the list for submission to the Advisory Committee, in order that they may have the opinion of the Advisory Committee upon it?—Yes, that is very often the case. The Board have not made up their minds whether certain expenditure is desirable or not, and wish to hear the views of the Advisory Committee, before coming to a decision.

Supervision of account

3359. (*Admiral Henderson.*) With regard to the accounts, I think you said, "The accounts are rendered every quarter. They are carefully compared with the estimates, and explanations of any substantial devia-

tion therefrom are obtained. The accounts are also examined with a view of seeing that all the expenditure is properly authorised and vouched for, and that the payments under contracts are such as have been approved." That is to say, this is really a matter of form, the Boards themselves will not deviate from the estimates which have been approved?—The audit is to see that the proper authority has been obtained and the proper vouchers furnished.

3360. It is a matter of account entirely?—That is a matter of account.

3361. You further say, "Perhaps its most important effect is in preventing ill-considered or extravagant schemes from being put forward." You mean that that applies to new works?—It applies to everything, Sir.

3362. And not to administration?—It applies to everything; it applies to increase of salary, for instance.

3363. Or to the efficiency of the administration?—Well, it applies to any expenditure; any proposal for expenditure.

3364. In examining the estimates, does the Board of Trade have sufficient evidence at its disposal to be able efficiently to judge of the economical aspects of the administration of the three Boards? I am speaking of the administration. I am not speaking of new works, or any particular repairs to steamers?—I think we have very good opportunities of judging of the administration, Sir; the efficiency of administration.

3365. Has any examination of the various systems towards this end ever been made; any overhaul or examination of the systems of the three Boards towards the economical aspects of their administration?—I do not think we have ever had any special examination.

3366. All three have a different system of management; has any attempt ever been made to make each one apply the most efficient and economical methods of the others, so as to get the best results possible?—I do not think any such general attempt has been made; we do make suggestions from time to time.

3367. I should cite as instances the question of attendance to lightvessels and the rock lighthouses; there must be one best form of doing it, varied by the locality, of course?—I do not think there would be one best form under all circumstances.

3368. Varied by the locality?—I think it depends very much upon the particular circumstances. What would be suitable in England, probably would not be suitable in Scotland or Ireland.

3369. There is another case in point, and that is the Blackwall workshops; their value as a whole to the Trinity House?—I do not think we have ever had any special inquiry into that, Sir.

3370. And as to the question of annual repairs as well; annual repairs either to vessels or lighthouses?—I do not think we have ever had any special inquiry into that, but I do not think that such inquiries have been necessary.

3371. Overhaul of tenders and comparison of accounts with estimates will not give you this information?—I think we have very good opportunities of getting a general idea as to the methods of administration of the three Boards, and forming an opinion as to whether they are satisfactory.

General Lighthouse Fund: Possibility of publishing account of, in greater detail.

3372. We have evidence that a good deal of the objection on the part of shipowners is that no detailed account of expenditure is published. Now, could this be done?—It depends what they mean by a detailed account, Sir. As I have just said, we have given more details in the last two years than we have before, but it would be difficult to go into extreme detail, to give the cost of each lighthouse or each lightvessel.

3373. What the witness stated was, that in the Return of Expenditure which is printed by order of the House of Commons there is very little information. Well, I am bound to agree with him, and I want to know whether it would be possible to give very detailed information, so that any suspicions which naturally arise in the minds of the people who pay the light dues might be eliminated?—Oh, it is possible to give the accounts in any amount of detail, Sir; of course, it would require an increase of staff, and it would cost money, but it is quite possible; we have got the information.

3374. Would it not be possible to let the Boards submit their estimates in a form which could be published?—I think so, Sir. I think that might be done, but I think the shipowners want more than details of accounts; I think they want details, for instance, of the number of days the steamers are employed, and that sort of thing, which would not come into the accounts at all. We have never had any definite statement of what the shipowners do wish. They have constantly said they want the accounts published in greater detail, but they have never told us what details they want. We should be quite prepared to consider any application from them, I am sure.

General Lighthouse Authorities: Difficulty of comparing systems and expenditure of,

3375. Now, I pass to a question Mr. Ennis was asking you about. I ask from a business point of view, is not really too much made of the differences of position of lighthouses, lightships, beacons, and everything? Every Board, whenever you ask any questions about expenses, puts this argument forward, and I want to know whether you think there is not too much made of it?—I have done my utmost for some time past to get some basis of comparison, and I have not been able to do it, Sir.

3376. I have a further question: Could a comparison be made of lights and lightvessels by groups, because it has been done in one case by the Scotch Board, I think it was? In one case evidence was given by groups?—I think that is the only way in which you could get any comparison, by taking a lightvessel, or two or three lightvessels of the same kind, or two or three lighthouses of the same kind, and comparing those; I do not think any general comparison is possible.

3377. In regard to Table "A," the maintenance of lighthouses and lightvessels includes repairs and salaries, does it not?—Yes, Sir.

3378. Now, where does the cost of the Blackwall Works come in in the Trinity House Account?—The cost of the Blackwall workshop is split up over the whole of the other expenditure; it is apportioned out.

3379. To the whole of the service?—The whole of the service.

3380. Now, in Table "C," is the cost of Gibraltar and the other Authorities' lighthouses included in the Trinity House return? You have included them amongst the numbers, but is the cost of their maintenance included here?—Yes, Sir.

3381. It is included?—Yes.

3382. Nothing that is exterior to the General Lighthouse Fund?—Nothing; nothing at all that is not maintained out of the General Lighthouse Fund.

3383. Now, if you look at the cost of the lighthouses—I have taken the year 1906 by way of comparison—I see that, if you take the amount of the cost of the lighthouses as a whole, the Trinity House came to £472, the Irish to £462, and the Scotch to £393 per annum per light; and I ask, in view of the fact that the excess of numbers of island stations on the Irish and Scotch coasts qualify the excess of rock stations on the coast of England and Wales—in the case of Ireland it is only two more—and considering the greater difficulty of communication and supply in many parts of Ireland and Scotland, do you not think that some comparison could be made, and that this shows strongly in favour of the Scotch Board, especially considering that they have 31 sirens and explosive fog-signals, against 29 of the Trinity House? I have neglected the smaller bells and things of that sort, as not being necessarily relevant to the question?—I am sure, Sir, it would not be a satisfactory comparison.

3384. I see in the total cost there is a difference of £10,393 between the Trinity House and the Scotch Board, and £10,712 between the Trinity House and the Irish Board. That is part of that question?—Yes.

3385. Well, the difference in the number of lighthouses they maintain is not very great. If you compare this list of lighthouses and other seamarks, except in the case of buoys—Trinity House maintains many more buoys—it is not so very great when the lighthouses abroad are deducted, and it does not appear to me that it is sufficient to account for the great difference in cost, because with the large number

Sir T. W. P. Blomefield, Bart., C.B.

11 Dec. 1906.

of island lights which the Scotch and Irish Boards have, and lights in exposed situations, it appears to me that the cost of their maintenance should be comparatively greater than the cost of those of the Trinity House, which are close to the lines of railway communications?—The Scotch Board have only one lightvessel.

3386. I am coming to that presently; and in considering this question you must bear in mind that a good deal of the relief work in Scotland and Ireland is done by boats, which presumably is included in their costs for maintenance, but not in those of the Trinity House. In this return the cost of all the maintenance that is carried out by the steam and sailing vessels appears under the head of maintenance?—Yes.

3387. But does the whole of these communications by boats appear under the head of maintenance of steam and sailing vessels, or does it appear under maintenance of lighthouses?—It appears under maintenance of lighthouses.

3388. Which shows that there is a greater proportionate cost put to the Scottish and Irish lighthouses than there is to the Trinity House?—Yes, there is, Sir.

3389. There is a considerable variation also in regard to the lightvessels. The single Scotch one cost (these are the figures for 1906) £1,303, while the 52 English average £1,405 and the 11 Irish £1,756 each, and some of the Trinity House and Irish vessels are spare and not in position. Presumably, the costs of the two lightvessels maintained by the Trinity House are not included in the amounts given; that is for the Admiralty. I do not know whether they are or not?—They would not be included.

3390. They would not be. If so, the average for the Trinity House would be £1,461?—Yes.

3391. The cost of the 13 steam sirens of the Trinity House would be in their favour against the two of the Irish Board. Now, do you not think there is some considerable variation there?—This is only for one year, Sir; the cost for one year.

3392. Yes; but I have taken one year, and that the last year, purposely, because one does not know what the additions are that have been put in when a period of seven years is taken. £625,564 has meanwhile been spent on new works, plus an unknown sum for other additions, included in cost of maintenance. I do not think a period is of any value under present system of account.

(*Chairman.*) Is it not a fact that in 1905 the cost of the lightvessel of the Northern Lights Commissioners was £2,105, as against £1,303 in 1906?—Yes.

3393. (*Admiral Henderson.*) I am coming to some of these points directly, because there is a very large number of discrepancies here which certainly want explaining. One year for the single Scottish lightvessel, without a spare one to take her place, when under refit, does not afford a good comparison with the others. I will therefore take the septennial average in her case, which is £1,419. As to the buoys and beacons, the average cost of Trinity House—I am going to the nearest pound—is £9½, the Irish £12¾, the Scotch £8½. Does not that also show much in favour of the Scotch Board, considering they have 23 gas beacons, against none of the Trinity House and two of the Irish Board, which is a set-off against the 25 additional gas buoys of the Trinity House?—There again—it is one year's comparison. I do not think it is reliable. You must take a longer period than one year to get any proper comparison.

3394. You stated just now that the Trinity House had many more buoys than the others, but is it not a fact that many of the Trinity House buoys are not cleaned and repaired at Blackwall?—I am afraid I could not say off-hand.

3395. Again, as to the steam vessels, the cost of which is £44,491, £14,696, and £18,700 respectively, giving an excess to the Trinity House for the average work done on the mean of the other two as £27,793. Do you think the Trinity House really get a return on the economical side for this expenditure, notwithstanding the number of lightvessels they have?—I have no reason to think they do not, Sir.

3396. The percentage in Table B is given on the total expenditure for each Board. Is it possible to make the comparison this way? It shows, for instance, that the district storehouse system of the Trinity House and Irish Board is expensive compared to the Scotch Board, but on the larger sum there should be a diminution of the cost of the administrative services. That is to say that where you have larger sums to deal with, as the Trinity House has over the other Boards, there naturally should follow a considerable reduction in the cost of administrative service towards efficiency, because you can do a big business at a much cheaper rate than you can do a small one?—With regard to the storehouses, of course the Scotch have only one small storehouse.

3397. I know; but I am speaking of this return in its general form. I am analysing this expenditure, and trying to find out whether there are not discrepancies that want explanation?—I am afraid it is not possible to make comparisons of that kind. It is very difficult to make comparisons in that way, Sir.

3398. The Trinity House cost of steam vessels rose £11,000 in 1901; can you give any reason for that?—I am afraid I cannot give any detail.

3399. But why did the cost of maintenance of steam and sailing vessels rise in 1901 £11,000?—Probably because there were several brought in for repairs; large repairs were required. You see those vessels come in for repair at different times.

3400. Has the cost of any new steam vessels been put into this maintenance form?—For repairs?

3401. No, for any of the new vessels?—New vessels would come into new works, Sir.

3402. Now, cost of storehouses fell £3,500 in 1906; that is for the Trinity House; it has fallen from £13,186 in 1905 to £9,622 now. Can you give me any reason for that great fall?—I am afraid I cannot. I cannot go into the details. There are reasons for the decrease, and the reasons should, I suggest, be obtained from the Lighthouse Authorities.

3403. The Trinity House cost of maintaining lightvessels for 1900 was £71,020; in 1901 it was £67,726. Then, again, there was a great variation in 1905. It rose from £77,623 in 1904 to £82,361 in 1905, and then fell again to £73,060 in 1906?—This, of course, depends very much on the number of lightvessels that come in for repair. The lightvessels are brought in for repairs at intervals of so many years, and the cost of repairs depends in each year upon how many come forward for repair or refitting.

3404. Do you not think it would be good business to try to arrange for the vessels coming in so that the cost of their repairs was fairly equalised over a term of years, instead of having these expansions and contractions?—Well, I do not know that there would be any great advantage in doing so, Sir.

3405. The maintenance of buoys and beacons has in each case fallen in 1906, and there was an increase of the Trinity House head office expenses in 1903. Do you know any reasons for that? If you take the buoys and beacons in every one of the three Boards, they have fallen very considerably in 1906?—I cannot go into the detailed differences; I do not really know. The detailed differences I am afraid must be got from the Lighthouse Authorities.

3406. Again, I notice that the miscellaneous expenses of the Trinity House fell £4,336 in 1906; do you know any reason for that?—No, Sir, I am afraid I do not know the circumstances.

Accounts: Difficulty in distinguishing between New Works and Maintenance.

3407. Now, we have evidence from the Engineer of the Trinity House that new additions to the extent of £4,000 a year—I think that was the sum he mentioned—are expended on the lighthouses, and are not put into the estimate for new works; is that the case?—Additions to lighthouses?

3408. Yes, alterations and additions?—There may be alterations in lighthouses; that would come under repairs.

3409. Now, is it possible, under the circumstances, to get a really correct account of what the cost of maintenance is? I may say that, if it is true that in the lighthouses what we in the Navy call additions and alterations are put into the account for repairs and maintenance you cannot get a correct account?—Well, of course it is extremely difficult to say what come under new works and what come under maintenance. It depends very much upon the circumstances of each particular case. If it is simply a re-

placing of something that is there already, that will be a proper charge for maintenance.

3410. I do not see that it is possible under such circumstances to really get the working cost of the establishment?—It is extremely difficult to do so.

3411. And my opinion also is that all replacements and additions should be under a separate head; that is the way in which it is always done?—I think replacements would certainly come under maintenance; they would not be new works.

3412. Replacement is what we call an addition—alterations and additions; and when you are undertaking the repair of a ship, or the repair of *any* mass of machinery, you must be exceedingly particular in separating what is the cost of repairs proper from what are additions and alterations, and it appears to me that with the three Boards the whole of these things are mixed up?—I do not think there is any very strict line drawn between new works and maintenance; it is extremely difficult to draw such a line.

3413. Well, I say the line is drawn in all business concerns, and it is certainly drawn most strongly in the Navy, and, I think, in the Army too.

orm of, sued by oard of rade.

3414. (*Colonel Herbert.*) There is always a difficulty; it is a very difficult point, but a very useful one. Does the Board of Trade issue any financial instructions to the Lighting Authorities as the heads under which they are to charge their expenditure?—No, we only issue the forms of accounts, which contain headings, of course, but we do not issue any instructions.

3415. Therefore you do not go beyond those particular columns which you lay out; you do not go behind that?—We do not go behind that. Supposing there was something in new works which we thought ought not to be under new works, or there was some large item under repairs which we thought ought not to be under repairs, and ought to go before the Advisory Committee, we should probably transfer that. I do not think we have ever considered these new works as actually representing what would be charged to capital in a company.

3416. (*Admiral Henderson.*) No, but then again you can have a form that what are alterations and additions to existing works should be in a separate column from what were absolutely essential repairs to keep things in working order. You would not, of course, put in new construction into that. In the Navy that is an entirely separate account; we do not mix it up; but when you have a machine you have constantly to make alterations to bring it up to date?—Yes.

3417. To illustrate it by the matter of a ship—some invention comes up, or some improvement comes up, you have to alter all sorts of things, and put them in in some form or another as an alteration or addition, and that, in all business matters, should be kept in a separate account as nearly as you can. Is Table B really of any value as to the cost of administration?—I doubt whether it is of very much value for that purpose.

neral ghthouse nd: lance in nd.

3418. Have any savings been made out of the Lighthouse Fund lately?—Do you mean, is there a balance?

3419. A balance, yes?—There is a large balance, Sir.

3420. A large balance?—Yes.

3421. And do you know its amount?—Yes, it consists of £78,888 cash, £325,000 invested.

3422. Is any interest secured on the balance?—Yes, Sir, on the invested part of the balance.

3423. What part is invested?—The investment is £325,000, Sir, but part of that belongs to the Basses Lights; £70,000 stock belongs to the Basses Lights; the remainder belongs to the General Lighthouse Fund, apart from the Basses Lights. Of the £78,888 cash, £10,886 belongs to the Basses Lights.

al receipts 1905.

3424. What is the total of the Lighthouse Fund for 1905?—The total receipts?

3425. The total receipts, yes, for 1905; I do not think we have got them?—In 1905-6, the light dues received amounted to £500,997.

3426. I do not think it is actually published yet?—No, Sir, it is not. I can hand you in copies of the proof.

3427. I just want to know the actual amount?—The amount received for light dues was £500,997. Then there were rents from lighthouse property, and proceeds of sale of stores, £2,781, and that made a total of £503,778. Then there were lighthouses abroad, which come into the account.

Sir T. W. P. Blomefield, Bart., C.B.

11 Dec. 1906.

3428. I do not think that affects us at all?—No.

3429. I am to ask you one more question; have you any suggestions to offer for improving the present administrative system?—No, Sir.

3430. From your personal experience, have you any point?—I have not any points to offer, Sir.

3431. (*Chairman.*) On the subject of the amount of the General Lighthouse Fund, complaints have been made, I think, from time to time, that the reserve fund is larger than it ought to be?—Yes.

3432. Have you any observations to make on that?—It is considered from time to time by the Board of Trade, and remissions are granted when it is thought advisable to do so. There was a remission of 12½ per cent. a few years ago, and there is another remission of 7½ per cent. which will come into effect on 1st April next.

Recent reduction of Light dues

3433. Do you think it would be wise very materially to reduce the amount of the reserve Fund?—Not to reduce it very largely; we must have a considerable balance in hand.

3434. (*Sir Frank Adam.*) Have you formed any opinion in your own mind, speaking generally, of the comparative merits of the practice, system, and methods of the three Boards?—Do you mean as regards the way in which they carry out their work?

General Lighthouse Difficulty of comparing, generally.

3435. With an eye, of course, in your case, to economy; looking at it from your point of view?—I am afraid I have not; the circumstances are so different that it is extremely difficult to form any comparison.

3436. Even on broad lines?—I think that the way in which the Irish Board do their work is less satisfactory to us than the way in which the other Boards do it.

3437. When you say "less satisfactory," you mean that they do not get quite as much work for the money they spend, or that it is not so systematically or methodically done?—It is not so systematically done. I do not think their schemes are so well thought out as those of the other Authorities.

3438. Arising out of some questions that have already been asked you, I think you stated that no salary or wages or allowances, no new works or extensive repairs, can be undertaken without the special sanction of the Board of Trade?—That is so.

3439. Then are all tenders, such as tenders for oil, coals, and other stores, submitted for approval?—They are.

Contracts: Control of Board of Trade over.

3440. So that to that extent the Board of Trade, apart altogether from the audit of the accounts, which is a matter of book-keeping, does exercise a certain amount of control over the details of the expenditure?—They control the whole of the expenditure; the whole has to go before the Board of Trade.

3441. When you say tenders are submitted—that is, by any of the Lighthouse Authorities—when you look into the tenders, what is your system of doing so?—We see that they accept the lowest tender, unless there are some special circumstances to justify a departure from the rule.

3442. And you satisfy yourselves at the Board of Trade that that tender is the lowest?—Certainly, Sir.

3443. And that the tenderer is a person in a position to execute the tender if he gets it?—Well, that is left to the Lighthouse Authority.

3444. You accept their statement on that head?—We should not make any inquiry unless we had some special grounds for doing so.

3445. In reference to the division under the different heads of expenditure, would you make in your own mind a distinction between an addition to a lighthouse and a repair of a lighthouse?—I think it would very much depend upon the nature of the addition. If it were a large addition we should charge it to new works; if it was something small it would probably go to repairs.

Accounts: Difficulty in distinguishing between New Works and Maintenance.

3445a. You see in all large businesses, as a rule, there is a depreciation set aside for wear and tear of machinery and other things?—Yes.

3446. There is no depreciation, of course, in your books?—No, everything is paid out of revenue.

Sir T. W. P. Blomefield, Bart., C.B.
11 Dec. 1906.

3447. Everything is paid out, and the actual cost of repairing anything that is required to be repaired in a lighthouse or a lightship, or in the way of altering or improving a light, when that is necessary, goes against what would be considered wear and tear and depreciation account in a business firm?—Well, of course, all our new works, the whole capital expenditure comes out of revenue. I do not think there is the same reason for having a depreciation account.

3448. Well, you would wish, if possible, would you not, to give returns at the end of the year showing exactly what has been spent upon actual new works, and therefore has added to the general lighting facilities of the coast, and to keep separate what has been spent simply on repair or renewal?—Roughly, that is done by the accounts.

3449. But I think you admitted, in answer to one of Admiral Henderson's questions, that it was very difficult to separate them, and that possibly a good deal that might be put into repairs went to the debit of new works or *vice versâ*?—Probably, Sir.

Board of Trade control over Lighthouse Authorities: Nature of,

3450. (*Colonel Herbert.*) I take it from what has passed that you look upon the control exercised by the Board of Trade over the Lighthouse Authorities as a purely financial control?—I do, Sir.

3451. Do you think that the limitation of that controlling power tends to make the Board of Trade not look closely into questions of administration, such as those that Admiral Henderson spoke of?—I think, Sir, we should look into any question of administration as it affected expense. If we thought that the administration was extravagant we should inquire into it.

3452. Would it be correct to put it in this way, that the Board of Trade thinks more of the financial results of the administration than of the aspect of the administration, or the detail of the administration?—I think the Board of Trade, of course, are very much interested in the lights being properly kept up, and they would not do anything to affect the proper maintenance of the lights; but they would wish to see that administration was carried on with the least possible expense.

3453. I am thinking purely of the administrative point of view, of the financial and the administrative aspects of the question?—We do not care, I think, what the precise system of administration is so long as it is not too costly. We leave the responsibility to the Lighthouse Authorities. We do not wish to relieve them of any of their responsibilities for seeing that the lights are properly maintained.

3454. Would it be correct to say that while the several Lighthouse Authorities are left absolutely free to carry on their business as they like, you exercise a very highly centralised financial audit?—It is more than an audit, Sir.

3455. Control?—Financial control, yes.

Duty of Nautical Adviser with regard to,

3456. (*Admiral Henderson.*) And therefore it would be true to say that you have not on your side any expert advice or business expert that could inform you of any lack of business capacity in the administration?—We have no expert adviser, except Captain Frederick.

3457. But he is not consulted on the question of this examination of the accounts?—Not of accounts.

3458. He is only consulted when there is some disagreement on a question of new works?—He is consulted in all cases where nautical questions come in, Sir.

3459. Yes, but is he consulted on questions of business administration?—He is consulted on such questions as the repair of lightships. If it was proposed to spend what seemed a large sum on repairing a vessel, we should refer the paper to him, and ask for his opinion.

3460. That is not what I mean. What I mean is, the business system of the Boards?—That is hardly a matter upon which we should consult Captain Frederick.

3461. You have no expert advice to do it?—No. We have no expert adviser but Captain Frederick. We frequently consult him. For instance, the Irish Lights Board some year or two ago wanted a new inspector. We sent Captain Frederick to Dublin to make inquiries as to the necessity for that.

3462. (*Mr. Ennis.*) It has been suggested to us in evidence that the Merchant Shipping Act of 1898 provided that monies resulting from the light dues on shipping should in future be applied solely to maintenance and construction of lighthouses—to lighthouse works solely?—Yes.

Control over Expenditure.

3463. And it has also been suggested to us that a large increase in the cost of lighthouse maintenance since that date has arisen from the fact that the incentive to economy on the part of the Treasury disappeared with this provision in the Bill of 1898, prior to which the surplus monies provided by the light dues were applied not to the general relief of taxation, but to such purposes as pilotage work, and work of that kind?—Yes.

3464. Is it your view that there is any foundation for the suggestion?—No, Sir, not the slightest foundation. The Treasury have not now and never have had any control over the lighthouse administration.

3465. Well, further, you exercise the financial control that you have spoken of, and you see that the expenditure of the different Lighthouse Authorities is judicious and economical?—Yes, Sir.

3466. Do you satisfy yourselves that it is legal and within statutory authority?—Certainly; we should not allow any expenditure which was illegal.

3467. You are aware, of course, that the cost of lighting the port of London, which amounts, we are informed, to £40,000 or £50,000 a year, is borne by the General Lighthouse Fund?—Yes.

3468. And I assume you have satisfied yourselves that the Trinity House has statutory authority for giving this large preferential treatment to the port of London as compared with the other ports of the United Kingdom?—I think that is a question for Mr. Pelham; it is administrative rather than financial.

Issue of, by Admiralty only, advocated.

3469. Then I shall have three important questions to put Mr. Pelham with regard to the Mizen Head, the Fastnet Light, and the lighting of the port of London?—Yes, Sir.

NINTH DAY.

Tuesday, 19*th February* 1907.

PRESENT:

The Right Hon. G. W. Balfour (*Chairman*).

Sir Frank Forbes Adam, C.I.E.
Colonel I. J. C. Herbert, C.B., C.M.G., M.P.
Vice-Admiral W. H. Henderson.
Mr. M. A. Ennis.
Captain C. Bigham, C.M.G. (*Secretary*)

Captain T. H. Tizard, C.B., F.R.S., R.N., called in; and examined.

Efficiency of lighting of coast of United Kingdom.

3470. (*Chairman.*) Captain Tizard, I think you hold the post of Assistant Hydrographer to the Admiralty?—I do.

3471. And you are here to represent the views of the Admiralty?—Yes; to represent the views of the Admiralty officially.

3472. The office you hold is one which gives you special facilities for forming an opinion as to the efficiency of the lighting of the coast?—Certainly; not only the position I hold, and from having had no complaints from the officers who are piloting ships round the coast, but also from many years' experience in surveying round the coast of the United Kingdom.

3473. And the conclusion that you have arrived at is that the lighting is——?—We have nothing to complain of. The lighting is efficient, certainly.

3474. Would you have been in a position to hear complaints from officers in the merchant service as well as in the Navy?—No; the complaints we hear, upon which I base my opinion, are from the Remark Books sent in by every navigating officer annually, and which pass through the hands of the Hydrographical Department; they contain any remarks they would like to make with respect to the lighthouses and the light-vessels.

3475. As a matter of fact, no such complaints have been made?—Very few, if any, observations are ever made about them. They have no complaints to make practically.

Notices to Mariners.

3476. I think you desire to make some observations with regard to notices issued to mariners by the Lighting Authorities?—I understood from the letter sent from the Commission to the Admiralty that there were three points upon which the Commission would like to have testimony, and one of these was whether it was necessary for the various Lighthouse Authorities to issue Notices to Mariners. Of course, this is a point upon which we have an opinion which the Commission may or may not agree with. The object of issuing the Notices to Mariners is to enable the mariner to correct the various publications which enable him to navigate his ship safely. The Notices to Mariners issued by the three Lighthouse Authorities do not contain sufficient information to enable him to do this, and very often we have, when we receive some of these notices, to write to the Lighthouse Commissioners to ask what they mean before we can publish the Notices to Mariners which will convey all the information they wish to convey. Then, again, they do not in any of their notices inform the mariner what charts, sailing directions or light lists are affected by these notices. They have only lately given in some instances the latitudes and longitudes of the places, so that there is a difficulty in any officer, or any mariner, picking up quickly the exact position of the place to which they refer.

3477. Your point is that the notices issued are not of a kind to give any real or useful information?—They give a certain amount of information; some of them give the information required, but all of them do not. The Northern Lights Commissioners are especially lax in this way, and we frequently have to write to the Northern Lights Commissioners asking them to state or mark upon the chart the exact position of a light-house or beacon, because we cannot make it out from the notices they give.

Captain. T. H. Tizard, C.B., F.R.S., R.N.

19 Feb. 1907.

3478. Supposing the form of notice which they give were amended, would you still think it would be undesirable for them to meddle in the matter?—I think so, for this reason: Their notices only reach a very limited class of people; they are not scattered all over the world. They only reach a few people in this country; they do not reach the foreign-going ships. They certainly never reach any of his Majesty's ships.

3479. Granting that the notices reach comparatively few people, do these not receive them earlier than they receive the same information from the Admiralty?—Yes.

3480. Considerably earlier?—I do not say "considerably," but earlier.

3481. In so far as they do receive them earlier, it would be an advantage?—Certainly, but there is no reason why they should not receive them as early from the Admiralty, if they would send the information direct to the Admiralty instead of waiting till it is printed and then sending it. At present the information which the Admiralty publish afterwards is received by the Admiralty from a printed notice as a rule. This notice has to be arranged according to our system, in which we put down all that affects the sailing directions or the charts and light lists, and then it is sent to the printers to be set up and revised before being issued; whereas if the information were sent direct by letter it would be published almost as quickly by us as by the Trinity House themselves or any of the Commissioners.

3482. Have the Admiralty ever requested the Lighthouse Authorities to send this information by letter?—Oh, no, it is not for the Admiralty to interfere with these Lighthouse Authorities; we have no jurisdiction over them.

3483. Still, they do communicate; they do send the printed notices?—They send the printed notices.

3484. Would it not be an advantage to send regular information to ships as soon as it is practicable to do so?—It might be an advantage sometimes in the case of some of our vessels, but as a general rule most of this information can wait till the ships receive it. Anything of very great importance is published, required at once, such as when a wreck takes place, and that is a danger which cannot be guarded against. If a lighthouse be altered or inaugurated, or if a buoy be altered in an important position, notice is given some time beforehand that it will be done; therefore the ships that have these notices are not surprised if they see a buoy altered before they get the actual information that it has been altered, or that a light has been inaugurated.

3485. Do the Lighthouse Authorities send information of what they propose to do?—Oh, yes.

3486. And that is inserted?—We give a Notice to Mariners at once.

(*Admiral Henderson.*) It would be done, certainly.

Captain T. H. Tizard, C.B., F.R.S., R.N.

19 Feb. 1907.

3487. (*Chairman.*) Is the date given?—As a rule; on or about such and such a day.

3488. Apart from this question of Notices to Mariners, I understand there is no special matter on which you desire to offer evidence?—No.

3489. You will be prepared to answer any questions the Commissioners may desire to ask?—Yes, but that part does not interest the Admiralty.

Sources of information for,

3490. (*Colonel Herbert.*) Where, or how, do you get the information for the notices you do publish?—We get it from the Lighthouse Authorities, from all foreign nations, from any particular letter sent in, from any mariner who sights a wreck or rock, or comes across a lighthouse which does not agree with the description given. Any mariner, in fact, writes straight to the Hydrographic Department.

3491. Is it a regularly recognised practice?—Yes.

3492. Not only in His Majesty's ships, but in the Merchant Service?—Certainly; we get a great deal of information from merchant vessels which pass or discover anything.

3493. Then it is rather an exception that you do not get the information you require from the Lighthouse Commissioners?—Oh, we get the information we require from them after a time, but they do not give it very often. The communications which we receive from merchant vessels, or from our own ships, do not contain all the information we should desire, and we have to make inquiries about it, in order to correct the charts and Admiralty publications.

3494. Do you think there is apt to be misapprehension in the minds of mariners, or persons connected with ships, owing to there being different classes of Notices to Mariners?—I do not think so, because most of them do not reach them. The only ones our notices reach are His Majesty's ships, and these notices are copied by the Board of Trade and issued gratis to all merchant ships, so that practically all merchant ships—except the mail lines of steamers, which invariably get our notices from Mr. Potter, the Admiralty Agent of the Board of Trade—get Notices to Mariners which are copies of ours, except that they have one great fault to my mind, and that is, they do not contain a list of the publications that they affect; and this, I presume, is because the Board of Trade do not wish to emphasise the fact that vessels ought to use Admiralty publications, in preference to those of private sellers. Of course, in saying what charts are affected in these notices, we give the numbers and descriptions of the Admiralty charts; but there are lots of modern vessels—especially fishing vessels—who do not use Admiralty charts; they use what we call "blue-backs." I presume that is the reason the Board of Trade do not give chart numbers, because those numbers apply to the Admiralty charts, and not to other charts.

3495. Do you think it would be an advantage that there should be only one system of publication?—Oh, certainly; decidedly.

Efficiency of lighting of coast of United Kingdom.

3496. (*Mr. Ennis.*) When you speak of the efficiency of the lighting of the coasts of the United Kingdom, do you speak of that as an actual fact, or do you speak of it in the comparative sense of the lighting of the coast of the United Kingdom being equal at least to the lighting of the coasts of foreign countries? I take it you would lay it down as a proposition that, considering the enormous volume of trade of the British Empire, and the interests at stake, the lighting ought to be at least equal to the lighting of the coast of any other country?—Certainly.

3497. In arriving at their view that the lighting of the coasts of the United Kingdom is efficient have the Admiralty taken into consideration the efficiency of other countries as well?—I think so, certainly.

3498. I mean, are reports made by officers of His Majesty's ships with regard to the systems of foreign countries?—The fact of the matter is, the lighting of the coasts may be considered under two views. A coast requires to be lit to lead a ship to port, and a coast requires to be lit also to warn a vessel of danger. Unfortunately it has been the habit of the people navigating ships, to run for those lights which show dangers, rather than try to keep clear of them, and the consequence is they come to grief in many cases. I am not aware that on the coast of the United Kingdom there is any great danger not marked, or any want of lights to lead a vessel safely to the port she is bound for.

3499. Is there not a considerable section of the coast of Scotland which could be improved by further ighting facilities?—If there was any trade requiring it, there might be some parts certainly which might be lit better with advantage. But my contention is, you only require to light those parts where trade is passing by to safely lead vessels that are bound to a port.

3500. I take it you consider efficiency the first consideration, not economy; that you demand efficiency first and economy afterwards?—I am not quite sure of that. I am not sure that economy should not be combined with efficiency.

3501. But you would not omit any safeguard you considered necessary? In regard to the enormous value of the sea-going trade of this country, and the lives involved, you would not consider any safeguard should be omitted?—No, certainly not.

3502. For the protection of life and property?—If by chance a single safeguard were omitted, I should be one of the first to raise an outcry.

3503. The Admiralty probably are in a better position than any other body in the world to give an authoritative opinion on this subject, because His Majesty's ships visit every part of the globe?—They do.

3504. And are more in touch with the conditions obtaining in other places than any other mariners?—I think they are, because they do visit every part of the globe, and the officers take their vessels about to every part of the globe, and are not confined to certain well-defined and particular routes, as most of the great lines of steamers are.

3505. That is my point?—They have experience of the world as a whole.

3506. (*Admiral Henderson.*) May I interpose for a moment? It is correct to say that the Admiralty orders to officers are to forward constantly every information which would assist navigation, or any changes that are in progress. It is strongly impressed upon them to do it?—That is so.

3507 (*Mr. Ennis.*) The efficiency of fog-signalling has enormously increased of late years?—I will not go so far as to say the efficiency of fog-signalling has increased, because unfortunately there are always areas of silence around fog-signals, and you cannot get over these.

3508. That is the case now with regard to these experiments recently conducted with regard to submarine bells?—Certainly.

Submarine bell fog-signals: Experiments with,

3509. Do you consider the Lighting Authorities of the United Kingdom have been as wide awake and up to date in experimental work as the authorities of other countries?—So far as I am aware the Lighthouse Authorities did experimentalize with the submerged bell, and one of the officers of the Hydrographic Department went out with the Authorities when they were experimenting, and his reports were most favourable.

Establishment of, in Canada and United States.

3510. As a matter of fact, bearing out my former question, has this submarine bell been installed on the Lurcher Shoal in the Bay of Fundy and also off Anticosti? The Canadian Government had them in actual working more than two years since, and also the United States Government?—That is so; it is over two years ago that these experiments, I believe, were undertaken. I am not certain as to the time, but I think it was about two years ago that the experiments with the submerged bell were undertaken at the North Sandhead lightvessel. When the Canadian Government and the United States Government instituted these submerged bells we were in correspondence with them, and asked them frequently to let us know what they considered about them, but we have never had a satisfactory answer from them yet.

3511. But, as a mattor of fact, on this side experiments have been undertaken with the submarine bell, which you say have proved satisfactory?—Yes, I understood most satisfactory.

3512. Both the Canadian and the United States Governments are not in the experimental stage, but they have had—I shall not call it an invention—but an application of this bell, in use for a period of over two years?—They have, but in some cases they have abolished it since.

3513. (*Chairman.*) May I ask what you mean when you say you have not received any satisfactory answer from the Government of the United States or Canada?—We have not received any answer at all about submerged bells. With every Notice to Mariners we issued about these submerged bells, we asked the mariner

who was passing to communicate, not only to the Government instituting the bells on board lightvessels, any remarks he had to make respecting them, but also to inform us. We have never had any reply from any vessels passing, and although we wrote to the Canadian Government and the United States Government asking the Government people to tell us what the position was with regard to them, whether they thought them successful or not, we never had any reply.

3514. No reply, either by way of commendation or criticism?—None.

3515. (*Sir Frank Adam.*) Some of them have been abolished?—Some of the Canadian ones. The other day we had a notice from the Americans to say that only certain bells that were established on board lightvessels were Government bells. The others were experimental bells established by private people.

3516. (*Mr. Ennis.*) But, as I say, the fact remains that the installation is in operation on the other side, and the experiments on this side have gone to show the efficiency of the system?—Yes, the reports we had at the time from our officer who attended were certainly most favourable.

3517. And, therefore, do you consider that the Lighting Authorities on this side have shown zeal in their desire to obtain most efficient and up-to-date apparatus?—I am not aware how much they have been hampered in their application of this thing. I believe they cannot do this without money is provided. They have not the money themselves.

3518. That leads up to my former question. Would you not consider it false economy to refuse the money for experimental purposes in such an important matter as submerged bells?—Certainly; anything which would conduct vessels in a fog, or give reasonable prospect of hearing a fog-signal, should be cultivated as much as possible.

3519. The Commissioners have had a quantity of evidence before them as to areas of silence in connection with existing fog-signals. Therefore, it is manifest that anything which will be efficient in a fog is of enormous value?—Certainly.

Diaphone:

3520. Another subject which led to experiments is the diaphone. The diaphone is, we have been told by engineers, assumed to be, probably or possibly, an improvement on existing sound fog-signals. That has also been in operation in the United States and Canada?—A great many of the fog-signals are diaphone signals in Canada.

3521. But not on this side?—So far as I remember, some were experimentalized with on the St. Catherine's Lighthouse.

3522. Only as experiments?—I was present, but this diaphone was not heard better than other signals.

3523. As a matter of fact, there are no diaphones established on the coast of England, except as experiments?—So far as I am aware, there are none. I am not quite certain without referring to the light list; I do not actually remember the particular character of every fog-signal round the coast.

Wireless Telegraphy: Establishment of, on lightvessels deprecated.

3524. Most of the ocean-going liners, and, I assume, His Majesty's ships, are now fitted with wireless telegraphy apparatus?—A good many of them are.

3525. Would you consider it desirable that lightvessels on the coast should be fitted with receivers for this?—That is a difficult question, and the difficulty of the question arises in two ways. If a lightvessel is in a position to convey information respecting an enemy's movements she must be considered as practically a war-signal station.

3526. In war?—Certainly; if you have apparatus on board which can be used to convey information useful in war, the lighthouse or lightvessel loses her character of simple benificence and becomes a war-signal station.

3527. Assuming that to be so, would it not be possible in view of the enormous value of lightvessels to a coast, to deal with lightvessels having apparatus of that kind in time of war on the lines of an ambulance?—I do not think an enemy would hesitate to destroy any war-signal station they could.

3528. Assuming there was no Marconi apparatus on board any lighthouse or lightvessel, would lightvessels be likely to be destroyed then?—No; it has never been considered in any war, so far as I am aware, that any lightvessels or lighthouses should be destroyed by an enemy. Their benificent character has always been respected.

Captain T. H. Tizard, C.B., F.R.S., R.N.
19 Feb. 1907.

(*Admiral Henderson.*) It is the custom of international law, the same as the custom not to interfere with fishing vessels.

3529. (*Mr. Ennis.*) That was my impression. Assuming that to be so, if a war broke out to-morrow, and assuming no Marconi apparatus to be established on board lightvessels as an ordinary aid to navigation, would it not be possible, in the event of war, to establish it for the purpose of war?—Certainly, quite possible, but unadvisable.

3530. And therefore, if we omit to provide these aids to navigation on lightvessels, because the lightvessels would be liable to be destroyed in time of war would that affect our position, because in time of war the installations might be destroyed?—First of all I cannot say the Marconi system is an aid to navigation.

3531. That was my question?—I do not see how the Marconi system is an aid to navigation. The Marconi system may possibly be useful to keep up communications, but it does not tell you where the lightvessel is, or the distance you are, or the bearings, from it. I do not see that the Marconi system is an aid to navigation.

3532. That was my question; do you consider ——?—No, I do not consider the Marconi system an aid to navigation. It may be an aid in other ways—in informing a ship, perhaps, of a danger near the lightvessel or lighthouse, but that is the only way in which it could be considered an aid to navigation. You cannot tell from an interchange of signals by wireless telegraphy where the station is that you are interchanging with, or how far you are off your bearings.

3533. You know you are within a certain area?—I do not know that even, because wireless telegraphy has been exchanged at a distance of 800 miles.

3534. Quite so. The aid to navigation would certainly be very limited?—Very limited.

3535. You do not consider it would be worth the cost of installation on lightvessels as an aid to navigation?—No.

Submarine bell fog-signals: Advantage of.

3536. On the other hand, you would consider the submarine bell an aid?—Certainly. So far as I know at present, it is still in the experimental stage in the Navy, but I believe it is likely to be a success. So far as I understand it at present, the fact of the matter is, that if a sandbank intervenes between the bell and the vessel that is approaching the lightvessel there is some difficulty in hearing it; but this I have no written information about. It is only in conversation with people that I have gathered that that is the difficulty about them—that sandbanks do interrupt the sound, and therefor if you approach a lightvessel on the danger side the sandbank may just interrupt your receiving any signal on your approach, and you may run upon the danger.

Illuminants: Relative advantages of.

3537. With regard to efficiency of lights, and comparing the electric light, vaporised oil, and acetylene, which would you consider, irrespective of cost altogether, the most efficient light?—It all depends on the situation of the light. If the light is situated down close to the shore the electric light has great disadvantages. It shines in your eyes, and blinds you to the lights of approaching vessels; and this was so much the case at Dungeness, where an electric light was introduced, that it was taken away. But when you put it on an elevation like the South Foreland, where in approaching the place the light is overhead, and you only see the ray, that does not shine in your eyes, and you have no difficulty in seeing vessels. I would not confine myself to say that one particular mode of lighting is better than another; it has to be considered what the light is for.

3538. Quite so?—If you want to light a danger which you do not want to get near, and to warn vessels which would therefore stand away, then, so far as my experience goes, the electric light is better because it carries farthest, but I am not aware that it carries farthest in all weather.

Short flashes deprecated.

3539. Quite so. Assuming, as I said before, that the cost has not to be taken as a factor in the question, would you consider the powerful French lights, such as Cape Grisnez, showing a distance of 20 miles, to be desirable?—I have a strong opinion on those French lights. In the navigation of the present age, you require more than ever to omit compass bearings and take angles between lights, but how on earth are you take angles if a flash only lasts for one-tenth of a second. Even if you could get the thing in the sextant, it is instantly gone again; you would take hours. I have seen it so much upon the coast of England, where it has sometimes taken an hour to get an angle between two

Captain T. H. Tizard, C.B., F.R.S., R.N.

19 Feb. 1907.

revolving lights, because they were not visible at the same time. Although the advantage of a brilliant light shining out and penetrating is very great in some places, there is a certain disadvantage.

3540. So you consider in that event the duration of the flash is too short?—Too short. One-tenth of a second is too short to enable you to get a bearing or an angle.

(*Admiral Henderson.*) This is the general complaint.

3541. (*Mr. Ennis.*) Assuming the duration of the flash to be sufficient to enable you to take the bearing, do you consider it an advantage that such a powerful light should show a distance of 20 miles or more?—I do not think so in the case of Grisnez.

3542. Not in that particular case?—If there is any danger, the further it can show to warn vessels the better. But when you are approaching a coast to reach a harbour, I think it is not so important that it should show so many miles as that it should show clearly and easily how to approach the port with perfect confidence.

3543. In the case of lights placed in a position such, say, as the Fastnet on the Irish coast, I assume the carrying power of the light would be of enormous advantage there?—Certainly.

3544. You would desire that it should be seen as far as possible?—Certainly.

3545. Would you consider that any modern invention, which would project the light to a very great distance, would be an advantage?—Certainly.

3546. You have said that the Notices to Mariners issued by the Lighthouse Authorities are practically of a misleading character, inasmuch as they do not contain sufficient information when they are issued?—I would not say they are misleading.

Notices to Mariners: Issue of, by Admiralty only, advocated.

3547. Possibly "misleading" is too strong a word; I mean they are susceptible of improvement?—Capable of improvement, certainly.

3548. You would favour a system by which the Admiralty would issue the notices altogether, and would be advised by the Lighthouse Authorities—kept posted properly—with all information that came within their knowledge at once?—I should think that would be the best.

3549. Most efficient?—I think so; that is my opinion.

Charts issued by the Admiralty: Advantage of,

3550. With regard to charts, you have said the Board of Trade do not wish to emphasise the use of the Admiralty charts?—That is only a surmise.

3551. But there are these blue-back charts in use also. Have they any official sanction; is there any guarantee of their accuracy?—Absolutely none.

3552. I take it, therefore, you also consider, in the interests of navigation and the safety of life and property, that the seafaring community would be better advised to use a chart which would have official sanction?—That is my opinion. The difficulty is there is nothing to force them to use it. The underwriters do not force vessels to use Admiralty charts, or any charts. There is nothing in the underwriting business, or at Lloyd's, to say they are to use charts at all.

3553. (*Admiral Henderson.*) Most of the skippers of the fishing-boats of Scotland do not even know how to use a chart?—Many of them do not.

3554. I will give you an instance. I very often go to the North of Scotland. A friend of mine, Lieutenant Philip Egerton, R.N., in a praiseworthy manner established a class at Helmsdale for teaching the fisher folk coastal navigation. He had some difficulty in getting any but a few to attend. None of them had ever seen or used a chart, and his first object was to teach them to make use of the lights and headlands on the coast by the employment of one. Previously they had been accustomed to go solely by rule of thumb.

3555. (*Mr. Ennis.*) As to efficiency, the Admiralty charts are superior to the unauthorised charts?—Certainly.

3556. (*Admiral Henderson.*) In regard to the efficiency of electric light, is it true to say that, even with the best of lights, it does not follow that they are always seen at a uniform distance; the question of the weather and the condition of the atmosphere very much affect the distance of visability?—Certainly.

Wireless Telegraphy: Establishment of, on lightvessels deprecated.

3557. Might I assume also it is your opinion that, practically, wireless telegraphy fitted to lightvessels is of no use, except to report a wreck or danger?—As far as I am aware, no navigational use.

3558. It is only in certain positions that even then it would be useful?—That is so.

Submarine bell fog-signals: Experimen with,

3559. Not in all. Have not the Admiralty recently—within the last few weeks—been carrying out experiments in submarine signalling?—The last I saw personally of it was a report about the submarine signals, and it was suggested from our department that, at any rate, some of these signals might be usefully made into a code for submarine boats. I believe that was approved, and some experiments are being made as to whether a code of signals cannot be instituted, by bells or something of that sort, for submarine boats.

3560. I noticed in the papers the other day that one or two vessels were carrying out experiments, and it said they had all made reports. You have not seen them?—Not the whole of those reports.

Charts: Issue of, by Admiralty.

3561. May I take it that all the original official documents connected with navigation are issued by the authority of the Hydrographical Department of the Admiralty?—Yes.

3562. They are used universally, not only by us, but by all nations?—Yes.

3563. These navigational charts are issued officially under the Admiralty?—Yes; in fact, the Russians go so far as to prefer our charts of their own coast to their own.

Notices to Mariners: Issue of, by Admiralty only, advocated.

3564. In the case of these hydrographic notices issued by the Lighthouse Authorities, supposing they were done away with, it would be perfectly possible for them to notify you by telegram in case of a wreck?—Yes. You see we do not necessarily give a notice for this reason. If a wreck is marked, it is always marked in the same way, and every sailor is acquainted with the way in which it is marked; and we maintain that there is no necessity to give a notice of a particular wreck, unless under certain circumstances—if out at sea—where, that wreck being marked, it may become of use to a vessel suddenly coming across it to know where she is. If it is so close to the shore that no vessel could get there, and the wreck is always marked by a buoy, we maintain it is no use to give a notice, because every sailor understands these marks.

3565. Certainly. You think there would be an economy in reducing these mariners' notices?—I do not see much advantage in the various Lighthouse Authorities issuing the notices, and it would certainly be an economy to do away with it, and let one authority issue all the notices.

3566. Have you any other suggestions for the Commission on these points?—No, but I am willing to answer any question the Commission may like me to answer.

Charts: Advantage including sketches of seamarks in

3567. (*Mr. Ennis.*) I just wanted to ask, do you consider it would be advisable—I believe the United States issues to mariners diagrams of their lighthouses and the principal buoys; a book of diagrams—do you consider that would be an aid to daylight observation?—You mean sketches of the lighthouses?

3568. Yes?—In most cases in which we have marks which it is important the mariner should be able to recognise at once, they are on the charts; sketched on the charts.

3569. On the charts. But I understand that there are books issued. This is not the one I refer to (*exhibiting book*); this is the Canadian one?—That is to say, with those sketches at the end. Quite so.

3570. Do you consider if those were to be issued by the Lighthouse Authorities or the Admiralty it would be an aid to navigation?—Some of them. For instance, I do not mean this (*referring to book*). This is a light house as it appears from the shore. That is no use to the mariner; he wants to know what it looks like from the sea. We endeavour to get the sketches from the sea; in fact, we are instituting the supply to all surveying vessels of photographic apparatus, to enable them to take the views of the lighthouses as seen from the sea. Those we shall put on the chart, and for making lights you have not to refer to another book but to consult the sketch of the lighthouse on the chart.

3571. I am glad to find the Admiralty appreciates the value of the point I have been making; that such diagrams are a great aid to navigation?—Certainly.

Efficiency of lighting of coasts of United Kingdom.

3572. (*Chairman.*) May the Commission take it to be your opinion, and that of the Admiralty, that the lighting and marking of the coasts is, at least, as well carried out in the United Kingdom as in any country in the world?—That is so.

TENTH DAY.

Tuesday, 26th February 1907.

PRESENT:

The Right Hon. G. W. Balfour (*Chairman*).

Sir Frank Forbes Adam, C.I.E.
Colonel I. J. C. Herbert, C.B., C.M.G., M.P.
Vice-Admiral W. H. Henderson.
Mr. M. A. Ennis.
Captain C. Bigham, C.M.G. (*Secretary*).

Captain E. F. Inglefield, R.N., called in; and examined.

Captain E. F. Inglefield, R.N. 26 Feb. 1907

3573. (*Chairman.*) You are, I believe, the Secretary of Lloyd's?—Yes.

3573a. And you are here to-day to give evidence on behalf of Lloyd's?—Yes, that is so.

Lloyd's: Functions of, bringing them into connection with the Lighthouse Authorities.

3574. Would you please begin by describing to us the functions discharged by the Corporation of Lloyd's that bring them into connection with the Lighthouse Authorities?—One of the principal functions performed by the Corporation of Lloyd's, as defined by Lloyd's Act of Incorporation of 1871, is the collection of maritime intelligence from all parts of the globe, and the publication and diffusion of that intelligence in the United Kingdom and abroad among those who are interested in shipping matters and in oversea trade. By maritime intelligence is meant any information affecting shipping, cargoes and freight.

In order to carry out the large business involved in the world-wide collection and distribution of such intelligence, it is necessary to have a carefully arranged system of signal stations in the vicinity of the principal trade routes as well as at the most important ports at home and abroad, besides specially appointed agents at every port in the world. Lloyd's has some 1,400 agents and sub-agents who, in addition to the important duties which they perform as the representatives of the Corporation, are specially charged to transmit at once all the latest maritime intelligence from their respective districts.

The United Kingdom, owing to its geographical situation and the predominant part which it plays in the business of the world, is necessarily the principal focus of ocean commerce. It is therefore round its coasts that the most constant watch has to be kept; and it is there, consequently, where Lloyd's principal signal stations are to be found. The last fifty years, however, have been a period of steady transition with regard to the mode and rate of progression of vessels of every kind—from sail to steam, and from low-powered steamers to those of high speed. This constant increase of speed, and the consequent more direct routes followed by merchant vessels, have an important bearing with regard to the positions of signal stations, for it becomes necessary to establish those stations further and further away from the various ports of arrival, in order to give sufficient notice to owners and other interested parties of the movements and approach of their vessels.

This may be illustrated by the case of signal stations in the Irish Channel. Formerly there was a system of signal stations on the North Wales Coast at South Stack, Point Lynas, Great Orme's Head, Voel Nant and Bidston (Cheshire), to report vessels making for the Mersey. Nowadays these stations would be of little use, as the vessels themselves would have reached Liverpool before their owners would have time to prepare for their arrival. It has therefore been necessary to establish signal stations at Malin Head, Inishtrahull and Tory Island, which give timely notice of the approach of vessels from the northward; while those bound up the Irish Channel are reported from the Smalls, the Fastnet, and the Tuskar, at which lighthouses, by permission of the Trinity House and Irish Lights Board, signals are taken for Lloyd's by the lightkeepers.

As another instance of the frequent necessity for changing Lloyd's signal stations, the case of the North Foreland may be quoted, which station has of late years fallen into disuse because the increasing tonnage of steamers has led them to pass outside the Goodwin Sands, instead of through the Downs as formerly. I might explain with reference to this that I do not mean that the channels are not deep enough inside the Downs, but that when you have to handle a large ship going at a high speed it is more convenient to take her round by the outside than to bring her up through a somewhat winding channel.

Distant signal stations are also becoming more and more necessary owing to the growing custom of shipowners to telegraph to Lloyd's orders which they want to have transmitted to their vessels from the first signal station which the vessels may make.

Legal right of, to obtain information from lightstations advocated.

It is likely that in the future Lloyd's will be more and more dependent for maritime intelligence on outlying lighthouses and lightvessels, and it is submitted that if the lighthouses are brought under Government control, Lloyd's should have, in the interests of merchant shipping and all those concerned in oversea trade, a recognised right to facilities for obtaining maritime intelligence from such lighthouses and lightvessels, though, of course, the facilities given should be entirely secondary to the proper performance of lighthouse and lightship duties.

3575. You speak of a right to facilities; are there any provisions of any Act of Parliament at the present time bearing upon the relations between Lloyd's and the Lighthouse Authorities?—No, not between Lloyd's and the Lighthouse Authorities, and there is no Act. As I have tried to explain, it is quite a recent thing that Lloyd's have required to get information from lighthouses and lightvessels, because it has been a continual state of pushing signal stations further and further away from the ports of arrival, owing to the greater speed of the vessels and more direct routes of approach.

3576. There is no provision of any Act of Parliament at the present moment imposing any kind of duty upon the Lighthouse Authorities with regard to the transmission of signals?—None whatever that I know of, Sir.

3576a. (*Sir Frank Adam.*) Purely a voluntary arrangement?—Purely voluntary.

3577. (*Chairman.*) Have you thought what sort of a right you would desire to see conferred upon Lloyd's, because so long as the facilities of which you speak are to be entirely secondary to the proper performance of lighthouse and lightship duties it would seem rather difficult to understand how such a right could be given?—I think it could be arranged that the lighthouse keepers should have certain duties to perform in addition to their duties of looking after the lights, sounding their fog-signals, and cleaning their lanterns, just in the same way as on board ship people have more duties to perform and responsibilities to undertake than any one particular function.

3578. Then would you impose upon them the obligation to convey maritime information for the benefit of Lloyd's and of the shipping community generally?—

Captain E. F. Inglefield, R.N.
26 Feb. 1907.

I think in view of the very wide interests involved in shipping generally—when you come to think that the whole trade of the country is dependent on it either directly or indirectly—it seems to me an obvious thing that every facility should be given for obtaining such information.

Wireless Telegraphy: Danger of, to light stations in time of war is inconsiderable.

3579. It was suggested to us the other day by Captain Tizard, on behalf of the Admiralty, that any lighthouse station equipped with the Marconi apparatus would be liable to be destroyed in time of war; at least so I understood him?—Of course, in war anything is possible, and we have known, even in the most recent wars, of acts of what you might term vandalism being committed, but I think it would be looked upon as a crime to destroy any lightship in war or any lighthouse, as I think it is likely that even belligerent countries would keep their lights showing for the benefit of the commerce of the world.

3580. Speaking as Secretary of Lloyd's, you do not regard that as a very serious danger?—No, I do not, and I think if there were such a possibility, which would assuredly be known beforehand, it would be an easy matter for the Government to take away the wireless equipment from lighthouses if they considered that that was the dangerous factor.

Maratime Intelligence Existing arrangement for obtaining, from light-stations,

3581. Now, apart from any legal obligation which might conceivably be imposed upon Lighthouse Authorities by future legislation, you have at present arrangements with the Lighthouse Authorities for performing some of these functions which you would like to have imposed upon them as duties?—Yes; through the courtesy of the Irish Lights Board, our own Trinity House, and the Northern Lights Board, we have made arrangements at three lighthouses, the Smalls, the Tuskar, and the Fastnet, and also by the courtesy of the Northern Lights Board we are now installing wireless telegraphy at the Butt of Lewis Lighthouse and the lighthouse on Flannan Island, about forty miles to the westward of the Butt of Lewis.

3582. Those arrangements are only temporary?—Those arrangements are only by the courtesy of the respective Lights Boards. But we feel that the position is rather an insecure one from our point of view, and that we are only there as a matter of courtesy, and that if there was any friction, through the lightkeepers feeling that it was outside their proper functions, the thing would be stopped, or if there were too many complaints from shipowners of not receiving their signals correctly; so that we feel that the position is a very delicate one, and ought to be made more secure.

3583. Now supposing that the Lighthouse Authorities considered that those duties could not be carried out satisfactorily by the lighthouse keepers; supposing that was the result of the temporary experiment which they have now undertaken, what would be the position?—I am afraid the position would be a bad one for Lloyd's. We could do nothing beyond asking as a favour that they should reconsider the position. But I think it would be a great loss to trade; shipowners might suffer very severely through want of intelligence.

3584. Would you suggest that Lloyd's should have a right to establish a station themselves on these lighthouses?—I do not quite understand that.

3585. Take, for instance, the Fastnet; I think if I remember right, there was an actual proposal that Lloyd's should have an installation there and work it themselves?—Yes; as a matter of fact at the Fastnet we have an installation, but, I think, to bring two separate elements like that into close daily communication, and to live together in confined quarters, would be bound to lead to friction. I think the thing might very well be arranged for the lighthouse keepers to supply the information and to work whatever instruments were installed. That is done now, and, so far as I can see at present, it is working satisfactorily. At the Fastnet, the Tuskar, and the Smalls the lightkeepers are taking signals from passing ships, and in the case of the Fastnet they are working the wireless telegraphy for us. We sent one of our operators there to instruct them, and it is now going on satisfactorily.

and Arrangements for reporting of casualties.

3586. Do you draw a distinction between the reporting of maritime information and the reporting of casualties? I see you refer in one of the paragraphs of your *précis* to the reporting of casualties?—Yes, because now in some of these outlying lighthouses, where we have not got actual arrangements for ships reporting themselves, the Trinity House have kindly arranged that any casualties that come to the knowledge of the lightkeepers should be transmitted to us at once. Of course, casualties are the most important part of maritime intelligence, because it is a prevention of fraud. It is easy to understand that if one or two people by some chance knew of a casualty, frauds might be committed in the way of reinsurance and so on, which would have a very bad effect, not only actually, but also morally on the reputation of British commerce, and those engaged in marine insurance in particular.

3587. And I understand that casualties are reported not merely from the lighthouses and lightvessels enumerated here, but from all lighthouses and all lightvessels which have communication with the shore?—Yes, that is so.

Lloyd's: Representation of, on Advisory Committee.

3588. In the last paragraph of your *précis* you suggest that Lloyd's should be represented on the Lighthouse Administration of the United Kingdom. I think Lloyd's are already represented upon the Advisory Committee, are they not?—My predecessor, Sir Henry Hozier, was, and is still upon that Committee, although he has vacated his position as Secretary of Lloyd's. I understand that that appointment is to great extent a personal appointment, as he still retains it; but I do not know all the ins and outs of the matter.

Representation of, on Lighthouse Authorities advocated.

3589. Is this suggestion part of a considered scheme for the reform of the constitution of the Lighthouse Authorities, because it implies a reform of the constitution of the Lighthouse Authorities, you see?—I think the Committee of Lloyd's hardly like to put forward any suggestion for the reform of Lighthouse Authorities, because it is not a matter that affects them directly as underwriters and insurance brokers in the same way that it affects shipowners. Shipowners naturally feel that they ought to have a great deal to say to the matter on account of the light dues, but Lloyd's is in a different position, and I think that they would not put forward any suggestion that the administration should be altered.

3590. This merely means, in short, that if a representative element were introduced into the constitution of the Lighthouse Authorities, you think Lloyd's would have a claim to be considered in the matter?—That is so, Sir. If I might add to that, I think Lloyd's would like to point out how much the interests of the whole trade of the country depend on this maritime intelligence, and it is therefore an important factor that Lloyd's, as representing this maritime intelligence, should have some voice in the administration of the lighthouses.

Object of incorporation of,

3591. (*Colonel Herbert.*) I should like to ask you one or two questions. Lloyd's is incorporated, I understand, for the express purpose of providing this intelligence?—Partly for the purpose of providing the intelligence, and also to make the members a corporate body so that they can act together for their mutual benefit. If I might explain, the underwriters at Lloyd's, and the brokers—in fact, all the members of Lloyd's—do their business independently, but they join together as a body to protect and further their joint interests.

3592. I see; then the Act of Incorporation is really to further private interests?—Not strictly so, because the whole commerce of the United Kingdom, of the Empire, is dependent on marine insurance. If there was no marine insurance, the commerce would hardly be able to be carried on. It all hangs on that, and marine insurance, owing to the very large sums that have to be insured, has always been a large feature. The stability of marine insurance depends upon the risks being divided up among a very large number of people. If few people take large risks, they would very soon become bankrupt; they could not stand it, and so the custom of these underwriters is to divide the risks among themselves in the small quantities, and then for their mutual protection to be joined as one large body.

3593. Yes, but the Act of Incorporation practically confers the privilege on a number of persons who otherwise would be carrying on their business individually, by making them a corporate body?—Yes, that is so, but unless they did join together their individual business would be impossible. A single underwriter, and even an insurance company, could hardly carry on the large business that Lloyd's does in having agents all over the world, and the large system of intelligence that they have. It could hardly be performed, and is necessary for their protection. The whole sys-

tem of marine insurance depends upon this intelligence, and on this protection, otherwise they would be so robbed all over the world by claims, that they could not carry on their business. I think that is a vital thing.

3594. I think that is going a little bit further than I put it; that your whole existence, then, depends upon your Act of Incorporation?—I will not say that it depends exactly on the Act of Incorporation, because the corporation is of comparatively modern date, whereas the coming together of the underwriters as a society, and forming the society of Lloyd's, is a very old institution, I daresay getting on for 250 or 300 years old.

3595. The point I am coming to is this: that in putting forward a claim to a right as a corporate body of individuals, who derive benefit from their corporation, you are proposing to throw upon a public body that which you have undertaken to do as a private corporate body?—I would hardly put it that way; I would not say that it is so much for the benefit of the individual as the necessity for the existence of the individual, and I say that it is a benefit to the whole maritime commerce of the Empire.

3596. There is no question about the benefit to commerce or the good system of intelligence, but what I am going on is this: that arising out of the commerce of the Empire there are benefits derived from individuals who are members of the Corporation of Lloyd's, and who have derived those benefits through their Act of Incorporation?—The benefits that we ask in that direction are a very small matter, compared to the huge stake that the country has in the marine insurance. It is not as if you were giving a special advantage to one body of people; I consider that you would be doing something that is necessary as an important factor in the stability of the commerce of the Empire.

3597. Yes, but at the same time the fact I think remains, and I do not think you have contraverted it—you probably will admit it—that they would be throwing upon a body which would depend entirely upon the community and upon the taxes made from the community, a duty which you at present are obliged to do on your own account as a private corporation trading body?—I think, Sir, with all due deference, that the letter of your statement is absolutely correct, but I venture to think that the spirit of your statement hardly conveys a correct impression.

3598. The spirit of my question is a perfectly friendly one?—I quite understand your point of view; you are quite right to press me on that point; I only want to say, written down your statement would make it appear that it was merely a matter of private advantage to the underwriters. It is not that they get any immediate or direct gain out of that; it merely helps them to carry on this business which is necessary for the whole commerce of the Empire, and as far as the underwriters' direct gain is concerned I am afraid a great many more of them lose money than make it over the insurance.

3599. You must excuse the military habit which makes me put things rather directly?—Yes, certainly.

3600. I think it is an important point to have recorded in a clear manner?—Most important.

Maritime Intelligence: Importance of system of,

3600a. That is the only object of my question?—I do not wish to traverse that in any way; I only want to put my view. It is my duty to impress upon the Commission that it is not such a personal matter as that to the underwriters, that it is more for the benefit of trade in general, and that if you do not get this information at the earliest hand the whole trade may suffer, because you will have fraud at once. One man may have intelligenge and go on reinsuring when he knows all the time that the ship has gone down. And that is most important, because immediately you have that sort of thing going on it disturbs the confidence that there should be in a large Corporation like Lloyd's, and it is a very disturbing thing for commerce in general.

Legal right to obtain, from light-stations advocated.

3601. My only reason for putting this very clearly is that I see you state here that the privileges that you at present enjoy have been granted as a temporary measure?—Yes, a temporary measure. We feel that the situation, as far as we are concerned, is a precarious one, and that it has to be handled most delicately. We feel that if at any time it suited any of these lighthouse keepers to give trouble and make difficulties and say they could not attend to their lights the whole thing would be stopped.

Captain E. F. Inglefield, R.N.

26 Feb. 1907.

3602. At the same time you will see there is a great difference between a privilege granted in such a manner as a temporary measure and a right imposed upon a public body depending upon the taxation of the country?—I undoubtedly admit that, but as regards the taxation I think it would impose a very nominal addition to the taxation of the country, and I think it quite possible, if a point were made of that, that Lloyd's might contribute something towards the extra cost.

Lloyd's: Assistance to Government rendered by,

3603. You think that Lloyd's might enter into an arrangement with the Government, by means of which it would pay a certain proportion of the cost; is that what you mean?—I cannot of course pledge the Committee of Lloyd's. If they were driven into a corner and the Government thought it a very important point, I think it is possible that Lloyd's would do that sooner than not have the right, but unless the Government felt very strongly that they ought to do so it would not be a fair thing, because the Government make use very largely of Lloyd's, especially the Admiralty. We are continually being asked for information. Very frequently we send out to our agents abroad for information they want. I suppose there is hardly a day passes that we do not get a telephonic message from the Admiralty about something, sometimes asking us to find out information and so on, and we supply them with a tremendous lot of information, therefore I think that unless it was really a charge that would be appreciable to the Government it would not be a fair or proper thing for the Government to ask Lloyd's to subscribe, because my own view is that it would want a very small addition to the present organisation and only a few very simple arrangements to arrange for these signals to be made from lightships and lightvessels.

3604. In fact, the Admiralty has made use of you as a very convenient form of devolution?—Yes.

3605. There is one more question I would like to put to you. Would you go a little further than you did just now and say this much, on behalf of Lloyd's, that you consider that Lloyd's might assume a certain part of the charge which would be necessary under a new system of Lighting Authorities provided that it received representation on the body which took over that Lighting Authority, if they were officially represented?—No; I am afraid I could not do that, because Lloyd's has very heavy expenses, and the funds are naturally limited, and I think it would be doubtful if we could contribute materially to the lighthouse system in general. What I meant to have suggested was that perhaps in a few of the most important lightvessels, where we found ourselves absolutely driven to ask for information we might share the expense, but we feel that it would not be treating Lloyd's well and that it would not be the best thing for the country to put us in that position.

3606. I understood you that if they were driven into a corner you thought you would have to contribute?—Yes.

3607. Well, I propose to make that corner more comfortable by suggesting as a compensation that you should have representation?—As a compensation?

3608. Yes; that was the suggestion I made?—Well, I would not look upon representation as any compensation for money that we paid, because it would certainly give us a great deal more work and trouble, and already our work at the present moment is terrific, looking after all the signal stations all over the world, and the large number of agents. The work there is enormous, so we should not look upon it as any benefit to be represented, or certainly not a benefit that we would pay for. We think that for their own sakes it would be a convenience to the Lighthouse Boards, provided that the principle was accepted, that intelligence should be sent from these lighthouses and lightvessels, that Lloyd's representatives should be either on the Board or on an Advisory Committee, to say what was wanted and to assist matters as much as possible.

Representation of, on Lighthouse Authorities advocated

3609. (*Chairman.*) May I ask this question: have Lloyd's, so far, experienced any difficulty in inducing the Lighthouse Authorities to meet their wishes in the matter of the conveyance of maritime information?—I have only been Secretary of Lloyd's a matter of four or five months now, and the arrangements were completed by my predecessor some time, I think, about a year ago, but from what I can gather there

Relation of, to Lighthouse Boards is unsatisfactory.

Captain E. F. Inglefield, R.N.

26 Feb. 1907.

has been considerable difficulty, and it is only as a favour that these privileges have been granted to us, and as I have already stated I feel that the position is a very delicate one and one that wants great care in handling.

3610. You do not know the character of the objections raised by the Lighthouse Authorities at that time in the course of the negotiations?—No, I do not know, but I think it is easy to understand that they feel that if their lighthouse keepers fail in their duty at any time as regards their fog-signals or their lights, they might turn round and say, "We were so occupied making signals to ships that we could not attend to these other duties."

3611. (*Mr. Ennis.*) Do I correctly assume that Lloyd's is primarily a big association of underwriters?—Primarily a big association of underwriters. But nearly all insurance brokers are also members.

3612. Quite so; but in any case it is in the interests of underwriting and insurance that Lloyd's originally came into existence. I mean that Lloyd's represents the underwriting of the United Kingdom?—Yes, and the marine insurance brokers as well.

Importance of, to British Commerce.

3613. And the operations of Lloyd's must necessarily be of an enormous character seeing that the total export and import trade of the country during the last recorded year is, I believe I am correct in saying, between £900,000,000 and £1,000,000,000?—Yes.

3614. Taking the imports at c.i.f. values and the exports at f.o.b. values?—Yes.

3615. And if you add freight to the export, the total value of the exports and imports of the United Kingdom will be very considerably over £1,000,000,000?—That is so, Sir; and, as I already said, the whole commerce of the Empire is dependent for marine insurance largely on Lloyd's. Of course, there are outside marine insurance companies who compete with the underwriters of Lloyd's to a great extent, but those outside marine insurance companies also subscribe to Lloyd's for their maritime intelligence, and they depend also upon this maritime intelligence. But as regards the volume of insurance done at Lloyd's, that has nothing to do with the corporation as a body; that is effected by the underwriters in their individual capacities.

3616. Quite so; but the cost of your intelligence must be borne by the funds of Lloyd's?—That is so.

3617. And the funds of Lloyd's are subscribed by the insurance community?—Yes, that is so.

3618. Consequently, the cost being so heavy, the insurance operations must be of enormous magnitude to induce those interested in insurance to subscribe to such a large extent for the protection of their interests and the protection of shipowners generally?—Yes, that is so.

3619. And as the entire trade of the United Kingdom must necessarily be sea-borne outwards and inwards, and assuming that for a very large proportion of it the risks are covered by insurance, it follows the operations at Lloyd's must be of enormous importance to the country generally?—Yes, that is so.

3620. And I take it it also follows that if the intelligence department which you have established were suddenly withdrawn to-morrow, the inconvenience and the dislocation of trade caused to the shipping community generally would be enormous?—I would even go further than that, and say that it would be more than an inconvenience. I have no doubt that it would bring to a standstill a large proportion of British trade, because underwriters would not insure unless they were protected by a system of maritime intelligence and a system of agents in all parts of the world, and unless shipowners could insure, very few of them, except perhaps the large companies, could afford to send their ships to sea.

3621. Therefore I take it that whilst primarily Lloyd's establish their very efficient system of intelligence for the benefit of the members of their association, indirectly they enormously benefit the shipping community as well?—They render the shipping trade possible.

3622. Yes, quite so; they confer enormous advantages upon the shipping trade, although the service is primarily undertaken on their own behalf?—I would go further; I would say they confer benefits upon the shipping trade in two ways. In the first place, as I have already said, very few shipowners could afford to send their ships to sea at all unless they were insured. And the second way in which they confer benefits on shipowners is that shipowners make large use of Lloyd's signal stations to report the movements of their ships in all parts of the world, to get early information of their coming, so that they can make preparations, and also to telegraph instructions to them at different parts of the world, so that a ship can be ordered to call at a certain signalling station for orders, and then, according to the state of markets in various places, a shipowner can telegraph out orders to his ship, which are signalled to her.

3623. As I say, the cessation of the services of Lloyd's would be a serious damage to the shipping community. Now as regards the cost of lighting the coast, the matter which this Commission deals with, the incidence of that cost, although it does not come within the terms of our Reference, falls upon the shipping community at present, as a matter of fact?—I believe that is so.

3624. And therefore any service undertaken for the shipping community, or paid for rather by the shipping community, is not a tax that falls upon the general public?—Not directly.

3625. Not directly upon the general public; it falls upon the shipping community primarily?—Primarily.

3626. And therefore I take it your contention on behalf of Lloyd's is, that in return for the enormous service which you render to the shipping community by means of this intelligence department and otherwise, you consider it would be a very small reciprocal arrangement on their part for the Lighthouse Authorities, whose cost is borne by the shipping community, to provide you with facilities at their stations for supplying this intelligence?—No, that is not quite what I meant. As you say the light dues apparently fall directly on the shipowners, but I imagine that they actually fall and are generally borne by the consumer, who pays the freight.

3627. Eventually they must be?—Eventually, yes.

3628. But in the first instance they are borne by the shipping community?—In the first instance they are borne by the shipping community; I do not quite see your point.

3629. My point is that you confer very large advantages upon the shipping community?—Yes.

3630. And that as the shipping community pay the cost of lighting the coasts it would be a very small return for the Lighthouse Authorities to give to you the facilities you seek at Lloyd's for supplying intelligence from the lightvessels and the lighthouses round the coast?—I rather had it in my mind, when suggesting that those privileges should be given permanently, that shipowners would be eventually relieved of this cost, and therefore my view was that it would fall on the taxpayer. If there was any extra cost, I think I could hardly suggest that it should be put on the shipowners, because I think the feeling of Lloyd's would be that it is not an expense that should be borne primarily by the shipowner, but rather by the taxpayer.

Maritime Intelligence: Cost of obtaining,

3631. Have you any information as to whether there is an additional expense involved? You, I take it, have installed these appliances on the Fastnet and the other places at your cost?—We have installed these appliances, and, as regards the additional cost, I may say that, by an arrangement with these Boards, we do pay a small sum to the lightkeepers for the extra work.

3632. In that event, practically so far no extra cost has fallen on the Lighthouse Authority by reason of your operations?—No, certainly not, no extra cost.

3633. The only point that could be made would be the one you suggest that the lightkeepers might claim that their ordinary duties were interfered with?—Yes.

3634. (*Chairman.*) Surely the cost is a very small matter; the whole question is one of efficiency. There might conceivably be a difficulty in a small place like the Fastnet to find sufficient accommodation for all those who would be required to work an important wireless installation. Does not the question really resolve itself into that?—It is very small, so long as we use only a few as at present; but I point out that our system of signal stations is necessarily a changing one, and it is possible that in the future it might be necessary to get intelligence from a great many more lightships and lighthouses. If we multiply those the expense would mount up very largely, and might ultimately become prohibitive, and such as to prevent

Lloyd's making those arrangements in as many cases as are absolutely for the advantage of commerce.

Captain E. F. Inglefield, R.N.
26 Feb. 1907.

Liability for errors in transmission of.

3634a. (*Mr. Ennis.*) You do not suggest, I take it, that if you were provided with statutory authority to establish these installations on lighthouses and light-ships, that authority would carry with it a liability on the Lighthouse Authorities or on the individual in the event of an error in the transmission of signals?—No.

3635. I mean, suppose a serious loss was incurred through error, you do not suggest that a financial liability would rest upon the people in the Lighthouse Service by reason of the error?—Are you referring now to a Government administration or to a corporate administration.

3636. Well, whatever form?—I think that would be easily arranged for, in the same way as the Post Office now incur no liability for mistakes in telegrams.

3637. Quite so; that is my suggestion; you do not claim any liability?—No, I think certainly not; that would be an impossible position.

Wireless Telegraphy: Danger to light-stations using in time of war is inconsiderable.

3638. Then you have said as to the danger in time of war that lighthouses or lightvessels might be interfered with, provided they were fitted with wireless installations. You described that as what you would call an act of vandalism, and you suggest, I take it, that provision should be made by international arrangement—the Hague Conference—or something of that kind—that those aids to navigation should be safeguarded from attack in time of war by International agreement?—I think certainly that would be an advantage.

3639. You look upon it in time of war—modern warfare—the trade of the world is not brought to a standstill by reason of a conflict between two powers, and that there is a large neutral commerce which would be endangered, and the lives of passengers would also be endangered, by an interference with the lighting arrangements of the coast of any power?—I do not think any belligerent would be so very foolish as to interfere with the enemies' lighthouses or lightvessels, because it is more to the advantage of our enemies than ourselves that these aids to navigation should be kept working in war time. It helps them to approach our coasts. An enemy's ship watching the coast would have great difficulty in keeping out of danger unless our lights were burning, and so I think it would be cutting their own throats to attack our lighthouses.

Lloyd's: Representation of, on Lighthouse Authorities advocated.

3640. Well, your contention is with regard to any change in the constitution of the Lighthouse Authorities that Lloyd's should have a representation on the reconstituted authority?—That is my view with the object of making any arrangement of that sort work smoothly.

3641. And you hold that representation on the Advisory Committee, which possesses no legal status—the Advisory Committee is simply a body which is consulted by the Authorities, but which has no legal status—would not in your opinion quite cover your claim. And do I understand that your contention would be that as Lloyd's represent the underwriting class of the Kingdom, and as the underwriters take the majority of the risks of sea-borne commerce, that they are more interested in fact in the efficiency of the lighting arrangements of the coasts than the shipowners themselves, because presumably the shipowner whose vessel is fully covered does not, as a matter of fact, take the risk of navigation that the underwriters at Lloyd's do, and therefore whilst a body consisting purely of shipowners might possibly be inclined to starve a lighthouse administration, Lloyd's would not have a tendency in that direction, because it would be their direct interest to have the efficiency of the service at its maximum point?—That is so. The members of Lloyd's most certainly have a direct interest in anything that tends to the safety of shipping, but I would not say that they have quite the same direct interest as shipowners, because if they find that a certain coast is dangerous or a certain voyage is a dangerous one they raise the rates of their premiums, and protect themselves in that way.

3642. Quite so, but if they raise the rates of premiums, it militates against the trade of the United Kingdom, as compared with foreign countries; is not that so?—Most undoubtedly, it militates against the whole trade of the Empire.

3643. You have spoken as to a matter which does not really come within the purview of this Commission, as to the desire of the shipowning community to be relieved of the cost of this service. As a matter of fact, would not such relief from the cost of this service mean a bonus to the foreigner of £150,000 or £200,000 a year?—I have not studied the question from the economic point of view, but possibly you might charge the foreigners light dues, and not British ships.

(*Chairman.*) That hardly comes within our province.

3644. (*Mr. Ennis.*) And then you claim that you should have representation on all reconstituted Lighthouse Authorities?—That is my idea.

Rockall: Undesirable at present as a signal-station.

3645. I will just ask one other question: you speak of using outlying stations, having to get further and further from your base, on account of the increasing speed of ocean steamships. Does Rockall lie in the track of any great ocean line?—Yes, it does.

3646. Would Rockall be useful in the establishment of such a station?—It would be useful, but I believe it is such a small rock that unless there were a lighthouse put there it would be no use to us, because ships would avoid it. There was a large liner foundered there a few years ago, but we are taking the Flannan Islands, which lie about 40 miles to the westward of the Butt of Lewis, where they are at this moment just installing a Marconi apparatus.

3647. When you spoke of increasing distances, it occurred to me that Rockall, which is about 200 miles off the coast of Ireland, within easy reach of wireless operations, would be even further afield?—If there was a lighthouse there it would be useful to us because ships would make it, but as there is no lighthouse they avoid it.

Maritime Intelligence: Work involved by receiving, at light stations.

3647a. (*Admiral Henderson.*) Can you give the Commission any idea of the amount of work which is involved on such places as the Smalls, the Fastnet, and the Tuskar, on which you have wireless installations; you have wireless installations at all of them?—Only at the Fastnet, not at the Smalls and Tuskar; we do it by flag signal; ships make them in passing. I am not quite sure whether the Post Office has the wireless system at the Smalls, but I could find that out, Sir.

3648. Have you any idea as to the amount of work which is involved?—I can obtain the statistics.

3649. The number of messages sent?—I can have the figures got out for all those places, and I will submit them to the Commission. But I would state that the arrangement is a new one, and the shipowners have hardly got into it yet. (*See table below.*)

Wireless Telegraphy: Danger to light-stations using, in war time is inconsiderable.

3650. You stated just now that some international arrangement could be made in the case of outlying lighthouses or vessels having signal stations. Supposing that was not done, how could the enemy know that you were not making use of them for warlike purposes?—Of course they could never be certain, they could never tell, but I do not think they would be so foolish; they reap more benefit by the lighthouses remaining intact; they could come in and sight them at night, and in the daytime keep away altogether. They would find them far more useful standing than demolished.

3651. Yes, but one of the great objects in all warfare is the destruction of means of communication and

Lighthouse.	Period.	Day Reports.	Night Reports.	Total.	No. of Reports telegraphed to Owners.
Fastnet	12 months from 1st January 1906 to 31st December 1906.	293	131	424	§ 362
Smalls	4 months from *30th August 1906 to 31st December 1906.	50	†	50	§ 33
Tuskar	2¾ months from *10th October 1906 to 31st December 1906.	34	†	34	§ 10

* Date signalling was commenced at this lighthouse. † Night reports are not taken at these stations.
§ This number is included in the foregoing total.

Captain E. F. Inglefield, R.N.

26 Feb. 1907.

intelligence?—That is so, but what is more important, I imagine, but of course it is only an opinion, is the means of approaching your enemy's coasts, and you cannot approach them if there are no lights.

3652. No, but you might want to get in unobserved?—In the day-time?

3653. Well, at any time?—That could be arranged; you could land a guard on the lighthouse to take temporary charge of it.

3654. Have you any idea of any prospective increase in the number of stations that you would require? Have you any list put down of proposals where you would wish to instal stations in lighthouses?—None at present, but there are a number of lightvessels in the North Sea, which, in view of the large trade in the North Sea, and in view of the large number of casualties there, would be obviously useful to Lloyd's.

3655. Have you any suggestions to put forward as to any reorganisation of the Lighthouse Authorities, as to questions which have cropped up before you at all?—I think that is hardly a question in which the Committee of Lloyd's would like to interfere. They feel that they have a certain amount of interest in lighthouses—that they are properly kept up, and put in proper places, and that there is a proper system of buoyage, and in fact that everything is done for the safety of ships round the coasts; but as long as that is done properly, they feel that it is hardly within their province to suggest what the authority should be.

Efficiency of lighting of coasts of United Kingdom.

3656. (*Chairman.*) You have, as a matter of fact, no complaint to make as to the manner in which the coast is lighted and marked?—No. Speaking generally, of course, the lighting of the coast is a matter on which there is no finality. Lately I have been receiving some very strong representations from a prominent merchant at Belfast with regard to the lighting of the coast of County Down. There have been a large number of wrecks there of late, and he is anxious that we should make representations to have that coast better lit, as there are very strong and variable tides there; but otherwise, so far as I know, I think the work seems very good, and to be continually improving. I think our own Trinity House is particularly good.

3657. (*Sir Frank Adam.*) I would just ask one question; almost all I had to say was anticipated. You speak of the efficiency of the work, except this particular part of the coast, where some representations have been made?—I do not say he has made out his case; I only quote that as an instance that has come to my mind for the moment.

3658. Have you any opinion in regard to the economy; is efficiency combined with economy, as far as your own opinion goes?—I have no knowledge of that matter.

Lloyd's signal-stations: Arrangements as to, with foreign countries.

3659. (*Colonel Herbert.*) Have you any arrangements similar to those you have described with foreign lighting authorities?—Not with foreign lighthouse authorities, but there are signal stations all over the world which have been established at the instigation of Lloyd's; a few of them are actually worked by our own men, but generally we prefer, if possible, to make arrangements with the foreign Governments; practically all are with the foreign Governments.

3660. Because in most cases the foreign lighting authorities are foreign Governments, but you do not deal with them?—No; I have no knowledge at the moment of any foreign lighthouses, but I will inquire. I think they are all independent of lighthouses. As a matter of fact, at Zebrugge in Belgium, I think the signalman there does work on a lighthouse, but that is at the entrance to a harbour. I will make inquiries, and report to the Commission, if I may.

3661. (*Mr. Ennis.*) You spoke of the lighting of the County Down coast?—Yes.

3662. May I ask, do you regard that claim made by this gentleman that you referred to as one that is deserving of investigation?—As I say, I have only heard his side; I have no doubt there is a great deal to be said on the other side; I only mentioned it as an instance. I was asked if all the lighting round the coast was satisfactory; I mentioned it as an instance, that there would probably always be complaints, and that there was no finality about the matter.

Fog-signals; Inefficiency of fog-gong.

3663. To take the case of a coast on which there is a number of sand banks and lightvessels, would you consider that it was a thoroughly efficient service if you had a stretch of nearly 100 nautical miles, in which none of the lightvessels were provided with anything more efficient than a fog-gong? A fog-gong, I take it, you do not consider satisfactory?—You mean on deck, not an under-water gong?

3664. No, a fog-gong?—No, because I myself have had experience of that in command of ships. It is a curious thing that in a fog sometimes you cannot hear a gong or a foghorn until you are close to it; at other times you hear it at long distances. The conveyance of sound in a fog is a most uncertain thing, and my own view is that the only certain thing is a submarine apparatus, which, I think, would go to a large extent to mitigate the danger in a fog.

Efficiency of submarine bell.

3664a. Is it within the knowledge of Lloyd's that submarine bells have been in use in Canadian and American waters for more than the past two years, and that in this country they are only in the experimental stage?—We have had reports, and we are watching the matter closely.

3665. Is it true that there is installed by a Harbour Authority in this country a submarine bell? Is there a submarine bell in the Formby Channel, do you know?—In the Formby Channel off Liverpool?

3666. Yes?—I have heard that there is one there, but I cannot tell you offhand what the authorities are.

3667. I have heard that there is such an installation there. That, I take it, would be within the control of the Harbour Authority of the Port of Liverpool?—I should think it would be.

3668. As to the incidence of taxation, are you aware that the cost of lighting the port of London falls upon the General Lighthouse Authority?—No, I am afraid I have not gone into that matter.

3669. As distinct from all other Lighting Authorities in the kingdom?—No, I was not aware of that; it is a very interesting fact though.

Captain WENTWORTH S. WADE called in; and examined.

Captain W. S. Wade.

Mercantile Marine Service Association: Number of members of,

3670. (*Chairman.*) I understand you are a member of the Council of the Mercantile Marine Service Association?—Yes, Sir.

3671. This association represents the commanders and officers of the Mercantile Marine?—Yes, Sir.

3672. Can you tell us what proportion of officers in the Mercantile Marine belong to the association?—We have over 3,000 members, and then we are combined with the Scottish Shipowners' Association, and federated with the Hull and Sunderland.

3672a. So that the Commission may take it that you represent a very considerable section of officers of the Mercantile Marine generally?—I should say about 5,000.

3673. And are you here to speak on behalf of the association?—Yes.

3674. Will you tell us your own personal qualifications?—I have been a shipmaster since 1873, and I hold a foreign master's certificate.

3675. And you are now commander?—In the Waterford Steamship Company's service for 23 years. Before that I was for a considerable time in the foreign trade, and I hold five pilot's certificates for various districts on the coast.

3676. Have you made a special study of lights and marks?—I have, yes. It is a theory I have been at for a number of years.

General Lighthouse Authorities: Instances of extravagant administration of,

3677. I understand from the *précis* which you have furnished to the Commission that you have got some suggestions to make as to the constitution of the Lighthouse Boards, but before we come to that, I should like to have your views on the efficiency and economy of the administration of the Lighthouse Authorities?—Well, we do not look upon the present administration of the Lighthouse Authorities as being either efficient or economical.

3678. Can you give definite instances in support of that view?—Yes; take, for instance, Beachy Head Lighthouse. It was formerly a lighthouse on the

Beachy Head Lighthouse.

cliff, but through certain representations which have been made, it was thought advisable, when the cliff was giving way, to place it on the foreshore lower down. It is an old saying amongst sailors, "Beachy Head in a fog." It was a lighthouse we never saw in a great deal of the weather we had about the coast, and they rebuilt it at the base of the cliff. Well, they built it as a rock lighthouse; of course, you understand what I mean by that—dovetailed and all put together to withstand any sea that might come along in an exposed rocky station. It cost over £60,000 to construct. Well, from our knowledge of the locality, we think that an efficient structure might have been put there for probably one-third of the money, and the balance saved to go towards giving us new works in other places where they are much needed.

3679. I quite understand that officers of the Mercantile Marine are favourably situated to form a judgment as to what lights are or are not required, but are they equally favourably situated to form a judgment as to how lighthouses should be constructed?—Well, we think for such a lighthouse as that, a lighthouse on screw piles and legs would withstand any sea that it would be subjected to there, and such a lighthouse could have been constructed at a very much less cost.

3680. Is that the result of any expert survey, or are you merely reproducing the impression that exists in the mercantile service?—That is the impression among us.

3681. Has your association ever discussed this question?—Yes, we have discussed the whole question as to cost. Of course, after the Mercantile Marine Fund was merged in the Treasury, and the lighthouse dues were placed as they had formerly been in the hands of the Board of Trade, a proviso was attached to it that they could not use them for any purpose other than that for which they were collected. After that took place, the cost of lighthouses, new works, and maintenance, increased enormously. I think, if my recollection serves me, in 1891, the estimated cost for that year was somewhere about £222,000.

3682. Are you speaking of maintenance?—Both maintenance and new works. The whole thing at that time was lumped into one lump sum. There was no Shipowners' Advisory Committee then, and that left a very large balance—it was somewhere between £400,000 and £500,000 the light dues amounted to at that time, which of course was appropriated to other purposes. That has all been done away with, but since that has been done away with, and since the dues are only expended on the purposes for which they are collected, we find that it has gone up as high as £500,000 a year.

Cost of light-vessels,

3683. But your charge of want of economy is merely based upon total amounts then?—Well, no; we take individual items. Now, you take lightships, for instance; you take the cost of a lightship at what many of these lightships have been returned as costing—£16,000. Many of us, along with being shipmasters, have had considerable practice and knowledge in ship construction, and we are not alone capable of supervising the construction, but we understand the principles of cost, and what a ship of a certain size and fitted for a certain service ought to cost. And when we come to see lightships of 100 feet long or less costing about £16,000, we know that it is excessive. That is our feeling. We know that, as traders, if we expended that amount of money on a vessel of that size, we could not make anything out of her; she would not pay at anything.

3684. Presumably the construction of these vessels is put out to tender?—Well, I do not exactly know how they proceed with it, Sir, but I can tell you that at the time one of those vessels about 100 feet long was costing this large amount, I had a contract for a steamer that was 212 feet long, by considerably greater beam and depth, with engines that would drive her 12½ knots, for £17,750.

3685. You have merely taken the size of the two vessels, and on that you base a statement that extravagant prices have been paid for these vessels?—Well, we think so; we think they are extravagant prices.

f light-eepers' wellings,

3686. Have you any other instances of extravagance to give us?—Now, take the lighthouses on the Kerry coast. It will be within your knowledge that they have brought the lightkeepers in from Territ and the Outer Skelligs; brought them ashore and provided houses for them. Those houses cost in the estimates £1,000 each; a lighthouse keeper's dwelling on the coast of Kerry, where labour is cheap and not difficult to obtain. I recollect at the time I was building some small houses that would be, in my opinion, quite good enough for a lighthouse keeper, in Bristol, and they cost me £250 each, and they were better fitted up, I think.

3687. Yes, but you have not, as a matter of fact, any experience of building cottages such as are required for lighthouses in the localities where accommodation for lighthouse keepers is required?—No, none of us have that.

3688. You are merely judging from your experience of building cottages in Bristol?—Yes, I lived for many years in Ireland, and I know fairly well what that class of property costs in Ireland—not exactly in that neighbourhood—but it is one of those things that we think ought to be called attention to, because we think that there is an unnecessary amount of money expended on many of these things that does not make for efficiency. Anything that makes for efficiency we feel ought to be done, but our experience in the Marine Service is that efficiency and economy go hand in hand. We have never been able to see much efficiency without there has been a reasonable economy attending it.

3689. You say with regard to the cost of construction of lighthouses, lightships, lighthouse tenders, fog-signal apparatus, lighthouse keepers' dwellings, and so forth, that in all of these very large savings might be effected, with just as much efficiency as at present, but it comes to this, does it not, that you are merely giving us your general impression? You have not had an opportunity of going into any of the details of expenditure?—Well, I recollect now, speaking of fog-signals, that on one occasion there was considerable discussion about the fog-signal on the Skerries, and a maker of these siren horns told me when we were discussing the matter that he could supply a fog-signal apparatus on the Skerries for £1,500, and he would guarantee that it could be heard as far as any fog-signal supplied at present to the Trinity House, and if it could not he would remove it. I believe that fog-signal on the Skerries cost about £4,000.

and of fog-signals.

3690. What you are relying upon then as regards fog-signals is the statement of a manufacturer of such signals, that if his apparatus were put up, it would be equally efficient and much cheaper than that which was actually used?—Yes, that was about what he said; and, personally, as far as my knowledge of mechanical matters goes, I think that the cost of these fog-signals on both our lightships and shore stations is excessive. I should not like to go to my employers and suggest that they should pay that money for such an apparatus. I think they would not agree with me; I do not think they would want me long.

3691. But you have not, as a matter of fact, had any experience in purchasing such apparatus, have you?—No, Sir, I have not. I know a patentee—a very able man—of foghorns, and at different times he has given me his views, which go to confirm my own a good deal in the matter.

3692. You say in your *précis* that up till recently it has been almost impossible to get any improvements undertaken?—That is so, Sir. I can speak from my own knowledge entirely on that point. Until the Mercantile Marine Fund Committee decided that the funds were to be at the disposal of the Treasury, and not the Board of Trade, and that the lighthouse dues, while in the hands of the Board of Trade, were not to be used for purposes other than they had been collected for, we had the greatest difficulty. I recollect in 1891 I made a report on the lighting and marking of the Bristol Channel, and it was submitted to all the Shipmasters' Associations in the Kingdom, and it was submitted to the Shipping Federation, and they all endorsed it; and it was submitted to the Board of Trade and to Trinity House, and I recollect our reply from Trinity House was that they had received it, and that they thought it was worthy of attention, and that they had appointed a committee to go on the spot and examine into the matter, and when the committee had reported they would let us know. And they did let us know, somewhat after this style: I do not pin myself to words, but they said the committee were practically in accord with the suggestions offered, but that owing to the Board of Trade refusing them funds they could not go on with the work. Now, Sir, that was in 1891; that was considerably before the Mercantile Marine Fund Committee was appointed, and since that Mercantile Marine Fund Committee has reported, and since the present administration of light dues for the

Want of efficiency in administration of,

Captain W. S. Wade.
26 Feb. 1907.

purposes for which they were collected has been in force, everyone of those improvements suggested then for the Bristol Channel have been carried out with most excellent results. And, in fact, they have done more; in two or three instances, other improvements that were not suggested have been carried out.

3693. But I think a few minutes ago, if I am not wrong you made it somewhat a matter of complaint against the Lighthouse Authorities that since 1898 the expenditure had been so much higher?—No, Sir, we do not complain of the expenditure; a man who does not find the money cannot really complain of people spending it. That is a question, I think, for the shipowners, not for us.

3694. But did you not urge, in proof of your view that there was extravagance in the administration of the Lighthouse Authorities—?—Yes.

3695. Did you not, in proof of this, point to the increase that had taken place in the expenditure since 1898?—I do not say that; expenditure may possibly have occurred, and no extravagance taken place, but, at the same time, taking items into account, we say that in our opinion extravagance has taken place. I do not know whether I am right in saying so, but I believe it is a fact. I know on one occasion an Elder Brother was asked about a lightship, and so little did he know about lightships that his answer was that she was between 200ft. and 300ft. long.

3696. Anyway, I suppose we may take it from you that the increase in expenditure which occurred about the year 1898, whatever the cause of that increase was, has at all events been accompanied by increased efficiency?—Yes, undoubtedly; that is our feeling. We cannot find fault with the increased expenditure. The only reason we do find fault with what we might term waste is that it tends to re-act on the Shipowners' Advisory Committee, and make them oppose new works that are really advantageous to us, and that we would like to have done, but through apparent extravagance they cannot see their way to sanction.

General Lighthouse Authorities: Suggestions for reconstitution of,

3697. Now, let us pass from that to the question of the proposed reforms in the constitution of the Lighthouse Boards. You have, I think, some suggestions to make on that point?—Yes, Sir, we have two. The first is that if the light dues are to be collected from shipowners, as at present, then the Boards should be reconstructed as follows:—Trinity House should be brought more up to date by the open election of Elder Brethren, instead of being co-opted as at present, and that an age limit should be fixed. We suggest 65 as the age limit which should be adopted, the new members to be elected by those who pay the light dues.

3698. Yes; and as regards the Irish and Scotch Boards?—We suggest that they should be elected in a similar manner, and in all cases care should be taken to select the members of the various Boards from all over the country; men from different ports in the country, we mean to convey, who would have a special knowledge of the district.

3699. Well now, with regard to that proposal, there are one or two questions that I should like to put to you. You suggest that Trinity House should be brought up to date by the open election of the Elder Brethren, and that the new members should be elected by those who pay the light dues—that is, by the shipowners. In the course of time, therefore, all the members of the Trinity House who perform the functions of Lighthouse Authorities would have been elected by the shipowners?—Quite so, Sir.

3700. Would you confine the choice of the shipowners to the Younger Brethren? Is it your idea that the electors, the persons who elect the Lighthouse Authorities, should be the shipowners, but that the persons appointed should be shipmasters who are already Younger Brethren of the Trinity House?—Well, I take it that the Younger Brethren are appointed by the Elder Brethren, and practically you would not do away with co-opting of members as Elder Brethren of the Trinity House by that course.

3701. Well, you would do away with co-opting by that course. I am only trying to get at your plan, because it does not seem to me that you have thought it out. You see the shipowners are to elect, but are they to elect anybody they please?—Precisely.

3702. Then that would mean the entire destruction of Trinity House as a Lighthouse Authority; Trinity House as a Lighthouse Authority would cease to exist?—Well, unfortunately a great many institutions of this kind have been destroyed at various periods.

3703. I only wish to point out that it would mean bringing Trinity House more than up to date; it would mean the entire destruction of Trinity House as a Lighthouse Authority, and the substitution of a new one?—We do not think so. We think you would bring in fresh blood, and Trinity House would still exist; the only thing would be that there would be a different method of electing the Elder Brethren. We do not look upon the present method of electing Elder Brethren as being the best that could be adopted.

3704. Do you seriously suggest that Trinity House should continue as a Corporation, but that persons in authority at Trinity House should be all elected by shipowners? Surely that is not a practical proposal?—The members of Trinity House who administer the shipowners' money undoubtedly ought to be elected.

3705. I am now speaking of Trinity House as a Lighthouse Authority; would it not be better to say at once that Trinity House shall no longer be a Lighthouse Authority, but that the Lighthouse Authority shall be elected by the shipowners?—We do not speak of it in that way, but now that you mention it I certainly think that if they are going to spend the shipowners' money on the lights, there is very good reason why the shipowners should have a voice in selecting the men, and seeing into the qualifications of the men who spend the money.

3706. Do you not think that, if the shipowners were to elect the Lighthouse Authorities, in all probability they would elect shipowners to represent them?—No, Sir, we think that they would just go on and elect shipmasters. Of course, if an alteration were made, a proviso could be attached to it, preventing other than shipmasters being elected to Trinity House, and we cannot see that any injustice would be done to Trinity House; in fact our feeling towards Trinity House is a very kindly one, for we have always received at their hands every consideration, and we feel that any grievances that we have really had have not emanated from Trinity House. Our work with them has been of a most satisfactory character; that is our feeling. But at the same time we cannot blind ourselves to the fact that co-opting members by a Board is not altogether the best way of getting the best men on that Board. We think that Trinity House should be representative of the country, and we do not feel that it is.

3707. Now, passing to the Irish and Scotch Boards, do you think that they also should be elected by the shipowners?—We do, Sir.

3708. But apparently you would place upon the shipowners some restriction as to the persons whom they should select?—They could select the Board, but we think that a Board of that sort ought to have a nautical element on it that would be able to say of their own knowledge what was required for the district comprised.

3709. Let us pass on to your second proposal?—That if the light dues are to become a charge on the Consolidated Fund, then Trinity House should have control of all lighthouses in the United Kingdom, first having been brought up to date as before mentioned, with a first-class superintendent in Scotland, Ireland, and England.

3710. By a charge on the Consolidated Fund, I suppose you mean a charge on the National Exchequer?—Quite so, Sir.

3711. Why, in case the expenditure on lights was to become a charge on the National Exchequer, do you consider that it would be better to do away with the Scotch and Irish Boards and keep Trinity House?—Well, for the reasons I gave before. We think that an amended Trinity House, an improved Trinity House, would be the best Board. In my own opinion I feel very confident of it, that Trinity House would be a proper authority to control the lighting and marking of our coasts.

3712. If it be a desirable thing to put Trinity House in sole charge, would you advocate that that should be done only if the cost were placed upon the Exchequer?—I take it that a certain control in any case would be maintained by the Treasury, either through the Board of Trade or some other Department of State, that a control would be kept on the Trinity House, to prevent them doing something that perhaps they might

General Lighthouse Authorities: Suggestions for reconstitution of,

feel disposed to do, but which was not for the welfare of the country.

3713. I do not think I have made my question quite clear. You have put two proposals before us; one of them is a proposal which you think should be adopted if the incidence of the light dues remains as at present?—Yes.

3714. The other you think should be adopted if the cost is made a charge upon the Exchequer?—Yes.

3715. I want to know whether the two proposals which you put forward have any real connection respectively with the question whether the dues are paid as at present, or are placed upon the Exchequer?—You will note there that we say we are not very much concerned about the incidence of light dues; that it is a matter that more nearly concerns the people who provide the money—the shipowners—but we suggest these proposals with the view that, if the dues are abolished, certain things should be done, and our first one relates to where the dues are paid by the shipowner, and where we think the shipowner ought to have a voice in the spending of them, and the second is where they become a charge on the National Funds, and where the shipowners have no more right than anybody else connected with the sea to speak as to the administration of them.

3716. I should like you to explain to me, if you can, why it is that you think that to do away with the Irish and Scotch Authorities, and to place Trinity House in sole charge, would be a good thing if the cost was a charge upon the Exchequer, but not a good thing if the dues remain as at present?—Well, you see, you alter the thing. If they are a charge on the National Funds, you remove the shipowner at once, but if they are a charge on the shipowner, I take it he has a right to speak as to how those funds are expended; that is our view. But I think a little further down we make mention of that; that, although not immediately concerned in the question of light dues, the Association is in favour of the whole charge of lighting and marking the coasts being taken over by the Government.

3717. That seems to me a third proposal, which is not really in harmony with either of the other two?—Do you think not, Sir?—Well, it may be our blundering way of putting it. We cannot make much provision in that direction, but we think we know something about what we are talking of with regard to the practical side of the question, and that is the efficiency or otherwise of the marking and lighting of the coasts.

3718. If we are to take your third proposal, I understand what you would perhaps prefer is that the present Lighthouse Authorities should be done away with altogether, and that the lighthouses and the marking of the coasts should be in the hands of the Government?—No; if we have conveyed that impression, it is not the impression we intended to convey.

3719. But do you not say in your *précis* that the Association is in favour of the whole charge of lighting and marking of the coasts being taken over by the Government, and the electors would then have a direct right of representation to the responsible Minister in Parliament upon all questions concerning these aids to navigation, whereas under the present system you say that a request for a new light must be made first to the Authority concerned, perhaps the Scotch of Irish Boards, then approved by Trinity House, then submitted to the Shipowners' Advisory Committee, and finally approved or disapproved by the Board of Trade?—Yes, I cannot see anything that clashes with either of our former proposals.

3720. Because under this proposal the existing Authorities would be abolished altogether, and the whole responsibility would be thrown upon a Minister?—That was not our intention; our intention was to still leave the administration as to lights and marks with the Trinity House.

3721. How could that duty remain with Trinity House, and yet the Minister be responsible?—Well, I take it now that the Board of Trade to a great extent controls Trinity House in the matter of funds.

3722. The Board of Trade are not responsible for the initiation of any new works?—I do not know how far their responsibility goes, or where it ceases or begins, but they certainly put their foot down often, as I have known to my cost where it came to be a question of expenditure, and many a thing that I had set my heart on for years and tried to work out I found put away just by a stroke of the pen, and it was not the Trinity House that did it.

Captain W. S. Wade.

26 Feb. 1907.

3723. (*Colonel Herbert.*) I gather from what you said just now with regard to certain details of expenditure that you have no great confidence in the judgment of the gentlemen forming the different Boards to determine what their expenditure should be?—No, we certainly do not feel, where it comes to a question of money, that they have taken that care in the expenditure of it that one would like to do with one's own money.

3724. Does your objection lie chiefly to the constitution of the Authority?—Of what Authority, Sir?

3725. Of any of the Authorities; I think you spoke generally as to all of them. I think you referred both to the Irish and Scotch authorities?—We certainly think that both the Irish Lighthouse Board and the Scotch Board are not Boards with the knowledge that is necessary to carry on a great work of that kind, That is our feeling; we feel they are not composed of men with a sufficient knowledge of that kind of work.

3726. You think neither of them have got the technical knowledge necessary?—We do not think so.

3727. But you think Trinity House has got some of the technical knowledge?—We certainly have a very high opinion of Trinity House, but we feel at the same time that there are many shortcomings.

3728. Then is it your opinion that, in order to bring these Authorities into proper condition, there should be representation of shipmasters upon the Boards?—For the Scotch and Irish Boards, we do think so, yes.

3729. On those Scotch and Irish Boards would the introduction of the element of representation of shipmasters make them satisfactory Boards in your opinion?—Of course, everything is an experiment till you know, but we think it would improve the Boards.

3730. In this point, in your second proposal here, that the Chairman asked you about just now, where you mention Trinity House, you say here that the Trinity House should have control of all lighthouses in the United Kingdom. Do you mean by that, Trinity House as it exists at present?—No, Sir, I think a little further on you see "first having been brought up to date as before mentioned."

3731. Your proposal, then, is that you would constitute an entirely different authority, but would retain the title of Trinity House?—Of course, you may look upon it in that way, but we did not intend to convey that, nor did we think that in doing so we would create a different authority. We have thought there would still be Elder Brethren, who would probably be elected in another way—in an open way; that is the only difference we could see in it. It is for you gentlemen to say what you think about the thing.

3732. You think that a radical reform of Trinity House would be necessary first of all?—If that is a radical reform, yes; but we thought it was rather a mild reform.

3733. Well, what would you consider a radical reform?—Turning them out altogether, and starting afresh.

3734. Well, do you think that would be better, because what we have to do is to get at the best?—No, I do not; I think we have a very good substratum of valuable information in Trinity House, and I think it is something to build upon, but I do think that certain alterations as time goes on are necessary in every institution, in every corporation.

3735. You want to get better men in there and not keep them too long?—I do not say you get better men, but if you get men from all over the country you will possibly get a greater variety of ideas, and probably in the aggregate you will get better results, and not keep them too long.

3736. Not keep them till they are worn out?—No; I do not think a man over 65 is the best man you can get. He may be; some men are very good at that age; but taking it in a general way.

3737. (*Mr. Ennis.*) Your first suggestion is that Trinity House should be brought up to date by the open election of Elder Brethren instead of being co-opted as at present. Well, now, with regard to that election, you are aware that Trinity House is by statute limited in number. The number of members of Trinity House is limited by statute?—Yes.

Captain W. S. Wade.

26 Feb. 1907.

General Lighthouse Authorities: Suggestions for reconstitution of,

3738. Do you suggest that there should be compulsory retirement of any of the existing members under your age limit?—No, Sir, we would interfere with nothing as it stands at present.

3739. Then vacancies would only occur by death at present?—Quite so; yes.

3740. And your suggestions would only take effect then in a very considerable period of time?—Well, as the vacancies arose.

3741. But the vacancies in the ordinary course would not arise very rapidly, and therefore the elective element in Trinity House would be probably anywhere you like from 10, 15, or 20 years before you had a majority of elected representatives on that Board. Is not that so?—Yes, probably it would. It would all depend upon the age of the present members.

3742. Taking the ordinary course, I should say that would be a fair estimate to make of it. Therefore the change which you suggest in Trinity House, so far from being a radical or violent change, would be a very mild and gentle one?—Yes.

3743. It would take effect very slowly indeed, and would not mean the placing of effective power—that is, the power of the majority of the Board—in the hands of elected representatives for a very considerable time to come?—Quite so.

3744. Well, now, with regard to the suggested election of these representatives, you say they should be elected by those who pay the light dues?—That is in the first answer.

3745. Yes, I am dealing with that just now. The light dues of this country are paid by ships of all nations; the foreigner pays a considerable amount of the light dues, but you must arrive at some elective authority, and you say the shipowners, is not that so?—Yes.

3746. When you say "shipowners" I take it you mean some shipowners' association?—Well, I take it that it would come to that, that you cannot deal with individual shipowners any more than you could deal with individual shipmasters. You must deal with them through their associations.

3747. Quite so. I want to arrive at what in practice your plan would be. It would be by shipowners' associations; would that be by shipowners' associations at present existent, or by any fresh associations formed from time to time. Would you confine the elective principle to associations that have some kind of statutory authority, or would you allow any organisation that sprang into existence to take part in these elections?—I take it it is a question for the future to decide in a sense.

3748. But you will grasp that some method of working should be adopted in the event of a change in the constitution, and the shipowners' associations that at present exist are, I take it, voluntary associations?—They are; yes.

3749. Now, looking at the shipowners—this is a point that you will be thoroughly able to grasp—as a whole, you may divide them into different classes, with different interests, is not that so?—Yes; in a sense it is so.

3750. You have the shipowners who are interested in the oversea trade; you have the shipowners who are interested in the coasting trade; you have the shipowners who are interested in passenger routes; and would not, as far as lighting and marking of the coast go, the interests of these various classes of shipowners necessarily diverge somewhat?—There is always a difference of opinion, the same as there is between shipowners in different trades, and shipmasters in different trades, but we do not find that it is any bar to our arriving at a conclusion on any subject.

3751. What I mean to convey is, in the event of election to a Lighting Authority being placed in the hands of shipowners only, would not probably a certain competition arise amongst the various classes of shipowners as to the representatives to be placed on that Authority? Would not the various classes of shipowners endeavour to place their own men on the Board?—Well, that is just what we say, that they should have the right of placing their own men, and if the various associations—now you mentioned the coasting trade, and you mentioned the mail and fast passenger steamers, and you mentioned the long voyage ships; but still we are all combined, you know, in one association. Now, there is the Liverpool Steamship Owners' Association. We are all combined in one, and there are various committees representing each and every class of ship. There will be the Atlantic trade, the southern trade, the coasting trade, and so on, and these committees practically do the work, and they are endorsed by the association sitting.

3752. But would not, in shipowners' associations, the volume of influence of the foreign and oversea trade completely overbear the coasting trade and the passenger service?—We do not find it, Sir; we do not find it in our work. Repeatedly all these questions come up. I get them sent to me for opinion from more than one association, and we find that they all work in one way in the general interest.

3753. Well, with regard to the second point in your evidence on that main head, you say the Irish and Scotch Boards should be elected in a similar manner. Are there in Ireland or Scotland purely Irish or Scotch shipowners' associations which would be capable of electing the members?—I think so; yes.

3754. In Ireland and Scotland?—Who are members of a shipowners' association which meets in Dublin.

3755. Which is a purely Irish shipowners' association?—Yes, and I know there is a Scotch association; we are constantly in communication with both of them.

3756. Do the associations you speak of in Ireland represent shipowners in ports other than Dublin, or are they limited to Dublin?—Oh, yes, they represent shipowners in all the ports.

3757. Do you favour the election of members to a Lighting Authority by the Harbour Boards of ports?—To mention an authority where the Harbour Boards light the ports.

3758. No, but would you give to Harbour Boards a voice in the election of representatives of a Lighting Authority?—I do not see where they come in.

3759. Well, I take one Harbour Board. You know Ireland fairly well?—Yes.

3760. I take one Irish Harbour Board for example. The constitution of the Harbour Board is six representatives elected by the Parliamentary electors of the borough, six elected by the shipowners of the port, two elected by the Board of Trade, or nominated by the Board of Trade, one elected by the corporation of the borough, and the mayor of the place is *ex officio*. Well, you see, shipowners—if you take the Board of Trade nominations, which are always, I may say, shipowners—have practically a majority on the Harbour Board?—Yes.

3761. And it is a more local body—a body with more intimate knowledge of the requirements of the stretch of coast adjoining—than any association, say, in Dublin could possibly have; is not that so?—Well, I do not see how you can get outside the shipowners. If we have a shipowners' association, and the shipowners of the country belong to it, and they pay the dues, I do not see very well how you can get out of giving them the right of appointment if you follow that course.

3762. Your proposal is to place the entire power with regard to the lighting of the coast in the hands of the shipowners. Of course, you link that proposal with a proposal that the Government should take over the cost of the maintenance of the lights altogether; but, assuming that was not done, that is not a matter which comes within our purview—that the incidence of the taxes remain as at present—you have said, as I think very properly, that you look upon efficiency as the first object to be aimed at?—Yes.

3763. You wish to combine economy with efficiency, and you think it can be done; but, still, efficiency you look upon as the first object to be aimed at?—Yes.

3764. Does it occur to you that a body composed solely of shipowners paying these dues would have a tendency to place efficiency in the forefront of their administration of this work, or whether they would not be rather inclined to consider economy? You have referred to the Advisory Committee, which is a shipowners' committee?—Quite so, Sir.

3765. Are you aware that the Advisory Committee have objected to expenditure on many occasions?—Oh, indeed, we know it to our cost; we know that very well. In this matter we are between, you might say,

the devil and the deep sea; that personally, in a way, we would prefer, for the sake of efficiency, matters going on as they are, and the shipowners paying the dues; but we know perfectly well that the shipowners will never rest on those terms, and you know there is no use in trying to reach out for an apple that is above your grasp; you had better take the one that is nearest to you that is a bit smaller, and that you can get a hold of. That is the way we feel in the thing. We feel that we would be powerless to oppose the shipowners when the question of the incidence of light dues comes forward, that they would have more power and more representation, and more power with the Government of the day, than we would have, and therefore we try to arrive at something that will give us the greatest efficiency along with a moderate cost. Therefore we do not oppose a something that, if it were left to ourselves to say, we would say we preferred to leave the light dues just as they are; and personally I am in favour of it, very much in favour of it.

3766. (*Chairman.*) And the Authorities just as they are?—No, Sir, I do think, and we all think, that the time has arrived when Trinity House, by such a method as we have suggested, or some such other method as would best recommend itself to those concerned, should be brought more up to date. That is our feeling in the matter.

3767. (*Mr. Ennis.*) You are aware, speaking of the incidence of the taxes, and the difficulties of shipowners in that regard, that a reduction of 12½ per cent. in the light dues was made some few years since?—Yes.

3768. And that a further reduction of 7½ per cent. is now about to take effect?—Yes.

3769. Making a total reduction of 20 per cent.?—Yes, we know that, Sir.

3770. You have told us that efficiency has increased largely of late years, so that you have two facts at least; that efficiency has increased, and a reduction of 20 per cent. has been accomplished. Still, you think more might be done?—I think, if you look at the accounts, as far as I can recollect them, that that 20 per cent. is rather more than they could afford to pay with the present expenditure of the light dues collected for one year, but a portion of it is coming out of a fund that has been laid by out of certain surpluses. I do not think the light dues, as far as my recollection serves me—I may be wrong—have all come out of the year's collection.

3771. Well, as to your second scheme, in the event of the tax being placed upon the ratepayers as a whole, and not upon the shipowner, that the Trinity House should be the sole Lighting Authority with first-class superintendents, I think you say, in England, Ireland, and Scotland. Just before I leave your first scheme I want to point this out to you, that with regard to these Elder and Younger Brethren that you have been discussing, of course, at present Trinity House is bound to elect, in the event of a vacancy, one of the Younger Brethren of Trinity House, but as they might elect a Younger Brother to-day and co-opt him to-morrow as an Elder Brother, that provision does not have any practical effect. Any man they wish to co-opt they are practically in a position to co-opt to the position of Elder Brother, but your claim is that they should not even be bound to co-opt a man as a Younger Brother first, but that the man should be co-opted direct, or elected direct by the shipowners' representatives to the position of Elder Brother?—Yes, but I wish to correct an impression that perhaps may have got abroad that we wish to tie ourselves absolutely to the shipowners as an elective body. We certainly think in an affair of the national importance that the lights and marks of the coast are, there ought to be a certain Government control, no matter what course is taken, and some responsible Minister of the Government ought to be responsible for certain actions, and to see that wrong is not done.

3772. You wish in effect to place upon the shoulders of a Minister of the Crown a responsibility that at present does not rest there. There is a certain amount of control by the Board of Trade, no doubt, but the Board of Trade, as I take it, are not responsible in the sense in which you wish to make them responsible?—They may not be, but I have often thought myself, after repeated applications, when serious disasters have occurred at certain places, and the Board of Trade have been asked repeatedly, and it has been pointed out by influential petitions and otherwise that these disasters have occurred, I think a Minister of the Crown representing such a department can hardly shake off the responsibility. It may not attach to him, not legally, but I cannot help feeling that I should not like to be in his shoes.

Captain W. S. Wade. 26 Feb. 1907

3773. With regard to the lighting of the coasts of the United Kingdom as a whole, do you regard the lighting of the coast as being perfectly satisfactory and efficient at the present moment?—No, Sir, I do not. There is a very great deal, and always will be, round the coast, that will require improvement. We live in an age of improvement. When you come to look at the difference in the trade, the way it is run, the speed of our ships, the weather they have to go through, it is not a question like it used to be, when we came in under sail, and we did not make a light; we just simply had to heave the lead over and ascertain the water that was under us, and turn her round, and wait frequently for several days.

3774. Do you anticipate any difficulty in placing the control of the lighting of the coast of the United Kingdom in the hands of one body. You know Trinity House itself exercises a certain amount of control at the present moment, but in the event of your suggestion being carried out, and the entire supervision being vested in the Trinity House with representatives in the outlying countries, would you anticipate any difficulties, or that improvements, say, in St. George's Channel, or the North Channel, or on the Scotch coast, might have to wait until the English Channel was brought into perfect order?—Well, I do not think that; I have never seen any disposition on the part of Trinity House to take and do anything more near home than they did in any other part of the coast.

Mizen Head: Necessity for light and fog-signal at,

3775. Are you aware that the Liverpool Shipowners' Association made strong representations with regard to a light and fog-signal at Mizen Head?—I am, Sir; I suggested that myself to them years ago, and I am very strongly of the belief that it is one of the most necessary lights on our coast.

3776. Lights?—And fog-signal.

3777. Lights, but would you divorce the light from the fog-signal, or the fog-signal from the light?—I would not.

3778. If it were said to you that the local lighting authority was opposed to the erection of a fog-signal at Mizen Head, on the ground that a fog-signal unaccompanied by a light would be a source of danger, would you agree with that?—No, I would not. You see we call attention to that. I have known in that locality myself, of my own knowldge, of several of our finest ships having been brought into Dunmanus in Bantry Bay, and if there had been a fog-signal on Mizen Head it would not have occurred; they have got out by the skin of their teeth.

3779. But what I want your opinion upon, and your opinion would be valuable in this respect, is, do you think a fog-signal at Mizen Head is sufficient, or do you think a fog-signal should be accompanied by a lighthouse?—That is our opinion.

3780. Which?—That it should be accompanied by a light. We feel that it is very necessary to have a light at Mizen Head. Now there are 30 miles of a stretch from the Bull to the Fastnet, approximate, within a mile or so, and the Bull is placed on the top, the highest place of the rock, for some reason; it used to be on the Calf until that got undermined by the sea. I went to rescue the people who were building the lighthouse. I thought they were a lot of shipwrecked men. I was so much astonished that I spent a whole Sunday afternoon, and sent a boat there. I thought these people were shipwrecked on the place; but to put a light on the Bull, and the weather we get, it is capped invariably; it is clear enough underneath for perhaps 100 feet or so, but above that it is all mist, and the land catches it, these high rocks catch it. This light is capped, and then you have nothing till you get to the Fastnet. If you go in between those in that kind of weather, or in fairly good weather six or seven miles off, you will go in between the Fastnet and the Bull if you are set to the northward, and it frequently happens in bad weather with south-west gales that you are set to the northward. I have made the Skelligs, the Outer Skellig right ahead, and very close, too, in that kind of weather. There was no fog-signal on it; there was nothing to warn us off.

3781. Then you are of opinion that a fog-signal

Captain W. S. Wade. 26 Feb. 1907.

alone on Mizen Head is not sufficient to make it efficient?—I would not think so; I never agreed with that idea, but it was the best we could get; it was the half loaf.

3782. I understand; but still you consider it only half a loaf?—That is so.

3783. You consider before you have the entire loaf you must have a lighthouse as well on the Mizen Head?—We think so.

3784. And therefore that is a point on which you consider the lighting of the coast is inefficient at the present moment?—We think that is one of the faulty points. In reply to our representation with reference to Mizen Head and the establishment of a fog-signal there, their argument was that it would induce masters to run into danger to pick up the sound. Well, an argument of that kind refutes itself.

3785. The Advisory Committee, your Shipowners' Committee, opposed a lighthouse?—I am quite aware. They are not my committee; we do not see these things with one eye, not with the shipowners.

Fog-signals: Inefficiency of fog-gongs.

3786. I was going to ask you about another stretch of coast as to the efficiency, because, in my view, experienced masters like yourself can tell us more about this than most other people. You know the stretch of coast between the Tuskar and the Kish?—I do, well.

3787. I do not know if you are aware that on that stretch of coast, from Tuskar up to Codling, at least, none of the lightvessels in there—the Lucifer, Blackwater and North and South Arklow—none of these lightvessels have anything in the nature of a fog siren?—No, Sir.

3788. The utmost that any of these vessels have is a fog-gong?—A fog-gong.

3789. I assume you do not regard a fog-gong as an instrument of very great efficiency?—Well, you would run over a lightship before you heard a gong.

3790. It is about as much use as a penny whistle would be?—I recollect my chief officer reporting fog-signal ahead, and when I looked down the lightship was alongside of us. He called it a band of music.

3791. Well, my own opinion in regard to the efficiency of fog-signals coincides with your own. Do you consider a stretch of coast nearly 100 miles in length with the chain of sand banks that run along there, the Long Bank, Glasgorman, Arklow, and all these banks; do you consider that that stretch of coast is sufficiently provided with fog-signalling apparatus?—No, it is not; it is not provided at all.

3792. Do you know that many coasting vessels get on these banks?—Oh, great numbers of them.

3793. Involving loss of life and loss of property?—Yes; I lost a cousin on the Blackwater Bank.

General Lighthouse Authorities: Suggestions for reconstitution of,

3794. You say here in your *précis* of evidence, as the shipowners at present have to pay the cost of lighting, the tendency is to cut down the programme of new works in order to reduce the light dues, and the great danger is that in following out a policy of reduction some greatly needed improvement may be omitted?—Yes.

3795. That being so, you are still of opinion that it would be advisable to man the Lighthouse Authorities with shipowners, assuming that the incidence of the tax remained the same—assuming that the tax was not lifted from the shoulders of the shipowners, you still think it would be a wise policy to constitute the Boards of shipowners, though you say here they might cut down the programme of new works?—The Board would not be constituted of shipowners.

3796. They would be elected by the shipowners?—Yes, they would be elected by the shipowners.

3797. They would be elected by the shipowners; that is your proposal, and being elected by the shipowners they would obviously be elected to carry out the shipowners' policy, whatever that was?—If a certain number of shipmasters were elected on the Scotch and Irish Boards I do not think that they would be for cutting down efficiency.

3798. Yes, but you state in your evidence here that the tendency would be to cut down the programme of new works, and that the danger is that, in following out a policy of reductions some greatly-needed improvements may be omitted. Now, that case in point that you referred to in your evidence before as to Mizen Head is a case in which the cost of erecting that fog-signal on Mizen Head would be objected to by the Advisory Committee, the Shipowners' Committee?—Yes, they did.

3799. You are aware that the Advisory Committee at present possesses no statutory power?—Yes.

3800. It is simply brought in as a committee to advise; there is no compulsion to accept its advice, but still its advice weighs largely with the Lighting Authorities and the Board of Trade?—Did you want me to say anything further on that matter?

3801. No; I simply point it out to you?—With regard to the shipowners, we say they have the right, as they pay the money; if they pay the money they have the right to select the tune.

New Works: Objected to by Advisory Committee.

3802. But you still anticipate that there is a danger?—Well, with our experience of the Advisory Committee you know it is shown. Now there was St. Govan's Lightship that was put down, and Trinity House wished to have it established there, a most necessary work, and yet the Shipowners' Advisory Committee eliminated it, and the Board of Trade adopted their view.

3803. That bears out your contention here?—Yes; that is one of the things. Of course, Mizen Head is another. I could go on and give you one or two examples of a similar kind where they have come in and prevented it. But, in a general way, what we think is most necessary is that there ought to be one central body, and that the work should be carried on without friction, and there would be no difference of opinion in the matter. Now, for instance, there is Black Head Light, on Belfast Lough, and there is Black Head Light, on the Mull of Galloway coast, just above Port Patrick. Both those lights, as originally designed, were of the same character. I am speaking just approximately, but those lights are only some 25 miles apart. Now, a vessel coming up there and making either of those lights, let us suppose on the wrong bow, would be put into danger at once. Of course, they have been altered, but it only shows you how those things might occur through two Boards putting a similar character light in the immediate neighbourhood of the other light.

County Down coast: Inefficiency of lighting of,

3804. Have you heard any complaints as to the efficiency of the lighting arrangements on the coast of the county Down?—Well, I think it is within every seaman's knowledge that knows the channel, and especially the north channel, that it is very badly lit to the southward of South Rock Ship; that it badly wants another lightship off the coast, and the wrecks that occur there from time to time plainly point to that.

3805. And therefore you hold that a service is not efficient which does not provide for the safety of human life on that part of the coast?—Efficiency may be carried out in existing works, in existing lights, but I think it will always come along. We will always have something else to deal with; as we go along there will be some additional work needed to perfect.

United Kingdom: Importance of lighting of coasts of,

3806. But you would take it that the lighting of the coasts of the United Kingdom ought to be, at least, equally efficient with the lighting of the coasts of any foreign power?—I think so, more so.

3807. Having regard to the enormous trade of this country?—I think so, having regard to our coasts, looking at the exigencies of weather and the immense traffic that goes all round them in all kinds of weather. It is no use saying you should not go; you should not do this and you should not do that. What is a man to do with a lot of cattle on board his ship if he has got no fodder and no water for them? He has to get somewhere to get into touch. That is a special occasion, but it is a thing that happens to thousands of our vessels in the year. And then there are all sorts of perishable cargoes, to which each day's delay means a depreciation in value. You say to the captain, "Well, you should not have done that; you have damaged your ship," or something; but there is the pressure behind him. He knows perfectly he has got to get a market for his commodities within a certain time, or those commodities will go bad in his hands.

3808. And in the passenger service would it be correct to assume that a master who consistently makes poor time would not be considered as efficient by the directors of his company as a man who made rapid passages?—Well, I should think so myself. I should expect to get dismissed.

3809. And therefore the temptation to run nearly full speed in thick weather would naturally be very great?—Well, I draw a line at thick weather.

3810. I mean the temptation to do so?—There is a great temptation to do that sort of things, but I must say, from my own observation of all kinds of men, in thick weather they, as far as in them lies, try to provide for safety—as much safety as you can get in fog, which is not a very great deal after all.

3811. With high power vessels going at the speed which those big ocean steamers travel now, it is essential that fog-signalling apparatus should be of the best possible description?—Undoubtedly.

Submarine Bell Signal.

3812. Have you any experience yourself of the new appliance, the submarine bell?—I have no knowledge of it. It has been established on the North-west Lightship in Liverpool, but since then I have not been in active service, and I have not had the opportunity of testing it.

3813. It has been established in these countries as an experiment?—As an experiment, but the Mersey Docks and Harbour Board have established it in the Fairway lightship some 10 miles off the bar.

3814. That is a local authority?—Yes, a local authority.

3815. But the General Lighthouse Authorities in the United Kingdom have not, so far, established this service except experimentally?—I have noticed in this year's estimates for new works of the Trinity House that there is a sum set apart for submarine signalling.

3816. Experiments?—I do not know whether they are experiments or whether it is with a view to fitting some of their lightships; I really forget now but I noticed the fact that it was in this year's estimates.

3817. I take it that you would consider that money spent upon experiments, anything in the nature of life-saving appliances, would be money well spent?—Undoubtedly.

3818. There should be no cheeseparing in that regard?—No, no cheeseparing. No undue expenditure, but to take and consider the thing intelligently, and know what you were doing before you moved.

3819. But if you were aware that the submarine bell has been in use by the United States and Canadian Governments for at least two years, and that we are only experimenting with it on this side, would that lead you to suppose that we had not been quite as active in our endeavours here as they have in other places?—Well, that has always been the case; the United States and the Canadian Governments, in matters of invention, have always been before us. They brought out the whistling buoys and the lighted buoys, and all sorts of things, before we thought of them.

Illuminants: Electric light deprecated.

3820. There is another matter stated in your evidence here. You say, "I do not admit that the French lights are better than the English, but, in my opinion, not so good, being mainly electric, which is a bad light in anything but clear weather." Would you say that the French lights, which are of enormous candlepower, would not penetrate further than the British lights?—No, not if the British light was oil or gas.

3821. I do not mean of the same candlepower?—No, I quite follow you. But I will give you an example, Sir. Take the Mersey, for instance. There, along the line of docks, they have a range of electric lights, powerful arc lamps, and there is a lower range of lights, the ordinary gas lights on the dock walls. Well, now, it has come under my own observation repeatedly that when the weather has been getting hazy those electric lights, one ofter the other, would disappear, and the gas lamps were perfectly visible, just the ordinary, perhaps, 25-candlepower gas lamp, and they were visible and never were obliterated, and the weather was not of such a nature——

3822. (*Admiral Henderson.*) Incandescent gas?—No, on the dock wall there are just plain gas. And I might mention that as far as my observation goes, incandescent lights of no description are as good, as seamarkers, as the ordinary oil or gas. There seems some thing in the purity of an incandescent light or an electric light, that seems to destroy its power when it is dealing with an impure atmosphere; it does not blend with it and give that glare which an ordinary gas or oil lamp does.

3823. (*Mr. Ennis.*) But, still, with the great power that is capable of attainment with an electric light, I mean with the candle-power infinitely superior to any other, and placed at an elevation, will not an electric light carry further than any other appliance?—No, Sir. The lights I have seen furthest and the best are Wigham's Giant Lenses, as exemplified by the Copeland, by Mew Island, Tory Island, and Galley Head. These lights are certainly, as far as I have been able to judge, the best lights in this way, that even when they are absolutely invisible on the line of sight, you see the reflection of them in the sky; they throw up what is sufficient in itself to indicate the position of the light.

Captain W. S. Wade.
26 Feb. 1907.
Wigham gas lights advocated.

3824. Do you approve of the modern system of an extremely rapid flash?—Oh, yes.

Rapid flash approved.

3825. Has it ever occurred to you that there is a disadvantage in this respect, that the flash is too rapid to permit of a bearing being taken?—No; the intervals between the flashes are so short that you can always take a good bearing, you can always arrive at a correct bearing.

3826. You believe that to be so?—Oh, yes; I have tried it over and over again. We take four point bearings of everything we pass; Skerries, the quick flashing light, just the fraction of a second since it has been altered, we have no difficulty in taking it, not the slightest.

Fog-signals:

3827. You see no difficulty in that respect?—Not the least.

3828. You say that if a light is required at a given station, a fog-signal is also necessary, and you have also said that the reverse of that proposition holds good, that if a fog-signal is placed a light ought to accompany it?—Precisely.

3829. You say, "Complaints are frequently being made of the length of time it takes before a foghorn can be sounded after a fog sets in." You have experienced, I have no doubt, difficulty with regard to an area of silence in fog, an area in which you do not hear the fog-signal at all, though you may be comparatively within the reach of it, within the carrying power of it?—Oh, yes, there are zones of bad sound. I suppose that it is within every seaman's knowledge. For instance, you will hear a fog-signal, and you will time it, and you will go on to hear it again and again, till there can be no doubt as to what fog-signal it is. You time it each time and take the intervals, and then you will not hear it, and I have gone on for two or three miles like that and not heard it, and then I have picked it up again. The first time I heard it I heard it very loud, and then I have followed it on.

Areas of silence of,

3830. That area of silence is not a constant quantity?—It is not.

3831. That is to say, a place that may be an area of silence to-day, may be a place in which the signal may be heard perfectly to-morrow, and some other place becomes the area of silence?—The only thing with reference to the area of silence that struck me in observing the difference is this: there is an area of silence in the neighbourhood of the Skerries, in the South Stack, and it is very noticeable, but I never knew an area of silence from either a ship afloat, such as a steamer or a lightship, that was not interfered with by the land, where a ship was free. Now, the Tuskar is another instance, the Tuskar light. That is a lighthouse—I would not like to say how many times I have passed it, oftener than I will again—but I have never passed that but once that I did not hear it, in fog, in thick weather, the rocket signal on the Tuskar.

3832. I can hear the Tuskar signal in my own bed?—And a very good signal it is. It is one of the most reliable on the coast, I think. This has always led me, engaging these zones of sound or bad sound, to imagine whether, rightly or wrongly, that they really do not exist only in so far as they are approximated to land which deadens or deflects the sound.

3833. But still, those areas of silence exist as a matter of fact whatever the cause?—They do, yes.

Establishment of submarine bell contemplated.

3834. You would regard anything like a submarine bell or any appliance which would be effective and do away with such an area as being a valuable invention?—Yes, and I think that we are not so very much behindhand in regard to the submarine bell; I think, if I recollect rightly, the Trinity House, some two years ago, placed it on their estimates.

Captain W. S. Wade.

26 Feb. 1907.

3835. Did they get the money passed for it?—But the Advisory Committee objected to it.

3836. Yes, there you are again?—I do not think you have reason to accuse Trinity House of wrong-doing in the matter.

3837. I have not been accusing Trinity House?—Oh, no; I always like to see the right man carrying the weight.

3838. (*Admiral Henderson.*) Where are the head-quarters of your association?—Liverpool.

Beachy Head Lighthouse.

3839. Is the new light at Beachy Head exposed to any heavy sea?—Well, it is exposed to the sea which will wash up at its base.

3840. It is not exposed to the sea the same as the Eddystone?—Not in the nature of the Eddystone or the Wolf, or take any of those West Coast of Scotland rock lighthouses.

Lightvessels: Cost of,

3841. Would not the cost of a lightvessel very much depend upon its design, irrespective of size?—I beg your pardon; by the design do you mean the construction?

3842. The cost would depend upon its design. Of course, size has a great deal to do with it, naturally, but I do not know what the actual requirements are. They try to make these lightvessels unsinkable now. I believe?—I do not know; I could not say that, nor have I ever heard of it. The Daunts Rock lightship was not unsinkable.

3843. Do you know whether the lighthouse keepers' cottages, that you spoke of on the coast of Kerry, have to stand any very extraordinarily heavy weather, or are exposed to the sea at all?—No, they are not exposed to sea at all; they have only to stand the ordinary weather of an ordinary house.

3844. An ordinary house on the west coast of Ireland?—That is nothing; well, the mud cottages stand it.

General Lighthouse Authorities: Suggestions for reconstitution of,

3845. Well, I take it as your opinion that if the shipowners were represented on the governing body of lighthouse administration, you would get greater efficiency and economy, and particularly also it would not give rise to the various suspicions and allegations which take place against the present Lighthouse Boards?—I do not think that is exactly our view, Sir. Our view more nearly approximates to this, that we consider, with regard to the Irish and Scotch Boards, that there should be a certain nautical element on those Boards. As at present constituted, they are not the best Boards you could get for the purpose. With regard to the Trinity House, well, I think it is pretty clear what I have said there. We should be very loath in any way to interfere with Trinity House as at present constituted until the existing members either resigned or died, and then a system of reform would take place.

3846. Now supposing it should be proved that either the Irish Board, or the Scotch Board was very much more economical and efficient than the Trinity House, would that alter your opinion?—Well, no, I have always been of opinion, and in fact, our council are of opinion, that Trinity House is most extravagant.

3847. Is most extravagant?—Yes, that is our idea about Trinity House.

3848. You think it is?—Yes.

3849. Now, supposing you were to reconstitute the Lighthouse Administration of the United Kingdom, and supposing that the Trinity House remained in charge of England and Wales, as it is at present, would you put thirteen managing directors at a salary of over £500 a year each to do the work?—As represented by Trinity House?

3850. Yes?—Well, I really do not know the number.

3851. There are thirteen doing the work; of course, they have got engineers and secretaries, and other people, but there are thirteen (and I compare them with managing directors), who serve on various committees. Now, from a business point of view, would you constitute a board to do, even England and Wales, with such a number of managing directors as that?—About £6,500 a year?

3852. £7,000?—Well, it is all right, Sir, but I once heard a railway manager say that he would manage all the railways in Ireland and go fishing two days a week.

3853. (*Mr. Ennis.*) Three?—Was it?

3854. (*Admiral Henderson.*) I want your opinion as a business man as to whether you consider a board of that kind is an efficient way of getting an efficient administration?—Oh, I think so; I think a board of that kind ought to be capable of thoroughly administering.

3855. But is it not really in excess of the requirements; is it not uneconomical?—At that price?

3856. Yes?—I do not think it is an expensive Board; many a managing director of a big concern gets that much himself.

3857. I am speaking of numbers now; take any board of directors in any big business concern really spending very much more money than they do; do they have a board of thirteen directors?—It is not our view to interfere in any way with the present privileges of the Trinity House. We feel that they have done so much for the country and for the sailor that they ought not to be harshly dealt with in any way.

3858. But is not that rather a philanthropic view?—Well, it may be.

3859. And not a business view?—Well, I would not say that it was not a business view. You would have to pension them; suppose you cut them off with a stroke of the pen and reduced the number. Those Elder Brethren, I suppose, would have to receive compensation in some shape or another.

3860. That would wear off in the course of years?—If they thought better to do it in that way.

3861. You have made two suggestions, and one of those suggestions is that if the payment for the lighting of the coasts fell upon the general taxation of the country, you would have one Board to undertake the administration of the whole coast of the United Kingdom. Now supposing the light dues were raised as they are now, do you think it would be much more efficient and economical to have one Board under the present system for the administration of the whole of the lighting arrangements of the coasts of the United Kingdom?—Well, I daresay that would be our opinion if we had not something else in view in the shape of the shipowners. You see as I said before we feel that anything that the shipowners have not got a hand in in this matter will not be carried, and we feel that it would be useless our suggesting certain reforms.

One Central Lighthouse Authority: Advocated.

3862. No; but I suppose that in any reconstituted Board the shipowners would be properly represented. Take that as granted from my point of view, that in any reconstituted Board, in whatever manner the light dues were collected or the expenditure was provided, the shipowners would be properly represented; is it your opinion that one Board to do the whole coasts of the United Kingdom would be better than the three existing Boards?—I think so; yes.

3863. Do you think it would result in economy as well as efficiency?—I do; I think it would.

3864. Under those conditions, granted the one thing that you want, that the shipowners were properly represented, would you and your Association approve of that?—I think so; I think they would approve of that. I think they would approve of one Board, provided that the thing was practicable. I am very much afraid it is not.

Lloyd's: Representation of, in Lighthouse Authorities is unnecessary.

3865. (*Mr. Ennis.*) As to the questions that Admiral Henderson is asking you I should like to know in a reconstituted single Board or three reconstituted individual Boards would you consider that Lloyd's would have a right of representation?—Well, if the shipowners pay the dues I do not see where Lloyd's come in, because Lloyd's are only doing something that they are paid for doing. They get the premium and they take the risk, and they take the risk on the basis of things as they are. Additional lights or marks mean assistance to navigation, and are only something in their favour. They ought to take off an eighth of the premium for that, but they do not. I do not think Lloyd's come in.

Efficiency of lighting of coasts of United Kingdom.

3866. (*Admiral Henderson.*) I think you have stated, speaking in broad and general terms, you consider that the coasts of the United Kingdom are fairly well lighted and generally up to date, but improvements are required, and always will be required?—Yes, they will be.

3867. That is a general statement, and you think

they are just as good as any other coast you know?—Well, I look upon our coast now as being lighted fully equally to any coast, and taking the character of the lights into account I look upon them as far superior to the French coast. They have as many lights probably as the French coast, but I do not like the electric light, because I have proved it so often that you cannot see it under the conditions of weather that the other lights are visible in.

3868. I do not know whether I did ask you this on the question of proposal No. 2, if carried out, would it not be better to have a new system altogether; if proposal No. 2 were carried out would it not be better, instead of your suggestion that it should be put on the Trinity House—well, you know the Trinity House is a private corporation which has other interests—would it not be better if your idea were carried out to have a new system altogether, a new governing body I mean?—Well, in giving our views here, and the views that I hold myself, as embodied by the Council of our Association, we felt and we feel very strongly that we would not like to do anything in opposition to a body like the Trinity House. In the past they have done so much for the country and they have shown themselves, up to a recent date in all our transactions with them, so amenable to reason when a thing has been put before them, that really we do not like to take or act in any way that would be detrimental to their interests.

3869. I suppose to sum it up I might say that the acting Elder Brethren being sailormen are objects of veneration to your Association?—No Sir; we are not represented on the Trinity House.

3870. No, no, but outside?—We might very well take up the other side, but we do not feel that, though we have none of our members that I know of on the Trinity House as Elder Brethren; still we feel the Elder Brethren have done a very good work.

3871. Now you put forward one point—I am only criticising these things—in which you said it would be very nice to be able to ask questions in the House of Commons as to all the deficiencies. Now I put it to you, is not the House of Commons overburdened as it is, instead of being bothered by questions of a petty lighthouse here and a petty lighthouse there, and you had better have an authority which is, so to speak, outside the House of Commons to deal with?—Well, I do not know, Sir; you hear all sorts of questions asked about a policeman in the House of Commons if he happens to be an Irish one, and I think we might very well say we have as much right to be heard as some of these people that claim the attention of Government.

Difficulties arising between General and Local Authorities.

3872. There is one other question I wanted to ask you, and that is, in your experience have you met any difficulties or questions as to the proper lighting or buoying of the border land between the local harbour authorities and the Lighthouse Boards?—Well, it sometimes occurs. For instance in Waterford Harbour there should be a light on Creadan Head. It is in the harbour, it is a question; the outside lights are maintained. I think the harbour light at Dunmore is maintained by the Board, and made because it is a Board of Trade pier.

3873. (*Mr. Ennis.*) Dunmore is a Royal harbour?—It is a Board of Trade pier, I know, and the Hook comes under the Irish Lights Board, but there is no light on the Creadan Head, and when I have spoken to the Harbour Board on the matter they have said well, it is a question whether they would have jurisdiction to put a lighthouse there. That is the only instance that I know of.

3874. The point that Captain Wade speaks of I know perfectly well. I think it is within the jurisdiction of the Waterford Harbour Commissioners; I think it is not on the border line.

Mersey Docks and Harbour Board: Efficiency of administration of,

3875. (*Admiral Henderson.*) Now is there any other point that you want to bring before the Commission?—Well, there is one thing. When you take the Mersey into account and the way that the work is done there under the Mersey Docks and Harbour Board I think it is a fair object lesson to any Lighthouse Authorities to see how work should be done.

3876. You mean to say thep do it efficiently?—They do.

3877. But do you know anything about the cost?—Well, I have the cost in the papers. I got what it cost this year for the Mersey. It was about £33,000, somewhere about that. Of course it is rather large.

3878. Is not that comparatively speaking excessive?—Well, you know, it is an exceptional port. The channels run through unseen sandbanks, and the work is carried on there under all conditions of weather, and a miss would mean the loss of a ship and probably all in her.

3879. That is the lighting and buoyage alone?—The lighting and buoyage, but of course it extends as far as Point Lynas.

3880. Have you any idea as to how that compares with the cost of lighting the Thames?—I did see the comparison, but as I said, it was just before my recent illness, and I do not seem to recollect very much about it.

3881. You had the comparison?—I got the comparison to make a report upon.

3882. Could you give it to us?—I will look among my papers, but I am afraid my papers got into rather a bad state when I was ill.

3883. Would the Mersey Docks Board have it?—I really forget now how the thing came about. I got it, I think, through the Steamship Owners' Association. They sent it to me to send them a report on it as to certain matters that they wanted to be informed on. That is how it came to me. I could not give you the whole particulars.

3884. There is the Clyde?—I am nearly sure that the comparison was between the Mersey and the Thames, for very much the purposes for which you ask for it now. It went into the whole question of the cost.

3885. In favour of the Mersey?—I made my report at the time. No, I think the Mersey was the heavier. I think the cost of lighting the Mersey was the heavier.

3886. For the area?—Yes; they had to resort there to very heavy moorings for the buoys; the tides are so strong; they are so exposed to heavy gales.

3887. (*Sir Frank Adam.*) Might I ask do you know that the lighting of the Thames is under the Lighthouse Authority, Trinity House?—Yes, Sir.

3888. How did you manage to get figures which enabled you to make a comparison with the Mersey Docks and Harbour Board?—That is exactly what I cannot tell you. They came to me in the way of a report of the whole of the new works, and there were certain comparisons given, and really now I cannot go into it. As I say, I made it before my illness, and everything seems to be blotted out to me.

General Lighthouse Authorities: Suggestions for reconstitution of,

3889. On the first page of your *précis* in speaking of the charge being put upon the Exchequer, upon the Consolidated Fund, you refer to Trinity House being brought up to date, and I take that to mean, looking to the No. 1 paragraph, that Trinity House being brought up to date means that the shipowners should elect the new members to Trinity House?—Yes, that is on the supposition that they pay the dues.

3890. Then what do you mean by Trinity House being brought up to date on the supposition that it is to be put on the Consolidated Fund—the cost of lighting?—Under that heading, you know, Trinity House, according to our view, should be the sole control.

3891. But what do you mean by being brought up to date; you use that expression?—Well, we consider Trinity House is not up to date now in the way that the Elder Brethren are allowed to hold office until they die. We consider that when a man has arrived at about 65 years of age, well, it is time he was relieved. That is our view of it. And further than that, we do not think that any board is up to date where the members are co-opted into their positions as the Elder Brethren are.

3892. May I take it then, that in supposing *apropos* of your *précis*, which is before us now, that the lighting charges are put upon the Consolidated Fund, by bringing Trinity House up to date, and leaving things, as you seem to wish to do, in the hands of Trinity House, you only mean that no member should be allowed to serve beyond the age of 65?—Well, our intention was, and our wish was, not to interfere with any existing members.

3893. That I quite understand; this would be a new rule that would be enforced?—Quite so.

3894. Who would elect, under those circumstances, the members of Trinity House, the shipowners having

Captain W. S. Wade. 26 Feb. 1907.

lost their right to do so by the charges having been put upon the Exchequer. Whom do you mean to elect the Trinity House in future?—Well, I take it then that the appointments would rest with the Board of Trade, or such other Government Department as was appointed for the purpose.

Instances of extravagance of,

3895. You have very wisely pointed out that in your opinion you consider that the cost of the building of certain lighthouses, the cost of certain lightships or buoys has been more than it ought to be. In the last page of your *précis* you say "The cost of lightships and maintenance must largely depend upon the situation of the ship." Now does not that mean that in all things, whether it be a lighthouse or whether it be a dwelling house on the coast of Ireland for lighthouse-keepers, or whether it be a lightship, all the particular costs must be governed entirely by special considerations?—Yes, in certain particulars. If you go to build a rock lighthouse you must build a rock lighthouse, and it has got to be done in a certain way, or it will not stand, but if you take and put a lighthouse, we will say, up at each end of Lundy Island, as was done recently, and you start on a base, we will say, of 140 ft. above the sea level, then you must make a structure of 78 ft. or 80 ft. or 90 ft., or whatever it may be—I do not say to a foot what it was—and you build a most costly structure, which is of no earthly use to you, I mean to say that is a waste of money.

Lundy lighthouses.

3896. You are referring now to a particular case?—Yes, two cases, North and South Lundy. For those lighthouses are on the solid rock, and then they took and put a bed of concrete down. I do not know what that was for except it was to spend money, and they took and built these great big structures. We did not ask them. The lighthouses were quite high enough, taking the base instead of the vane, and things would have been much better if they had just simply put a light apparatus a few feet above the rock.

3897. Is it not possible that there were considerations which they had before them which led them to decide upon that particular lighthouse which you had not the opportunity of getting a knowledge of?—One never knows what is in somebody else's mind, but we were never able to find them out. And there is the Foreland, in the Bristol Channel, that is another lighthouse built at a very great height and a considerable tower built up. We have always been at a loss to know why these immense structures were made when, according to all the best knowledge of lighting, the lower you keep a light for present day navigation the more efficient it is. You prevent it getting into the region of mist, where it gets capped.

Foreland lighthouse.

3898. (*Chairman.*) A lower light has now been constructed at the Foreland, has it not?—Well, I am not aware of that, but as an advocate for the Foreland light, and those lights on North and South Lundy myself some years ago, I have followed the thing very closely, and watched it, and the St. Govan's Shoal lightship and other matters in the Bristol Channel, and I have always been at a loss to know why this immense cost was gone into when you are only taking the light away from the region in which you want it.

3899. What was the date at which the lighthouses on Lundy Island were constructed?—Well, I could not tell you to a year or so; I should say they are there within ten years.

3900. (*Sir Frank Adam.*) What I understand you to mean is this, that certain lighthouses which you named have been constructed in a different way to what you, and those who act with you, consider advisable, and at too great a cost, but that does not shut out, or you do not wish to deny, that there may be reasons which you do not know of, wise reasons, why that was done?—Well, we do not know of the reasons.

3901. You do not know?—We do not know of any.

Lighthouses: Alterations of, at present desirable.

3902. With regard to lighthouses, you mentioned Beachy Head as a special one which used to be on the cliff, and which is now on the level of the sea. I suppose that there, and in a number of similar cases in your knowledge and recollection, lights have of recent years been changed for wise reasons and good reasons?—Oh, yes, we have had several lights changed, and they have been very valuable changes.

3903. And therefore the total cost of lighting the coast of recent years, both as regards the position of lighthouses and also by improvements in lights on shore and by lightships, might possibly look as extravagant if it were not known that it was the result of obtaining very great efficiency, and had the general approval of those who knew what was best to be done, like yourself?—Well, unfortunately that was not the case, Sir. A lot of things were done that we did not exactly approve of. For instance, now, where two lighthouses exist, I think I was the first, probably, that made the suggestion of doing away with two lighthouses and placing a flash or a revolving light of a distinctive character on one of the towers in place of them. And if the two lighthouses were placed in such a position that in one they cleared certain dangers, then take and put a red sector of the light over that danger. That has not been followed out to its logical conclusion. We still have two lights at Milford, St. Anne's Head. We have two lights on the Nash; we have a high light placed on Caldy Island, up in the clouds almost, while a smaller light lower down would be a guide to the roads, and would be far more valuable, because if you look at the chart you will find it is inside the fairway line; it is in Carmarthen Bay.

3904. In all those cases which you are now mentioning you consider that further expenditure is necessary in order to improve the efficiency of the lighting of the coast?—It is like this; if you do away with two lights on the Nash and you put, say, a quick flashing light on the low lighthouse, well, you do away with one lighthouse establishment, and therefore that saving becomes evident at once.

3905. In maintenance?—In maintenance.

3906. Though initial cost is increased?—The initial cost, I suppose, would be increased to the extent of the new apparatus. And the same way on St. Anne's, the same thing would take place; you could very well do away with one lighthouse there, and give it a distinctive character.

Importance of distinctive character of,

3907. The light a distinctive character?—Yes, the light a distinctive character.

3908. Which in your opinion ought to be?—I should say something like the present Lord Kelvin said in a lecture. He said every light ought to spell its own name. He meant, you know, that it had such a distinctive character.

3909. Had such a variation that a passing mariner could not mistake it for another?—That you could not well mistake it.

3910. If you will refer to page 3 of your notes you will see you say that "Of recent years the Lighthouse Authorities have shown a disposition to carry out new works and improvements urged by nautical men, but what is wanted is a more general policy of coordination and uniformity among the three Boards, so that the character of all lights, marks and fog-signals should be defined by an intelligent and comprehensive programme embracing the whole of the coasts." Is it not a fact that practically Trinity House, of whom you have such a very high opinion, have that power at the present moment?—They may have the power, but they cannot spend the money unless the Board of Trade approve of it, and what is the good of the power without the money?

General Lighthouse Authorities: Suggestions for reconstitution and control of funds of,

3911. Then, in this idea of a new constitution which you indicate, you wish the power to rest with them of not only administering and organising, but also that they should have the power of the purse?—Well, I certainly think that as Trinity House had in former times the power of the purse, and it was taken from them for the very reason that it was taken from the Board of Trade, shortly ago, because they spent the money for purposes other than that for which it had been collected, the thing that strikes me is that, under certain safeguards, Trinity House might very well have the spending of the funds if they are responsible for them.

3912. Then do I gather from your answer to this last question that you have in your mind in the event of the shipowners continuing to pay the dues that a Trinity House elected in a somewhat different method, which you have indicated, and serving only up to 65 years, should receive those light dues, and have the full control of them?—Now I am afraid we clash a little there, on the question of the first and second. You see, my first one embraced that fact of the shipowners paying the dues; the second one goes into the fact that the nation supplies the funds. Now, if the nation supplies the funds, Trinity House can very well administer them under the supervision of

the Government of the day. But if the shipowners supply the funds, I take it they will want to have a voice in the matter—at least, I know if I did I should like to have something to say—as to what you did with them.

3913. I want rather to be clear on this point; I am sure you see the reason why. Supposing that a new authority were constituted, giving, as you think ought to be done, election to the shipowners who pay the dues, then do I understand you to mean that without any control or authority from Parliament or otherwise the representatives of the shipowners, whatever they might be called, this new body should have the full control of the funds?—Well, in Scotland and Ireland they would have control of the funds required for their district.

3914. When?—If the shipowners paid the money.

3915. Now do you mean that?—Well, they would. Under our proposal they would have control of the funds because their own nominees would be on the Boards, but in England Trinity House would administer the affairs of the country as far as the lighting and marking went.

3916. (*Chairman.*) But always subject to the control of a Government Department?—Always subject to that.

3917. (*Sir Frank Adam.*) You do not mean to say they ought to have the power of spending the money without any control from a Government Department?—No, I think it would be foreign to anything that we thought that any public board or any board of that description should be out of control of anybody, that they could actually do as they liked. No doubt such an arrangement would be come at that they would be under a certain control if they exceeded certain limits.

3918. Can you imagine a body of shipowners having full control of the receipts and the expenditure gradually refusing to spend anything, and therefore eliminating the incidence of the light dues altogether?—I can quite well imagine that, Sir.

New Works: Recommendations for, made by Mercantile Marine Service Association.

3919. I just want to put one or two other questions. You referred to some cases in which very strong representations had been made and petitions sent in of disasters. I think in reply to some questions of Mr. Ennis you said those had been repeatedly made by yourself and the body you represent?—Yes, they have been made by our Association. Our council have made them over and over again; we have discussed the matter. That is with reference to Mizen Head. There is another like that, St. Govan's Shoal, Bristol Channel, where there is a lightship now sanctioned to come on. She was passed in last year's estimates; she will be established there in April.

3919a. I gathered from what you said that you felt that these representations and petitions had not been received in the way that you expected them to be received at the time?—Well, they did not bring any good result; they did not build the lighthouse on the Mizen Head, and they did not put up a fog-signal there.

3920. Were those representations made by you to the Board of Trade or to the Lighthouse Authority?—Well, I cannot give you a perfectly correct answer, because I do not really know. I know I was on the Council at the time that they were being discussed, and it was on my initiative that the matter was proceeded with, but how the matter was represented through the Executive I do not know.

3921. (*Chairman.*) Do you think you could furnish us with a list of the recommendations for new works made by your association to any of the three Lighthouse Authorities during the past ten years?—I think so, Sir; I think we could go back. Well, we started this work before, but practically in my time we started in 1891.

3922. From 1891 onwards?—From 1891 onwards I have been closely connected with everything.* *Captain W. S. Wade.* 26 Feb. 1907.

(*Admiral Henderson.*) It might state what has been carried out and what has not.

3923. (*Sir Frank Adam.*) I gather from what you have said that it is your opinion that of recent years things have been carried out more quickly and efficiently than used to be done in the antedated period?—Yes; ever since the light dues have been allocated for the purposes of the marks and lights on the coast we have never had what I call reasonable ground for complaint; everything has gone along very well. And anterior to that the Trinity House always showed a disposition to meet us. I must admit they acted with the very greatest fairness to us in considering our proposals and in giving us what they thought ought to be done. What they did not do it did not appear to us to be their fault.

Advisory Committee: Attitude of, as to proposed New Works.

3924. Then it is your opinion generally that except in so far as new works have been stopped by the Advisory Committee and the Board of Trade, the Lighthouse Authority have been carrying out the work efficiently, although in some cases not with the economy that you think might have prevailed?—I think that is rather in the minds of the Advisory Committee—the Shipowners' Advisory Committee—that they think they are not getting value for their money. They are not a class of men who are in the habit of paying 2d. for a thing they can get for 1d. I think they have got their teeth into that, and they will not budge. In communication with the Advisory Committee afterwards, they have expressed regret that they had not sanctioned certain things that were pointed out to them were very necessary; but as they considered that a waste of money was going on, it rather made them feel that anything in the shape of new works must be opposed; that sort of thing, you see.

3925. They have a general vague impression that works have not been done as cheaply as they might have been done, but they cannot really put their finger, for various reasons, upon any specific detail in which they could take exception to the expenditure?—I am afraid they could. I am afraid some of those men could tell you just now what a square foot of timber would cost, and there is not much in the way of ships or machinery that they do not know.

3926. Admittedly so, of course, but with that knowledge in their minds, which they undoubtedly possess, would they be able to say that in any particular case the expenditure on any particular thing, lightship, or fog-signal, or lighthouse, had been greater than it ought to have been?—Oh, I think so.

3927. You think they would be able to do that?—I think with their general knowledge of commercial matters, and especially when it is coupled with a knowledge of machinery and ships, and that sort of thing.

3928. And you think their representatives ought to give evidence to that effect if they have the opportunity?—Well, I should think that that was a question for this Commission to say. I am afraid that I am not competent to express an opinion.

3929. You would not consider if they hesitated to come forward and give evidence it was because they thought they had no specific case they could put clearly before this Commission?—I do not know, Sir. You see, I do not represent them in any way. I could only say what my opinion was, and I do not think that would be worth much.

3930. (*Mr. Ennis.*) The general trend of your evidence has been that efficiency being the first consideration, economy is very desirable, and that the shipowners feel aggrieved with the weight that is pressed

* *Note.*—In a letter subsequently received, the Mercantile Marine Service Association wrote as follows:—"In 1891 we laid before Trinity House a paper contributed by Captain Wade, embracing the whole of the lights and marks in the Bristol Channel, and putting forward a programme of improvements. The Elder Brethren expressed themselves as being in sympathy with many of these suggestions, but want of funds prevented them from being carried out within a reasonable time. However, during the course of years, the improvements have been gradually made until with the establishment of the lightship on St. Govan's shoal during the present year, the programme will have been completed. The lights in the St. George's Channel have also been the subject of representation in 1892 and subsequent years. The Skerries fog-signal and light received attention in April, 1897, July, 1899, and December, 1902, and both have been considerably improved, the light especially. Bardsey Island and the Smalls in February and June, 1906; and the Smalls light has as a result been somewhat improved, although not to the extent desired. Representations have also been made from time to time to the Northern Lighthouse Commissioners and the Irish Lights Board for improvements in certain lights, marks and fog-signals, although not always with success."

Captain W. S. Wade. 26 Feb. 1907.

upon their shoulders by the cost of the lighthouse administration of the kingdom. Now, with regard to your suggestion, or the suggestion of the shipowners, to place the burden upon the taxpayer, has it occurred to you that that, if carried into effect, would mean making the foreigner a present of £150,000 or £200,000 a year?—That is with reference to the light dues, Sir.

Light dues:

3931. Certainly, that foreign ships, not being taxpayers, would go absolutely free of charge altogether?—Well, that might be answered, if I might be permitted to say it, by saying that foreigners, with the exception of Turkey, do not charge us light dues.

Not levied by foreign countries.

3932. I see; it would be reciprocal?—So I do not think that we could very well complain of not charging them.

3933. Then another question is this, where you take the cost of this service so much to heart, or where the shipowners take it so much to heart, have you ever heard of serious complaints as to the lighting of the port of London, which is estimated to be somewhere between £40,000 and £50,000 a year, being placed on the General Lighthouse Fund, and the port of London being placed in that advantage over all the other ports of the United Kingdom?—I have heard the thing discussed, and I have always thought it an anomaly why the Mersey Docks and Harbour Board should take and light the coast down to Port Lynas, fifty-one miles from Liverpool, and put a fairway lightship ten miles from the Bar and another one close in to the Bar. I have always thought that, but still it is done, and it was done at the time probably when Trinity House did not go into these matters.

3934. But the shipping community at ports other than London feel it to be a hardship?—I have no doubt they do.

ELEVENTH DAY.

Tuesday, 5th March 1907.

PRESENT:

The Right Hon. G. W. Balfour (*Chairman*).

Sir Frank Forbes Adam, C.I.E.
Vice-Admiral W. H. Henderson.
Mr. M. A. Ennis.
Captain C. Bigham, C.M.G. (*Secretary*).

Mr. R. Cooper Rundell, called in; and examined.

Mr. R. Cooper Rundell. 5 Mar. 1907.

3935. (*Chairman.*) You are the Secretary of the Association of Underwriters and Insurance Brokers in Glasgow?—I am.

3936. And are prepared to give evidence on behalf of that body?—On behalf of the Committee.

Association of Underwriters and Insurance Brokers in Glasgow: Constitution of,

3937. Will you describe to us the constitution of the Association?—The Association is an association composed of insurance brokers and underwriters, doing business very much in the same way as the Corporation of Lloyd's, in London.

3938. Is it incorporated?—No, it is not an incorporated body.

3939. At what date was it constituted?—It was constituted first formally in 1818, but it had been in existence some years previous to that.

3940. And the objects of the Association are generally analogous to those of Lloyd's?—Yes. There was a particular reference at the first meeting that was held forming the Association, that it was an Association also for protecting underwriters' interests in respect of wrecked property.

3941. Have the Association taken special interest in matters relating to the marking of the coasts?—Yes; throughout we find records in the minutes showing special interest in that subject.

Representations made by, to the Lighthouse Authorities.

3942. Can you decribe to us any steps that were taken at any time by the Association officially in connection with the lighting of the coasts?—It has made representations to the Boards, both to the Northern Lighthouse Board, and also to the Board of Irish Lights, on the subject of lighting, particularly on the Northern coast of Ireland and the Western coast of Scotland.

3943. Have those communications been frequent?—They have been from time to time, extending over a period of about 80 years. I have a number of instances—perhaps it would be troubling you to go into detail—but I could give you half a dozen instances where we have intervened.

3944. I think it is hardly necessary to go into those. Have you generally been able to secure the object on behalf of which the representation was made?—In the very first that I find a record of in our minutes, we apparently were successful in getting the object of our memorial complied with, that was a lighthouse on the Rhins of Islay, as I see in a subsequent memorial there is a reference to this light having been erected, showing that the original memorial had been successful. We went very fully into the matter of lights on the North-west coast of Scotland in 1893, and we submitted the question to our nautical adviser. He went very fully into the matter, and prepared a report, which was sent up to the Board of Trade. At that time Lloyd's were also making representations to the Board of Trade on the same subject.

3945. Why did you approach the Board of Trade rather than the Lighthouse Authorities, in that instance?—It was at the suggestion of Lloyd's. If I remember rightly, we were communicated with in the first place by Lloyd's intimating that they were making representations in regard to the lighting of the coasts, and asking us to support them by writing—I am now speaking from memory—to the Board of Trade on the subject.

3946. You did not approach the Board of Trade because, on other occasions, you had not found that communications to the Lighthouse Authorities had produced the desired effect?—No.

3947. The Lighthouse Authorities had always been ready to consider memorials that the Association had addressed to them?—I have been upwards of thirty years in the Association, but I do not remember during that period any direct representations by us to the Board of Northern Lights. We have had communications with the Irish Board, and put representations before them, and we have never found but what they were quite willing to take the matter into consideration.

Advice of, asked by Northern Lighthouse Board.

3948. Has your Association ever been consulted by the Lighthouse Authorities?—I only see a record on one occasion of the Board of Northern Lights having addressed us on the subject to ask our advice, and at that time the Committee of the period referred the matter to their nautical adviser, and also to others, and we approved of the course suggested by the Board of Northern Lights on this occasion.

3949. (*Admiral Henderson*). How long ago was that?—In 1862 the opinion of the Association was asked by the Commissioners of Northern Lights as to the erection of a harbour light on Dune Point, in Loch Indaal, Islay, and the Association, after consulting their own wrecking officer, and others, replied that, in their opinion, the light would be of great service. That, apparently, was in 1862. It was before my connection with the Association.

3950. (*Chairman.*) You say in your *précis* of evidence that, in addition to matters connected with the lighting of the coast, the Association has also a direct interest in the powers and administration of the General Lighthouse Authorities in connection with their duties under the provisions of the Wreck Removal Act?—Yes, we have a Salvage Association, in direct connection with the parent Association, the Association of Underwriters, and, of course, in carrying out the work we have a good deal to do with wrecks on the coast, and therefore we are particularly

interested in the powers granted for the removal of wrecks. I believe, with regard to the removal of wrecks, the General Lighthouse Authority have the control of the removal of wrecks, outside any Harbour Trusts.

3951. And have you any complaint to make of the way in which the Lighthouse Authorities have discharged that part of their duty?—None at all. I have no experience one way or the other.

General Lighthouse Authorities: Objections to constitution of,

3952. Is your Association satisfied with the present constitution of the Lighthouse Boards?—No.

3953. Will you state their views upon that subject?—My Committee are not satisfied with them, because they are not directly representative of the shipping interest generally. So far as the Trinity House is concerned, of course the active members there consist of Commanders in the Royal Navy and the Merchant Service, and to that extent, of course, the Board is qualified naturally by experience to attend to the lighting and buoying of the coast; but the other Lighthouse Boards, from the mode in which their members are elected, are not composed of men who are likely, from their experience and training, to be so qualified. Of course, you know the constitution of the Board of Northern Lights in Scotland. It is composed of lawyers mostly, lawyers who are there *ex officio*, and also of certain Provosts and Councilmen.

3954. Is your criticism of the constitution of the Board based upon general and abstract considerations, or have you any specific complaints to make of shortcomings that you think are directly traceable to the constitution of the Board?—No; indeed, so far as we are aware, their duties have been carried out with regularity and satisfaction. I have no information to offer on that ground.

3955. It is only on broad lines that you are dissatisfied with the existing constitution?—Precisely.

3956. So that, although you say that the Scottish Lighthouse Board and the Irish Lighthouse Board are, from the nature of their constitution, not composed of men who are likely, from their experience and training, to be qualified for their duties, their unfitness remains merely a conjecture?—Probably.

3957. Based upon the probabilities of the case?—Yes.

Suggestion or reconstitution of,

3958. You go on to say that, in the view of your Association, all the Boards should be more representative of shipping interests generally, and that shipowners, marine underwriters, and oversea traders should be represented. Might I ask exactly what you mean here by "oversea traders"?—Well, I mean shippers of goods by sea, both coastwise and abroad.

3959. You do not mention here shipping masters?—No, they are not specially mentioned, but certainly shipping masters would be qualified.

3960. They ought, in your view, to be included in any representation?—Any representation, I think, should include shipmasters.

3961. I wished to know whether the omission was deliberate or accidental?—It was not deliberate.

3962. That is the view of your Association, I understand, of the change they would like to see introduced if the present Lighthouse Authorities are maintained?—If they were maintained, yes; that they should be remodelled.

One Central Lighthouse Authority: Government Department advocated as,

3963. But I gather that you would prefer to any remodelling of the existing boards the transference of their whole duties to a Government Department?—Precisely, so as to be under the direct control of the State.

3964. You say that your Association further considers that the work being carried on by the three separate Boards, each constituted in a different manner and acting under different rules, is not likely to be conducive to economy in expenditure?—Yes.

3965. That, again, I suppose, is an inference?—An inference, yes.

3966. Not based on any actual facts that have come to your knowledge?—We do not know any actual facts to support that, but with three bodies really doing the same work, and under independent control, it is only natural to suppose that, if there were one central authority, having one system and one rule, matters could be carried out, such as staff arrangements and so on, in a more economical way than where you have three separate bodies for doing the same work.

3967. Your complaint with regard to the Scottish and Irish Boards, that they are not composed of men who are likely, from their experience and training, to be qualified to attend to the lighting and buoying of the coast, would, of course, equally apply to a Government Department?—Yes, but there, you see, we make the proposal that they should be assisted by a committee, which we believe would be competent to advise them.

With assistance of three Advisory Committees.

3968. That would be a committee analogous to the existing Advisory Committee?—Well, as I understand, the present functions of the Advisory Committee are very restricted; they are restricted merely to new works. For instance, they do not, I believe, advise the Board of Trade in regard to the management or superintendence of the Lighthouse Boards.

3969. Yes, but management and superintendence of Lighthouse Boards, apart from the question of where the lights should be placed, and of what character the lights should be, would not require any such special experience as you speak of?—Underwriters, of course—from wrecks occurring and matters of that kind—get to know the dangerous parts of the coast, and the parts of the coast they wish to see lighted.

3970. Yes, that would no doubt be relevant in the case of new works?—Yes.

3971. But it would not be relevant as regards general administration?—Possibly not, so far as existing works are concerned.

3972. How would the lighthouse committees which you would propose to attach to the Board of Trade—in the event of the Board of Trade being made the General Lighthouse Authority—be composed, in the view of your Association?—Well, Sir, my Committee are inclined to adopt the suggestions made in Mr. Charles McArthur's Bill.

3973. And that is——?—Shall I read to you the sections in the Bill relating to the committee?

3974. If you would be so good?—"Clause 6. The superintendence and management of lighthouses, buoys, and beacons on the coasts of England and Wales, and of Scotland, and of Ireland respectively, and also the powers and duties by this Act transferred to the Board of Trade in relation to local lighthouses, buoys, and beacons on those coasts respectively, shall be exercised by the Board of Trade, with the assistance of an English lighthouse committee, a Scottish lighthouse committee, and an Irish lighthouse committee, and the members of those committees shall form a General Lighthouse Committee for the purpose of advising and assisting the Board of Trade in all matters appertaining to the Board of Trade as General Lighthouse Authority."

"Clause 7: The members of the English, Scottish, and Irish lighthouse committees shall be appointed by the President of the Board of Trade, provided that a majority of the English lighthouse committee shall consist of persons representative of the shipping and mercantile interests and of the navigation of England and Wales, and a majority of the Scottish lighthouse committee shall consist of persons representative of the shipping and mercantile interests and of the navigation of Scotland, and a majority of the Irish lighthouse committee shall consist of persons representative of the shipping and mercantile interests and of the navigation of Ireland, and such persons shall be appointed upon the nomination of such shipping or trade or navigation associations, Harbour Authorities, bodies, or persons, as His Majesty shall by Order in Council prescribe." The only alteration that we can suggest in this clause 7 is that after "shipping" we should introduce the words "marine insurance." It would then read "marine insurance and mercantile interests."

3975. The idea is that a certain number of bodies should be declared, by Order in Council, privileged to nominate, and that out of the persons nominated by them the Board of Trade could select?—Yes. The next clause reads: "The Board of Trade may make rules prescribing the number of members to serve on the lighthouse committees, the manner in which they shall be nominated, the period for which they shall serve thereon, and the method of filling up vacancies caused therein by death or resignation." So that His Majesty, by Order in Council, would prescribe first the nominating bodies, and then the Board of Trade would ask those bodies for nominations.

3976. Mr. McArthur's Bill contemplates, I think,

Mr. R. Cooper Rundell.

5 Mar. 1907.

the transference of the expenditure on lighthouses to the State?—Yes.

3977. Is the constitution contemplated in that Bill one which your Association would wish to see adopted, whether the expenditure were transferred to the National Exchequer, or whether it remained as at present?—Well, I have not the voice of my committee on that, but so far as I know I do not think it would alter their opinion as regards the desirability of having an assistant committee in the same way.

3978. Would it alter your opinion as to the advisability of transferring the administration to the Board of Trade?—No; my idea is that the transference should still take place to the Board.

Board of Trade control over Lighthouse Boards.

3979. You say in your *précis* that the Lighthouse Boards are at present independent of the State, and not subject to any superintendence and control in their general administration?—I believe that to be the case.

3980. You are aware, I suppose, that they are at present subject to the financial control of the Board of Trade, and that no new work can be undertaken except with the consent of the Board of Trade?—Yes, so far as the works are concerned, but in regard to their administration I understand that the Lighthouse Boards have full power.

3981. Are you aware that they cannot spend money without the sanction of the Board of Trade?—In connection with their ordinary management? I was not aware of that. I understood that in their administration they had control of the monies.

Central Lighthouse Authority: Advocated.

3982. (*Mr. Ennis.*) It does not come first in your *précis*, but I might follow the question of our Chairman. If you were to learn that the Board of Trade did possess effective control over all the financial operations of the Lighthouse Authorities, would that in your opinion alter the views expressed by those you represent as to this suggested change?—I think not. It is on other grounds besides just merely pure finance that it is proposed that there should be a central authority.

Northern and Irish Lighthouse Boards: Objections to constitution of,

3983. I am taking the question of the constitution first as you have been discussing it. You object to the constitution of the present Lighthouse Boards, but on what grounds? Is it on grounds of either efficiency or economy in their administration?—It was considered that from the way in which these gentlemen were elected they were unlikely to have the experience that was considered desirable on such a Board, and it was a very important Board carrying on very important duties. It is thought to be, therefore, very desirable that the composition of the Board should be a selected one.

3984. But you refer, I presume, not to Trinity House?—I am referring now more particularly to the Board of Northern Lights.

3985. And the Irish Board?—The Irish Board in the same way.

3986. The two outlying Boards?—Yes.

3987. Are you aware that these Boards, prior to obtaining the sanction of the Board of Trade to their proposed new works, must obtain the sanction of the Trinity House?—Oh, yes.

3988. So that, therefore, at the present moment the Trinity House does exercise an effective control, at least over new works, as regards the Boards which are composed of men who are not qualified by nautical experience for the position?—Yes.

Trinity House: Constitution of,

3989. And the Trinity House is composed of nautical men?—Yes.

3990. Have you any objection to the constitution of Trinity House itself?—So far as it is represented by those nautical men, I should think they would do very well for the purpose of selecting and discriminating as to what lights and buoys should be established.

3991. Are you conversant with the constitution of Trinity House?—No, I cannot say that I am. I understand that the care of the lights is under a department of the Trinity House.

3992. Are you aware that the members of the Trinity House obtain their positions by co-option?—Yes, they are self-elected.

3993. From the ranks of what are known as the Younger Brethren; co-opted by the Elder Brethren from the body of the Younger Brethren?—I understand that is the rule.

3994. And that they hold office until death?—Yes.

3995. No matter what age they attain. You are also aware, I take it, that membership of the Trinity House is a salaried post?—Yes, so I understand.

3996. And that the members of the Northern Lights and the Irish Lights Board receive no pecuniary advantage from their position?—Yes.

Central Lighthouse Authority: Advocated, with three Advisory Committees.

3997. In your suggestion of the reconstituted authority with the three Committees, we have at present three Boards in the kingdom, the Trinity House, the Northern Lights, and the Irish Lights, the Trinity House being salaried, the other two Boards being of an honorary kind, do you suggest that the committee by which you propose to replace these three Boards should be salaried or honorary?—I think, if I remember rightly, it is suggested that they should be remunerated. On that matter my Committee have really offered no opinion.

3998. It is, so far as the question of economy goes, rather an important point, because if the committees were to be anything like numerically equal to the present committees, the cost of their remuneration would necessarily be much greater than the cost of remuneration of one body only now?—That matter has not been under our consideration.

3999. But I put it to you that it is an important point, from the point of view of economy?—Oh, quite so, yes.

4000. Then I should like to get a little more in detail what your idea is with regard to the constitution of the committee. As our Chairman has pointed out, the Board of Trade at present exercises an absolutely effective control over finance. Monies cannot be expended without the sanction of the Board of Trade. You suggest that the Board of Trade should have absolute control, should be a State Department, absolutely controlling this service?—Yes.

4001. Do you suggest that the Board of Trade should look after the administration, or that they should simply possess a power of veto over the operations of the committees?—They should really have an administrative power.

4002. What officials of the Board of Trade do you suggest? What body should be created in connection with the Board of Trade to see after the administration of the service?—I think the idea was that it might be committed to the Marine Department of the Board of Trade.

4003. The administration?—Yes; for instance, at present in regard to looking after salvage matters, Receivers of Wrecks, I think, are under the Marine Department of the Board of Trade, and the removal of wrecks seems to be cognate to that of salvage coming on shore, which is at present under the Receiver of Wrecks. These seem all very much in the same line.

4004. But dealing with such a large coastline as the coastline of the United Kingdom, would not the Board of Trade require representatives at points very far distant from London to efficiently carry out the work of administration?—I have not given that matter consideration.

4005. For example, you have at the present moment three engineers, the Trinity House, the Northern Lights, and the Irish Lights?—Yes.

4006. Do you consider one engineer in London would be in a position to effectively supervise the work of the coasts of the United Kingdom?—I cannot say that my Committee have given that matter their consideration, how it would be dealt with, whether by one engineer, or by an engineer with assistants at sundry points along the coast.

4007. You do not wish to offer an opinion on that point?—No.

4008. How many members do you suggest these committees should consist of? But first, I may ask, what do you suggest the functions of the Scotch, Irish, and English Committees—the separate functions of these bodies—should be, apart from their joint function as a General Lighthouse Authority?—I am unable to express an opinion.

4009. I understood your suggestion to our Chairman

to be that three committees should be appointed—one for Scotland, one for Ireland, and the third the Trinity House, and that these three committees jointly should form a General Lighthouse Authority, to deal with the work of a General Lighthouse Authority; but what functions would remain for these committees independently of their functions as that joint General Lighthouse Authority, seeing that at present the Lighthouse Authorities in existence, the Northern Lights and the Irish Lights Boards, only fulfil the function of a General Lighthouse Authority, and have no control over local lighting, the lighting of harbours, and so forth?—It is only the general——

4010. They only act at present as a General Lighthouse Authority?—Yes.

4011. Consequently, you suggest that a composite body should be formed of those three bodies, to deal with the coasts of the United Kingdom. Now, what size do you suggest that the Committee for Scotland, Ireland, and England should be—what number of members?—That I have not considered; I am unable to give you a suggestion.

4012. And are you prepared to suggest the percentage say, as you do not suggest the number? Would you be prepared to suggest the percentage of the total number, be it what it may, that should represent these various interests which you specify here—shipowners' associations, underwriters' associations, shipmasters' associations, and chambers of commerce, etc?—No; these details I have really not considered.

4013. But they are important details?—They are.

4014. Of course, as our Chairman has asked you to state, if the incidence of the tax in connection with this service remains as at present, we understand that shipowners object to the present arrangement; that is a matter outside of our jurisdiction?—Yes.

Shipowners and Underwriters: Are agreed as to requirements of coast lighting.

4015. But it bears upon the question in this way: Assuming that the incidence of the tax remains as at present, would I not be correct to assume that the interests of the shipowners and the interests of the body that you represent—the underwriters—would be somewhat divergent; that is, that the underwriters would desire to see the lighthouse service of the coast as efficient as possible, with a view to the greater safety of the property for which they make themselves responsible?—Yes.

4016. Whereas the shipowners, being obliged to pay the cost, there is a tendency with a body of that class to economise—judiciously, certainly—and possibly to economise beyond the bounds of prudence?—Yes.

4017. I put it to you that a lighthouse body composed of the representatives of shipowners only might in the exercise of their duties possibly starve the service to a certain extent, with a view to economy, whereas the underwriters' associations would, I take it, have a different tendency?—Well, we have found this in the past—that shipowners and ourselves have been very much in unison with regard to requirements, and on several occasions when we have been taking the matters of lights up, the Shipowners' Association have communicated with us with a view to certain lights being adopted, and we have gone in for joint action; but, so far as my experience has been, we have never found shipowners' associations backward in supporting or coming forward with any suggestion for the general safety in respect to lights.

4018. You are aware that the present Advisory Committee is a body possessing no statutory power, but that they possess a large moral effect upon the administration, I think, goes without saying. It has been stated to the Commission that certain claims have been made by associations of shipowners and shipmasters with regard to lights of fog-signals in certain localities, and that the cost of the erection of these has been vetoed by the Board of Trade at the instance of the Advisory Committee?—I was not aware of that.

4019. If you believed that the Advisory Committee were adverse to an expenditure of a sum sufficient to keep the service in a state of high efficiency, you would not, I take it, be disposed to place too large a power in their hands?—Naturally, no.

4020. Do you wish to offer any suggestions with regard to the present lighthouse services on the coast of the United Kingdom, as to whether you consider them to be efficient in the comparative sense, or thoroughly efficient? Are you aware if your body desires any improvements?—No, I have no observations to make on that on behalf of the Committee.

Mr. R. Cooper Rundell.

5 Mar. 1907.

Wrecks:

4021. You are aware, I have no doubt, of the information contained in the wreck statistics on the coasts of the kingdom; that is a matter which touches your body very closely?—Yes.

4022. You are aware, I take it, of the number of vessels which have been lost on the coasts within the last twelve months, the last period for which the reports have been made?—I have not seen the report.

4023. And of the number of lives, which in my estimation is more important still, that have been lost. Are you aware that a total of nearly 1,000 lives have been lost on the coasts of the United Kingdom within the period covered by this last report?—I was not aware of that.

4024. That is a very heavy toll of human life?—It is.

4025. And you, I take it, would put it to the Commission that any expenditure within reasonable bounds that would tend to lessen that loss of life and property, or to safeguard life and property more efficiently, would be a wise and just expenditure?—Decidedly.

4026. I should just like to ask another question on the point I have been dealing with before departing from it. You suggest that the work of lighthouse administration is a national work, and therefore should be under the control of the State?—Yes.

4027. But, as a matter of fact, is it not true that a great national work, the work of life saving, with equal force, a claim might be advanced that it should be an affair of the State, and yet it remains in the hands of a voluntary institution such as the National Lifeboat Institution?—Well, it is under a different category; it is supposed that common humanity would go to help to the recovery of life, while there might not be that attention to property.

4028. But I take it that the lighthouse service on the coasts of the United Kingdom, though extremely efficient for the purpose of saving property, is primarily designed for the purpose of saving life?—Possibly, yes.

4029. With regard to wreck removal and appliances, you lay stress upon the importance of that, and I quite concur with your view. Do you know whether the existing Lighthouse Authorities possess any special appliances for that purpose?—I do not know whether they have or not. Of course, they have these little vessels, these steamers that go out with stores, and for repairs and so forth, but I do not know whether they make use of them in any such way; I have no information on that point.

Removal of,

4030. Of course, you are aware of the class of vessels employed by the Liverpool Salvage Association, vessels of that type, and vessels fitted with extremely powerful appliances, which would not be found on board any ordinary vessel?—Yes.

4031. You would be in favour at present of any authority, whether the present authority, a reconstituted authority, or an authority modelled on other lines—you would, I take it, be in favour of a reasonable expenditure for providing special steamers or special appliances for wreck removal, seeing how important such removal would be for the general interest?—I do not know that I would go quite so far as that, because I think, as a rule, there are contractors and associations for carrying out that special kind of work, pretty well distributed round our coast, and some equipped Harbour Authorities, and the General Lighthouse Authority no doubt would be in the position to avail themselves of the services of these associations or contractors for doing that work, these contractors having special appliances requisite for carrying it out.

4032. Well, I put it to you this way, that a wreck may either be a valuable wreck or a non-productive one?—Yes.

4033. A valuable wreck will undoubtedly be dealt with at present by the Salvage Association, but an unprofitable wreck they will certainly not touch, unless paid for doing so by somebody?—Precisely.

4034. And your contention, I take it, would be, not that the Lighthouse Authority should provide steamers and appliances of their own, but that they should be legally entitled to retain the services of salvage associations for wreck removal, and to pay the

Mr. R. Cooper Rundell.

5 Mar. 1907.

cost of such removal out of the funds of the Board?—Yes; I think that is the course at present.

4035. (*Admiral Henderson.*) How long have you been Secretary to your Association?—Rather over 30 years.

Underwriters: Associations of,

4036. I wanted to ask, is there any other association of underwriters in the United Kingdom besides yours and Lloyd's?—Yes, there is the Liverpool Underwriters' Association.

General Lighthouse Authorities: Reconstitution advocated.

4037. Supposing it were shown that the Irish and Scotch Boards were relatively more economically efficient than the Trinity House, would you still hold the opinion which you have advanced?—Oh, yes; it is not on a question of economy merely, but for the effective carrying out of the work we think it is desirable that there should be a change.

4038. Supposing it could be proved that the Irish and Scotch Boards were as efficient as the Trinity House, would your opinion still hold good that you have advanced in your evidence?—Well, that would be saying that the Trinity House was perfectly efficient. I would not like to go so far as that.

4039. Now I want to ask a question which has been, in a form, put before. Does not the Board of Trade exercise the control you ask for by the State in a sufficient degree?—I understood, of course I am subject to correction, that the Board of Trade have no actual control over the administration.

Control of Board of Trade over,

4040. But are you now aware that even for administrative purposes none of these Boards can spend even more than a £5 note without the sanction of the Board of Trade?—I was not aware of that.

4041. And that the Board of Trade examines their estimates and passes them?—I understood they have a sort of audit survey of the accounts. I suppose they have the power to warn the Lighthouse Boards in the future, but would have no power over the current expenses, the expenses under review.

4042. But are you aware that the whole of the current expenses come before the Board of Trade for review, and are passed by them before they can put them into execution in the form of estimates?—No, I was not aware of that.

4043. I ask again, in what manner in your view are the present Boards independent of the State; of course being governed by the present Board of Trade control?—They have each an independent organisation, I understand, for carrying on the work quite irrespective of any control.

4044. I do not think it is so. The Board of Trade examine closely their estimates and go into every detailed question connected with them, and exercise the paper control that it is possible for a Government Department to carry out?—I did not understand it went so far as that.

4045. Yes, it does?—That it was arranged on estimate.

Central Lighthouse Authority:

4046. Given absolutely State control, in what manner would you propose to devolutionise the administration?—Well, the idea that was in my mind—but it has not been discussed by my Committee at all, I have not the authority of my Committee for saying so—was that it could be arranged for through the staff of the Customs, just in the same way that the Receiver of Wrecks is very often the Collector of Customs, and he has the duty of acting as Receiver of Wrecks in regard to salvage matters, so that there would be also a staff at the Custom House that could attend to the question of lights. Of course, they collect the dues at the present time, I believe.

4047. Do you propose to put the control of the local lights on to the Customs in all respects?—I would not say under the Customs, but under the Board of Trade, perhaps through the organisation of the Customs.

4048. Do you not think the Customs have got quite enough to do as it is?—That I cannot say; I do not know. These are details that I have not really given any consideration to.

4049. In regard to this question of State control, you would be obliged to have a board, a committee, a general committee?—Yes.

4050. And expert officials; you must have expert officials to carry on the work?—Yes.

4051. And experience generally shows that when a State takes up work of this character it costs a great deal more than if done by independent authorities?—I was not aware that that was the case.

4052. Well, generally speaking, the State gets hauled over the coals for expenditure, and I think most of us who have experience of control of large sums of money connected with the State find that the State is made a target of, and constantly gives in, and, on the whole, the cost of control is really greater if done by the State than if carried out by an independent authority who is responsible to the public?—Yes.

4053. That is a personal opinion, of course?—Quite so.

General Lighthouse Authority: Objections to constitution of,

4054. Now, you have put forward an objection here, and I want to know if that objection would stand if the shipowners were represented on the Government body. Your objection, I think, is at the bottom of page 2 of your *précis*, "The fact of the Lighthouse Boards being independent of the State, and not subject to any superintendence and control in their general administration, is considered objectionable"?—Yes.

4055. Now, I ask, would your objections stand if the shipowners and the underwriters were represented on the Government bodies?—Yes, but I should think that such representation would be of advantage.

4056. Your opinion that the administration by three Boards having different systems cannot be economical is a general one, or is it based upon any statistics?—Just a general one.

4057. Would you concur, given the financial control of a purely representative board, if the administrative work was carried out by a small committee of this board, assisted by proper experts?—I think my Committee would be likely to agree to that suggestion.

4058. Have you any statistics you wish to produce at all?—No.

4059. Have you any specific complaints to make against the Boards?—None.

4060. You would suggest that any administrative reforms should be towards greater economy than you imagine there is at present?—Certainly it is desirable.

4061. In reference to the question that was put to you just now by Mr. Ennis as to the loss of 1,000 lives, of course that statement requires to be analysed as to the amount which is due to inefficient lighting or buoyage?—Yes.

4062. Many lives are lost on the coast in collision—I think they all go in here—which have nothing to do with the lighting and buoyage, and the whole of these wreck statistics, before they can be accepted from our point of view, must be strictly analysed as to what are due to inefficient lighting or buoyage, and of course, again, in many cases incompetence. Have you got any more points you wish to put before the Commission?—Nothing else.

United Kingdom: Efficiency of lighting of coast of,

4063. (*Sir Frank Adam.*) I gather that, so far as lies within your knowledge, the opinion of your Association is that, speaking generally, the lighting of the coasts of the United Kingdom is efficient?—Yes. There are, of course, some suggestions that my Committee have made that have not been carried out. In this letter that they wrote to the Board if Trade, for instance, some of the suggestions were not carried out, and other lighthouses were erected in place of those suggested; but, on the whole, they have no reason to complain, I think.

4064. Have you found out that in recent years suggestions have had fuller consideration and been more rapidly carried out than in previous years, going further back within your recollection?—That I really cannot pass an opinion upon.

4065. In regard to a question, on the other hand, of economy of administration, you do not propose to offer any specific evidence?—No.

General Lighthouse Authorities: Objections to constitution of,

4066. But I understand that upon general grounds your opinion is that if the lighting of the coasts has been practically efficient under the present administration, and if it has proved to be economical, that is in spite of the present constitution of the Boards?—Yes.

4067. And that the system upon which the present Boards are appointed is undesirable?—Yes; I think it is possible that they have been fortunate in their

executive. Take the Board of Northern Lights, the members of which are really *ex officio*—these lawyers, for instance—the mere fact of a lawyer becoming a Sheriff of one of the Maritime Counties giving him a seat on the Board naturally makes it an accident whether that man has any nautical experience or not, and therefore it is a Board that must very much depend upon their Engineer and other executive officers, and I think they have been possibly fortunate in having good officers; but it is throwing a very great responsibility on an engineer, and, for an important function of that kind, perhaps too great a responsibility. I think it is very desirable that the men forming the Board should be men that would be qualified to go into questions with that Engineer, and discuss them with a little more equality than there is at present.

4068. Then I take it that you consider that efficiency of administration under the present system of the Scotch Lights and the Irish Lights has been owing to the fact that they have had in past years able, zealous, and competent Secretaries and Engineers, and that does not affect the view you take of the undesirableness of the present system, because the day might come when they had not such competent men in charge?—Exactly.

Underwriters: Representation of on Lighthouse Authority advocated.

4069. I understand in any new body to be formed you wish that marine insurance societies should have representation?—Yes.

4070. Have you in view, in asking that, the power you would have of operating as a certain check on the danger that Mr. Ennis has pointed out, of the shipowners being over-economical in their expenditure in regard to lighthouses?—No, I cannot say that that has been before us at all. As I said before, we have always found, as far as we have had experience, that shipowners have been quite ready to go along with us in any proposals with regard to new lights.

4071. But you admit you have a more direct interest, perhaps, in multiplying them than the shipowners?—Yes.

4072. But if the claim that the shipowners put forward to have representation is because they pay the dues, where do the marine insurance people come in in that regard?—Well, of course, they have nothing to do with the payment of the dues.

Mr. R. Cooper Rundell.

5 Mar. 1907

4073. Therefore it would not be representation on account of payment?—On account of payment, no.

4074. But a more general representation, which your Society would advocate in the interests of Executive Administration?—Yes, in the general interests of safety.

4075. (*Mr. Ennis.*) I just want to ask one further question. In your suggestion for transferring the duties of the present three Lighthouse Authorities to this new body do you suggest that merely the area of their operations should be transferred or do you make any suggestions with regard to the powers at present exercised by local authorities, harbour authorities, for example, the Clyde authorities, as a most important body in your country?—No, the suggestion was merely in respect to the General Authority outside.

Local Lighthouse Authorities: Representation of, on Central Authority suggested.

4076. And would your suggestion as to chambers of commerce on that proposed authority cover harbour authorities. Do you not consider that such an authority as, say the Clyde Lighting Authority should have representation on the outside Lighting Authority, as many of the cases might or might not injuriously affect their interests?—That is that they should be represented?

4077. Yes. Do you consider that certain chambers of commerce sufficiently cover that; you would consider chambers of commerce and Harbour Authorities more or less identical bodies?—No, I do not consider that certain chambers of commerce sufficiently cover that, nor that they and Harbour Authorities are more or less identical bodies. The Clyde Lighting Authority has, I believe, representatives of the Glasgow Chamber of Commerce on its Board. But I think it does not seem inappropriate that the local lighting authorities should have some representation.

The Right Hon. The Lord RAYLEIGH, O.M., F.R.S., called in; and examined.

The Rt. Hon. the Lord Rayleigh, O.M., F.R.S.

Scientific Advisor to Trinity House: Duties of,

4078. (*Chairman.*) We desire to have your evidence as Scientific Adviser to the Trinity House. Would you be good enough to describe your relations to the Trinity House, and the nature of the work which you undertake for them in that capacity?—I was appointed Scientific Adviser in December, 1895, and the work that I have done in that capacity, I think, may be classified under four heads: (1) reporting generally upon schemes laid before the Trinity House by inventors, (2) attending committees charged with organising experiments, and taking part in the experiments themselves; (3) inspecting apparatus under construction, and (4) putting forward such suggestions as may occur to me and making investigations of a theoretical or experimental character which may have a bearing upon the future development of the subject.

4079. It is with respect to the last category only that you made suggestions on your own initiative?—Yes.

4080. In all other cases you are invited to make a report, or to attend the carrying out of experiments?—That is so.

Reports made by

4081. Could you give us a list of the reports made by you since you became Scientific Adviser?—I have a list here which was supplied to me from the Trinity House. I think it is fairly complete; not quite, however, partly because in some cases the experiments may have failed from one reason or another, so that I wrote no report; so that this list does not entirely cover the matters which have been before my attention.

4082. Perhaps you would be good enough to put in the list?—I can do it.

4083. Could you give us some idea of the kind of matter which is referred to you for report?—Perhaps I might read it as it is drawn up here, backwards, in order of date.

4084. If it is not very long, perhaps you might?—It is rather a long list, extending over the ten years.

4085. Would you read a few extracts from it?—The last appears to be the 13th July, 1906, and relates to the diaphone fog-signal. Report after visit afloat, etc., to attend experiments with diaphone fog-signal at St. Catherine's Lighthouse.

4086. That was a report upon experiments actually carried out at St. Catherine's?—Yes.

4087. Are most of these reports the results of actual experimentation?—Some relate merely to schemes put forward by the inventors. I think they are all included in this list.

4088. So that this list would include both the first and the second head?—Well, it might really include the third also, because after inspecting apparatus I have usually made a report.

4089. Yes, quite so; I see?—Shall I read some of the others?

4090. If you would be good enough to read some of the others to give the Commission an idea?—February 11th, 1905. Explosive fog-signals: Report after attendance at trial with gunpowder and aluminium mixed charges at Woolwich Arsenal. That reminds me that a subsequent set of experiments has been omitted, because as the result of these experiments at Woolwich Arsenal we carried out actual trials at the North Stack, I think it is, from Holyhead, in which the signal gun there established was fired alternately with the ordinary black powder charge which had hitherto been the practice, and with this new charge containing an addition of aluminium, and the result of these experiments was to show a very great advantage accruing from the addition of the aluminium in making the flash visible.

The Rt. Hon. the Lord Rayleigh, O.M., F.R.S.

5 Mar. 1907.

4091. Was the suggestion to add aluminium a suggestion made by an inventor?—No; as a matter of fact, that was made by myself. We were investigating the Skerries fog-signal at the time, and a discussion came up about the gun signal, and it was remarked by someone that the Irish boats attached great advantage to the flash from the gun as well as, of course, to the report, the sound signal for which the gun was established; and I remember making the remark that if the flash was of value it would be easy to have a much more powerful flash than the black powder alone could give, and I think it was from that remark that these experiments took their origin. I could tell the Commission more about that if they wish to hear it. 25th November, 1904. Proposal of Mr. Azemar, of Holstein, Germany, to direct beams of light from lighthouse upwards during fog; also *re* wireless telegraphy. That was a case of a scheme put before the Trinity House by an inventor upon which they asked me to report, corresponding to the first head.

4092. Now, on a scheme of that kind you would report without thinking it necessary to make any experiments perhaps?—Yes; or else, of course, I might have to remark that I had not the knowledge sufficient to enable me to express a definite opinion. Shall I read on?

Fog-signals: Skerries experiments.

4093. Perhaps we might have one or two more instances which you regard as of somewhat more importance than the others?—14th October, 1904. Skerries Lighthouse (fog-signal). Observations *re* silent area discovered in vicinity of lighthouse after attendance at experiments with siren fog-signal. Those were experiments in which the Elder Brethren tried to see whether anything could be done to improve the fog-signal at the Skerries, of which there had been complaints. It is an extremely important station I think; nearly the whole of the Liverpool traffic goes round it. Complaints had been made of the insufficiency of the fog-signal, and the Elder Brethren were desirous, if possible, of improving the signal, and it was with that object that these experiments were made. Three signals were established on the Skerries in close proximity to one another. One was the ordinary service signal, the second was a somewhat similar one, but using a modified horn which had been introduced at my suggestion, and the third was an entirely different character of apparatus, modelled from the French. It was rather an instructive set of experiments. We had these three sounded within a few seconds of one another, and we observed the effect from the sea, steaming out in various directions, and the result generally was that in every direction the first two signals were not very different. I think there was a slight advantage on the side of the second, but both were very decidedly superior to the third. In fact, I think in several directions we were able to go out to such a distance that while the first and the second were still quite serviceable signals, the third was inaudible.

4094. (*Admiral Henderson.*) Were they carried out in fog?—No. It was rather curious, as illustrating the extreme difficulty of this work, that after these observations had been made and we were rather congratulating ourselves upon the unambiguous character of the result, when we went back to Holyhead the Deputy Master consulted, I think, a coastguardsman there, asking him whether he had heard these signals. Oh! yes, he had heard the three all the afternoon, and the third was the best throughout. That was, of course, in a direction where the signal was not wanted, back as it were from the Skerries, at Holyhead, and at a distance of seven miles. But it is perfectly inexplicable how that could have happened.

4095. (*Chairman.*) What was the date of those experiments?—1904.

St. Catherine's experiments.

4096. The classical experiments on fog-signals were those made at St. Catherine's, were they not, in 1902?—Yes.

4097. These were the most important experiments ever made on the various forms of fog-signals?—I should think they were since the experiments made by Tyndall.

4098. Could you describe to us those experiments, and the results obtained?—We had various types of instruments installed at St. Catherine's. There was, of course, the service signal, there were two sirens provided with eliptically-shaped horns of the kind that I had recommended; there was a reed horn on a model which had given satisfaction at Belfast, and which I think was very much advocated by the Advisory Committee of Shipowners; and there was also a very powerful Scotch siren provided with a large horn, and consuming a great deal of power. The results, I think, went to show that the sirens carried the day.

4099. As against the reed?—As against the reed. The reed is a very good instrument, but it was on a smaller scale than the sirens. It consumes less power, but the sound that it gave was quite inferior to that given by the more powerful sirens. I think it was in consequence of the observations made at that time that the eliptically-shaped horn has been adopted by the Trinity House and has been installed elsewhere.

4100. Did the experiments include careful observations of areas of silence?—So far as it was possible.

Causes of areas of silence of.

4101. Did you find areas of silence vary in different conditions of weather?—Yes. And, of course, that is the great difficulty. No doubt a great deal depends upon the condition of the weather overhead, so to speak, which the observer on the seas very often knows nothing about. Perhaps I may say generally that before I had the opportunity of being practically acquainted with these things I could not have believed that so much uncertainty could exist as experience shows does exist.

4102. You mean you would not have expected it on theoretical grounds?—No. It is a saying among the Elder Brethren that the more you see on this subject the less you know.

Diaphone experiments.

4103. Have you experimented with the diaphone?—Yes; the diaphone was brought over by Mr. Northey. I witnessed the experiments: it was not more than that. Mr. Northey is, I believe, now constructing another instrument which will compare more directly with the Trinity House instruments in that it will consume about the same amount of power. In these experiments in 1906 the diaphone did very well. It was a more powerful signal than the St. Catherine's service signal as we observed it, but it consumed something like five times as much power. Well, of course, we had never doubted that by putting more power into an instrument a more powerful sound could be obtained.

4104. That could be done with the service signal as well?—That could be done with every kind of apparatus, no doubt, so that in order to have a better comparison, Mr. Northey is preparing a diaphone which will consume about the same amount of power as the service signal. Then the comparison will be made under better conditions.

Difference between diaphone and siren.

4105. It is arranged that the comparison shall be made when this apparatus is provided?—I think it is arranged, as I understand, for the spring. I may say that I do not see on theoretical grounds any great difference between what may be expected from the diaphone and the service signal. In both cases there are elongated apertures through which the wind is admitted periodically, and in the siren these apertures are opened and closed by a revolving drum which passes over them. In the diaphone it is a piston which moves backwards and forwards, and so alternately covers and uncovers the apertures. One does not see *a priori* how the result should differ much in those cases if the same amount of power is used. There may be an advantage in the diaphone in that it may keep its pitch more accurately than the revolving sirens do.

4106. Is failure to keep the pitch a common fault of sirens?—It has been in the past; but now, I think, largely as the result of these experiments at St. Catherine's, Mr. Matthews has instituted a more regular inspection. He considers that more than very moderate variations are now excluded, but the tendency has always been, owing to wear of the brake by which the siren is governed, for the speed to increase, and sometimes, no doubt, it has had very deleterious effects upon the sound in past years.

Submarine bell experiments.

4107. Have you been concerned in any experiments with submarine bells?—Yes; I took part in one set of experiments—I do not think it is on this list, though—in which the bell was established on the Goodwin Lightship and was observed from the "Irene."

4108. Those experiments were instituted by the Trinity House?—Yes.

4109. How long ago was that?—I think about two years, or a year and a half. The observation is made by telephones on the bridge of the steamer, the sound being conveyed to the telephones from microphones

attached, one on each side of the ship, close to the skin. The sound was very well heard through these telephones on the bridge, and a good judgment could be formed as to the bearing of the bell by the relative loudness of the sound as heard from the two sides of the ship.

4110. Those experiments were hardly sufficient, I suppose, to draw any definite conclusion from?—So far as they went they were quite satisfactory. Of course, it was only one afternoon. We varied the distance. I think we ran out from about one mile from the bell to three miles.

4111. Do you think it would be desirable that these experiments should be continued on a more extensive scale?—Yes, unless the results actually obtained in practice would supersede the necessity for special experiments. I believe now there is experience.

4112. But Trinity House has not, so far, undertaken any further experiments?—No. I think they had proposed it, but there was some difficulty about getting the money.

4113. Should you consider it part of your functions to press Trinity House to make experiments in particular directions?—Yes, if I thought they were neglecting them.

4114. But so far you have not had occasion to do that?—I think I have urged them to give attention to what may be done by wireless telegraphy signals, but as a rule it has been sufficient for me to express an opinion, I think, for the Trinity House to take the matter up.

4115. That would come under your fourth head, occasional suggestion of matters that may deserve attention?—Yes.

4116. Have you kept a record of those?—I am afraid not. I could refer to certain publications of my own in which various ideas had been developed, and which, as I say, may have a bearing upon the future development of the subject.

Rayleigh horn for sirens, introduction of,

4117. Those are ideas which you have arrived at on theoretical considerations?—Partly on theoretical considerations, and partly on the ground of private experiments made at home. The elliptical horn was introduced in that way. The idea came from theory. Then I made experiments, of course, on a very small scale, and so, perhaps, not adequate, but still very instructive experiments, using very high-pitched sounds which allowed the scale of the apparatus to be reduced, and I was able in that way to say that considerable advantage attended the use of the horn with an elliptical section, and so to recommend it with more confidence for a trial on a working scale.

4118. And you think that actual experience, as a matter of fact, has confirmed the theory in this instance?—It has. You mean the experience on a working scale?

Difficulties as to experimenting with,

4119. Yes?—Yes; but I may say these experiments are exceedingly difficult, there are so many changes in the weather, or one thing or another, that it is exceedingly difficult to get good comparative results on a large scale. On a small scale it is easy, because one can repeat them as often as one chooses. Where one has to go a considerable distance to a place like St. Catherine's—of course, all those stations are almost necessarily at out of the way places—if the weather happens to be unfavourable at the time there may be a difficulty in finding another opportunity to repeat the experiments.

Lighting Apparatus: Inspection of new,

4120. Are you often called upon to inspect new apparatus?—Yes, most of the new optical apparatus I inspect before it is passed, usually at Birmingham.

4121. You inspect it before it is installed?—Yes, before it leaves the works. I have also inspected apparatus in Paris for the Trinity House.

Experiments.

4122. (*Mr. Ennis.*) With regard to the question of experimental work generally, are you aware whether our Lighthouse Authorities, taking them as a whole, or the Lighthouse Authorities of foreign countries, such as France and others, are more lavish or generous in their expenditure with regard to experiments than ourselves?—I have understood that more money is devoted to the subject in France, but I have not much direct knowledge.

4123. But you would approve of a liberal expenditure on experimental work?—I think there are cases where more money might be spent with advantage, but it is not only a question of money, it is a question of the attention of the engineer and the staff.

The Rt. Hon. the Lord Rayleigh, O.M., F.R.S.

5 Mar. 1907.

4124. Quite so; but you are aware, I take it, that with regard to two classes of apparatus that you have told us of, that is the diaphone and the submarine bell, they have been in actual use on the coasts of America and Canada for some two or three years past?—Yes.

4125. And they seem to be satisfied with the results obtained there, especially with the submarine bell?—I believe so.

Fog-signals: Advantage of submarine bell,

4126. In view of the difficulty which we have already heard a good deal of, and which we now have your valuable opinion concerning, as to the areas of silence, and the fact that they are not constant, would not the submarine bell, if generally adopted, be a great improvement over sound signals, inasmuch as it does not seem to be liable to any such defect as the area of silence?—I think there is reason to suppose that the working of the submarine signal would be more regular, but perhaps there has hardly been sufficient experience of it yet to state that as an actual fact from observation. I have always felt that the submarine method has great advantages. The irregularities which attend the propagation of the sound signal through the air no doubt depends upon two things. It depends upon the fact that the temperature in the air varies—it may be different overhead to what it is upon the ground—and upon the wind, which acts in an indirect but a very potent manner, either favouring or interfering with the propagation of sound to a distance. Well, in both those respects one must expect water to be a more favourable medium than air. In the first place the differences of temperature in water would be much less than in the air, and even if they occurred, they would produce less effect on the density of the water. The air, of course, is exceedingly sensitive in respect to changes of temperature. Again, although there are currents and tides in the water, the velocity of them is a good deal less than that of the currents in the air which we know as wind.

4127. You have said that the bearings can, to a certain extent, be judged by the intensity of the sound on the port or starboard side of the ship. Can you in any sense measure the distance by the sound?—Are you speaking of submarine signals?

4128. Submarine signals, yes?—I suppose it could only be by an estimate of the loudness.

4129. Of course the submarine signal has one disadvantage, in so far as it cannot be made useful to any ship which is not fitted with the microphone and telephone?—Not as I have described it; but I may mention that the bell can often be heard from the inside of the ship without the special fitting of microphones and telephones.

4130. But in any case I take it that the fitting of the microphone and telephone needed for the purpose is a matter of trifling cost—of comparatively trifling cost?—Of trifling cost for a large ship, certainly. I am speaking of the inherent cost.

4130a. And for vessels engaged in cross Channel passenger service, and large ships of every class, it is an appliance which, if installed in the lightvessels round the coasts of the kingdom, would practically mean, I take it, that every ship of reasonably large tonnage would immediately be fitted with the appliances to enable it to utilise the invention?—I should suppose so, if the present anticipations of success were confirmed.

4131. Are you aware whether the presence of a sandbank or shoal between the bell and the vessel would have any effect in preventing the sound travelling?—By altering the depth of water?

4132. The depth of water?—I should suppose it would, if the depth at low water over the shoal was very limited.

Difficulties of experimenting with,

4133. The difficulty with regard to adequate experiments as to fog-signals, I take it, also is that these experiments can only be conducted with accuracy in a heavy fog, and that when carried out then they run the risk of misleading vessels and causing casualties?—We never practically attempt such experiments in times of fog; it would hardly be safe to ourselves to do so. And besides that, in time of fog the service

The Rt. Hon. the Lord Rayleigh, O.M., F.R.S.

5 Mar. 1907.

signal is necessarily in use for its proper purpose, and of course is not available.

4134. What I meant to convey is that it is practically impossible to carry out experiments in fog for the reason that you had said that the service signal is in use and that vessels might be misled by it?—Yes.

Lighthouses: Value of beam of light projected upwards from,

4135. And therefore you cannot obtain, with experiments of that kind, the maximum amount of information which you desire?—That is so, but I have always thought that the probabilities were that the signals would be better in time of fog than they are at other times, owing to the greater stillness and uniformity in the condition of the air.

4136. Can you tell us your opinion upon that point; the suggestion made by—I forget the name of the Engineer—you gave us in November, 1904, as to beams of light projected upwards in fog; as to what conclusion you arrived at as to the value of that suggestion?—I think so much would depend upon the precise condition of the atmosphere. If there was a cloud overhead just over the light ready to receive a beam that you were projecting upwards, no doubt that would be a very efficient means of working, and it might happen that the light reflected from the cloud would reach a distant observer better than a light sent direct from the station in his direction.

4136a. But all that would depend entirely upon accidental circumstances. It could not be relied upon as a constant quantity?—Of course, it often happens that the beam sent in a horizontal direction from the lighthouse is seen overhead by an observer below the horizon from the lighthouse.

4137. At sufficient distance for the horizontal beam to be projected?—Yes. Perhaps in some cases the observer may not appreciate exactly the conditions under which he is seeing the light—the powerful electric lights which are now installed at no very great heights—because, in respect of fog, it has been considered the better policy in recent years to keep the lights rather low. These powerful lights could be seen, so far as their intensity is concerned, to distances vastly greater than those at which they sink below the horizon, and under those conditions a beam of light is frequently seen overhead by an observer who cannot see the light itself.

Illuminants: Relative values of,

4138. With regard to an illuminant, what is your estimate of the relative value of electric light, vaporised oil, and acetylene?—There is no doubt that the electric light is more powerful; but whether the advantage corresponds to the cost, especially since the improvements that Mr. Matthews has introduced in the use of oil, I should think doubtful.

4139. But putting to one side the fact of cost, the electric light is the more powerful, and for certain stations, such as the Fastnet, off the coast of Ireland, which vessels make coming in from the Atlantic, it would be desirable that they should see the light at as great a distance as possible?—Yes. I think one must distinguish between what happens in fair weather and in dirty weather. Of course, in fair weather the electric light can be seen to enormous distances, and sometimes that is a convenience for navigation. But in dirty weather, when the danger is of course more imminent, the difference of distance to which the light is serviceable is not really so great.

4140. But still it is in dirty weather that the enormous candle-power obtainable by the electric light is so important. I take it that for practical use the electric light can be installed to carry further than any other form?—I think so, especially perhaps the new flame electric arc, in which the colour is yellow.

Wireless Telegraphy: Possible development of, for lighthouse purposes.

4141. With regard to wireless telegraphy, you have suggested it as a useful aid to navigation. What is the method that you would suggest for its adoption. I mean it has been stated that it has the defect that though you may receive a signal from a particular station, you have no means of ascertaining how distant that station is from you, that it may be 100 miles, or it may be 800 miles?—Of course, it is no use to receive a signal unless it tells you either the distance that you are from the place from which it was sent or the bearing, approximately.

4142. Quite so?—I should have thought that it might be possible to develop a wireless signal, in which you could infer the distance roughly. Of course, the signals would have to be specially designed to that end, so as not to be perceptible at too great distances.

4143. I am glad to have your opinion that it is a scientific possibility to create a signal in which you can approximately gauge the distance?—One does not like to speak too confidently of a matter of that sort until it has been tried, but I do not see why there should be any insuperable difficulty in doing it. After all, we have that difficulty in all the signals, whether they are sound signals through the air or sound signals through the water.

Illuminants: Relative values of,

4144. (*Admiral Henderson.*) Do you advise the Trinity Board on the form of the illuminant, as well as the form of the apparatus?—No, I can hardly say that I advise them usually on that subject. They have their own views as to the necessities of the case, and I do not think I have ever been consulted as to the particular form to be adopted, except as regards details at a later stage.

4145. And is it your opinion that the practical point of view of the question of illuminants is a matter of economical efficiency?—Yes.

4146. It is true that you may on certain conditions get an electric light to a greater distance of visibility than any other form, but it is entirely a question of position and place and economy?—Yes. I may say that I do not myself understand quite where the advantage of the very powerful lights that have been installed on some parts of the French coast comes in. The distances for which they are wanted are comparatively small.

4147. Well, I concur with you. I speak as a sailor, and you do not want to see a light too far off; it becomes a nuisance to you?—But I presume at such a point as the Lizard, or St. Catherine's, it is an advantage to have the most powerful light you can get. I dare say it is well known. I happen to have a son in the Navy, who serves as a navigating lieutenant, and he has told me that it is not uncommon now on coming home to see both Ushant and the Lizard at the same time.

4148. Well, I believe they can. Do you consider that the coast of England and Wales is efficiently lighted at the present moment, within your knowledge; is it within your knowledge at all?—That is a nautical question on which I could hardly express an opinion.

Experiments

4149. (*Mr. Ennis.*) I just wish to ask you would you consider it desirable that the Lighthouse Authorities, jointly or individually, should offer, as it were, inducements to inventors in the direction of appliances that they may find it desirable to perfect and improve?—In what way would you suggest that they should do that?

4150. At present I may take it that if an inventor makes any invention, or constructs an apparatus, you are willing to consider the merits or demerits of his proposal?—Yes.

4151. But what I suggest is if you take, say, sound fog-signals, admittedly there are difficulties to be overcome; do you consider it would be desirable that the Government or the Lighthouse Authorities should be prepared to intimate their willingness to make it worth an inventor's while to overcome that difficulty; to offer an inducement to inventors to go to work on the problem?—By promising a reward?

Experimental establishment under Trinity House advocated.

4152. A monetary award?—I could imagine that that might work well in some cases. Again, there is the question of an experimental establishment under the Trinity House, or the Lighthouse Authority itself. I have sometimes spoken on the subject to the Elder Brethren, and I have thought that if it were really desired to push the development of fog-signals, for instance, as quickly as possible, that such an experimental establishment is wanted, and that it ought to be instituted in some more accessible situation than St. Catherine's or the Skerries. Across the mouth of the Thames, for instance, it would be possible to make observations. There might be a station somewhere near Sheerness, which would be conveniently accessible from Blackwall, and observations, whether of sounds or lights, could be made from the other side of the Thames.

4153. Do you consider that the money expended on such a service would be money well spent?—It is very difficult to give an opinion about that. I may say that if it were not that I have been always

rather sceptical about the possibility of getting over certain difficulties, depending upon silent areas, and so on, I should have been more urgent in pushing experiments in the direction of improving the force of sound signals; but I have always felt discouraged by the fact that whatever we do, we shall be met by this difficulty. It might even be argued that it is misleading to institute signals which one day are audible to a very great distance, and the next day cannot be heard at all at perhaps two miles.

The Rt. Hon. the Lord Rayleigh, O.M., F.R.S. 5 Mar. 1907. *Trinity House:* Efficiency of,

4154. (*Admiral Henderson.*) Do you consider that from a scientific point of view the Trinity House are up to date?—I think I may say that.

4155. Fairly; as they may be governed by economy, I suppose?—I think I may say that generally.

TWELFTH DAY.

Tuesday, 19th March 1907.

PRESENT:

The Right Honourable G. W. Balfour (*Chairman*).

Sir Frank Forbes Adam, C.I.E.
Colonel I. J. C. Herbert, C.B., C.M.G., M.P.
Vice-Admiral W. H. Henderson.
Mr. M. A. Ennis.
Captain C. Bigham, C.M.G. (*Secretary*).

Commander G. C. Frederick, R.N., called in; and examined.

Nautical Adviser to Board of of Trade: Duties of, in connection with the Lighthouse Authorities, as to New Works,

4156. (*Chairman.*) You are the Nautical Adviser to the Board of Trade?—Yes, Sir, and an Associate of the Institute of Civil Engineers.

4156a. You are also a commander of the Royal Navy?—Yes.

4157. Will you describe to us your duties in connection with the administration of the three General Lighthouse Authorities, in the first place as regards new works?—With regard to new works, my duties are to advise the Board generally as to the importance and utility of any works brought before them, from a navigational point of view, and I have to refer also to the question of whether the works are urgent or not, so that they may be able to form an opinion as to the desirability or not of the works being undertaken at an early date. In doing this I am naturally influenced by the knowledge that the Lighthouse Authorities have had the consideration of their respective coasts before them as to the lights or navigational marks which are required in the interests of navigation, and that they would naturally put forward in their estimates or bring before the Board of Trade those works which were considered of most importance, and therefore I can look at the questions from the point of view as to how far they will be a benefit to traffic, and whether they are in positions which are apparently the most suitable.

4158. That is to say, that in forming a judgment you take into account that the Lighthouse Authorities are in an exceptional position to form a sound opinion upon the question whether any new mark should be put up at any part of the coast?—Yes, they have the requirements of the whole of the coast before them, and they also have the applications received by them from time to time from various bodies, requesting improvements or the installation of a new lighthouse, and they can therefore judge fairly as to the necessity of the work before putting it before the Board of Trade.

4159. Your natural attitude of mind, therefore, would be to agree with the representations made by the Lighthouse Authorities, unless there was, in your opinion, a clear case that they were wrong?—Yes, as a general rule, but there have been cases in which I have thought that it was unnecessary to proceed with certain works, at any rate, for the present. I think, perhaps, you may remember one case, Sir, in connection with Strathie Point in the north of Scotland. The Northern Lights Commissioners required that light on the north coast, and it was a point on which I thought it was unnecessary, at any rate, taking into consideration the importance of other lights, and the necessity of the expenditure of other sums upon what might be of more use to the general navigation. In that case it was deferred.

4160. In that case was there not a difference of opinion between the Scottish Lights and Trinity House with regard to the proposed light at Strathie Point?—Yes, that was also objected to by the Trinity House, but at the time I drew up my report irrespective of the views of the Trinity House. The opinion was practically endorsed by Trinity House subsequently.

Commander G. C. Frederick, R.N. 9 Mar. 1907.

4161. As a matter of fact, the view taken by the Trinity House and your own opinion coincided?—Yes, I only quote that as a case in point, in which there are occasions on which I might suggest or report to the Board of Trade that the expenditure of a large sum of money was hardly necessary at that time.

4162. I think the Advisory Committee on that occasion also took the same view, did they not?—They did.

4163. So that the Scottish Lights stood alone against the Trinity House, yourself, and the Advisory Committee on that occasion?—Yes, I did not wish to draw any particular attention to the Scottish Authority as you understand, but it just happens to be a case in point.

4164. There may always be differences of opinion on these points?—There have been other cases, but I only mention that one, as it came within your knowledge.

4165. Speaking generally, however, you have found yourself agreeing with the views taken by the Lighthouse Authorities?—Yes; sometimes I have made suggestions as to some other form, or perhaps a modified form of light, and it has been subsequently agreed to by the Lighthouse Authority, in lieu of, perhaps, some more expensive light that they have proposed.

as to appeals from Scottish and Irish Boards.

4166. Have you any observation to make upon those cases where Trinity House have been unwilling to accord their statutory approval?—Do you wish me to mention any specific case that I think——

4167. No?—There have been cases in which the Trinity House have not been ready to give their statutory approval and on being referred to me, on some occasions I have agreed with the Trinity House, on other occasions I have supported the other Lighthouse Authority. I may say that, of course, in forming an opinion on these cases, I have to obtain if possible further information as to the requirements of the locality and so on. My advice is not given as an arbiter on the spot without really looking into the matter carefully.

4168. Then, before a decision is finally taken in any case, the matter is discussed at a conference held between the Lighthouse Authorities, the Advisory Committee, and the Board of Trade?—Yes.

Commander G. C. Frederick, R.N.

19 Mar. 1907.

4169. And the President of the Board of Trade has an opportunity of hearing the case argued out there, and also has the advantage of your opinion?—Yes.

4170. And on all those materials he forms his own final decision?—His own final decision. I may say that at the close of the Conference it has not always happened that all the cases put before the President have been agreed to or settled. Sometimes questions that arise on these estimates are deferred for further information and for intercommunication with the Advisory Committee, and those cases are settled later on. They are referred back again to me, and I give my advice on the matters in point.

4171. Those are often cases in which the President does not feel able to decide on the information before him, and desires more information to be supplied either by the Lighthouse Authorities or by the Advisory Committee?—Yes. I have just referred only to the lighthouses; of course, that refers to all new works.

4172. I was coming to that. There are three items which come under the head of new works—construction of buildings in connection with lighthouses, new buoy or light stores, and new lighthouse tenders—that do not seem to depend upon navigational considerations?—No, except as regards, sometimes, lighthouse tenders, as to whether the class of vessel proposed to be built is considered too extravagant; I have had to give my opinion on one case. There was a modification on that occasion in the cost of the vessel eventually.

4173. Questions involved in connection with those heads are rather questions of expenditure?—Yes, quite so.

4174. Than nautical questions, properly speaking?—Yes; of course, as regards lighthouse tenders, in that particular case which I referred to, the old vessel was reported unsuitable for her work, and that, of course, was a nautical question.

As to maintenance of seamarks.

4175. Next, as to works of maintenance?—The works of maintenance are those which are generally submitted to the Board of Trade annually by the three Lighthouse Authorities. Long lists are sent in of works that they propose to carry out in the ensuing year, and I criticise them; that is to say, I look at them carefully, and unless there is anything very special in the shape of considerable expenditure on any particular work, I naturally am disposed to pass them. I cannot criticise very deeply matters such as the reconstruction of small works, the painting of buoys, the painting and repairs to lighthouses, and so on. Those are items which must be left to the Lighthouse Authorities who have before them the requirements of the services in all these petty details, and therefore, as I say, unless there be some very large expenditure, I do not seek for further information before passing them.

4176. Do the Lighthouse Authorities submit proposals for maintenance to the Board of Trade with a reasoned explanation?—Yes, if there is anything special they give a full detailed account of why they are required, or if they do not give sufficient we ask for it. There may be cases which come before the Board of Trade in that way when they ask for sanction for certain works, and they give the full details of how they are to be carried out, but the cost, as you can understand, is a matter that I am not quite in a position to criticise, as it depends on contractors' tenders, the cost of materials, and so on. That must be dealt with by the Lighthouse Authorities themselves and their experts. There are cases, of course, in which the estimates have been sometimes too low, and they have referred again to the Board of Trade for their sanction to the expenditure of a greater sum than that originally put down in the estimates, but that is not very frequent. One can quite appreciate that in lighthouse works, where the weather has so much to do with a good many of the works that are carried out, that it is not always possible to give an absolutely accurate estimate as to the actual cost. They may find that bad weather has prevented them landing, for instance, on some of these lighthouses, and so on; that there has been a great deal of delay, and that the work has cost more. Or in the case of lightvessels coming in for repairs, when they have opened them out they find a great deal more work to be done than was anticipated—dry rot, and so on, has taken place.

4177. Where the cost has exceeded the estimate I presume it is the case that the Lighthouse Authorities are always expected to give an explanation?—Oh, yes, they do, and they give very full, detailed explanations, sending in the reports by the engineers and shipwrights, and so on.

And as to experiments.

4178. Lastly, as to experiments, what are your duties in connection with those?—Experiments come before me to advise on as to the desirability of sanctioning the expenditure in connection with them. There have been cases where the expenditure has been large, and it has been thought desirable to put them down in the form of new works, such as, for instance, the experiments where large sums are involved. We have had before us the cost of installation and experiments with submarine signalling apparatus, and this has been discussed with the Advisory Committee. There are other smaller cases which can be looked at simply as to the desirability of the Lighthouse Authorities keeping themselves up-to-date by utilising all the information and knowledge gained by the advance of science and engineering improvements.

4179. Here again, I suppose, in connection with any suggested experiments the Trinity House would give its full reasons for desiring to make the experiments?—They do; they all give them.

4180. You would add your observations to theirs, and before such experiments were sanctioned the President of the Board of Trade would have the full case before him?—Yes; for instance, when some of these requests for experiments come before the Board of Trade I may know that something of the same class has been tried by one of the other Lighthouse Authorities, and instead of the Board of Trade sanctioning at once we refer them to the other Lighthouse Authority to see whether they cannot have all the information they require from the other Authority.

4181. The effect of treating such experiments as new works is to bring them to the notice of the Advisory Committee?—Yes; sometimes it may not be a very large expenditure in experiments, but a very large expense subsequently in the works which would have to be carried out, or probably carried out as a result of those experiments.

4182. Do you initiate suggestions, or do you only advise on points submitted to you?—No, I do not initiate suggestions.

4183. You do not regard that as part of your duty?—No.

General Lighthouse Authorities: Efficiency and economy of.

4184. Have you formed any opinion as to the general efficiency of the Lighthouse Authorities as administrative bodies?—As far as my experience has gone, and as regards my duties, I have always found that their suggestions were very practical. Sometimes they may take a wider view of things, and perhaps consider a larger expense necessary than I might think desirable, but bearing in mind that they have to provide the best of everything to ensure the absolute reliability of their lights and works, it necessarily means that a great expense has to be incurred; but I have always found them very reasonable.

4185. When you use the phrase "larger expense than you might have considered desirable," are you referring to new works or to maintenance?—Well, more to new works. I do not know that I should say as far as I have seen, that there has been any great extravagance in their estimates as regards maintenance.

4186. You think they are reasonably economical?—In view of the importance of the maintenance of the lights in the highest state of efficiency.

4187. When you speak of large expenditure on new works you do not mean us to infer that the expenditure on any given new work is greater than it should be?—No.

4188. But that the total expenditure on new works suggested by the Lighthouse Authorities in any one year has sometimes, in your opinion, been larger than it need have been?—No; I think I should qualify that by saying that there are cases where they may have suggested a lighthouse, where I have thought perhaps that a less costly installation might answer the purpose. We have had a case before us quite lately, and I may say that Trinity House bore out the view I had at the time—in fact, we have had two or three cases—and eventually a less expensive installation has been established. But I think they have done it with the best intentions and with the desire of providing the best for the service, and I dare say they would pro-

bably still hold to their view that they thought the original estimate and proposal the most suitable.

4189. Are you of opinion that our coasts are, on the whole, well lighted?—Yes, I think they are. You can fully appreciate that many of these lights were established very many years ago; some of them were established 100 years ago, although I do not say there have not been slight improvements in them; but still, they require from time to time to be brought up to date, and to do that they have to alter the character of lights, and to spend perhaps some thousands of pounds on putting some new type of illuminating apparatus into the towers. This is being done by all the Authorities from time to time; they put in one or two each year in the estimates, so as to gradually keep their lights up to the requirements of the modern development of traffic, and also in connection with the improvements that take place in the type of vessels now navigating at a different rate of speed much closer to the coast.

4190. I take it then to be your opinion that the coast is, on the whole, well lighted, but that there is still room for improvement, and that the Lighthouse Authorities do not show themselves backward in desiring to introduce improvements?—Yes; quite so.

4191. In fact, from what you have already told us, you think that in some instances they are rather too anxious to go ahead and spend money?—Well, it is a fault on the right side, I think, as far as their duties are concerned, because they are kept in check, you see, and therefore it is an advantage to have them desirous to bring themselves up to date. I may mention another point in that connection, and that is, when they adopt improvements which are productive of considerable economy in some of their works, some of their own officials have designed improvements which are certainly economical, like the Trinity House, in the incandescent oil, for instance, where very large economies have been effected by the introduction of this system—I think they are always desirous of doing things economically in that way, to bring in anything that will improve the lights, and at the same time lessen the cost of the works.

4192. (*Mr. Ennis.*) May I ask what length of time have you occupied the position of Adviser on Navigation to the Board of Trade?—Six and a half years now; October, 1900, was the date of my appointment.

Advisory Committee:

4192a. Was the Advisory Committee in existence at that time?—Yes, it had been in existence one year.

4193. Then you are not in a position to compare the condition of affairs existing prior to the appointment of the Advisory Committee with the condition existing afterwards?—No.

4194. Taking the Advisory Committee's work as a whole, you are of course aware that they have no statutory power to enforce any decisions they may arrive at, but still I take it you will agree that their decisions have a very large weight and have been largely acted upon?—They do carry weight, doubtless, and have been acted upon.

4195. You, I take it, will also agree that the lighting of the coasts of the United Kingdom, in view of the maritime superiority of this country over all others, should be at least equally efficient in comparison with the lighting of the coasts of any foreign power?—Oh, certainly.

Tendency of, to consider economy rather than efficiency.

4196. Do you consider, taking the general tendency of the Advisory Committee's operation as a whole, that the tendency is towards a high state of efficiency, or, on the other hand, that they act rather as a brake upon expenditure?—I think that it must be recognised that they do put a great deal of importance on the question of the reduction of expenditure. Naturally they are the body who have to pay the cost, and in some cases, I think, they may be inclined to put that before the question of what may be considered efficient.

4197. Mr. Pelham has handed in a list of lighthouse works objected to by the Advisory Committee, and also a list of works recommended by the Advisory Committee; I presume you are conversant with those returns?—Yes.

4198. And the list of works recommended by the Committee covers about half a page; the list of works objected to covers several pages?—Yes.

4199. And, furthermore, in the list of works recommended by the Committee, I see the improvement of the light on Rathlin; this appears to have been recommended by the Advisory Committee, but when the Commissioners of Irish Lights submitted an estimate of £25,000, the Advisory Committee considered the expenditure too large, and the application was dropped?—Yes, that was so.

Commander G. C. Frederick, R.N.

19 Mar. 1907.

4200. In fact, these works recommended by the Advisory Committee are, taking them as a whole, works of small cost; they do not seem to have recommended any work, the installation of which involved a large capital expenditure?—The expenditure on Mizen Head was one; I do not know whether that is mentioned in the list.

Mizen Head:

4201. Fog-signal £7,500?—Well that was a fairly large sum.

Disagreement as to establishment of light and fog-signal at,

4202. I intended to ask the question later on, but as we are now dealing with Mizen Head, is it true that the Commissioners of Irish Lights—it is stated here they first objected to the fog-signal at Mizen Head—is it true that the attitude taken by the Commissioners of Irish Lights was that, if the fog-signal were erected in the locality, it should be accompanied by a light?—The Irish Lights Commissioners did consider so.

4203. And that light has not been sanctioned?—No.

4204. The Advisory Committee and Trinity House did not approve?—No.

4205. And therefore these bodies, not approving, it would not come before you?—It did come before me; I had the question before me, and I was not in favour of the light there.

4206. Were you in favour of the fog-signal?—I was not greatly in favour of the fog-signal.

4207. When you speak of recommendations sent in by the Lighthouse Authorities being in themselves desirable, but the question of cost having to be looked into, may I ask if there is any written or unwritten law as to the amount of money that should be expended on new works each year by the General Lighthouse Authorities as a whole or by the individual Authorities; I mean, in arriving at your estimate as to whether a desirable expenditure should be incurred this year, or postponed to a future date; have you any fixed sum before you that should not be exceeded in that current year?—I am hardly expected to criticise the amount to be spent; in my advice I very often state that I think a certain work should be carried out if the funds are available, and it is desirable to expend so much money. I do not advise as to the amount of money that should be spent in any given year, or suggest it is being overrun; I can only say, perhaps I may refer to the fact, that very large works are being undertaken in that same year, and that the matter is not urgent and might be deferred, but beyond that I am not asked to advise or to make any reference to the cost of the actual works during any one year to the President.

Nautical Adviser to Board of Trade: Duties of, as regards expenditure.

4208. Are you aware if applications have been made with regard to lighting of the County Down coast, because evidence has been tendered here on that subject, and I should like to hear your views on that, as to whether applications made by local people with regard to insufficient lighting of the coast of County Down were in your opinion based upon reasonable grounds?—There have been applications—well, a number—one application has been received from and a great deal of correspondence has taken place with Mr. S. Lawther; he has written very frequently to the Board of Trade on the subject, but he has been basing his evidence, I think, as to the necessity for the lighting on perhaps erroneous ideas as to the number of wrecks that have taken place on that particular spot. I might refer to that perhaps, if I may.

County Down: Erroneous ideas as to causes of wrecks on coast of,

4209. Pardon me for interrupting you, but may I ask if the wreck charts contained in this abstract were prepared by you?—No, they are prepared by the Marine Department of the Board of Trade. I may add that some year or more ago—I can tell you the exact date; last April, just a year ago—Mr. Lawther asked the Board of Trade for a return of the number of wrecks that had taken place on the coast of the co. Down during the last 10 years, and the Marine Department gave him a list of 179 wrecks that had occurred there; apparently Mr. Lawther was under the impression that all those wrecks might have been due to faulty lighting; that was the original suggestion on his part which necessitated the improvement of the lighting on the coast, but on analysing the number

Commander G. C. Frederick, R.N.

19 Mar. 1907.

of wrecks that have occurred there—these 179 wrecks—I summarised them as follows. I brought a list in case you might ask me a question upon it.

4210. I think it is most interesting?—Of these 179 wrecks, 22 were vessels which dragged or parted their moorings when at anchor or alongside quays; 23 were vessels that were inside Lough Strangford; 43 casualties occurred while vessels were entering or leaving harbour, beating in and out or steaming in and out, and getting on shore; and 27 occurred during daylight and in clear weather. Well, that is 115 out of the 179; of the remainder, a few were due to mishaps to sails or steering gear, and a great number occurred during thick fog or hazy weather, when land and lights were obscured. I am quite prepared to admit that even during the foggy weather some of those vessels may have been out of their reckoning, by not making sufficient allowance for the currents, but as far as the lighting of the coast was concerned, I could not say that but very few of these casualties were due to the want of more lights.

Proportion of wrecks due to insufficient lighting.

4211. But still you think that a small proportion of them might be due to insufficient lighting on the coast?—A small proportion. I may say that I went through the list most carefully with all the returns, and pencilled against them what was the cause of the casualties. Of course, the first question that cropped up was in connection with the lighting of the coast, and from that list of wrecks I found that five, I think, had gone on shore just inside Belfast Lough, at a place called the South Briggs Reef, which has subsequently been lighted by a gas buoy, and I do not think that any casualties have occurred there since. So, of course, there is one case in which the improvement has taken place. There were only, I think, three wrecks out of the whole number that had gone on shore near the entrance to Lough Strangford which might have been averted if a light had been in position. As to the question which, I believe, Mr. Lawther puts great stress on, the insufficient knowledge of the tides—the tidal currents on the coast—that did not arise at the time, because the question had only been on the question of lighting. Since then he has added to his suggestions by saying that it was desirable that, in addition to lights, it was necessary to have better charts, or rather better information on the charts, regarding the tidal information, and he has been informed that that, of course, was a question for the Admiralty; that they had the production of the charts and the issuing of the charts.

Issue of wreck charts of coast advocated.

4212. The Admiralty are the only people who issue official charts?—Yes; we have nothing to do with that. The other question—I daresay it is coming before you—that he has raised with the Board of Trade is that of issuing a wreck chart to all vessels, showing the number of wrecks that have taken place on that coast, as a warning to them to take more care in navigating along the coast in thick weather; but that, again, is not a question for the Board of Trade. They do not issue charts or instruct ships to provide themselves with such a chart, and he has been informed of that accordingly, and at the same time warning him that the chart which he proposes should be issued, showing 179 wrecks, would be hardly a fair one on which to base his statements as to the immense number of wrecks that have occurred which might be considered due to the tidal currents; that was rather his suggestion.

4213. Obviously, I take it that such a chart as suggested would not convey any accurate information, because the number of wrecks on a coast will largely depend on the amount of traffic along the coast?—Yes, but, of course, one does not wish to throw cold water on the attempts of any party to bring before the authorities any suggestions. I may say we welcome any suggestions from outsiders, but one is desirous that it shall be based on some reliable information.

Light and fog-signal advocated for Strangford Lough.

4214. *(Chairman.)* Might I just ask, before you leave this subject of the coast of county Down—you have mentioned lights; you said nothing about fog-signals—do you think that there might be more fog-signals on that coast with advantage?—I do think that there might be an improvement in one position. I am quite in agreement with the idea that there might be some light in the vicinity of the entrance to Lough Strangford, and not only a light, but some fog-signal. I, perhaps, am not prepared to specify quite the class, but, generally speaking, I think that probably a lighted gas buoy, or something of that description, just outside all the dangers, or even a light and fog-signal at Ballyquintin Point might be advantageous. The only wrecks which have taken place on that coast which might have been averted if additional lights had been in position are at that particular part. Many of these wrecks have taken place within a short distance of the South Rock Lightvessel; and there is a very good fog-signal and a very good light there. I should think a very large proportion of these wrecks have taken place within two miles of this lightvessel, and therefore it can hardly be said it is because the coast is insufficiently lighted when the weather has been so thick that they have not been able to see the light. I think also a great many of the casualties are due to the lead not being used. In thick weather advantage has not been taken to see what water they were in, and in many cases they could easily have kept off the coast if they had. Before you turn to another subject, with regard to the lighting of the coast of the county Down, of course, we have referred this correspondence to the Commissioners of Irish Lights, and asked them to consider the matter. It was even spoken of at the last Advisory Committee meeting, and only yesterday we received a reply from the Irish Lights Commissioners that they were considering the whole question and looking into the matter of the additional lights and fog-signals that might be necessary, and I presume we shall have it before us in the next year's estimates.

Fog-signals.

4215. *(Mr. Ennis.)* I intended to put to you questions on the fog-signals at County Down when dealing with other fog-signals; as we have been touching on fog-signals, I will now ask this question: When you consider the range of coast lying between the Tuskar Lighthouse and the Codling Lightvessel—a range of coast nearly 100 miles long—a coast with a chain of sandbanks running along and a number of lightvessels, the Lucifer, Blackwater, North and South Arklow—are you aware that none of these lightvessels I have specified are provided with anything more efficient in the nature of a fog-signal than a fog-gong?—I could not say offhand what the fog-signals at those places were.

Inefficiency of fog-gongs.

4216. The installation on board of all these vessels is a fog-gong, and I take it a fog-gong is with an onshore wind, in that position, practically useless for the purpose of warning vessels?—Of course, one knows one cannot hear them very far. They have not been fitted on any of our lightvessels in recent times.

4217. You would not consider them modern. You have spoken of gradually installing lights of a better type in the towers and keeping up to modern requirements; you instal so many lights each year with a view of gradually bringing the entire system into a highly efficient condition. But science does not stand still; science is making progress, and the question I should like to ask is, is the pace at which we are changing our lighting arrangements sufficient to keep pace with the strides that science is making?—Well, I think that with regard to the coast between the Tuskar and Codling Lightvessel, as far as I am aware, there have been no complaints about these fog-signals. I cannot call to mind, during the six years I have been at the Board of Trade, that there has been any application received at the Board of Trade, or any complaint made that these fog-signals were inefficient. Whether the Lighthouse Authorities have received complaints on that score I do not know, but I should think the probability is that if they had had any pressing complaint, and no notice had been taken of it, that we should have had it at the Board of Trade subsequently.

No complaints of signals from Tuskar to Codling.

4218. Of course, the chain of lights that I speak of would be lights that would more intimately affect coasting trade than the large oversea trade?—Yes.

4219. But still the coasting trade is important?—Well, we do get a great deal of correspondence in connection with the coasting trade.

Submarine bell fog-signals.

4220. Speaking of the question of efficiency, and with regard to the question our Chairman asked as to the lighting of the coasts of the United Kingdom, and your own answer to a prior question of mine, is it not a fact that, especially in experimental work, we are not level with some other countries? With regard to submarine bells, for example, it is stated here, in these works objected to by the Advisory Committee: Submarine signalling £1,000. That was objected to by the Advisory Committee on the ground that it should

not be paid out of the light dues, and Trinity House bowed to the decision of the Advisory Committee and withdrew the proposal?—Yes.

Established in Canada and United States.

4221. Are you aware that for more than two years past submarine bells have not only been experimented with, but have been in actual use on the Canadian and American coasts?—Yes.

4222. I do not know if you have seen a report of Colonel Anderson, dated January, 1905, on the lighting of the Canadian coasts and the St. Lawrence?—No, I have not seen it.

Lightvessel:

4223. But in that report he refers to a modern lightship, such as are installed off Anticosti, I think, and the Lurcher shoal in the Bay of Fundy. He describes these lightvessels as being fitted with the most perfect system of electric lights, occulting very satisfactorily, with submarine bells and with wireless installations. Would not, in your opinion, a lightship of that type be superior to anything that we have on these coasts at the present moment?—With regard to the electric lighting of the lightvessels, I think it better to have oil; I think the oil that we use is more suitable. The electric light is not so useful in penetrating through a fog, and is not the best illuminant nowadays, and is consequently not being adopted. The French are beginning to give them up too in some cases, and I think, where the lights are at a very low altitude, such as they would be in lightvessels—only 36 or 40 feet above the sea—we do not require these intensely powerful lights that you have at higher elevations. When a light is 150 feet above the sea, and can be seen at a considerable distance the very powerful electric or oil lights must be of more importance, but when you have these lights that are only visible 10 or 12 miles at the outside, it is not necessary to have lights of such intensely powerful character, and I think that the latest type of lightvessel's lights now established in England answer the purpose admirably, and are very efficient.

Electric light deprecated for,

Submarine bell fog-signals: Shipping community disagree as to advantages of,

4224. You would agree, I take it, that the experiments with the submarine bell, so far as they have been conducted on this side, go to show the great utility of that invention?—Yes, I do think so, but you must bear in mind that shipmasters are not all in favour of them. I do not know whether you know that the Allan Line have had them fitted, and they are having them taken out again. They go to Canada, and they are taking them out of their vessels. I do not think that I am in a position to state all that took place at the last Advisory Committee meeting, because, as your Chairman knows, it is confidential. I do not know whether the Commission is aware that opinions are very much divided amongst shipowners and shipmasters as to the advisability of establishing the submarine signalling apparatus. There are not a large number of vessels that have yet been fitted, comparatively speaking—taking the enormous traffic there is. No doubt the large liners—where cost is not perhaps taken so much into consideration as in the smaller vessels—that class of vessel would be more quickly furnished with these sound signals, but with regard to the tramp steamers and the smaller class of vessels, I think the probability is that it will be a very long time before they will take it in hand and fit their vessels, and until their vessels are fitted with the apparatus they will not receive the benefit from apparatus or lightvessels. I think the probability is that if they were generally fitted on lightvessels, most of the tramp lines would say that they were not particularly interested in the matter.

Advocated.

4225. Do you not consider that, if efficient submarine signals were provided by the Lighting Authorities on the coast, that Lloyd's, the underwriters, might be trusted to fix their rates for insurance to make it compulsory on these steamers to fix the appliances?—Yes, but I do not wish in any way to say that I do not think the system is a good one. I do think it is a far superior way of signalling, and more reliable than the ordinary sound signals that we have.

4226. Of course, you are aware of the difficulties with regard to areas of silence in the case of sound signals, which seem to be an insurmountable difficulty?—Yes, I have experienced it myself; I have been present at the experiments and have tested it.

4227. I have only one other question to ask, and it is with regard to what you said as to lights. I quite grasp what you say with regard to lights on board lightships at very low elevation, and to lights in a large number of positions, but for a big leading light—for a light such as the Fastnet, say, or a light for ships coming in from the sea—is it not desirable that the light should be seen at as great a distance as possible?—Certainly.

United Kingdom: Efficiency of lighting of coasts of,

4228. And though the electric light does not penetrate a fog, given candle power for candle power, as efficiently as an oil light, is it not a fact that improvements have recently been made by introducing, I think, a red beam into electric light, which enables it to carry further, and that the candle power which can be obtained is so enormously greater than anything which is possible with oil light, that electric lights can be installed which carry further. We have had the evidence of a witness here as to the lights at Ushant and the Lizard being seen at the same time?—I think as regards the majority of lights round our coast, taking the most salient points, such as the Fastnet, the Tuskar, and the Lizard, and these outstanding lights, that the type we have now is amply sufficient for safeguarding navigation, and the power of the light is very great; that the distance they can be seen—even at the farthest range, the light is very powerful in ordinary weather; and the penetrative power in foggy weather is so good that I think it would be better than the electric light. As far as I have studied the subject, I do not think those lights could be improved upon.

Nautical Adviser to Board of Trade: Duties of, with regard to Lighthouse Authorities.

4229. (*Admiral Henderson.*) According to your statement and to Mr. Pelham's evidence, you are the ultimate nautical authority over the lighthouse administration in the United Kingdom in all its branches?—I presume I may be considered so; yes.

4230. Now this authority extends even to engineering, scientific and optical questions?—Well, I suppose it may, in one sense; at the same time, I am not in the position, nor do I pretend to criticise the optical apparatus that is employed, knowing that the Lighthouse Authorities have their expert advisers; that the Trinity House have Lord Rayleigh, who is one of the greatest optical experts in the kingdom; and I presume you quite appreciate I should not criticise anything of his, and say that I disagreed with him.

4231. In the course of your duties, you have even to go into the field of finance?—To a very limited extent, yes.

4232. As it is affected by these questions, I mean?—Yes.

4233. Do you not think that the expert knowledge of the various Lighthouse Authorities is sufficient for their purposes?—Yes, I should think it would be.

4234. Now, have you anything to do with the administrative efficiency of the three Lighthouse Boards?—No.

4235. Who does this at the Board of Trade?—I presume it rests with the Assistant Secretary and the President.

4236. And is this an expert, or is it purely a paper control?—A great deal of it is reasonably expert control, but in some details it must be only limited to agreeing with their propositions. For instance, as I referred to in the matter of maintenance especially, the Board of Trade are not in a position to go into the cost in detail of these small works of maintenance—cost of trifling repairs, for instance, or cost of paint, and all the small details, which must be left to the Lighthouse Authorities.

4237. Is there any expert administrative advice in the Financial Department?—I do not know that I should be able to give an answer to that; I think I should rather prefer it to be put to the Financial Department itself.

General Lighthouse Authorities: Efficiency of,

4238. These Boards have all different systems for carrying on what is identically the same work. Has it occurred to you, or, as far as you know, to anyone at the Board of Trade, to inquire as to which is the best, or to think that some mean of the three would be better?—That seems to me rather an administrative question that I ought not to express an opinion upon.

4239. You have a great deal to do with the Boards; you must have some idea of their executive efficiency?—Yes.

4240. I want to know whether you have formed any idea?—The efficiency of the Lighthouse Authorities seems to me generally exercised to good advantage. I think that though the constitution of the various

Commander G. C. Frederick, R.N.

19 Mar. 1907.

Authorities is very varied, yet in their several ways they arrive at very good conclusions, and they are very well advised, especially you may say in regard to the Scotch Lights, where there are no nautical experts among the Commissioners.

4241. Which in your own mind is the most efficient?—I think it lies between the Trinity House and the Northern Lights Commissioners. The Trinity House carry on their work very admirably, and so do the Northern Lights Commissioners. I do not say the Irish Lights do not, but I think the most efficient would be those two.

4242. I am speaking, of course, in the administrative sense, in the economically efficient sense?—My own opinion would be that I think the Scotch are the most economically efficient in that way.

4243. (*Colonel Herbert.*) Might I put it in this way? Which does Captain Frederick think does their work in the most businesslike manner?—I feel inclined to think that the Scotch do—the Northern Lights Commissioners.

4244. (*Admiral Henderson.*) Take, for instance, the fact that the governing bodies of the Scotch and Irish Boards are unpaid, while that of the Trinity House receives £7,000 a year for doing the same work; is not this an extraordinary anomaly?—Not altogether. The duties that the two Boards do are very different. For instance, in the case of the Trinity House—I only give you my views, because naturally you have had the Trinity House and the Northern Lights Commissioners before you, as to what their duties are—but with the Trinity House the Elder Brethren go out in the tenders, they see that the buoys are in their positions, they check their positions, and they do a great deal of practical work in the field, or afloat I might more properly say, which is not done by the Northern Lights Commissioners. The Northern Lights Commissioners have very many fewer buoys, and they have not got the same checking of banks and soundings, and therefore the captains of their lighthouse tenders do carry out these duties, and are able to do it. But, for instance, with the Trinity House, where they have a great number of banks on the east coast of England, the estuary of the Thames, and various places, the Elder Brethren go afloat; they see the soundings carried on, they check the positions of the banks, the positions of the buoys, and do a great deal of work afloat. They are constantly going afloat.

Difference in duties of,

4245. (*Mr. Ennis.*) Do you know that a committee of the Irish Lights Board has been about a month afloat each year doing similar work?—I do not know how long, but they always spend a certain amount of time afloat visiting the lights; but in the case of the Trinity House they do more than that, you see.

4246. (*Admiral Henderson.*) But is not that a supererogatory duty, the fact of the Elder Brethren of the Trinity House actually fixing the position of a buoy; you cannot rely on the position of a buoy fixed once a year, it must be done continually and constantly, and it must be verified after every gale of wind?—Oh, I think they are constantly going out, the Elder Brethren of the Trinity House.

4247. I do not think that is the evidence we have had, it is only done when they make their annual inspection by the Elder Brethren?—Oh, I do not think that could have been given in evidence, but I should not have agreed with it if I had heard it.

(*Chairman.*) I should not have thought that that was the evidence before us.

(*Admiral Henderson.*) However, we will look it up.

(*Chairman.*) We can get an authoritative statement on this subject from Sir George Vyvyan.

4248. (*Admiral Henderson.*) I would say that in your opinion, of course, to be efficient, inspection of buoys must be constant, so to speak?—Yes.

Nautical Adviser to Board of Trade: Time of, occupied by Lighthouse work.

4249. What staff have you got to assist you in your work?—Practically none, because I am only an adviser, and I simply have the papers submitted to me to minute or report upon.

4250. Is the time of none of your staff taken up in connection with lighthouses?—Of course, there are different clerks who deal with some of the questions, and the papers are referred to me, they come to me through the usual routine—the Board of Trade papers.

4251. May I ask, having regard to the amount of work, whether all your time is taken up in the control that you exercise?—Well, the whole of my time is taken up in the different branches. It would be difficult to say how much is for lighthouse duties. Some years—at different parts of the year—I get more questions than others. When the estimates are not coming on for some time I may go for days without having a question of lights referred to me at all.

General Lighthouse Authorities: Relation of, to Board of Trade.

4252. I want to know if it has occurred to you that the existing system of devolution, by which the Trinity House more and more controls the proposals of the Scotch and Irish Boards, and is itself, as well as these Boards, completely under the control of the Board of Trade, necessarily tends to take responsibility off their shoulders, and must involve much circumlocution and delay?—I do not know that I should say that there has been very much delay. Of course, delay—if you can use the word delay—is when the questions have to come before the Board of Trade, and then, after being considered by them, to go before the Advisory Committee, and then be considered afterwards; a good deal of time is thus taken up. I think that is inseparable from all questions of that description where papers have to be referred from one department to another.

4253. Yes but would it not be much more simple, and probably more efficient, if there were one central administration?—I think if you had a central administration you would require to have someone to go round and inspect locally.

4254. You must have inspectors, of course?—Yes, it might be done more rapidly, I grant it.

4255. And I would remark that though the result of this control may be ultimately efficient, especially as to expenditure for new works, there is no really executive administrative control. Each Board really practically goes its own way?—You see, the Board of Trade never initiates new works; it is left for the Lighthouse Authorities to initiate all new works.

4256. On the ultimate control the Lighthouse Boards cannot spend a £5 note without the sanction of the Board of Trade?—No.

4257. That tendency is to relieve them of responsibility. It must inevitably, in carrying out work, relieve them from responsibility, and the question I am driving at is whether the Board of Trade control, particularly as far as the executive administration is concerned, really is efficient, and whether the result is that each Board goes its own way?—It might be possible from the fact of their considering that a certain amount of control was exercised by the Board of Trade, that they might not be so careful in drawing up their estimates, but I do not know that it necessarily follows that it is the case.

4258. You see that each Board has an entirely different system of management?—Yes.

Advantage of different methods of,

4259. One must be better than the others?—Perhaps it is an advantage that there should be different methods, because they can learn from each other to a certain extent.

4260. I am afraid they do not?—They are not bound to one line only.

Advisory Committee: Value of,

4261. I want to ask you what is your opinion of the value of the Advisory Committee?—I think the Advisory Committee is very useful in discussing the questions of new works from the point of view of the shipowners, so that when works may be proposed by a Lighthouse Authority if they could bring suggestions from their shipmasters that a certain light in another position would be more desirable, or a certain class of lights was necessary, they may be of great advantage to the Board of Trade in coming to a decision, and they may be able to put before the Board of Trade the views of the shipping interest. They may be a very useful body in that respect, an advisory body on the practical lighting of the coasts, because they represent the large shipping centres where they can be in touch with the shipmasters.

Central Lighthouse Authority: Opinion as to advisability of,

4262. Are you of opinion that it would be more satisfactory if they were directly represented on a Governmental body or on a central Governmental body; and I mean also not only that they should be represented, but that the underwriters and the masters should be represented as well?—The difficulty of having so many representatives of different bodies on a board is rather great when it is quite possible for

any central board to obtain the views of all these people without having them represented on the board. For instance, if there were any question of a light in a certain position on the coast, it would be practicable to write the various shipping people and find out from them what their views were, those who are using the lights that is to say, and looking at it from a practical navigational point of view, apart from the financial.

4263. But if the Masters' Associations were represented these views would be condensed and ready?—They would have to get the information, any way.

4264. But they would know it; it would come off their own bats, so to speak?—I was really thinking of it from the point of view as to the advisability of having a number of representatives of such different bodies on a central board. Of course that would imply that you are having a central authority over all the Lighthouse Authorities.

4265. Yes?—And under the present conditions.

4266. No, that does not necessarily follow, because you would have a different system of devolution?—I think that would have a great bearing on the question.

4267. I mean, supposing that you had a central governing body, we will call it, or a central consultative body; a small executive board, and a proper devolution and decentralisation of the system round the coasts, do you not think that would be more efficient for the purpose?—I am not prepared to say it would be more efficient; I think it might, in some ways, be more convenient.

4268. Would you think it would tend to economy?—It might reduce the staff expenses, but I do not know whether it would reduce the cost of the works themselves.

4269. No, that I do not mean; I am speaking of administrative cost. I am not speaking of the cost of new works at all?—I do not know that it would, because at present, as you have said, the Northern Lights Commissioners and the Irish Lights Commissioners are not paid for their services, therefore, in that way you get gratuitous services under the present conditions, and if you had a central department you would have, I presume, paid officials, if they had to give their time to it.

4270. Yes, you would have to have a certain number of paid officials, but you have got them now, nearly all?—Under the different Lighthouse Authorities, you mean; bringing them in and utilising them in that way?

4271. Yes, some form of that sort. Of course, I mean a transformation of the whole existing system?—Yes; I have not really given it sufficient thought to give a reasonable answer.

4272. You have not thought it out?—No, I have not thought it out.

elligs: spection of, Board of ade and nity use.

4273. You have mentioned in your evidence that you visited a locality; where was the locality and when was it?—Last year, in April I went down to the Skelligs, on the south-west coast of Ireland. The Irish Lights Commissioners had proposed a new lighthouse should be built, and I was not quite in favour of the large expenditure of money required, as there was a light in existence there which I thought might be utilised, and the Trinity House agreed with that view. The President requested us to go down as a committee and inspect the place with the Irish Lights Commissioners, which we did; as the result of that inspection we recommended certain improvements which prevented the large expenditure which had been first asked for. I only give that as a case in point.

4274. It is not often that you have had to do it?—No, only once or twice.

thouses: struction

4275. (*Sir Frank Adam.*) You mentioned, in regard to general works under your supervision, the question of construction of buildings in connection with the lighthouses, but you have told us that in all matters of minor detail connected with the cost of works, you usually accept the figures given you by the Lighthouse Authorities, and you do not go into details?—Yes.

4276. But might I ask you in regard to the construction of buildings, which sometimes figure at a very large sum in the estimates, if you include these among the minor works of which you accept the costs put before you by the Lighthouse Authorities, or do you check these in any way?—I practically accept it, but in criticising it one compares with the cost of works or buildings by other authorities, such as the Admiralty, in similar positions, what they pay for their buildings. That is one of the questions that your Chairman said I had not really to give an opinion upon; I simply say that these works are necessary because they must have accommodation for the staff. That is rather the line I take up; they must have the staff at the lighthouses, and the staff requires so much accommodation.

Commander G. C. Frederick, R.N.

19 Mar. 1907.

4277. May I take it, that, so far as you can form an opinion, the construction of those works in different localities has been carried out generally fairly economically?—Well, I think economically as regards the works and future maintenance. For instance, at these outlying and exposed positions the buildings that are erected may seem very expensive, but then it means that those buildings require very little repair subsequently. You have put up a substantial structure which costs very little afterwards in maintenance, and of course that means economy in the end. But as regards the specifications that they issue to the contractors who are asked to tender, I take it that the fact of their calling for tenders at all and taking the lowest tender shows that they have got the cheapest that they could get in the circumstances.

Cost of construction of, not extravagant.

4278. We have had evidence before us of a general nature complaining of the unnecessarily great cost of certain lighthouses and lightships. I wanted to ask you an opinion on one in particular that will exemplify the others, and that is the lighthouse at Beachy Head. It was originally on the cliff, and it was afterwards made a rock lighthouse below the cliff?—Yes.

4279. It was put before us, not with any evidence in detail, but just as a general conclusion arrived at by a nautical authority or the representative of a nautical authority, that that new lighthouse on the rock cost a great deal more than it ought to have cost. Have you any knowledge of that?—No; I should say it was constructed, as far as I can understand, with considerable economy. It was constructed by the Trinity House themselves. They were going to put it out to contract, if I remember rightly, and the lowest tender received was considerably more than the Trinity House had estimated, so they took the work in hand themselves. It was an exceedingly difficult place in which to build it, and they had to send down most of the material from the top of the cliff by an aerial railway; it was carried out with complete success, and I believe that they saved, by constructing it themselves, some thousands of pounds.

4280. (*Chairman.*) That is, as compared with the lowest tender?—Yes.

4281. But I think that the evidence of the witness to whom Sir Frank Adam refers was to the effect that it should have been built on an entirely different plan?—Oh!

4282. (*Sir Frank Adam.*) It was unnecessary cost; he put it in this way, he said it cost £60,000, and a suitable house might have been erected for £20,000?—I do not know that I can give an opinion on that right off.

4283. (*Mr. Ennis.*) I think the opinion was to the effect that the position was not such an exposed one that the building required to be of such enormous strength and so well dovetailed.

(*Admiral Henderson.*) I think what the witness said was that it was constructed just the same as if it was a rock lighthouse, and he did not consider the position there necessitated that—the building of a rock lighthouse actually on the beach.

4284. (*Sir Frank Adam.*) I suppose your opinion would be with regard to such a lighthouse that though not exposed to unusually great storms—they can judge the force of the storm that happens every winter on that coast—yet it ought to be built strongly enough to resist any possible storms that may arise over a long range of years perhaps only once?—Oh, certainly.

4285. (*Chairman.*) The new lighthouse at Beachy Head was determined upon, and sanction given to the design before you became Nautical Adviser to the Board of Trade?—Yes.

4286. (*Colonel Herbert.*) Do you receive all the estimates and plans of these works before they are executed?—No.

Nautical Adviser to Board of Trade: Duties of.

4287. Have you to advise upon them?—I do not see the plans at all.

Commander G. C. Frederick, R.N.

19 Mar. 1907.

4288. That is not one of the points?—No.

4289. (*Sir Frank Adam.*) In answer to one of the Chairman's questions you said that, having given your recommendation to the President of the Board of Trade, and he having all the information before him to come to a decision with regard to a lighthouse or other work, he had to take financial and other grounds into consideration. May I ask you what you had in view in using that expression "other grounds"?—I think my idea was there that "financial" was the question of the cost of that particular class of light; "other grounds" referred to the number of works which should be carried out within that particular financial year.

4290. And whether or not preference should be given to one particular work over another that might not be quite so important?—Yes. Now, for instance, in this next year's estimates there are various items that will probably be struck out because they make too great an expenditure in the one year, and perhaps two or three or them—expensive works—may be deferred to another year.

Advisory Committee: Reason for objection of, to certain New Works.

4291. You have told us that, in your opinion, the Advisory Committee, as at present constituted, is a useful body, and looking at the returns of works that have gone before the Advisory Committee in the last five years in connection with the Scotch coasts—that is suggestions made by the Scotch Lighthouse Authorities—I find that of 24 works objected to by the Advisory Committee 16 were sanctioned by the Board of Trade?—I do not remember the numbers; I take them from you.

4292. Leaving only 8 that were either postponed or refused?—Yes, that would be the case.

4293. Have you got in your recollection why those particular works were objected to, speaking in a general way. We have got evidence before us, but I thought perhaps you might state in a general way your opinion as to why these works were objected to on the whole?—By the Advisory Committee?

4294. Yes, by the Advisory Committee. Was it chiefly on account of the cost, or was it for other expert scientific reasons?—I think their opinion was that some of them were not necessary in the interests of navigation.

4295. Then, in the cases where the Advisory Committee thought they were not necessary, and they were afterwards sanctioned by the Board of Trade, I presume the Board of Trade Authorities had evidence before them that was strong enough to overrule the opinion of the Advisory Committee?—Yes, they were satisfied that the necessity for the lights had been established.

Submarine bell fog-signals: Advocated.

4296. Referring to what you said with regard to the Allan Line having abandoned, or being about to abandon, the use of receivers for submarine bell signals, have you heard or have you received any information as to the Canadian Authorities in places where they have had them in use on their coasts or on the St. Lawrence having given them up?—No, I have not heard anything in that respect. Of course, I quite agree with the usefulness of these signals, and they would be of great assistance to vessels fitted with receivers.

Receivers for, removed from steamers of Allan Line.

4297. (*Chairman.*) Do you know on what ground the Allan Line have given them up?—No, I have not heard any details, but I understood that they thought they did not get sufficient benefit from them, or something to that effect, but I have not got the full details about it.

4298. Have they abandoned the system on those vessels which were already fitted with receivers?—Yes, they were fitted on those vessels.

4299. (*Sir Frank Adam.*) I understand, speaking of tramp steamers generally, you do not think they are likely to go to the cost of providing the apparatus necessary to make use of those signals?—I doubt if they will for some time. If there is a question of the insurance, as a Commissioner put it to me, or a question of the underwriters, of course they will be bound to do it.

4300. If the cost of insurance without apparatus were greater than the cost of establishing the apparatus?—Yes.

General Lighthouse Authorities:

4301. With regard to the constitution of the three Boards, on which you have given us some valuable opinions, and comparing the Scotch and Irish with the Trinity House, you have, of course, this distinct difference, apart from Trinity House Elder Brethren being remunerated, that they are all nautical men, whereas neither the members of the Scotch Board nor the members of the Irish Board are nautical men, or in very few cases?—There are only two on the Irish Board.

Relation of Scottish and Irish Boards to Trinity House.

4302. Well, is there not this to be remembered also in considering the difference: that to the Elder Brethren (that is, Trinity House, who are all nautical men) there at present come for their consideration, before they go on to the Board of Trade, all suggestions in regard to lighthouse work made by the Scotch Board and the Irish Board?—Yes, they all come through the Trinity House to the Board of Trade.

4303. So that, however faulty the system may be at present—I am not asking you whether you think it so or not—yet still, so far as regards the final decision at present in regard to the necessity of certain works, it really rests with a board composed of nautical men?—Yes. It is a great advantage in that way that they are criticised by the Elder Brethren, and very often a considerable amount of correspondence goes on between the different bodies before it is eventually sanctioned by the Trinity House, and it comes before the Board of Trade.

4304. And before your opinion is asked?—Yes; so that in one way, having the Trinity House as the superior authority over the others the matter is more threshed out.

One Central Lighthouse Authority: Opinion as to advisability of,

4305. But, still, I gather from what you said in answer to the question of the other Commissioners, that you do think that improvements could be made in the present system by centralisation; or, I put it in this way, that though you hesitate to say that there could be greater efficiency and greater economy, yet, just as the Advisory Committee as at present constituted is most useful, so extending that and making a central body, composed entirely of representatives of the shipping interests which pay the dues, you might have an authority who would do the work thoroughly well and give greater satisfaction generally as a representative authority?—I think that a central authority of that description would be a very suitable one, but I do not quite gather whether you propose that there would be still the powers or authorities in the different kingdoms apart from the central authority.

4306. No; what I had in view was a central authority, devolving upon the local authorities certain administrative work to do, but the whole control resting in one central authority for the United Kingdom and Ireland?—If you had the one authority in London to supersede the whole of the three Lighthouse Boards, then, of course, you would have the one body, which would have to keep in touch with all the distant places all round the kingdom, whereas at present the various Authorities in their different countries are dealing with the subjects which refer to their own particular locality; they are more in touch—I will not say more—but they are in touch with all the wants of their localities.

4307. Are you acquainted with the American method of managing the lighthouses?—No, I have not studied it.

4308. We believe that there they have a central authority, and divide the coast into sections in charge of a superintendent, with his staff?—Yes, something of that sort.

4309. Do you think anything of that sort, with a central authority in London, would answer if introduced into the United Kingdom?—Offhand I would hardly give a definite opinion, but it does not sound to me as a thing that would be so satisfactory in England. I think you want to consider the coast as a whole in all cases. Take the East Coast of England; you want to consider the whole of the East Coast of England, what lights they want on the coast, and where they are most required. You hardly require a sub-division into districts as regards the construction of new works. Of course, for maintenance and such like, that is already in existence at the Trinity House, with their different districts and superintendents round the coast. Then they do not have to look at the thing as an administrative whole; the superintendent of the district simply has under his charge certain works, which he has to see are kept up in proper order and repair.

4310. But, I suppose, in that case he would have to refer everything, before carrying it out, to the central authority?—All his representations would go to his

own central authority, and then if there was any expenditure, of course, it comes as an estimate before the Board of Trade.

4311. But in this idea which I am suggesting for your consideration, instead of coming to Trinity House, say, it would come to a newly-constituted central authority in the same way?—That could be done as far as that was concerned very easily, I should say.

Submarine bell fog-signal.

4312. (*Admiral Henderson.*) In reference to the questions that Sir Frank Adam has asked you about submarine telegraphy, it follows that any introduction of that system must be gradual, and that the two systems must be maintained until it becomes universal; the present existing system of fog-signals must be maintained?—Oh, yes.

4313. Until it is adopted generally?—Oh, certainly, it must be done.

4314. By very slow degrees?—Oh, yes.

4315. And, of course, that means an increase of expense?—Yes.

Nautical Adviser to Board of Trade: Duties of,

4316. (*Colonel Herbert.*) The questions arising out of lights only form a part, I understand, of the matters that are referred to you at the Board of Trade?—Yes.

4317. Therefore we are not to regard you as an expert at the Board of Trade for the purposes of lights, but merely general naval expert on all matters connected with shipping?—Yes.

4318. Is it a fact that a considerable part of those references which come to you in connection with lights arise from conflicts between the different Lighting Authorities?—I should not say the greater part; there are occasional questions that come before me in that respect.

4319. Cases where, for example, either the Scotch or the Irish Authority has been over-ruled by Trinity House?—Yes.

4320. And appeals to the Board of Trade?—Yes.

Trinity House control over Scotch and Irish Boards:

4321. Do you consider that there is any sound reason for keeping that controlling authority at Trinity House?—Well, I do not know that I should say that there is any sound reason for it, but I think at some times it may be very valuable, as I was saying just now.

Value of,

4322. To get a second opinion?—That you get a discussion between the Authorities, because very often discussion arises as to the class of light. For instance, the Irish Lights or the Northern Lights Commissioners may desire to put up a light of a certain type or character, and the Trinity House raises a question with them as to whether something else would not be better and more efficient, so that perhaps there may be considerable correspondence between them on the subject, and at times the Trinity House's suggestion has been agreed to as being more suitable, and at other times the Trinity House give way, and say that the suggestion of the original authority is the best, so that you have this advantage.

4323. That is, it raises discussion?—That is, it raises discussion.

4324. Do you think discussion is always a satisfactory thing in administration?—Well, I think sometimes it is useful to the Authorities to know that the subject will be discussed properly before they get sanction for it.

4325. But the Board of Trade itself cannot be a controlling authority in these matters. From what you said just now they have not got the expert opinion?—You cannot criticise all these things, there is no doubt about it, from absolutely expert opinion. For instance, as I said before, with regard to cost it was absolutely impossible for me to go into the details of the cost of a structure.

4326. Exactly; therefore the controlling authority is in a sense delegated, or rather has become so by practice, because it has not been regularly delegated?—To a large extent it must be.

4327. (*Chairman.*) Are you speaking of new works now or of maintenance?

4328. (*Colonel Herbert.*) I was speaking generally of all works?—Well, even with regard to repairs of a lightship, the shipwright reports that certain expenditure is required for repairing the vessel, that this, that, and the other has to be done, the value of the timber, and all these little details have to be gone into on which this estimate is based.

4329. (*Chairman.*) But Trinity House would have no control over that part of the duties of the other Lighthouse Authorities?—Oh, no.

Commander G. C. Frederick, R.N.

10 Mar. 1907

4330. It is entirely confined to new works?—Oh, yes.

4331. (*Colonel Herbert.*) But I understand they might raise objections to the details of new works, and that would involve questions of construction?—No; it is on principles.

4332. Only on the principles?—Only on the principles, not the details.

4333. (*Admiral Henderson.*) I think we have distinct evidence that the Trinity House have stated that they control expenditure, and that the other Boards have to send complete drawings of all new works, and that they are criticised by the Engineer of the Trinity House as to their efficiency.

4334. (*Colonel Herbert.*) That is what I understood?—The Trinity House is the statutory authority.

Nature of,

4335. (*Chairman.*) In practice the control of Trinity House in respect of other Lighthouse Authorities is entirely on the principles and is confined to new works?—Yes, they criticise whether a lightship shall have one, two, three or four flashes, and the fog-signals in the same way. For instance, they may say they do not consider that a siren is desirable, they may consider a foghorn would be more suitable, and so on; but that is not going in for what I call the actual details, that is the principle only.

4336. (*Colonel Herbert.*) Well, it is laid down that it is to be over principle, but as a matter of practice it has come to be a great deal more over the detail; at least, that is my impression.

4337. (*Chairman.*) It is confined to the position and character of the light?—Yes.

4338. Should you not say that?—I should say so; I do not think we criticise the cost.

Board of Trade control over, Lighthouse Authorities:

4339. (*Colonel Herbert.*) I do not think it is very material. I will not press the point, but the point I am on is this, that the Board of Trade cannot be the controlling authority; it has not got any expert opinion?—Are you talking about the maintenance?

Nature of,

4340. It is rather on any questions that may cause a conflict between these different Authorities?—We are the controlling authority as regards the point as to whether a lightship shall be established or not, or whether it shall be of a certain character or not, because it lies with me to advise the Board whether I think it is satisfactory or not.

4341. It has all come upon you?—And then the President has to give his final approval.

4342. Yes, but it must all come upon you; that is placing upon you, who have only this among many other functions, the invidious duty of deciding between these supposed-to-be expert Authorities?

4343. (*Chairman.*) Does not the President decide after having heard all sides of the question?—Oh, yes, certainly.

4344. He would not consider himself in practice bound to follow the advice of the expert Nautical Adviser of the Board?—No, he does not. Only the other day something of that kind occurred where I suggested a light of a certain power would be strong enough. The President thought something more powerful was necessary, and it was sanctioned accordingly.

4345. (*Colonel Herbert.*) He would probably have the opinion of the expert?—You see, it would be the experts of the different Lighthouse Authorities, or even the advice of the Advisory Committee, he would have before him. He hears the whole question thrashed out.

4346. (*Chairman.*) He is in the position of a judge; he hears counsel on all sides?—Yes.

Efficiency o

4347. (*Colonel Herbert.*) Would you say that the Board of Trade is a thoroughly efficient controlling authority in the technical matters that come before it?—I should say that it was sufficiently so.

4348. (*Admiral Henderson.*) Might I interpolate one question here? Has not the President of the Board of Trade—with all due respect to the Chairman—quite enough serious responsibility and serious business to do without bothering himself with the positions of

Commander G. C. Frederick, R.N.
19 Mar. 1907.

optical apparatus and other things connected with lighthouses?—I do not know that I am qualified to state what the duties of the President are.

4349. (*Chairman.*) That is hardly a question to put to Captain Frederick.

4350. (*Colonel Herbert.*) Another part of your references arise from differences between the Lighting Authorities and the recommendations or objections of the Advisory Committee, is not that so?—Yes, at times when there is a difference of opinion.

4351. That is a considerable part, likewise, of your duty?—Yes.

Advisory Committee: Value of,

4352. Then do you consider that that Advisory Committee exercises an important function from an administrative point of view in the management of lights?—I think they have been useful in helping the Board to form an opinion, because they have been able to bring to bear the views of the shipmasters, as I have said just now, but I think that the reason that they have been overruled in certain cases is that perhaps they had not considered the subject in all its bearings. They may think that it is not necessary to expend certain sums on certain works, and object to them, but the evidence from other sources may be sufficient to show that the money will be well expended. For instance, a lighthouse that I have in mind now, they had objected strongly for several years to its being brought up to date. It is a very, very old light, and in a very important position. They said that they thought that it was amply sufficient for the purpose, but it was thought that being in this prominent position, as suggested by another Commissioner, the light should be of the best and most up-to-date character, and it was eventually sanctioned. They objected to it because they thought that in the form it was in it was sufficiently good. It happened to be a lighthouse in a prominent position, with practically 8,000 candle power, which is a very, very small candle power indeed. It is now one of the most powerful modern lights. It was of the old fixed type at one time; now it is a flashing light. I think there are cases in which it is quite reasonable to overrule the views of the Advisory Committee. They give useful advice and suggestions, which have been carried out in certain cases.

4353. Do you consider that the views of the Advisory Committee are unduly coloured by the question of the incidence of light dues?—I think I can most easily reply to that by saying that if the cost of the light dues did not fall upon the shipowner there would not be so many objections on the part of the Advisory Committee to some of the proposals put forward by the Lighthouse Authorities.

Local light's: Consideration of complaints as to,

4354. Well, now, I will ask you with regard to local Lighting Authorities. Do differences arise between the General Lighting Authorities and the local Lighting Authorities which are referred to you—such authorities as the Mersey, and Humber, and so forth? I am not sure whether the Humber is under the Trinity House?—Under the Hull Trinity House; it has just been placed under the Humber Conservancy. Sometimes complaints are made to the Board of Trade as to local lights not being efficient, and the questions are referred to the General Lighthouse Authority of the country to which they belong for their criticisms, and it is generally found that they take the matter in hand, and have the lights put in good order, or some modification and alteration in them which will satisfy the requirements of navigation.

4355. (*Chairman.*) Have the local Lighting Authorities an appeal against any decision of the General Lighting Authorities—an appeal to the Board of Trade?—I do not think they have under the Merchant Shipping Act. At the moment I cannot recall any section.

4356. (*Colonel Herbert.*) I do not quite remember whether it is specifically laid down?—I do not remember it.

Maintenance of,

4357. (*Sir Frank Adam.*) Who pays in that case?—The local Lighting Authority has to maintain its lights. As to the General Lighthouse Authority, of course that is all in the Merchant Shipping Act, but the General Lighthouse Authority has considerable powers in the way of control generally over the local lights and buoys. They can instruct them to establish lights and put down buoys in position.

4358. (*Colonel Herbert.*) You have not had to regulate differences between the local Lighting Authorities and the General Lighthouse Authorities?—No.

4359. Do you think that it would be a sounder system of administration to have all these lights under a General Authority?—The local lights and all?

Possibility of control of, by Central Lighthouse Authority.

4360. The local lights and all. Assuming that a new General Authority were established, whether they should not take over the whole of these duties?—Well, it would seem anomalous not to do so, as the local authorities are arranged. For instance, you have the Mersey under a local authority; you have the Thames under the General Authority; you have many small places under the General Authority; for instance, places like Bideford and Barnstaple. Bristol again is under the local authority, inside the harbour; so that having such an anomalous condition round the coast, if any great change were made in the administrative arrangements of the lights, it would seem reasonable to bring them all into accord under some general system.

4361. I was coming to that point about certain ports. Have you been able to judge as to the feeling of grievance which exists in regard to the different treatment of the various ports—take, for example, the Thames?—No, I do not know that I have heard of grievances. Now, for instance, the Clyde Trustees light their own channels.

4362. But they have to pay?—Then, they get the light dues for it, you see.

4363. (*Sir Frank Adam.*) The local light dues?—Yes, the local light dues; at all these small places they get their local light dues.

4364. (*Colonel Herbert.*) You might create a grievance by removing from them the right to levy these light dues; they might think they would not get their fair share if it were a general fund?—Perhaps some of them might like to remain as they are to look after their own lighting; others, referring to the anomaly round the coast, might ask whether it should not be dealt with generally, so as to make the whole thing consistent.

Notices to Mariners:

4365. You mentioned just now in your evidence a question about information respecting tides, and so forth, and that leads me to the question of the instructions to mariners issued, I think, by the Board of Trade?—Yes, we issue Notices to Mariners, and the Admiralty issue others.

Issue of, by Admiralty and Board of Trade.

4366. The Admiralty issue Notices to Mariners?—Yes.

4367. Now, what is your opinion about this dual issue?—Oh, I think it has always, so far as I know, worked very well. The Admiralty issue theirs on a different system to what we do. Originally they were Notices to Mariners to the men-of-war, that was the original idea for their being issued, but they issue them for the mercantile marine as well, and then all the Admiralty Notices are copied into the Board of Trade Notices; practically one is a duplicate of the other, but they are put in the form that is issued to the mercantile marine, almost like a volume, which goes back for the last few months, and includes all the Notices to Mariners, so that a seaman has the advantage of turning over the Notices to Mariners to see if there is any correction to be made to his charts of any locality if he is suddenly ordered away to another part of the world. The Admiralty keep their charts in the dockyard from which the charts are issued. When they are issued to a ship they are up to date to that particular day. The mercantile mariner purchases his charts at the chart agent's, and they should be up to date, but he may not use them for some time, and he may not keep them corrected—on board a man-of-war they are bound to do so—and if he is suddenly ordered to go to another part, and he has to work by a chart which has not been corrected, perhaps not been looked at for months, he turns up his Notices to Mariners and sees whether in the Notices there is anything affecting that particular chart.

4368. Do you think the Board of Trade ought to exercise more control over the charts that are issued to vessels, and so forth?—I have not fully considered that; I should think it is, more a question for the Marine Department than for myself, the question of the issue of charts and the supply to ships; the equipment of ships.

4369. We have had some questions on the subject; I thought we might have your opinion. Then, with regard to another duty of the Lighting Authorities, namely, the removal of wrecks. Do you have to deal with that in any way?—Well, we do not have very much

Wrecks: Difficulties arising as to removal of,

to do with it. Sometimes cases have happened where a wreck has occurred, and a question arises whether it is for the local authority to remove it.

4370. That is the very point I wish to ask you about?—I had one before me yesterday, so I know the difficulties. In the Merchant Shipping Act there is no obligation, it only states that they may remove wrecks which are within the limits of their jurisdiction or in the approaches thereto. The question of "the approaches thereto" is a crucial point sometimes, because though the wreck may be just in front of a harbour the local authority does not wish to go to the expense of removing it, and they say, as far as they are concerned, it is not in their jurisdiction, and as far as they are concerned they do not propose to remove the wreck, and then it has to be removed either by the General Authority or left where it is. Certain cases have arisen where it has been of importance, and the General Authority has removed the wreck.

4371. Then, there our system at present is faulty?—About the removal of wrecks?

4372. With regard to that function?—Oh, yes, I think there might be some improvement as regards either an obligation on certain parties to remove, or some method. There should be no question that when a wreck occurs, if it is injurious to navigation, that it should be removed as soon as possible.

Commander G. C. Frederick, R.N.

19 Mar. 1907.

4373. In fact, there is nobody directly responsible?—I had a case before me only yesterday afternoon where a wreck has occurred in a river. It is within nobody's jurisdiction, and it is not an obstruction to the approaches to the quays of the nearest place, therefore they are not bound nor do they feel called upon to remove it, and the question is going to be submitted to the Trinity House now as the General Lighthouse Authority. It is right up in a river.

4374. That is one of those cases which may be chucked about from one Department to another for a considerable time?—Oh, yes.

4375. In the meantime nobody touches the wreck?—No, quite so.

Notices to Mariners: Difference between Admiralty and Board of Trade Notices.

4376. (*Admiral Henderson.*) Would you send us over a copy of the Board of Trade Notices to Mariners?—Yes, I will. Another point I might mention about these Notices to Mariners is that in the Board of Trade Notices there is a great deal of information in the opening part of them; there are all sorts of instructions about the influence of oil on water and various matters that do not appear, of course, in the Admiralty notices, but I will send you over a copy.

Captain A. F. Boxer, R.N., called in; and examined.

Captain A. F. Boxer: Appointments held by.

4377. (*Chairman.*) I think you were at one time Inspector of the Irish Lights?—Yes, Sir.

4378. How long did you hold that office?—I was Inspector 24 years. I had been in command of a vessel for two years, then I was Assistant-Inspector for four, and the rest made up 24.

4379. When did you cease to hold office?—In 1892.

4380. You were a captain in the Merchant Service?—No, Sir, captain in the Navy, navigating officer and naval commander in three of Her Majesty's ships. I had returned from China just before I took an appointment under the Irish Lights. I had been in command of a vessel in China for four years, and I returned in 1867 or 1868.

4381. I understand you desire to give evidence on the constitution of the Irish Lights Board?—Yes, Sir, the formation of the Board. First, I want to know am I to speak in case the shipping dues should be done away with, or only as to the reorganisation of a General Lighthouse Board. I can speak of both cases. I have gone into the American and the Canadian system; I have been over there, and I approve very much of the American system of lights.

Irish seamarks: New system of control of, advocated.

4382. The Commission has nothing to do with the question of the light dues, but if you desire, you can say what you think ought to be the constitution of the Lighthouse Authority in the event of the present system of payment being altered. We will not interfere to prevent you giving that evidence if you desire to do so?—Well, Sir, in regard to the constitution, I take from the seventy-five lighthouses that we have now on the coast of Ireland, thirty-four to be under the local counties, of those counties bordering the sea coast, which are eighteen, and that they should have the full management of the lights on their particular coasts. At the same time there should be a practical efficient officer at the head of the Board, with a practical engineer under the control of the Local Government Board of Ireland—this Board should be abolished, so that any changes in the lights or any expenditure in these little harbours should have the approval of a practical officer attached to the Local Government Board. The officer, I should say, should be a naval man or a mercantile man of big experience of the coast of Ireland. I have had a great deal of experience for the last twenty years, I may say, or fifteen, working on the coast of Ireland at these local harbours as well as my own. I have made two inspections of the lighthouse department, one in the winter and one in the summer, in a steam yacht; but in the summer I always went by land, and I always found them, particularly the local harbours, very anxious to have their own management of their local affairs.

4383. You mean to say that there should be no control over the local Lighthouse Authorities by the General Lighthouse Authority?—No, Sir; they should be clear; a different board: but it should be under the Local Government Board of Ireland, with an efficient officer or officers attached.

Captain A. F. Boxer, R.N.

4384. But we have nothing to do with the constitution of local Lighthouse Authorities?—No, Sir.

4385. The inquiry by this Commission is into the administration of the General Lighthouse Authorities; will you please confine yourself to that?—Yes. Well, with regard to the General Lighthouse Authorities, if you take thirty from the number, there would be only about thirty-four or thirty-five for the General Lighthouse Authority; and the harbours of refuge, if they were attached, will be eighteen more to the General Authority. That Board should be a general Board, not a Dublin Board. The Dublin Board is self-appointed, and they sit with closed doors, and they have an inspector.

Irish Lights Board: Reconstitution advocated.

4386. Then your suggestion is that the Irish Lights Board should continue to exist, but should have its constitution altered?—Yes, Sir.

4387. By being made what you call a general Board?—Made a general Board sending members.

4388. How would you propose that the members of the Board should be chosen?—From the principle seaports in Ireland sending members. It was suggested some years ago, and they found great difficulty in getting the members—even from Belfast—to go up to attend, so I should think there will be great difficulties in getting members from these ports to assist in forming this Board. I am of opinion myself that the General Lighthouse Board in Ireland should be constituted by efficient—not self-appointed—practical men.

4389. (*Sir Frank Adam.*) But you do not think you would be able to get them?—From those ports I do not think they would come up; there would be a difficulty in getting them to attend—the expenses and other things, and their time.

4390. (*Chairman.*) But then you propose that the existing constitution of the Board should be altered?—Oh, yes.

4391. That the new Board should be composed of representatives of the Harbour Authorities?—Yes.

4392. And at the same time you tell us that the representatives of the Harbour Authorities would probably not attend?—Yes. Very probably they would not attend; it would be very hard to get them to attend. Then there are so many ports in Ireland which are harbour ports. There are eight of them that come under that. I would not meddle with those ports that are working under their own Acts, namely, Dublin, Belfast, Derry—there are eight of them—I would leave them alone; let them continue on their own work.

4393. Well, then, will you proceed to the second head of your *précis* of evidence, the control, inspection and management of coast lights and buoyage, including beacons and all seamarks?—There should be a

Captain A. F. Boxer, R.N. 19 Mar. 1907.

practical officer instead of a self-nominated man on the Board in the management of this.

4394. You have already told us what you think the General Lighthouse Authority should be; apart from the question of the Lighthouse Authority, do you wish to put any evidence before us on the subject of the control, inspection and management of coast lights and buoyage, including beacons and all seamarks?—Of course, I consider, taking the thirty local harbours

4395. I think we need not trouble with those?—Oh, you would take those out.

4396. I understand that you desired to come here to give evidence before this Commission, and that the paper which I have now before me is a *précis* of the evidence which you wish to give?—Yes.

4397. Well, I ask you what is the evidence which you wish to give on the second head in the *précis*?—I had a chart marked out with everything, but coming over it has been mislaid. I think I have said already all that I have to say on that second head. I do not think I can add any more to what I have said already.

Steam-vessel service: Officers insufficiently qualified.

4398. Then we pass to the third head—"Evidence on the officering and manning of the lighthouse steam tenders, together with their general management and working"?—The officers should be better qualified; they should work up for their different points, and the commanders of those vessels, instead of having home certificates, should be qualified in the service the same as they are in the Trinity House. They work their officers up in the ships, and as they come up to being captains, they can almost take the duty of the inspector. In the Trinity House, I may add, there are always two of them to go in the steamers, but the captains are perfectly capable of fixing the position of buoys and lightships. It is not the case with us. There have been men brought in with home certificates. And the other officers, too, I do not think are qualified enough for a particular service like that of placing marks on the coast and lightships. I have had to do it myself in my time as inspector, but it took a great deal of my time and my office work to have to go out and do this work.

4399. When were you inspector?—I was inspector for twenty years. I had the whole coast of Ireland under me, with one vessel doing it for ten years until we got a second, and I worked it inspecting the coast twice a year. Then at the end the work was so severe, and as my age came on, I found I had to give up on account of health.

4400. Are we to understand you to say that you think that work which you did in your capacity as inspector should be done by the captains of the steam tenders?—They would be qualified for it to relieve the inspector.

4401. And you think at present they are not qualified?—I do not think so; they are only carrying home certificates and other inferior certificates. They should be brought up in the service to fully understand marking and placing the positions of buoys. It is a very important duty to see that a light is properly placed. Then I think the masters of the lightships should undergo an examination. They do not at present.

Lightvessels: System of maintenance extravagant.

4402. That brings us to the next point in your *précis* of evidence. Lightships; have you anything else that you wish to say to us about lightships?—Nothing more. I have just stated about the lightships. I may add that I think bringing in the lightships once every three years involves too much expense; to bring in the lightships so often is a very expensive work, and it entails the expense of keeping a second steamer. Most of my time I did the work with one steamer, but since then they have gone into a system of bringing the ships in more frequently.

4403. You think that a less economical system than prevailed in your time?—A great deal, I think, Sir. I am not giving myself any credit for doing it, but I think we worked much more economically than at the present. There is a very large outlay keeping up a staff.

Stores: Delivery at stations by contractors advocated.

4404. Will you pass on to the next head, "Storing of lighthouses and lightships"—what is meant by storing of lighthouses?—The contracts every year.

4405. Oh, supplying lighthouses and lightships with stores?—With stores. I think some of these things could go straight from the contractors for use; were there specifications sent out and contracts made, many of the stores could go straight instead of going through the Kingstown store, involving a lot of work and expense.

4406. That might be done direct, you think?—That might be done direct.

Irish Lights Board: Co-option of members deprecated.

4406a. (*Colonel Herbert.*) I understand your objection to the present Authority is based on its being an Authority created by co-option?—Yes, Sir.

4407. Entirely?—Entirely. The inspector has not the power or anything. If you are called in to give an opinion as a practical officer, and you give an opinion contrary to their ideas, you are told you may go, and they sit with closed doors, and they can say anything they like against an officer. I think that system of co-option could not be worse than it was for the whole time that I was inspector. With the engineer it was just the same. Mr. William Douglass, the Engineer, who worked with me for a great many years, was quite of the same opinion.

4408. Do you think that the Board exercises its functions well with regard to its selection of officers?—Well, I would rather not answer. I think there is a great deal—the members of the Board selecting and co-opting.

4409. No, the selection of officers to serve under the Board?—Oh, for the officers, no; I think they act very well. A few years ago they did not promote their own officers, but took in outsiders, but latterly they have been promoting their own officers up, which I think is a proper system in a small service like the Irish Light service. The expense has gone up a great deal of late years. If I could speak about the office establishment I would say a very large establishment is kept up on account of the reports and references from Board to committees and committees to Board, and the stores are very expensively kept at Kingstown. There is three times the expense now to what it was in my time. Of course, things have increased, I allow, but still they have increased unnecessarily in keeping up a very large staff, which I think unnecessary. Then there is another thing which I would like to speak about, and that is the rents of their offices; they are paying a very heavy rent in Dublin for the offices for this Board to meet in—upwards of £400 a year. There is vacant ground, the Board of Works ground at Kingstown, which could be got for the mere asking, you may say, and at a very small expense proper lighthouse offices could be put up there, and it is a very suitable place, close to the working of their yard, where they could have their staff and the officers under their control close to the yard, and everything would work much better than having an office in Dublin, and it would be a great saving. There would only be an outlay of a few thousand pounds in building offices on this ground; whilst they are now paying upwards of £400 a year and other expenses keeping up this Dublin office.

Establishment expenses excessive.

Suggestions for reconstitution of,

4410. (*Mr. Ennis.*) So far as I understand your proposal with regard to the reconstituting of the Irish Lights Authority it is this. Under the Local Government Act there is in the maritime counties of Ireland a certain list of fishery piers and harbours scheduled as being under the control of the local authority?—Yes.

4411. Your proposal is that the lighting of these piers and harbours that are scheduled as being under the control of the county councils should be vested in the counties?—Should be vested in the counties.

4412. And that a supervising authority of these fishery harbours should be vested in the Local Government Board for Ireland?—Yes.

4413. And you are assuming that the Local Government Board would obtain the services of a marine superintendent?—Of a marine superintendent—of a harbour engineer, specially attached to the Local Government for that work.

4414. With regard to the more important lights round the coast of Ireland and the lights in these harbours of refuge that you spoke of, your proposal with regard to them is that the existing Irish Lights Board should be reconstituted, and that the power of co-option should cease, and that the Lighthouse Authority should consist of representatives of the various Harbour Authorities in Ireland?—The principal Harbour Authorities.

4415. You have stated that you consider a difficulty

might arise with regard to the attendance of members of these Harbour Boards?—Yes.

4416. But supposing that difficulty could be overcome, do you consider the various Harbour Authorities in Ireland, that is, the harbours created by Act of Parliament, should be represented on this central authority?—Should be represented on this central board.

4417. Now, on the boards of some of the harbours of Ireland, as you are no doubt aware, the Board of Trade nominate representatives?—Yes.

4418. Would you suggest that the Board of Trade should nominate any representatives on the General Lighthouse Authority in Ireland?—If they did it should be a practical chairman, a man that would have to give his whole time to the work.

4419. You consider that representatives of those harbours in Ireland would be fairly representative of the shipowning interest; I mean that a large number of the members of these Harbour Boards are themselves shipowners?—Yes, a fair number. I belong to the Local Marine Board of Ireland, and on that Board there are eight or ten representatives of the marine companies. The Chairman and I find that they take good interest, and work at the Marine Board very satisfactorily. Being all practical men, they understand what they are doing.

4420. As our Chairman has informed you, the question of the incidence of the payment of the light dues does not come within the purview of this Commission, but as matters stand at present do you agree that there are conflicting interests with regard to the lighting of the coast; that is. the shipowners would say, as long as they have to pay the light dues, naturally they wish to see the cost of the lighting as low as possible?—Yes.

4421. Whereas the shipmasters, the men who have life and property in their charge, and underwriters, who have undertaken to guarantee against loss of that life and property, would have different views on it; their desire would be to see the efficiency of the lighting arrangements on the coast as high as possible?—Yes.

4422. And therefore I take it that you would agree that these various interests should be represented on such an authority?—Yes.

4423. There should be a fair representation of these various conflicting interests?—Yes.

4424. A representation of the over-sea trade?—Yes, particularly the over-sea trade, because in the outlying stations they have more interest, a great deal, because two-thirds of the shipping passes our headlight and passes up that coast to Scotland and England.

Removal of offices to Kingston advocated.

4425. Your contention with regard to the offices in Dublin is that by building offices at Kingstown the Commissioners would have their Works Department more closely under their supervision, and would save considerably on their present expenditure?—Yes, save considerably.

4426. You know the coast of Ireland thoroughly well?—Yes.

Mizen Head: Necessity for light and fog-signal,

4427. Might I ask your opinion as to a question that has been debated very closely between the Advisory Committee, the Trinity House, the Irish Lights Board, and the Board of Trade with regard to whether a fog-signal and a lighthouse are or are not necessary or desirable at Mizen Head; what is your opinion on that subject?—My opinion is that they are.

4428. Both?—That they are both necessary.

4429. Both a light and a fog-signal?—A light and a fog-signal. There have been more wrecks in my time at that Head through want of either than any other thing that I know.

4430. Would you approve of the erection of a fog-signal without a light?—No. I would include the light. There is a big space between the Fastnet and Kinsale.

4431. You think the fog-signal should be accompanied by a light?—Yes.

Fog gong: Inefficiency of,

4432. Now, with regard to the stretch of coast between the Tuskar and the Codling. The lightships on that stretch of coast are provided with fog-gongs only?—Yes, they have a danger gun to warn ships standing in to them for the banks.

4433. If they see the ships?—If they see the ships.

4434. But in a thick fog, of course, they do not see them?—No. *Captain A. F. Boxer*, R.N.

4435. Do you consider more efficient fog-signals on the lightships on that stretch of coast would be desirable?—Yes. 19 Mar. 1907.

County Down: Recent improvements of lights.

4436. Now, with regard to the county Down coast, do you consider the county Down coast sufficiently lit?—I always thought we ought to have a lightship off Strangford, in the line between Rockabill and South Rock, so as to prevent vessels standing in there and getting into the big streams of water into Strangford Lough. We have stopped the wrecks since we put this "Skullmartin" ship down. We have stopped a great deal of the Scottish ships coming across, leaving with drunken crews standing across for the night and going on on our coast and getting wrecked.

4437. I have no doubt you agree that the placing of the Barrels Rock lightship on the Wexford coast has had the effect of a great cessation of wrecks along that coast?—Oh, yes, one of the best improvements we had.

Central Lighthouse Authority: Advocated.

4438. Now, just a concluding question. Though you advocate the reconstitution of the Irish Lights Board and the placing on it of elected representatives of the various Harbour Authorities in Ireland, you do not suggest that the Irish Lights Board, as a Board, should cease to exist, and that a central board in London should control the lighting of the whole coast of the United Kingdom?—I think a central board in London, representative, worked on the American style, with a representative in Ireland, would work better.

4439. With a representative in Ireland?—Have their chairman in Ireland a practical man.

4440. Yes, but how do you suggest that the central board in London should be constructed?—Oh, by Elder Brethren of the Trinity House.

4441. But Ireland would have no representation, or, at least, a small representation on that central board?—Oh, yes, they would, but I do not think you would get people to come over and sit on that central board in London. There is the difficulty. That is the difficulty of working; even from the large ports getting representatives to come up to Dublin to sit as a board is a difficulty.

4442. I put it in this way: The Advisory Committee at present advises the Lighthouse Authorities and the Board of Trade as to recommendations for new works which come before them. We have had evidence that with regard to the coast of Scotland out of 24 recommendations, or out of 24 cases, in which they refused to sanction the proposals that were made, the Board of Trade eventually sanctioned 16, thus showing that the outlying districts, the coast of Scotland, which was not in the fairway of very much trade, did not receive very much consideration by the Advisory Committee. Would not a similar danger arise in regard to the coasts of Ireland at the hands of such a body?—Oh, yes, there is no doubt of that. I should look at it all through that the marking of the coasts and the working of the main Lighthouse department should be done by practical officers. That is my opinion right through, and that small local harbours should be worked by the local county bodies on the coasts, but with a practical officer and an engineer attached to the Local Government Board.

4443. An Irish board, elected by the Harbour Authorities of Ireland, and containing representatives of the shipowners, the shipmasters, and the underwriting interests, with a controlling authority, a central authority, either the existing authority of the Trinity House modified or the Board of Trade direct, would, in your opinion, be a good authority for Ireland?—Yes. With regard to local harbours, would the Commission like me to speak about the fisheries while I am here, because I have a great knowledge of the neglect of the local harbours, the piers, and the slips all round Ireland at present. As you know, the Irish character requires a great deal of encouragement. If they lose a boat or they lose their nets they are only disheartened, and it requires a lot of cheering up by practical men to bring them up to their work again.

4444. It is a subject I feel a great interest in myself, and I quite agree with you in regard to it, but I do not think it comes within the purview of our inquiry?—It is a very important thing on the coasts of Ireland, the fishery, I think.

4445. (*Admiral Henderson.*) In what year did you retire from the Service—from the Navy?—In 1868.

Captain A.F. Boxer, R.N.

19 Mar. 1907.

4446. What was your rank before you retired?—I was lieutenant-in-command.

4447. You are now a retired commander?—Yes.

4448. You had been a long time an inspector?—Yes, very long.

Inspection of seamarks by Irish Lights Board: Unnecessary.

4449. Now all the Boards inspect their coasts as well. Does this inspection of the Boards do much good?—No; they take the services of one of the steamers for nearly three months.

4450. Is it your opinion that they could perfectly well trust the inspector?—Perfectly. And they never inspect in the night; they go flying about and seeing how quickly they can go round the coasts.

4451. Do you know if that applies to the other Boards as well?—Not with the Trinity House; they send two members of their own, and they are very particular in the Trinity House. I know that as a fact.

Central Lighthouse Authority: Advocated.

4452. Mr. Ennis was talking to you just now about a new constitution of the Board. Would you believe that if you had a central board in London, with proper executive officers in Ireland, you could carry out the work of the Irish Board as it is at present?—Yes, and at half the expense, I believe.

4453. Would you believe that that would be a better way of doing it than having a Board in Dublin at all?—Yes, to have their proper responsible officers.

4454. With proper executive officers in Ireland?—With proper executive officers in Ireland for working the coast and answerable for it.

4454a. (*Sir Frank Adam.*) When you say at half the expense you mean at half the expense of maintenance?—Of maintenance.

4455. Not for new works or anything of that kind?—No; the new works are out, and lightships and buoys are out of my calculation.

Mr. S. Lawther, D.L., called in; and examined.

Mr. S. Lawther, D.L.

4456. (*Chairman.*) You are an Alderman of Belfast?—Yes; senior member of the Corporation.

4457. Have you devoted much attention to nautical affairs?—All my life.

4458. And especially to the lighting of the coasts?—Yes.

4459. I think you desire to give evidence as to the management of the lighting of the coasts as compared with that of the colonies and of foreign countries?—Yes.

4460. Would you kindly tell us what you have to say upon that subject?—Well, Mr. Chairman, I have put it down in writing and you have a copy.

4461. I have a copy of the *précis* of evidence which you propose to give?—Yes, I took them seriatim, and put them down carefully, and I do not think I could improve on it.

4462. Will you follow the order of the *précis* then, and tell us in what respect you think that the management of the lighting of our coasts falls short of that of our colonies and of foreign countries?—Oh, yes, Sir, very much so.

4463. In what respects?—Oh, the entire administration.

Lighting of Coasts of United Kingdom: Not up to date.

4464. Will you proceed to explain that, please?—In comparing the management of the lighting of our coasts with the progress of the shipping industry, it is very much behind the times. The class of ships, as I clearly point out, is a very different class of ship altogether. Formerly, under the Act by which this Irish Lights Board and these other Boards were constituted, they were small vessels, very small indeed, sailing vessels. Since then there has been no modification, comparatively speaking, of the management of the lights up till now, and the result is serious losses, and enormous losses have taken place from time to time on our coasts, as shown by the map which I have here prepared and which I sent you.

4465. Do you consider that the falling behind which you allege has taken place on the part of our Lighthouse Authorities has any relation to the difference in the size of vessels which now navigate the seas?—Yes. There has been no co-equal progress in the arrangements of the lighting of our coast equal to the increase of the shipping frequenting our harbours, and the types of ships frequenting our harbours, and the class of speed, and all that kind of thing.

4466. You say in your *précis* the management of the lighting of our coast is still carried on by the Irish Lights Board on the same lines as when our trade was done by small sailing vessels of slow speed?—Yes.

4467. Has the mere fact that the vessels have since increased in size and in speed altered the necessities of lighting of the coast?—Yes, very much.

4468. And it is because the Irish Lighthouse Authority has not been sufficiently alive to that change that you say they have fallen behind?—Yes.

4469. Would you make that a little clearer to me?—Well, the meaning of it is this, that the Lights Board in Dublin or the Lights Boards all over the country are co-opted members; they are not practical men. They may be a very high type, and are a very high type, of gentlemen, but they have no local knowledge of shipping matters at all, and they are not in touch with the requirements of the various harbours and the sets of the tides into these harbours, the same as other nations, such as Canada and America and France and other countries are. To manage the lights of a country properly it must be done by experts—men who have made it their life study; men who understand the various kinds of tides and the dangers of the tides setting on the coast.

4470. But I understand you to say that the introduction of large and fast vessels has necessitated alterations in the methods of lighting the coast?—Yes.

4471. What are those alterations?—Well, a different type of lighthouses. For instance, the old type of lighthouses used to be on Maiden Rocks; two old lighthouses have been there for eighty years, and they were only suitable for the class of vessel passing at that period, travelling at a speed of five or six knots. Now the steamers going to America go eighteen, twenty, and twenty-two knots. I agitated and got these lighthouses removed, and now we have a magnificent light on the Maidens, and since that was done we have not had a single wreck. I have a map here showing.

4472. In that case, whatever may have been the case when you began to agitate on the subject, the lighting of that part of the coast has since been brought up to date. Why do these fast vessels require a different kind of light?—They come so quickly on the light, a short light or an inferior light, a ship going eighteen or twenty knots, but it takes small vessels going four or five knots a long time to come up to it.

4473. You mean the light should be seen at a greater distance?—The light should be seen at a greater distance.

County Down: Inefficiency of sea marks.

4474. Are there any other cases round the coast of Ireland where you consider the light is very inferior to what it should be, having regard to the consideration you have just mentioned?—Yes, on the County Down coast, approaching Belfast on the south, very inferior indeed. The St. John's Light is a very old light, which has been up seventy or eighty years. We have been agitating to get that St. John's Light made right, and the Irish Lights Board, I think, have agreed to do so, and I think when that is done it will be a very great improvement.

4475. But it appears to me that on the whole the Irish Lights administration may have moved slowly, but it has in the end done what you desired it should do?—Well, if you knew the difficulty to get them to move. It took me five or six years. I have written about 700 or 1,000, I do not know how many, letters, deputation after deputation to get a light put on Black Head, that is on the northern entrance to Belfast Lough. I could illustrate that better if you would permit me to show you the chart. (*Chart exhibited.*) This is Belfast Lough, that is Larne Lough, there is the Maidens Light, and here is the list of ships that went ashore on the Maidens; there they are all dotted where losses took place. There were two lights there. Very well; we applied to the Irish Lights Board. The Irish Lights Board put us off. We applied to the Trinity House; they put us off. We applied to the Board of Trade, and it took I do not know how many years, five

or six years, and we got deputation after deputation up, and they still fell behind. We applied also to get a light here put on Black Head. There is a number of rocks all along the coast. Well, the Irish Lights Board said: "We do not consider there is a light required on Black Head." I wrote to the Wreck Commissioners, and got a list of all the wrecks, and I have them put on this chart, showing where the wrecks have taken place; and I got up our thirty-three members of Parliament summoned to attend a meeting here to go into this question, and go to the Board of Trade. And a very extraordinary circumstance happened on one night: four steamers went ashore on Black Head on one night.

4476. (*Admiral Henderson.*) In a fog?—In a fog.

4477. Then the light would not have been any good?—If the light had been there those ships would have been saved.

4478. Why?—Because there would have been a fog-signal there. Since that light has been put up no ships have been lost.

4479. Is there a fog-signal there now?—Yes, a magnificent light, and the fog-signal there is a magnificent one also.

Recent improvements of lights.

4480. (*Chairman.*) You say it took six years before you could persuade the Irish Board to put up a light on the Maidens?—There were two lights there on the Maidens. We suggested, and they complied after a great deal of correspondence, that those two lights should be removed and one splendid light put there. Since that new light has been put there there has not been a single loss.

4481. At what date was the new light put there?—That was about three or four years ago.

4482. Do you happen to recollect whether the Irish Lights put you off on the ground that in their opinion a new and improved light on the Maidens was not required, or on the ground that there were other works that were more urgent?—Well, partly both. I think in one case they were not required, and in the other that there were more urgent cases, and that style of thing. When we applied to the Board of Trade on that light here were four steamers ashore in one night. I happened to be up here with members of Parliament, and I called on the Board of Trade and showed them this telegram. Sir Courtenay Boyle, who was then Secretary of the Board of Trade, said: "Well, we will get this thing done," and that was done at once.

4483. Do you remember what year that was?—About three or four years ago—1903, I think.

4484. Sir Courtney Boyle has been dead longer than that; he died, I think, in 1901?—It was perhaps five years ago; but I am speaking from memory.

4485. (*Admiral Henderson.*) When you were advocating the question of these lights at Belfast did you recollect the Irish Lights Board had to consider the whole coast of Ireland, and did you take into consideration the demands of other parts of the coast as well?—No, we did not; we were only dealing with what concerned ourselves usually on that coast. When we got the Wreck Commissioners' returns showing that these wrecks were there as laid down on that chart, it became a very serious thing, and a very dangerous thing to leave.

4486. (*Chairman.*) Do you happen to remember whether the Advisory Committee were in existence? No, I do not think they were.

4487. Then it must have been before 1900?—I cannot charge my memory, but I have the correspondence that deals with that. Now there is only one thing I want to explain. The Maiden lights are now perfect. I passed over there on Saturday night in that gale of wind, and I asked the captain of the steamer how he liked it, and he said no improvement could possibly be made. But there is one defect, one serious defect, and some day there will be a lot of trouble about it, namely, the fog-signal that there is at the entrance of Larne Harbour, it should be out on the Skernaghan Point.

Removal of Larne fog signal to Skernaghan Point advocated.

4488. Is that point within the jurisdiction of the local Harbour Authority?—No, it is outside. The inside here is Larne, and that is the entrance where the light is, outside Larne, one that is further out, you see, in a line with that there (*indicating on chart*). That is where they ought to put the fog-signal, on Skernaghan Point. A very extraordinary circumstance in connection with the Barr Point fog-signal is this, that you might be within a quarter of a mile of it on the land side and not hear it, and six miles on the sea side and hear it quite distinctly.

4489. You do not want to hear it on the land side?—No, but it so happens.

4490. Is not that one of the peculiarities which are frequently found in the case of fog-signals?—Quite so. Outside, when you are coming in that way, you get that point there, that other point, and then that there (*indicating on chart*). This fog-signal does not carry across those two land points, but down along the coast, there it will go down six or seven miles. For instance, there is the "Princess Alexandra"; there is the boat that went in there and was almost ashore, and she could not hear the fog-signal. Had it been there, and the boat coming in there, she would have heard it quite distinctly.

4491. There seems, from the evidence given before us, considerable uncertainty as to the audibility of fog-signals due to the existence of areas of silence?—Quite so; I was perfectly amazed in going down into that lighthouse and going over the Maidens, and going round to see those sunken rocks uncharted—perfectly uncharted. All the rocks there are not laid down on the charts at all. The Irish Lights yacht going down there went out in the month of August in broad daylight in the summertime, taking some oil from Larne Harbour, and she went on a sunken rock and knocked the bottom out of her, and she cost thousands of pounds to repair.

Danger of sunken rocks.

4492. (*Admiral Henderson.*) When was that?—Twelve years ago.

4493. (*Chairman.*) Was the existence of the sunken rock known?—No; uncharted. Mr. Ritchie was then President of the Board of Trade, and when the matter was brought to his attention he said that was an uncharted rock. That is the case of a great many of these rocks, because when these charts were made out they were not marked on them. I do not know how long it is since this chart was published.

4494. (*Admiral Henderson.*) That, of course, is an old chart?—1888. All that we want to make that part of the coast perfect is to put that fog-signal from there to there (*indicating*). Sir Hugh Smiley, who lives there, has a yacht, and his yacht went on the point and had a narrow escape, but she got off.

4495. (*Chairman.*) Have you represented the matter to the Irish Board?—Over and over again to the Board of Trade.

4496. What has their reply been?—The reply has been—I really could not tell you—it has not been looked into. "I have received your letter, and will lay it before the Board." I think that is the usual reply from the Irish Lights Board. That was the usual universal reply.

4497. Then we may take it practically that you have not had any undertaking from them to consider the matter in the future?—No; no undertaking.

4498. They have simply acknowledged receipt of your representations?—Yes; a printed form. Received your letter, which will be laid before the Board. That is all that is wanted there. I spoke to the captain on the bridge the other night going across, and asked him what was wanted, and he said: "Mr. Lawther, what is wanted there, is to put that signal out there, and that will do." I will explain the reason why: Coming along here the mail boat—the only accident that has occurred since that was done, and that Black Head was lighted—Burns Mail steamer from Scotland on the 29th September last went on Muck Island, and he did not hear the Black Head fog-signal. If that signal had been going, that vessel would not have gone on shore. But you see the cause of this is the set of the tide. Coming down here—it is shown on the map I sent you—I think the tide runs there six knots, down here four, and an enormous inrush of water into this lough, and that sets it on here, and in a fog there is a drift or tide. The "Partridge" went ashore there, and as a proof of that the Clyde Shipping Company's steamer—I think it is the "Copeland" came down here, and the captain did a very wise thing, when he got abreast of Black Head—he arrived there at two o'clock in the morning.

Wrecks which have occurred on coast of,

4499. In a fog?—In a very thick fog, and when he

Mr. S. Lawther, D.L. 19 Mar. 1907.

got abreast of Black Head, he stopped, sounded, and waited till half-past three, and anchored, and the Black Head fog-signal, according to his statement, he could not hear. If it came to an inquiry, he waited there from two till half-past five—he then heard the Black Head fog-signal, and at six fifteen he got his anchor up, and the fog-signal on Black Head steered him right up to Belfast. I had a reply from the Board of Trade, and they sent a copy of the Irish Lights, saying that they had sent down that the case of the Black Head fog-signal was that the indicator only showed that the fog was there at four o'clock, but the Clyde Shipping Company's steamer was there at two, according to the captain's letter, and he remained from two till a quarter to six, so there must have been something wrong with the indicator.

Wrecks which have occurred on coast of,

4500. Either that or he was in one of those zones of silence which affect the fog-signals; according to the lightkeepers' account the fog began at four?—The Irish Lights said that the lighthouse-keeper reported the signal to be at four. The Clyde Shipping Company's captain says: "I did not hear it, although I had anchored right abreast, till half-past five.

4501. There you have a conflict of testimony. It might be possible that the vessel was in one of those zones of silence?—Yes.

4502. (*Sir Frank Adam.*) At that particular time?—Yes, at that particular time.

4503. (*Chairman*). The zones of silence, as we know, alter?—Yes, true, but it is a most marvellous thing. When I was speaking to Mr. Cheyne about this, and speaking of the lighthouse-keeper, I could not believe it, and Cheyne said: "The marvellous thing is that six miles away, with the windows and the door shut, I heard the fog-signal quite plainly," and here is the boat, the "Princess Alexandra," drifting away down there, and this man was here; had he been out there he would not have gone in.

4504. I should say from the evidence laid before us, that you could not be certain, no matter where the fog-signal were placed, that it would be heard in any particular place?—You are quite right, after practical testing, after asking the lighthouse-keeper about these fog-signals: "Are there any other places the same?" "Some places down about Cork and those places," So those fog-signals are very deceptive in certain states of the foggy weather. But here is the trouble in this case, and it is a very serious trouble. Now, here is your chart. The flood-tide comes in from the north, and meets the flood-tide from the south at Dundrum Bay, and if you look I think you will find a photograph of the "Anglia" ashore on Bally Quinton Point. It is on the other chart (*chart exhibited*). This is it. I have dealt with that. There is the Skernaghan Point; there is the Maidens; there is the tide running there four knots. That is the one light. Now, that is as it is at present. There is the tide setting in there, and here are these wrecks. Now these wrecks that I have got, and have sent you, are the Wreck Commissioners' return of 179 wrecks on this County Down coast in ten years prior to 1906.

4505. (*Admiral Henderson.*) Have you analysed these wrecks, and the conditions which caused them?—No; I dealt with them as a public record.

4506. As a whole?—As a whole.

4507. Because you know in dealing with wrecks reported by the Board of Trade, there is only a very small percentage of them which are due to inefficient lighting?—I am aware.

4508. A large proportion of the accidents happen to ships at anchor—which drag on shore, something of that sort of thing. A large percentage are due to collisions, to other causes, or to fogs which have nothing to do with the lights. Do you see what I mean?—I have gone into that carefully with our harbour master. I believe in talking of lights, and that style of thing you must deal with practical men—pilots and sea captains, and people of that kind. Now, this information I got from the Board of Trade, from the Wreck Commissioners. There are 179 wrecks. I handed that over to our harbour master, and the engineer took the list, and he has honestly recorded them. There is Strangford Lough, and he has put them in there; all in that line are the result of what you have explained, small vessels at anchor, and small chains, and that sort of thing, but when you come up here where the "Anglia" went ashore, that is an enormous steamer. She was coming up here, and this explains it. Here is the flood-tide coming up south, running at the speed that it has, and here is the flood-tide coming down north, and the two tides meet here. This man, a comparative stranger, navigating his ship right up, thought in his innocency that chart does not describe anything about it, it does not show it there, and that is one of the reasons why, I say, this is one of the things that is so very much wanted, to have a wreck chart in the chart room of the ships coming into the various harbours. Well, that man was coming up here at four knots, or whatever speed it was, and he then met with the ebb, the flood which became the ebb, and he just landed his ship there just at that point, and that is the cause of the most of these wrecks in that way.

4509. (*Admiral Henderson.*) Where was he coming; up here?—Up here. He was bound to Belfast.

4510. He was a great deal too close in?—Of course he was, but the tide shifted him in.

4511. But he is too close in at any rate for careful navigation?—Are you aware that the tide runs into Strangford Lough at 10 knots?

4512. I am not aware that it does out here in the proper channel, where he ought to have been?—I quite agree with you, and he ought to have put his lead over to ascertain his position, as he should have done, and had a chart showing that the tide separated there. Had he taken soundings, as you see there, he would have kept clear right out here.

4513. (*Chairman.*) All those considerations show that many of these wrecks, perhaps the majority of them, were due to causes quite independent of the lighting and marking of the coast?—Oh, quite so, but all the large ships; there were three large French steamers, I think, went ashore there, of 4,000 or 5,000 tons. The steamer "Anglia" which went ashore there still remains on the beach. The salvage and repairs, if she is saved, will cost fully £20,000; if not saved, her loss will be close on £70,000.

Improvements of seamarks contemplated for,

4514. Is there any change in the lighting and marking of this coast which you have represented as urgently necessary to the Irish Lights Board and which they have refused to carry out?—There is the light at St. John's Point, which was brought before the Irish Lights Board, and they have sent to the Harbour Board the statements which I wrote to the Board of Trade the other day, and advised them. They are going to put a duplicate of the Black Head light, a light of 400,000 candle-power, on St. John's Point. That will be a tremendous boon. They are going to put a lightship, if the Board of Trade and the Trinity House and the Government agree, outside Stangford Bar, right out in the Channel, and they are going to improve the South Rock light, and they are to put supplementary buoys between Donaghadee and the coast.

4515. When those changes are made, do you think the marking of this coast will be satisfactory?—Oh, very satisfactory indeed.

4516. Does it not come to this, that this administrative body, which you say is so very much behind the age, has either put or is prepared to put up all the marks on this part of the coast which you think are required, with the exception of one fog-signal?—This is only the result of this agitation now before the Board of Trade. We could never get a reply from them, we could never get any movement from them until the Advisory Committee and Lord Pirrie made the representation to Mr. Lloyd George, and I think through them they have sent to our Harbour Board, of which I happen to be a member, to say that they will do this, and if they do that, and carry these things out, that coast will be lit.

4517. Has the Advisory Committee made these suggestions?—Yes, I think so.

4518. On its own initiative?—In addition to the other, they have seen Mr. Lloyd George; I believe Lord Pirrie has seen Mr. Lloyd George.

4519. (*Sir Frank Adam.*) Is Lord Pirrie on the Advisory Committee?—He is on the Advisory Committee. What I say is this, that while that is so, that will not prevent the great risk of the in-draught of the tide setting on that coast. What I would suggest to this Royal Commission is that you should recommend that in the chart-room of every ship—my friend here evidently knows something about ships——

Wreck Charts: Issue of, to all vessels advocated.

4520. (*Chairman.*) This is Admiral Henderson.—He evidently knows something about this matter; I can see by his left eye he has a knowledge of that. But if there was a wreck chart in the chart-room of every ship of that point there, and these wrecks all dotted on the chart in the various chart-rooms, I say that is absolutely necessary not only here, but all round our coast, and that is one of the things that I would recommend your Royal Commission to urge upon the Government—to have these wreck charts in every chart room.

4521. (*Sir Frank Adam.*) Of course, that is hardly a matter that falls within our reference, nor would Lighthouse Authorities have any power to compel the ships to carry such charts. Our inquiry is to inquire into the administration of the lighthouses?—I understand that, but I understand power had been given you to make recommendations for the better protection of our coasts.

4522. No, I think that is hardly the nature of our reference. Our reference is to inquire into the administration and constitution of the Lighthouse Authorities?—You understand, then, our views about that. I recommend, whether it is under your jurisdiction or whatever jurisdiction it may be, that for the better safety of life and property vessels should have that wreck chart in the chart-room. Now, there is no class of man—and my friend will understand me—so deserving of encouragement and protection as the little coasting captain that has to run with his 400 tons and his 500 tons of coal from Maryport and from Cardiff. To catch the tides, that poor fellow is on the bridge on a foggy night, and he has a small crew, and he is just working so-and-so, and that is the class of man I sympathise very much with, and if he were compelled to carry and had his chart, showing him just the same as if you were making a motor-car and a 'bus on the road open an arm danger signal to be there, it would be an incalculable boon to the man, and if that had been the case at the Land's End that White Star boat would never have been ashore.

4523. If there had been?—If there had been a wreck chart showing that that was a dangerous point there.

4524. (*Admiral Henderson.*) I do not think it is necessary for an intelligent sailor to have a wreck chart in order to encourage him to keep clear where there is danger at a point. They will not save him in a fog, and, what is more, most of these vessels coming along here have local knowledge—of course, masters of vessels are just the same as individuals in any other profession—they are composed of people who are very efficient and people who are not so efficient. You have to consider the human element, and one great advantage of coasting traders is that, as a rule, they ply on the same routes and have great local experience?—They do; yes.

4525. And that their experience, their local experience, stands them in very great stead?—Familiarity breeds contempt.

4526. Will keep them off?—That is to say, the familiarity of escaping and knowing the tide, and the catching of the tide, and having to make three or four passages a week, and every little corner is cut off. Well now, that is not for the benefit of the saving of life or anything. To my mind that is the solution of it, and I would say there it is. I would show you another point here (*chart exhibited*); there is the Isle of Man. Now, there is a ship coming up here, she catches the Calf of Man light, and if you look at the soundings in there, if a man would sound on a large ship, and if he were compelled to take soundings when he departs—if you are going to Parliament it would be a very simple thing to get this thing done—if you look up here, Belfast, there is 160 or 180 fathoms running in there, and you can fancy the tide running down there all that space, varying from 77 fathoms and 66 fathoms, coming into Belfast Lough 5½ and 6 and 10 fathoms. Look at the depth from 100 there; look at the high wall, the bank of that tide coming down there at 4 or 5 knots, banking up on that, and you will see it is enormous; and that comes down along that coast, and the waters run in here to Belfast Lough, and they run in here and they run into Dundrum Bay. You see that is the case there, the set of the tide there, but if that was marked with the wreck chart along that, and then Dundrum Bay, showing that the tide runs up——

4527. The tides meet?—I could not see it; you are a younger man that I am, and you can see the mark on that there. That should be in red letters, and all the speeds of the tide should be there. That is my view of it.

Mr. S. Lawther, D.L. 19 Mar. 1907.

4528. I think it is quite a sound suggestion that, generally speaking, it would be an improvement to charts if the tide marks were in red?—I think it would.

4529. (*Chairman.*) I quite accept that, but I think that hardly comes within our reference. You have given us your view as to the lighting of the coast in the neighbourhood of Belfast, and you have told us that your experience of the Irish Lights Board leads you to conclude that the system of administration should be changed?—Should be changed; yes, Sir.

General Lighthouse Authorities: Abolition of, advocated.

4530. What system of administration would you recommend should be set up in place of the present one?—The thing I would recommend would be this, putting it practically, if I were manager of it. I would abolish the Light Boards altogether of Ireland, Scotland, and England, and I would put in their place the most experienced expert you could possibly get; not a politically appointed man, but an examination man; that is, an inspector, a practical man at sea like our friend here, and I would put an engineer in charge of it, and I would divide our coast into sections the same as they have in America, and I would put this man in charge of that coast, and instead of an Advisory Committee I would make the Harbour Boards in the area of those sections the Advisory Committee. I will tell you the reason why. Our Harbour Boards are elected members, principally among the shipping community. We have a harbour master, who generally has a master's certificate. Our man has a first-class master's certificate. He has been in the Cunard line, I think in charge. We pay him a very large salary, and he is in daily touch with every ship that arrives and every ship that departs. He is a master of the pilots; he is in touch with the pilots; he knows if there is any deficiency or what is required in connection with accident or any deficiency. Supposing a ship went ashore now, if there is no inquiry by the Light Authorities as to the cause of a ship going ashore, there is an inquiry as to the negligence of the captain, the incompetency so far as he is concerned, but there is no inquiry as to the negligence or fault of the official in the lighthouse. Now, I hold this is absolutely necessary, whether the loss was a loss by the defect of the master or the defect of the light, or for the want of a change of light, or for an improvement on the lighting of the coast. Now that is one of the things, that an Advisory Committee of the Harbour Authority would cost nothing, because it is on the spot. You get instantaneous relief, and another tremendous boon and advantage would be all the lighthouse keepers in that area would know that every captain could report to the harbour master within an hour or two hours if the light was not kept, or if there was any deficiency in the light at all, or if the lighthouse-keeper had neglected his duty. The lightkeeper would be in touch with them, and it is one reason why, and a strong reason; and the two executive officers, the practical man, the engineer and the inspector, when they would visit this section they would come and hold a conference with a Harbour Authority, and they would go round the coast and see where there was any deficiency, and where any improvement could be made, and in that way you would have economy and you would have efficiency, and I believe if those things were done on our coast, just as the Black Head Light has saved many wrecks there since it went up, so on that County Down coast it would have saved these 179 wrecks, or 75 or 80 per cent. of them.

Harbour Boards: Appointment of, as Advisory Committees advocated.

4531. I gather your view is that the present Boards should be done away with altogether?—Yes.

4532. And in their place there should be a sort of committee of two—one an inspector and the other an engineer—?—Exactly, in sections; so many in sections all over the country or the United Kingdom, the same as in America. That is the American system, I believe.

4533. There would be a navigator and an engineer in charge of each section?—Well, whether you would have an engineer for two or three sections or not, I cannot say. One engineer might do the whole of Ireland you see.

Central Lighthouse Authority: Advocated.

4534. Do you contemplate any central board to control these officers?—No, I would have a board in London; I would manage the lighting of our coast just the same as His Majesty's Government manages the Customs and manages the Post Office. Under the Board of Trade you have a department for looking

Mr. S. Lawther, D.L. 19 Mar. 1907.

after the railways and everything else of that kind, and I would have a head board in London, dealing with this whole question, and if there was anything local that our local authorities wanted, an improvement, or anything of that kind, they could telegraph at once to the gentleman who would have charge of the district, and ask him to come down. Well, if there was any difference between that officer and the local authority, that would be referred to the Government here.

Central Lighthouse Authority: Advocated.

4535. You mean that if the local authority thought it was desirable that some new light should be set up in their district, they should have the right to ask the two officers in charge, the inspector and the engineer, to see that this light was put up?—Yes.

4536. In the event of a difference between these two authorities that there should be an appeal to a central body?—Appeal to a central body.

4537. Or to a Government Department?—Or to a Government Department.

4538. But from what source would you derive the funds necessary to put up a new light?—As I understand, the income which is now derived from the lights charged for vessels passing your coast is so large that there is a very large sum to the credit of the lights.

4539. But would you allow a local authority and local officers when in agreement to draw upon that fund for the construction of a new light?—I would not allow them to draw a shilling. That would be under the Government Authority if they agreed to it.

4540. That means that, as far as new lights are concerned, there should be a Central Administrative Authority?—There should be a Central Administrative Authority, that is all. I would not allow them to create anything or spend anything themselves, but that they should be subject to the Government Department who had charge of the funds for dealing with it.

4541. Then your plan would be to sweep away the three existing Boards, and substitute a Government Department in their place?—That is the very thing.

4542. And to appoint local officers for different sections all round the coast?—Yes.

4543. And those local officers should be in touch with the local Advisory Committees?—That is it; and if you do that you would then get the best opinion in the country. I know Ireland, east, west, north, and south, and if you took me to Limerick I could not tell you a single thing about the tide; I could not advise you. If I were on the Advisory Committee I would know nothing about it; I would know nothing about Galway, I would know nothing about Limerick. What would be the use of me in comparison with a Cork pilot, a Cork harbour-master, or a Cork captain, going in there?

4544. But the initiative as respects new lights you would assign to the central body?—To the central body.

4545. And, of course, the control of finance?—Yes.

4546. (*Colonel Herbert.*) I understood you to say your objection to the present system is that you consider the individuals constituting the Boards are not competent?—Well, if you pardon me for putting it in that way.

4547. That is putting it in a brutal way, but still——?—Well, I do not think they have had any experience.

4548. They have not had experience?—No.

4549. I do not quite understand your idea with regard to this expert navigator and engineer. Were they to constitute a sort of department of inspection for the whole kingdom, or was this for Ireland only?—Oh, no, England would have her section, Scotland would have her section, and Ireland would have her section, and those three countries would be controlled by the one Department in London.

4550. Have you based your opinion upon what you know of the Irish Board, or have you studied the constitution of the other Boards?—I know nothing of the constitution of the other Boards. I hear the Scotch Board very highly spoken of indeed; that the Scotch Board have carried out the lighting of the Scotch coast in a much more acceptable form to the Scotch people than the Irish Board has, even than the English Board. That is merely hearsay opinion.

4551. Well, that being the case, that would rather modify your recommendation, would it not?—Not the slightest; it should not modify it at all.

4552. If their administration was held to be satisfactory?—No; it is only in comparison that I am speaking.

United States: Coast lighting superior to that of United Kingdom.

4553. You consider they ought to be better?—No comparison at all, because America does it. I was speaking to a captain of a ship that came in from America the other day, and I was asking him about the lighting of our coast, and what we would require, what he would recommend, what changes he would recommend coming up, and I asked him to put his views on paper, and I sent it to the Board of Trade, as I have sent all the letters from the various captains advising the Board of Trade from practical experience. And I asked him this question: "What is your experience of the manner in which the English coast is lighted as compared with the American coast?" "No comparison at all," he said. "The American coast is lit in a far superior way, and the lights are better." I have never seen the lights myself.

4554. (*Chairman.*) That is the first time such an opinion has been expressed before this Commission?—I am merely giving that opinion.

Shipping Community:

4555. (*Colonel Herbert.*) Are you interested in shipping?—I am one of the old 1-64th owners. I did not go into the limited liability company business. I built the largest sailing vessels in the world when iron ships superseded wood, and I built five of them in Harland and Woolf's—they are all out of it now—carrying 4,000 tons. People thought I was ahead of the times, but now steamers are carrying over 30,000 tons.

Representation of, on Lighthouse Authority deprecated.

4556. The reason I asked you was, I wanted to have your opinion as to the representation of the shipping interest?—I am very glad to hear of that. In the days of the old 1-64th shipowner he was brought up on his own capital, traded on his own capital, ran his own risk. The steamship owners of to-day are the Mary Anne steamship companies, with shares partly paid up, and the majority of those companies are managed, not by the old Brocklebank and Ismay type of gentlemen, they are limited company management; and I do not think you would get out of those limited companies men who have been trained from their youth up, and their families and their capital, enough to give you practical knowledge of shipping matters the way that the old 1-64th owners did.

4557. You do not consider you would get any advice that would be worth having?—I do not, because if you take the limited liability companies—the Cunard line and the big companies, the Cunard line and the White Star line—the heads of the departments are so engaged with overwhelmingly powerful business that they would not have time. The Mary Anne companies—the servant-girl ship-chandler companies, having eight or ten steamers and a £5 share—are managed in this way: "You get your stores from me, and I will take shares from you." I do not think that would be the class of men from whom you would get an Advisory Committee to guide you as to the lighting of the coast. Now, that is a majority of the British shipping at the present time.

Wrecks: Causes of, on coast of County Down.

4558. (*Mr. Ennis.*) With regard to your evidence, I think the first point you brought before us was the enormous number of casualties on the County Down coast, totalling 179?—That is the Wreck Commissioners', not mine.

4559. But you obtained that information?—Yes.

4560. You said you had not segregated this total into the different heads under which the casualties occurred. It may be of interest to you to know that we have had a return given to this effect: That of that 179 total casualties, 22 vessels dragged or parted their moorings when at anchor or alongside quays; 23 were vessels inside Lough Strangford; 43 were entering or leaving harbour; 27 occurred during daylight in clear weather; total, 115. Some were due to mishaps to sails or steering gear, while many occurred during thick fog or hazy weather, when land or lights were obscured. That makes the total casualties 179?—Might I answer you now; I bring it to memory. I had a copy of that from my friend Mr. Pelham, of the Board of Trade, and I went into it and analysed it, and out of the 179—I think the harbour-master and I went into that, and we analysed it out—I think there were 63 bonâ fide positive losses, preventable if that wreck chart had been put there.

4561. No; there are 115 which are due to causes

which would not be affected in any way by the question of lighting or fog-signals?—Yes.

4562. But then some were due to mishaps to sails or steering gear, and many occurred during thick fog or foggy weather. That, of course, might be due to the absence of lights or fog-signals, but still the total number would probably not exceed 40 or 50 which these casualties might possibly amount to?—But they were all very large ones. I make them out about 60 that would be preventable. All those were ships and steamers of various sizes up to the "Anglia," of 10,000 tons, D.W., and down to coasters of 500, 1,000, and 1,500 tons. For instance, one of Robertson's boats went ashore the other day right up on the lighthouse.

4563. In any case you have told us that, having obtained this very efficient light on the Maidens and another at Black Head, and having obtained a promise of having something done for you with regard to St. John's light, of which you complain of a want of power there, and having also obtained a promise to have something done for you with lights at the entrance to Strangford Lough and at Bally Quinton Point, that when these promises have been carried into effect, practically your grievances, so far as the County Down coast is concerned, will be all set at rest, except this question of a fog-signal at Skernaghan Point in place of inside the entrance to the harbour?—Yes. If I were the Advisory Committee I would say that the last suggestion from the Lights Board, although it has come after many years—in my experience, 40 years, I think, of steady application—I think it would meet the case; but what is required if you are going to Parliament to change this, I would suggest, would be this wreck chart of the coast in each chart-room; what I would recommend is that compulsory soundings should be taken in fog; that a man should locate himself by sounding at the bottom; that is absolutely necessary.

4564. With regard to this, we have narrowed down your present difficulty to this fog-signal?—Yes.

4565. All the other difficulties have either been swept away or are in process of being swept away?—Yes.

4566. With regard to that fog-signal at this point, I may say, further, are you aware—you have spoken of the Advisory Committee being in favour of helping you largely with your necessities on the coast of the County Down—of a return which we have had put in of lighthouse works objected to by the Advisory Committee and lighthouse works recommended by the Advisory Committee?—Yes.

4567. Well, so far as I can gather from these recommendations of the Advisory Committee, the only point on which the Advisory Committee really took any steps to help you was with regard to the improvement of the light on St. John's Point. They recommended that, but that is the only recommendation that the Advisory Committee appear to have made with regard to your coast?—Yes.

4568. Whilst the total recommendations made by this Advisory Committee are comprised, as you see there, in about half a page, and the works proposed for Ireland, Scotland, and England, which they objected to, cover over three pages. Now with regard to the constitution of the authority, are you aware that this Advisory Committee is composed of shipowners?—Yes, I am.

Black Head Light: Circumstances leading to establishment of,

4569. Now, I want to ask you, do you think that from the time you began your agitation—your very practical and your very effective agitation—for the lighting of your own coast, if the Irish Lights Board had not existed at that time, and you had had to deal with the Advisory Committee only, you would have obtained all that you have got since?—I really do not know. You see, the only thing that I got secured was when my friend Sir Courtenay Boyle was Secretary to the Board of Trade, when the 33 members of Parliament were to meet the next day to go to the Prime Minister about this Black Head light. When I went into Sir Courtenay Boyle with a telegram from the harbourmaster that four steamers were ashore at Black Head, he said, "Give me this thing." I said, "Well, if you telegraph to the Irish Lights Board, and see that the Irish Lights Board will put that light on Black Head, I will not ask these 33 members to meet. I want the light on Black Head, and if you telegraph to the Lights Board in Dublin a telegram that I will write out for you, and that you will send"—I wrote the telegram for my friend Sir Courtenay Boyle to send to the Irish Lights Board in Dublin, and it was this: "Lawther, Belfast, here; 33 members Parliament to meet tomorrow; four steamers ashore at Black Head; will you authorise a light to be put at Black Head at once? If you do, I will induce Lawther to go home, and end this agitation." The result was that next morning, in the Constitutional Club, I got a letter from my friend Sir Courtenay Boyle, "You may go home, and do not bother me any more," and the result of that was that the light was put on Black Head. I do not believe, if those four steamers had not gone ashore, and the idea of the 33 Ulster members meeting, the light would have been there yet.

4570. That may be, but you will admit, I have no doubt, that it is not every Irish gentleman, or Scotch gentleman, or English gentleman, who is agitating for efficient lighting on the coast of the particular locality that he inhabits who is fortunate enough on the very day that he is in the House of Commons to have four steamers go ashore for his special benefit?—I know this much, that if you want a light or improvement on the coast, get four steamers ashore in one night, and I will guarantee that you get what you want.

(*Chairman.*) That is a very interesting illustration of the efficacy of political pressure.

Central Lighthouse Authority: Suggestion for constitution of.

4571. (*Mr. Ennis.*) I want to put it to you this way with regard to the constitution; I do not quite understand the constitution that you propose for this new authority. I do understand thoroughly that you propose to sweep away the Irish Lights Board, the Northern Board, and the Trinity House?—Yes.

4572. You have expressed an opinion that the Scotch Board has done its work extremely efficiently?—I merely say in comparison, that I hear them well spoken of. I know nothing of my own knowledge.

4573. But are you aware that the Trinity House is composed of mariners altogether?—All I can say is——

4574. I mean they are experts?—During the time I was in negotiation about these lights I called at the Trinity House, and I must say I met a gentleman there, when I put these things before him, an expert of experts, and he said the light should be put there, "And if I have anything to do with it it will be there." Now, speaking for the Irish Lights and Trinity House, I never met with anything but courtesy in my dealing with them.

4575. What I put to you is this: You propose to sweep away the three Boards?—Yes.

4576. You say, and we have had evidence of it, that the Scotch Board is a very efficient Board?—Yes.

4577. The constitution of the three Boards is this: Trinity House is a paid Board, and paid well for their services?—Yes.

4578. And it consists of practical men, who co-opt each other to the position?—Yes.

4579. Has the Irish Board got men who are not practical men?—Yes.

4580. The Scotch Board consists practically of lawyers?—I would have nothing to do with them; I would not touch a lawyer with a 40-foot pole so far as lights are concerned.

4581. You are aware what the constitution of the Irish Board is?—I know all about it. I know the Lord Mayor of Dublin is a member. My friend the Lord Mayor at the time was a very decent fellow, and he was very civil.

4582. We have had evidence as to the constitution of the Board, but what I want to put to you is that you propose to create an authority in lieu of all these Lights Boards?—Yes.

4583. As far as I understand your plan, it is that this Advisory Committee of Shipowners, which at present advises the Board of Trade should remain in office?—Not at all; I would wipe them out, too.

4584. The whole lot of them?—The whole lot of them.

4585. You would have an engineer and a navigator practically in charge of all Ireland?—Of all Ireland.

4586. And they would be controlled by whom?—They would be controlled by the Government, a Department of the Government. You want to know how I would deal with it? I would say you would put the Board of Trade—the Board of Trade runs the railways, and they run many other things; they would have an establishment, whether they would take Trinity House over or not.

4587. I would call your attention to this fact. You say the Board of Trade run the railways, but you do not mean to convey to us that the railways are

Mr. S. Lawther D.L.
19 Mar. 1907.

managed by an engineer without any director, without any intermediate authority between the engineer and the Board of Trade?—I mean to say that the Scotch, English, and Irish Lights should be managed the same as His Majesty's Customs are managed, by practical men. They charge light dues on ships passing their lights, and the Customs charge dues on wine, whisky, and that, and they have an officer to collect that, and the Customs collect light dues on ships coming in, the officers in charge of the Customs. The Post Office is a most complicated thing, and yet it is one of the most perfectly-managed things in the three kingdoms. Well, if the Post Office is so well-managed by experts, would it not be a very simple thing for the same class of experts to manage the lighting for England, Ireland, and Scotland, the same as America, France, and all up-to-date nations do.

Central Lighthouse Authority: Suggestion for constitution of,

4588. Yes, but I want to get from you the constitution of the authority that is to manage all this work because it goes without saying that a Minister obtaining his office by virtue of the political party to which he belongs being in power at the time, and not being an expert himself in the matter of lighting or anything of that kind, must depend upon experts. There must be a controlling power vested in the Government. There is a controlling power at the present moment vested in the Board of Trade. I suppose you are aware that at present, if the Irish Lights Board or the Northern Lights of Scotland wishes to carry out anything in the nature of new works, they must first of all obtain the sanction of the Trinity House? Though they are not nautical experts themselves, they must obtain the sanction of the nautical experts of the Trinity House, and, having obtained that sanction, they must further obtain the sanction of the Board of Trade?—I am aware of that.

4589. So that the Board of Trade exercises a control at present?—Of course, yes.

4590. You propose to extend that control of the Board of Trade from what I may call a control by veto to an administration of the entire work?—Of the entire work.

4591. Do you think that the Board of Trade has not sufficient onerous duties to perform at present without undertaking one like that?—I was in at the Board of Trade to-day seeing Mr. Pelham, and I think they will require very shortly new buildings. I think it is a very dilapidated old show, and I think they will need new offices very shortly.

4592. (*Chairman.*) I think perhaps it is desirable I should correct you on one point. You spoke of the Board of Trade running the railways. The Board of Trade has, as matter of fact, much less control over the railways than it has over the Lighting Authorities?—It may be, but to a certain extent they have the Railway Commission, and all that.

4593. The Railway Commission is quite independent of the Board of Trade?—I know; but the Board of Trade has a great many things on hand. But what I mean is, you may not put it under the Board of Trade; have a Lighting Department, have it a new Department altogether if you like outside the Board of Trade, but let it be a Government Department.

4594. (*Mr. Ennis.*) What I want to arrive at is this: I want to know in your suggested control of the lighting of the coasts of the kingdom how Ireland will have a representation which can make itself heard with regard to lighting on the Irish coasts which may be locally felt to be necessary, and which a central authority might not view possibly with favour. I have heard you say with interest, and I thoroughly agree with your view, that the little coasting man, the man carrying his 300 tons of coal, is a man who deserves to be sympathised with. And I think you will agree with this view—that in considering the question of lighting the coasts of the kingdom you have a variety of interests, and those interests are in many respects conflicting interests. You have the interests of the oversea trade, the big oversea trade. Their requirements would be met by some big leading light such as the Fastnet, the Tuskar, and a few lights like that. They do not want lights on remote parts of the coasts, and so far as their voice or their interest goes they have no incentive to expend money upon lighting a portion of the coast which does not directly affect their own trades, does not affect the great maritime waterways. I think that is instanced by the fact——?—Would you like me to reply to that.

4595. One moment; I just want to put this point a little further. In these works which are objected to by the Advisory Committee, which is a body of shipowners, there are no less than 24 works on the coast of Scotland objected to by the Advisory Committee, and yet the Board of Trade overruled the Advisory Committee in 16 of these instances, and granted the requests of the Northern Lights Commissioners. But if the Northern Lights Commissioners were not there to put forward the requests for these works in the north of Scotland, and if it rested in the hands of some central body, would these works ever have been passed?—Do you wish me to reply.

United Kingdom: Importance of lighting of coast of,

4596. Yes?—The lighting of the coast is a national question; it is not for the little coaster or for the man-of-war, it is for the nation to have our coasts properly lit. It is not for the newspaper penny postage whether you post your letter on one side of the street to go to the other side of the street or to go to Australia; distance is nothing; it is the system. In the management of the national thing it is absolutely necessary that it should be perfect; there should be nobody in it. What is for the greatest good for the greatest number is the absolute requirement of the lighting of our coast; to be up to date with other nations. This is a national question altogether. Do not let one person have this, or one shipowner have that, and do not let us have an election for that. Let us have a tradesman, let us have a man at the head of the management of the lighting of our coasts such as the gentleman that I saw at Trinity House, an Admiral of the highest type, a perfect gentleman. The moment he saw the coast he said, "That is right; that light should be there." That is the man that I want; he is not dependent upon his election; he is not depending upon votes. Now of all the things that my experience of 50 years of public life has taught me to set myself against, it is, "Can I get you a situation? If you vote for me I will do that sort of thing." I want this a national question the same as you build your Navy, the same as you build your Post Office, and the same as you build your Army.

4597. Yes, but in this case we must take facts as they exist; the theory and the practice, so far as I know it, is that the Post Office must give an efficient service to every part of the kingdom?—Yes.

4598. And that efficient service is given to every part of the kingdom?—Yes.

4599. Even to the most remote districts?—So should the lighting of our coast be for the lighter or for the "Dreadnought." The "Dreadnought" ought to be warned just the same as the man-of-war that went ashore in the Bristol Channel. If he had had that wreck chart, that man-of-war would not have been there. If you had had my friend at the Trinity House at the head of that Department, away from political power altogether, and put him at the head of a competent staff of clerks and secretaries and everything of that kind, you have a Lord Roberts or you have a Lord Kitchener or somebody or other at the head of affairs who knows.

Central Lighthouse Authority: Advocated.

4600. (*Chairman.*) Is that consistent with what you have previously said, Alderman Lawther, about making a Government Department responsible?—Put that man at the head of the Government Department; that is the man to put at the head of it; have a Government Department.

4601. Then it would be a Government Department which was not amenable to Parliamentary control?—It would be amenable to Parliamentary control—of course it would.

4602. If you put it under Parliamentary control, then political pressure may be brought, which seems to me to be the very thing that you dread, though you seem to have applied it yourself in one instance with signal success?—Exactly the same as the Post Office. I am not in the House, but I know there is a great deal of work goes on; but I know this much—that if you put a Department subject to the Prime Minister I would not have them going out of office. I would have this man a permanent official; he would be selected from a competitive examination for his qualities, and if he did not do what was right, out he would go.

4603. (*Mr. Ennis.*) Your contention is—and there is a great deal to be said for it, no doubt—the entire coast, the whole coast of Ireland, not alone the coast of the County Down, should be efficiently lit, and the

whole coast of the United Kingdom should be efficiently lit?—Exactly.

4604. And that these coasts should not be inferior to any foreign seaboard in their lighting?—Hear, hear; that is it.

4605. That is your contention, and I sympathise with it, but we must take matters as they stand, and we must take into consideration the fact, although we have not to report upon it, that the shipowning community at present pay the light dues?—The foreigner pays the light dues.

4606. The shipping community foreign and English?—They all pay.

4607. And so long as they pay the light dues they will object to any very large expenditure upon the lighthouse service of the coast of the kingdom. And, furthermore, we all know that when the Advisory Committee and the Lighthouse Authorities consider new works that are proposed, an element that enters largely into the consideration of the question—and you have had experience of this yourself, forcible experience of it—is not a claim that the work is not in itself a desirable work, or a work that ought to be carried out, but a claim that there should be only a limited amount of money per annum expended on the entire service, and that that claim may possibly be obliged to wait until some other claim is carried into effect. That is the present position?—Now I am going to explain that, and explain it, I think, to your satisfaction. I am Chairman of the Lunatic Asylum. Fifteen years ago there were 300 inmates in it; to-day there are 1,300. The committee of that period advertised for land, and they put it up, and the result of it was that any fellow that had land and had any influence came to the committee and said, "Will you vote for this land, So-and So?" It so happened that there was a large estate five miles out of Belfast of about 400 acres, and need I tell you that I took a very great interest in the thing? Instead of bringing a local committee on to the scene, I said bring the active men down from Dublin. My friend Mr. Balfour will understand—the Lunacy Commissioners. They brought them down to Belfast, they went over this estate, and when they saw it they said, "Buy this at any price, it is the finest in the kingdom," and the result of it was that I got my opportunity, and I said, "Well, this is what I have recommended you to do. No patchwork; get rid of all this patching at any cost with a new state of things; go in for the German system, go in for the Colony system, go in for the classification of your patients; build a villa to hold 50 the same as the Germans do; it will cost no more to feed 40 or 50 or attend 40 or 50." And what is the effect? Our asylum is now being put up on that 400 acres of land, and they are putting it up at £90 a bed, I think, whereas formerly, when the whole asylum was one great big barrack and in one big room yelling and shouting, it cost them £200 a bed.

4608. As you have introduced that to illustrate your meaning, I just want to put this question to you to illustrate mine. You have given us a very interesting statement about this asylum and the Government officials coming down and buying this land, but your suggestion would practically amount to a suggestion that you yourself, as Chairman of the Asylums Board, and the members of the Asylums Committee, should go out of office altogether, and it should be managed from Dublin without your assistance at all?—Dealing with lunatics is one thing, and the lighting of our coasts is quite a different matter. All the same, I am against patchwork in either case.

Harbour Boards: Appointment of, as Advisory Committees advocated.

4609. I should like to know what exact function it is—you made a suggestion with regard to the Irish Harbour Boards—that you propose they should fulfil?—Well, the exact function that the harbour masters should fulfil would be the same as the Advisory Committee at the present time. The executive men that would have the management of the section of the coast, in case there would be anything wrong or anything right wanted, would come and confer with the Harbour Authorities, the nearest Harbour Authority, who would be practically acquainted and know all about it. If the executive officer and the Harbour Authority agreed, then the agreement would go before the Government Authority, and then if you have that, it would rest with the Government whether they carried that thing out or not. If they disagreed, then the Government Authority would say who was right and who was wrong, whether it should or should not be done. What I was going to say was this: I believe the economy, the saving from the three Boards being put into one, would be just like one man living in a house at £200 a year and three men living in a house at £1,000 a year. You would save in the administration of the carrying out of your programme, to my mind, a very large sum of money indeed.

4610. Are you aware that the Irish Board and the Scotch Board are unpaid Boards?—I am aware of that—perfectly aware of that.

Central Lighthouse Authority: Would be economical.

4611. They cost nothing; their services are gratuitous?—I am perfectly aware of that; but they have yachts, my friend, and they have journeys in those yachts. They went out to put a barrel of oil on the Maidens; that cost them £10,000; and they have uniforms and that kind of thing. All that type of thing should be done away with.

4612. (*Chairman.*) Have you got any figures as to the cost of what you call these yachting exploits?—No, the Irish Lights Board are, so far as they are concerned, perfect gentlemen, but you have a staff, the office staff there is £4,800 according to their own showing.

4613. (*Mr. Ennis.*) Which staff?—That is the clerks' staff.

4614. Do you mean to convey if you had a Central Authority managing the lighthouses in Ireland that you would do without a staff?—Oh, no, certainly not; you would have an executive staff.

4615. What I mean by my question is: Would not the officials, the paid officials, that are at present in existence, or other people in their place, be needed in any case to carry on the work?—That I could not tell; that would be a matter for the working of it out under the altered circumstances.

4616. If they were not needed economy might be effected, but if they are necessary there would be absolutely no economy, because the Board which you propose to do away with is not paid?—Take it this way: That you have a Secretary in Dublin, you have a Secretary to the Northern Lights Commissioners, you have a Secretary to the Trinity House—three secretaries. One secretary would be enough, would it not?

4617. I want to get that as your opinion, that one secretary would be sufficient; that you do not need any representative of the Central Authority in Ireland or Scotland?—Not at all.

4618. That the Central Authority in London would be quite sufficient to control both Scotland and Ireland?—The whole thing.

4619. Without any secretaries in Ireland or Scotland?—The same as I understand it in America; they have no secretaries all over the country, as I understood. It would be for the Royal Commission to find that out; you could find that out.

4620. But, then, practically your view is—as I understand your view—that you are opposed to the present composition of all three Lighthouse Authorities, because two of them are practically co-opted, self-elected, but you are also opposed to public election, to elected representatives of the shipowner, who in this case pays the dues, and in the case of local lights, a certain class of local lights, of course, local authorities have to contribute towards them?—Our Harbour Authorities deal with the local lights, our harbour matters, and the Chairman deals with that.

4621. Are you aware that the lighting of the Port of London, contrary to the custom prevailing in most harbours in the kingdom, is borne by the General Lighthouse Fund?—That I am not aware of. I do not know anything outside Irish affairs. I know nothing about the London system or Trinity House.

4622. Do you suggest that this Central Authority that you propose to bring into existence would deal with the area administered by the present Lighthouse Authorities, or an extended area?—I would. The authority I would suggest would be an authority to deal with the lighting of the coasts of the kingdom.

4623. And therefore your proposal practically amounts to this, that the entire lighting of the coasts of the kingdom should be absolutely controlled by the Government, and by officials appointed by the Government?—Yes.

4623a. That there should be no power of appointment vested in the payers of the dues, or in any other body in this country?—As long as they charge lights, that is a question that becomes a national question, but the

Mr. S. Lawther, D.L. 19 Mar. 1907.

less you say about it, if it is not within your jurisdiction, the better.

4624. (*Chairman.*) We have nothing to do with the question of light dues?—No, you have nothing to do with that, but the strong point is the safety of the coast and the navigators on the coast, and bringing it down to the simple practice, the wreck charts, and the navigators should use the lead; and another thing which is not mentioned, that these lighthouses outside should be connected by telephone.

Telephonic Communication: Advocated, between light-stations and Harbour Authorities.

4625. (*Mr. Ennis.*) You are aware that some of them are at present?—I think it should be universal. I will explain to you the reason why. Take Belfast, take the Black Head Light—ships coming from the north—these ought to be connected by telephone, because in a fog the small vessels come in, and they are sometimes two or three hours late, for the sake of the poor men who are waiting to discharge them.

4626. (*Admiral Henderson.*) Is not that a local affair?—I do not think so; the local people could not get that. It is a compound thing; it would be for the benefit of the working men.

4627. (*Sir Frank Adam.*) What do you mean by "compound"?—Well, the men who would get most benefit would be working men.

4628. Who were the authorities that opposed the composition?—The nation would be.

4629. But in the present case of communication by telephone?—Two things.

4630. On the one hand you have got what?—I would say the ratepayers should have the authority to connect every light with the Harbour Authority.

4631. You have instanced a special case here, I understand?—Yes.

4632. What are the two authorities that ought to join together to be connected by telephone?—I should say the Harbour Authority and the Lighthouse Authority should be connected by telephone, because the ships from the Bristol Channel and from English ports are prevented during foggy weather from coming in until they are sometimes four or five hours late. When these ships come up to the quay with general cargoes or coal cargoes, these poor unfortunate men who are waiting to discharge them in wet weather and cold weather are standing hanging about there from 8 o'clock in the morning till 2 or 3 in the afternoon.

4633. (*Mr. Ennis.*) No doubt it would be very desirable to give every facility that could be given to people in matters of that kind, but do you not realise that if you impose extra duties on the Lighting Authority, the Lighting Authority would require a larger staff, and that would mean much greater cost?—No.

4634. For instance, in fog, light keepers must be attending to their fog-signals?—Yes; you take the lighthouse at Black Head or St. John's Point, or anything of that kind, and have it connected by telephone on the general telephone; the harbour-master would ring the man up at Black Head Light, and the man at Black Head Light would say such and such a boat has passed up. There would be only 24 in the day; there are only 24 ships come in in the day, 12 north and 12 south. It would be a very small, not a very big operation; it would only be the cost of putting the wires down and making the connection. That would be through the Government Post Office or through the other.

Irish Light Board: Representation of localities on, disapproved.

4635. I just want to ask you one more question. In the event of your favourite scheme—that is, the sweeping away of all existing Lighthouse Authorities and substituting a Government Department and nothing else—in the event of that not being carried into effect, I want to ask whether you would prefer the Irish Lights Board to exist on the lines that it at present exists on, or to be replaced by a Board consisting of elected representatives from the various harbours of Ireland which possess statutory harbour powers?—Well, I have not studied that out, but I would not approve of either the one or the other, and I will tell you the reason why. Supposing I were taken from Belfast to be a member of that Board, I would only know the requirements of Belfast; I would know nothing about Galway, Sligo, Limerick and Londonderry—nothing of that kind. That is one of the strong arguments. I would go up, and I would be asked to give an opinion on a thing I knew nothing about.

4636. Supposing a claim came from an outside source for some lighting on a stretch of the coast which you were fully conversant with and able to give as effective an opinion upon as you have given to-day with regard to your own coast, would you not be a tower of strength to your Board?—No. If you sent forward representatives of the various Harbour Boards to Dublin to manage the lighting of the Irish coast by an elected body from the various Harbour Boards, I do not think it would be an improvement on the present system.

4637. The present system, as you are aware, is a system whereby a body of Dublin gentlemen representing one port only in the kingdom manage the entire coast?—Well, I would say from my knowledge of human nature you would be safer in the present to leave it in the hands of officers. In the other case every fellow would run it for himself. If you sent a representative up from Galway, Sligo, Limerick, Derry to manage the lighting of the coast every fellow would be wanting something or other of the kind, whereas in the Irish Lights Board, as at present composed, you have a better jury to go upon than an interested jury.

4638. (*Sir Frank Adam.*) You evidently have no faith in work by representative government?—Of a certain class; and I think you and I would be at one on that point if we were to compare notes.

4639. (*Mr. Ennis.*) Well, I gather, then, that you would not favour an elective principle, but at the same time you hold that the coasts of Ireland ought to be efficiently lit?—I do, strongly.

4640. And do you think if it had not been for the exertions of yourself and your colleagues in Belfast that you would have succeeded in getting your coast as efficiently lit as you have?—I do not; I think they would have been in the same state. But if you put the executive system on, I speak of, and send down my friend from the Trinity Board, he is a tradesman who knows just exactly what he is talking about, and whether you want a light or not, there it is; you have no trouble. My experience in life leads me to the opinion that you ought to go to a shipbuilder who knows his work, go to a tradesman who knows his work; you have no trouble with him whatever.

4641. Are you a believer in the view that experts of high general knowledge are more competent to express valuable opinions on local circumstances than people who know the locality thoroughly all their lives and who may not be so thoroughly qualified from the expert point of view. I put it in this way: an engineer comes down to a section of the coast where a fishery pier is required, say; would you place absolute confidence in the opinion of that expert if you found that it was in direct contradiction to the opinions of experienced fishermen who had lived in the locality all their lives and who knew the set of the tides and all the local circumstances?—I would rather have the man who went out on a dirty night with his oilskins on than all your experts in existence; I would rather have a man who, coming in, knows the sets of the tide and the narrow escapes he has had.

4642. Does not that tell against your own argument that representatives of different parts of Ireland such as Galway do not know what is better for Galway Bay?—The principle I go on is that you would get home rule on the point and you would get it on the spot. The Commissioners of the Derry Harbour Board would deal with the home rule question and the ships going to Derry, and would have it there, and every one of them would know, and dare not express a wrong opinion, because it would be *ultra vires* to the expert.

Harbour Boards: Appointment of, as Advisory Committees advocated.

4643. But you do not propose to give him any power?—Oh, yes, pardon me.

4644. What is the power you propose to give him?—He is the adviser with the sectional navigator and the sectional engineer; he goes down and confers with them on the spot.

4645. Who appoints him?—The Government.

4646. I am speaking of the men representing the locality; who appoints them?—Oh, that is the whole Harbour Board, and the Harbour Board is an elected body.

4647. You suggest the Chairman of the various Harbour Boards?—Of the Harbour Commissioners, who are an elected body; they are elected by the public.

4648. But you suggest that the Chairman of that Board should be an adviser to the engineer and inspector that you propose?—No, no; the whole Board. For instance, in our Harbour Board we have a Navigation Committee that deals with the navigation—altogether with that type of thing. Supposing that

my plan was carried out, it would be the Navigation Committee of the Belfast Harbour Commissioners that would deal with that; the expert would come down and confer with that committee, and the harbour-master and all the pilots and the pilot-master would all go on the spot.

4649. (*Admiral Henderson.*) I have only one or two questions to put. Plainly, you have advocated practically that the lighthouse administration should come under State control absolutely?—Yes, absolutely.

Central Lighthouse Authority: Advocated.

4650. Now, supposing that that was not practicable, would you consider that a Central Board, on which there were representatives of shipowners, of the underwriters, and of the Admiralty, and shall we say of the Board of Trade itself, and of the masters, the shipping interests generally, would be a good substitute for the State control—that is, a governing consultative body that met only once a quarter, and that took the main points of the financial control and the consideration of new works, and decided on it with what I call an expert Board—that is to say, a small body of two or three expert officers which you have been suggesting to do the executive work, with a properly decentralised system of inspectors and so forth, and engineers too, in Scotland and Ireland. Do you think that that would be a form which would be acceptable according to your ideas?—Next to the proposition I put, I think that would be the most acceptable one.

United Kingdom: Lighting of coasts of, inferior to that of other countries.

4651. You have said a good deal about the up-to-date lights and signals procurable, but, of course, you understand—in fact, you advance it—it is like most other questions—a question of ways and means—money?—Yes.

4652. That these Boards and the Board of Trade itself are governed by pecuniary considerations?—Everything is money.

4653. Can you bring forward any evidence to show that, taken as a whole, our coasts are not as much up to date and as well lit as those of any of our colonies or any other nation?—Oh, yes, unquestionably.

4654. You can bring it forward. Have you got it here; you have only hearsay evidence?—Well, the County Down coast—look at it.

4655. You have admitted, with the one exception which is now wanted, which is already approved, that the County Down coast would be the most up-to-date part of the whole coast of the United Kingdom?—It is only one of the legs of the stool that has agreed to it; the Trinity House has not done it, nor has the Board of Trade done it, nor has the Financial Secretary agreed to it; you do not know where you will be before it is through.

4656. Granting that what you say is correct, is it your belief that the loss of time and effort and everything under the existing system is due to the ancient character of the present system of administration?—I can only speak from experience.

4657. And that if it were modernised it could be run at a less cost?—I do certainly; unquestionably.

4658. Does not Lloyd's do the work of reporting passing vessels?—They do, yes. It is a startling fact that the County Down coast has been a mine of wealth to Lloyd's agent out there.

Wrecks.

4659. Could not Lloyd's agency be employed to inform your dockers?—I knew a man who had a small income, and lived in a house at three shillings a week, and he now owns a large farm in County Down, and he is a salvage man, and his income is I do not know how much per year owing to the wrecks on the coast. They have been a magnificent harvest for him. My wreck chart would do away with his work.

4660. Is it true, on the question of wrecks, that the number of wrecks on the coast is diminishing?—Not from Saturday night on the Land's End.

4661. You do not think so?—No, I do not.

4662. But have not improvements in nautical appliances in a larger number of steamers lessened the number of wrecks that there were a few years ago also?—One wreck to-day would represent perhaps 200 fifty years ago. For instance, the "Suevic," the White Star liner, which was built in Belfast, of 12,000 tons, would represent a whole fleet of 300 or 400 tons. It is something melancholy to see that magnificent ship there on the Land's End.

4663. Yes, but it was in a fog?—Yes.

4664. The Boards at present are assisted by experts; they have their expert engineers and their expert people generally?—All I say is, the Dublin Board is composed of a body of gentlemen second to nothing in the country. You could not have nicer men or nicer officers; they are courteous, civil, and everything you like.

United States: Efficiency of lighting of coast of,

4665. Do you know that the American Board is very much more hard up for money than we are, and that they have greater difficulties?—I know that they have all the difficulties. I was speaking to an admiral the other day—I was dining with him. We were talking about the lighting of the coast, and we were talking about the American system. "Well," he said, "America is a great country; there are millionaires there; we in England cannot do the things they can do in America, but one thing I do know, and that is that the coast is well lit."

4666. You said something with regard to compulsory sounding. Now, how could you carry it out, compelling merchant ships to take soundings when they are in fogs?—It is compulsory now; it is compulsory in the only way that you can make it compulsory, that if a man is found negligent or not using the lead in a fog he gets sacked; that is all you can do. I was speaking to Mr. Pelham to-day in the Board of Trade, and he said, "You have passed Factory Acts and that sort of thing to save people by the bye-laws and all the regulations you can put upon the wall all over, but nothing is done for this."

Telephonic Communication.

4667. One other point I want you to consider on the question of these telephones you suggest. You must recollect you then get into international questions, because you make your lightships, which are immune from attack in war, signal stations, giving information?—Do you know what it would do to connect Belfast with the telephone?

4668. I am not speaking of that; I am speaking of the question of war. Supposing that an enemy came along, and you had a signal at a lighthouse, he would knock that lighthouse down. At the present moment, by international law, he does not touch the lighthouse?—Yes.

4669. It is a point to be considered. What I want to show you is that there are difficulties, so far as that is concerned?—That there are difficulties.

4670. Now, as a practical man, when you have considered the administration of all these various Boards, I want to know whether you do not consider it a very extraordinary anomaly that the Trinity House Board should be paid £7,000 a year, while the other poor Boards are not paid anything at all for doing practically the same work?—I would wipe that out. My theory would wipe the £7,000 a year and all the others out. I have studied this thing, as you see, carefully out, and what I recommend is a very, very simple thing, a re-charting of the wreck charts on the coast.

THIRTEENTH DAY.

Tuesday, 26th March 1907.

PRESENT:

The Right Hon. G. W. Balfour (*Chairman*).

Sir Frank Forbes Adam, C.I.E.
Colonel I. J. C. Herbert, C.B., C.M.G., M.P.
Vice-Admiral W. H. Henderson.
Mr. M. A. Ennis.
Captain C. Bigham, C.M.G. (*Secretary*).

Mr. T. F. Cooke, Mr. H. J. Forde, Mr. Marcus Lynch, and Mr. T. N. Redington, called in; and examined.

Mr. T. F. Cooke, Mr. H. J. Forde, Mr. M. Lynch, Mr. T. N. Redington.

26 Mar. 1907.

4671. (*Chairman.*) Perhaps I had better begin with Mr. Cooke. Mr. Cooke, you are Chairman of the Londonderry Harbour Board, I understand?—Yes, Sir.

4672. Are you here to express the views of the Harbour Boards in Ireland generally, or only of the Londonderry Harbour Board?—Oh, only of my own Board.

4673. Has it been the habit of Harbour Boards to meet to discuss matters of general interest in the past?—Not in Ireland, I think.

Harbour Boards: Representation of, on Irish Lights Board advocated.

4674. Because I observe in your *précis* you say, "The question of the present constitution of the Irish Lights Board has been under the consideration of the Harbour Authorities in Ireland on many occasions during past years, and it has been the unanimous feeling that these authorities should be represented on the Lights Board"?—That is so, but as far as my time is concerned, during the time I have been Chairman of my Board, we have had only one meeting. We have had a great deal of correspondence during the last ten years on the subject with the other Boards.

4675. Have you made any representations on this subject to any authority, Parliamentary or otherwise?—No, we have not.

4676. So you have not had an opportunity of expressing your views publicly?—No.

4677. Before the present one?—No.

4678. I see you say that the Londonderry Port and Harbour Commissioners have no specific complaint against the Irish Lights Board?—That is so, but although we have no complaint against them, our idea is this: that it would be a great deal of use on the Irish Lights Board if they had more local representation on it. The Harbour Boards in Ireland, of course, have their engineers and their pilots and their various officers of that sort, and we have always been under the impression that we could give the Irish Lights Board a great deal of valuable information on certain subjects. Now, to illustrate that, there is a case in point at the present time, upon which we are corresponding with the Irish Lights Board; that is as to the position of a buoy placed at the entrance to Lough Foyle about two years ago, and it is the unanimous opinion of all the masters frequenting the port that that buoy is not in the proper position; that it is about two miles away from where it should be. Well, we have made various reports to the Irish Lights Board on the subject, and it has not been altered.

4679. And your idea is, that if you had a representation on the Board you would be able to urge your views on the Board with greater effect?—Yes, for the local requirements of the coast. There is another matter—I do not know whether it is the proper time to mention it or not—but there is a feeling on the part of the captains and people who are navigating the north coast of Ireland, that the lights on Rathlin Island are not sufficient. They think there ought to be a light on the western side of Rathlin, because vessels bound to the west cannot see the present light on it, and make use of the Sound, and they think if there were a light on the western side of Rathlin, and a sounding buoy or a siren, or something of that sort, it would enable them to use the Rathlin Sound, which they cannot do at present at night.

Rathlin: Establishment of light at, advocated.

4680. Does the question of the improved marking of Rathlin Island come in any way specially within the cognisance of Harbour Boards, or of your own Board?—No, but the way it comes before us is this; that our port is just immediately beyond it, and it is largely used by coasting steamers, and Atlantic steamers, too, that enter the port of Lough Foyle.

Harbour Boards: Representation of, on Irish Lights Board advocated.

4681. My question was directed to this: Do you think that for the marking of the coast at a place like Rathlin, or take in the south an important lighthouse like the Fastnet—do you think that in connection with seamarks of general utility such as these the presence of representatives of the local Harbour Authorities on the Irish Lights Board is desirable?—I do, yes.

4682. Have you considered the constitution of the Board generally? Your present suggestion is that a certain number of representatives of the Irish Harbour Authorities should be placed upon the Board, but is that the only change which you would suggest?—Our idea is this, that with the exception, I think, of Dublin, which has a very large nomination on the Irish Lights Board—their Corporation and their port have a very large nomination on that Board—no other Harbour Board in Ireland that I am aware of, except Belfast, is represented on that Board at all, and therefore we think that a great many people on that Board should be substituted by people who have more practical knowledge of the coast.

4683. You would not sugest that the number should be increased?—No, we do not suggest you should increase the Board, nor do we suggest it should be done away with at all, because my Board recognise that the Irish Lights Board have done very good work and very good service, and all they would like is to see the Board more or less reformed rather than done away with.

4684. You would be contented if each Harbour Board in Ireland having a revenue of not less than £10,000 should be represented on the Board?—Well, we only give that in round figures. It is impossible to put on Harbour Boards with £1,000 a year, because the Board would be too unwieldly. We only take round figures, and say all Harbour Boards having a revenue of £10,000 a year should be represented.

4685. Take the figure of £10,000, which is the one you suggest here, what number of representatives of Harbour Authorities in Ireland would that produce upon the Board?—I am only speaking from memory, but I should think it would represent six or seven Boards in Ireland, perhaps more; perhaps eight.

4686. That is the only suggestion which you are here to present to the Commission, with regard to the reconstitution of the Board?—That is all, Sir. There is another matter which I wish to mention. We did

Telephonic Communication: Advocated between light-stations and Harbour Boards.

think it would be of great importance if these local lighthouses—when I say local I mean Rathlin, Tory, Irishowen Head, and Inistrahull—could be put into telephonic communication with the nearest Harbour Board Authority, for various reasons. A Harbour Board Authority like that has a staff, and could notify vessels in distress, or anything like that, and if notified to them they could notify the proper people.

4687. I think there is only one other point arising out of your *précis* of evidence, and that is with regard to the revenue of the Lights Board being devoted to the purpose for which it is levied, and not used for any other purpose. What do you refer to?—Well, as I understand the revenue of the Irish Lights Board, during the past years there has been a large surplus, and that that surplus has been devoted to other objects. If it is so, we think that that surplus revenue ought to be devoted to decreasing the light dues.

Light Dues: Application of,

4688. Are you speaking of the revenue of the Lighthouse Fund generally?—The revenue of the Irish Lights Board.

4689. There is no special revenue of the Irish Lights Board?—Well, the impression I was under was that the revenue went to other purposes, like paying coast-guards and things of that kind; paying the Board of Trade. Am I wrong in that?

4690. That is a mistake; that is not so. The light dues are paid into the Lighthouse Fund, and are not applied, so far as I am aware, to any other purpose. I did not quite know what it was you had in your mind?—I may be wrongly informed.

4691. It might be the annual outing of the Irish Lights Board?—Oh, no, certainly not; but the impression my Board certainly had was that the surplus passed into the coffers of the Board of Trade, and was applied to other purposes.

4692. That is no longer the case?—That is not so.

4693. Is there any other point on which you wish to give evidence before the Commission?—I do not think there is, Sir.

4694. Very well, then, I will pass to Mr. Forde. You are the Chairman of the Waterford Harbour Board?—(*Mr. Forde.*) I am not the Chairman; we have no permanent Chairman.

4695. But you are deputed to represent the Waterford Harbour Board?—I am deputed to represent the Waterford Harbour Commissioners.

Harbour Boards: Representation of, on Irish Lights Board advocated.

4696. As regards the evidence just given by Mr. Cooke, would you express a general concurrence in that evidence?—I would, Sir; yes. I would like to make one correction. I think that Mr. Cooke placed the revenue that should be represented on the Irish Lights Board at £10,000 a year; that would be rather high. I do not think that would embrace some ports that may legitimately be represented in Ireland. Of course, as he mentioned, he just placed the figure at £10,000, but I think in Ireland—as you would know, Sir—£10,000 would be rather a large revenue for many ports that really might claim to have representation.

4697. Quite so; we are to take it that in principle you think the Harbour Boards should be represented?—I do.

4698. It is quite clear that all Harbour Boards could not be represented?—Quite so.

4699. A line must be drawn somewhere?—Yes.

4700. The most convenient way of drawing it would be to make it depend on revenue?—Yes. Of course, you would have to take this into consideration. There are ports on the west coast of Ireland, if you went on the division of a fixed sum for revenue, you could not have represented, so an exception would have to be made in cases like that. In Galway and Sligo—I do not know what the revenue might be—but I do not think it would be up to £10,000 a year. Generally, I think I may say the Harbour Boards in Ireland should be represented, but some line, of course, should be drawn as to the number.

Appointment of, as local Advisory Committees advocated.

4701. Have you any observations to add to those Mr. Cooke has made on the subject of the constitution of the Irish Lights Board?—Well, I would favour the American system, that the Board should be constituted of practical engineers and master mariners, and then the Irish Harbour Boards represented should form an Advisory Committee, that they would consult with as to matters appertaining to the coast lights that may be considered as applying to each particular Harbour Board that would be represented.

Mr. T. F. Cooke, Mr. H. J. Forde Mr. M. Lynch, Mr. T. N. Redington.

26 Mar. 1907.

4702. You mean you would have a Central Board, as at present?—A Central Board.

4703. It would be entirely reconstituted then?—It would be reconstituted.

4704. It would consist of representatives of Harbour Authorities?—Of representatives of Harbour Authorities and the other experts.

Irish Lights Board: Reconstitution advocated.

4705. And how would the other experts be appointed?—Well, I believe in America they appoint them by competition. You see, it is a very technical subject, the whole of this question of lighthouse administration, and you require to have the best men possible to deal with it.

4706. But have you studied the American system?—I have not studied it very closely, but I have heard about it.

4707. Have you any observations to make with regard to your own district?—We have no observations to make in the way of finding fault with the present administration; but we think that if the administration had been more flexible, possibly greater good might have been done. For instance now, in administering our own port, I think we have nine lights in our harbour, and there are a good many cross-channel steamers coming in there, and when the captain of a cross-channel steamer makes a suggestion that a buoy might be placed here, or a light should be placed there, or some alteration should be made, we go into the matter with our pilot master and our harbour master. We hold an inquiry with the cross-channel captains as well, and we then decide what is best to be done.

4708. Have you been in the habit in the past of making representations to the Irish Lights Board?—We have made, Sir, but for years past we have not done so.

Administration of, efficient.

4709. Have you generally found the Board willing to listen to those representations?—They have listened to them; whether they carry them out afterwards is another matter. I would not wish you, Sir, to take it that I wish to complain of the way they have managed things. I think they have managed things very well on the whole.

Local Lights: Establishment of, by General Lighthouse Fund deprecated.

4710. Is there any other observation you would like to add?—It has been stated that at Rosslare the Irish Lights Commissioners have placed a light at the public expense, though it was a private harbour. If that is the case, it is a case of preferential treatment, as we in every Harbour Board might claim that, if you put a light on Rosslare, which is on a private harbour, you might do the same for other harbours.

4711. What do you mean by a private harbour?—Rosslare is a private harbour; it belongs to the railway company, and the light, I understand, was placed there at the public expense. If it is right to place a light on a harbour belonging to a private company, then I say it is the same to place lights at the public expense in other harbours.

4712. Is the Rosslare light put up at the public expense although it is within the jurisdiction, or although it is on a part of the coast line within the jurisdiction, of the Rosslare Harbour Authorities?—I have not been able to find out exactly.

4713. There is nothing else, Mr. Forde, you would like to say to us?—There is nothing else.

Irish Lights Board: Reconstitution advocated.

4714. Then, Mr. Lynch?—(*Mr. Lynch.*) Well, Mr. Chairman, Mr. Forde, who has just spoken, has cut the ground from under my feet. I had a memorandum of what the Galway Harbour Board, which I represent—I am the Chairman of it—wish, and I think it is nearly all embodied in what Mr. Forde has just suggested. The memorandum is very short. The Galway Harbour Commissioners are unanimously of opinion that the present antiquated system of management, as adopted by the Board of Irish Lights, should be abolished, as it does not meet the requirements of the up-to-date class of vessels at present trading to our ports.

4715. That seems to me to go a good deal beyond the views expressed to us by Mr. Forde?—I understood it, Sir.

4716. Would you develop that, please, a little more. Mr. Forde, I think, did not take any very serious ex-

26 Mar. 1907.

With Harbour Board for local Advisory Committees.

ception to the administration of the Irish Lights Board?—Would you allow me to read this?

4717. You think it does not meet the requirements of the up-to-date class of vessels at present trading to Irish Ports?—If you allow me to finish it, it will explain itself.

4718. If you please?—It is universally admitted that the French or American systems—I am not exactly certain about it, it is not on my own authority, but I am speaking for the Board—are the best. The former is managed by practical engineers and trained master mariners, these officers being selected by competitive examinations, and we strongly recommend this system in this country. We also recommend that the engineers and master mariners appointed should consult the following Harbour Boards:—Dublin, Belfast, Cork, Waterford, Limerick, Galway, Tralee, Drogheda, Dundalk, Newry, Dingle, Londonderry, Westport, Kinsale, Wicklow, and Wexford, which should form an Advisory Committee—I do not say to be on the Board, but they should be an Advisory Committee—and to allot to each port their neighbouring coasts—that is, to mark out a strip of coast which should be more or less under the jurisdiction of each port. In case of any difference or dispute between the officers or Harbour Authorities the dispute shall be settled by the Board of Trade, whose decision shall be final.

4719. I think you were modest, Mr. Lynch, when you said Mr. Forde had cut the ground from under your feet, because in this little memorandum you have developed a completely different system to that which he has suggested?—I understood Mr. Forde to say the Board should be entirely remodelled. Perhaps I was wrong, but I understood him to say it should be composed of experts and practical engineers, master mariners, and so forth, who would be better able ——

4720. I understood both Mr. Cooke and Mr. Forde to desire that the Irish Lights Board, as such, should continue. Mr. Cooke thought that there ought to be representatives of the Harbour Authorities. Mr. Forde, I think, went rather further, and said that there should be engineers and master mariners upon it also; but you, as I understand, would sweep away the existing Board altogether; you would have a Board entirely of experts?—Yes.

4721. And instead of having representatives of the various Harbour Authorities on the Board you would constitute those Harbour Authorities merely as an Advisory Committee?—Yes, exactly, reconstructing the Board altogether. Those are my instructions. Do away with the present Board and form another one composed of engineers and experts and master mariners, and people who will be more up-to-date in the requirements of the country.

4722. You say: "It is universally admitted that the American or the French systems are the best." Can you describe to us these systems?—I cannot. I have stated what I was told. Those were my directions; I cannot say. I never state anything that I cannot carry out and give proofs of. I am not aware myself, personally, what the American system is; I only say what I have been told by the Harbour Board.

4723. When you say "it is universally admitted," you mean that is the general opinion of your Board?—The universal opinion of the Board. Of course, I do not go beyond taking the orders; I only represent the Board.

4724. When you say: "It is universally admitted that the French or American systems are the best" you mean that is the view which your Board has unanimously directed you to express here?—Exactly. I daresay the Board think that others besides themselves are of the same opinion; but, of course, I cannot say.

4725. Well, then, I should like, if possible, to get a somewhat clearer idea of the nature of this proposal. You say "in case of any difference or dispute between the officers or Harbour Authorities the dispute shall be settled by the Board of Trade, whose decision shall be final"?—Yes, Sir.

4726. Take, for instance, a proposal to erect a new mark upon the coast?—Yes.

4727. You mean that in the first instance the Board, reconstituted on the lines you suggest, should consult with the Advisory Committee, and that whatever conclusion they came to, if they were agreed, it should be carried out?—It was the Advisory Committee who suggested it to the Board of Lights—the new Board; they would make the suggestion. If the Board did not see fit to accede to their suggestion, then the matter could be referred to the Board of Trade, whose decision would be final.

4728. But supposing the Board did accede to their suggestion; supposing the Board and the Advisory Committee were in agreement with respect to the expediency of establishing some new light, what would follow?—Is it the Board of Lights—the new Board of Lights?

4729. Yes?—Very well, if they were, then in that case they could do so.

4730. Out of whose money?—Oh, out of the public funds, of course.

4731. Out of what fund?—The funds supplied to the Board of Lights.

4732. By whom; who would supply it?—By the Customs—the Treasury, of course, or wherever it is supplied now, either by the harbour dues, or wherever they can be got from. They have a certain income now, Sir, have they not?

4733. Is it your idea that the Advisory Committee and this newly constituted Board, when in agreement, should have power to draw upon funds supplied by the Treasury, and only in the event of difference of opinion should any Government Department come in with control?—If there was difference of opinion between the Advisory Committee and the Board of Irish Lights—the new constituted Board of Irish Lights, then they should refer it to the Board of Trade, and their decision would be final.

4734. But supposing there was no difference of opinion between them?—Then, of course, there would be no necessity to refer it to the Board of Trade; it would be carried out.

4735. But in order to carry it out they require funds, and they must make application to somebody for funds?—Where do the funds come from at present, Sir?

4736. The funds come at present from the light dues?—Well, from the light dues, then.

4737. But are they to draw upon the Lighthouse Fund at their own sweet will as long as they agree together?—If they agree together; you see the Board of Irish Lights draw on the funds, of course.

4738. Would you give no Government control at all over the funds; is not that a very surprising proposal?—Well, of course, you could always refer them to the Board of Trade. It is only if the consulting members of the Board, that is, the representatives of the different Harbour Boards, and the Irish Lights agree on the advisability of erecting some new light, or changing something, or improving some buoys, putting bells on them as they are wanted in Galway; and we never thought for a moment that there would be any difficulty if the two Boards agreed as to the advisability and expediency of it in carrying the matter out.

4739. You did not consider the question of the supply of funds?—Oh, we never do in the West.

4740. Is there any other observation that you would like to add to what you have already told us?—No, Sir.

4741. Mr. Redington, I suppose your evidence covers quite the same ground. You are the Secretary of the Galway Harbour Board?—(*Mr. Redington.*) Yes, Sir.

4742. And also Secretary to the Conference of the Harbour Authorities in Ireland?—Quite so, yes.

4743. Have you anything to add?—I do not think I have anything to add to what Mr. Forde, Mr. Cooke, and Mr. Lynch have already stated.

Irish Lights Board: Not in touch with local requirements.

4744. (*Colonel Herbert.*) Mr. Cooke, as I understand, you consider that the present Commissioners of Irish Lights are not in touch with the local requirements?—(*Mr. Cooke.*) Not altogether.

4745. Is that caused, do you think, in any degree by a want of definition of the areas of their functions?—No, I do not think it is; but, when any question arises, of course, it has to be conducted by correspondence—a question of buoys, or beacons, or anything of that sort, which has to be conducted entirely by correspondence. There is no person on it from the locality or the district to ventilate the views of the people who want the things done; that was my point.

4746. Yes; but you see my point with regard to the different functions of the two bodies is that the higher authority—the General Authority—has to deal with the passing lights along the coast, the outer lights, as it were; whereas the Harbour Authorities have to deal with the inner waters?—Yes.

4747. Well, may not that absence of touch arise from the fact of that difference in their functions, and that there is sometimes an overlapping of those functions, and it is not very clear to know which authority should deal with certain lights or with certain areas?—Yes; but my feeling is that in the case of vessels, coasting steamers and all sorts of steamers bound into a port like Derry, the masters or the mates of them go to the harbour office and talk these things over, and they tell them what things they see wrong, and what things they think might be improved. Well, I think it would be an advantage if those views could be brought into touch with the Irish Lights Board. The only way we can do it at present is simply by putting the case on paper and putting that before them.

Local lights: Maintenance of, by General Authority deprecated.

4748. Yes; but if the things complained of fall within the area of your own Board you are at liberty to deal with them just as you like?—Oh, certainly. But we never put cases before them that our own Board can deal with. If we put up a light in our own river or on our lough, which is a matter for the consent of the Irish Lights Board, they have to sanction it, and they always sanction it where it is desirable.

4749. Have you ever considered, in connection with your proposal, the possibility of bringing the whole of the lights under one authority?—Well, that is, of course, from our point of view, rather a big question; we are really only interested in the Irish Lights.

4750. I mean all of the Irish Lights, whether local or general?—Well, we never have considered that; but I do not think it would be a desirable thing to do, because I think every local authority knows its own requirements best. Besides, I do not know how you could work it out.

4751. But if you were represented on the Board, you would be, as it were, a branch of one General Authority?—Yes, but I do not think you could work the local harbours and the local rivers better than they are done at present by having the members elected by the ratepayers, who really are the importers of the goods. And I think they have a fair knowledge because, as I say, they are coming into contact every day of their lives with their pilots, their engineers, and other people like those, and they know what is really wanted better than any single Board could know.

Harbour Boards: Representation of, on Irish Lights Board suggested.

4752. Now, with regard to another suggestion of yours, the obtaining of representation. You said that you did not think it desirable for every local authority to be represented; would it be possible to group authorities so as to obtain representation?—Yes, I think it might be. My idea, when I said that was, if you take any harbours in Ireland, small and large, your Board would be so unwieldy that I do not think it would ever work.

4753. That is evident?—You must not get it too big; but I think it is perfectly possible that you might group the harbours together.

4754. Then, there is always the difficulty of the different degrees of importance of these different authorities?—Yes.

4755. Would not the lesser ones rather be in danger of being swallowed up by the bigger ones?—Well, I do not know really in what way you could work it out; but they would, I think, be better in having some voice along with the larger ports than none at all, as they have at present.

4756. Of course, it is to find out the way to work it out that we are here?—Yes; you might, I think, have ports like Belfast, Dublin, Cork, and Londonderry represented, which are large ports. Of course, when you get round to the western ports, and get to small ports like Tralee and Dingle, that were mentioned, all those ports—I do not know exactly what the size of them may be, but they must be small ports—there is no doubt that a number of those ports could be grouped, and have one representative for those ports. I do not know what the practical way of arriving at it would be, but I should think you could do it in that way.

4757. You think that is a practical idea?—Yes, I think so; I think that could be done.

4758. Then, your idea is that the existing Board should still continue to be the Lighting Authority for Ireland, but that the personnel should be altered?—That is the idea of my Board.

Mr. T. F. Cooke, Mr. H. J. Forde, Mr. M. Lynch, Mr. T. N. Redington. 26 Mar. 1907.

4759. By means of representative members?—Yes; they do not in any way wish to see the Irish Lights Board done away with, because, as I mentioned, my Board recognise that they have done very good service and are doing their work very well; but they do think that with local assistance and local knowledge they might do better.

4760. Yes; but then it is a question of bringing new blood into the present arrangement?—Yes; rather reforming the Board than doing away with it.

Irish Lights Board: Reconstitution advocated.

4761. Mr. Forde, I understood that your proposal was different; that you proposed that there should be a small authority, what I might call a bureaucratic authority, set up to deal technically with the whole question of lights, and then a separate Board as an Advisory Board; was that so?—(*Mr. Forde.*) Well, I think, perhaps, I put the Commission under a misapprehension, if that was the case. What was in my mind was this: when you asked the question, Did I wish to see the Irish Lights done away with? I said No; that was the idea of some people; they think there should be one administration for the whole of the United Kingdom. It was from that point of view that I answered the question, not to be done away with, but we did not mean that the personnel might not be greatly changed. At present the Irish Lights Board are practically appointed in Dublin, and they have representatives put upon it who really do know nothing about the business in hand. I do not wish to say anything disrespectful of them—gentlemen appointed on it; it may be looked up to as an honour to be a member of the Irish Lights Board, but there are really gentlemen appointed upon it who know nothing about the business in hand. My idea was that there should be several experts on it who were practical men—master mariners and engineers, and then that there should be some representatives from Dublin, and representatives from the Irish Lights Board; the whole of them to act together, as it were.

4762. Do you know the constitution of the Trinity House?—No, I do not, beyond, merely just in a very crude way, that it is appointed, I understand, by Lloyd's.

4763. Well, I may tell you, the members, or the Elder Brethren of Trinity House are master mariners?—Yes.

4764. That is their qualification. Is that the idea you have with regard to reforming the Irish Board?—That there should be some master mariner on it; something like, as you say, the Trinity House.

4765. You would have that as one qualification?—Yes, and engineers as a qualification, and then the Irish Harbour Authorities.

4766. And you would propose that these gentlemen should be appointed, these Commissioners for Irish Lights?—Well, in a Board like that, if you appointed mariners, I should think you would have to pay them.

4767. Yes; but who would be the appointing authority?—I should think the Board of Trade at first, and then, when you had the Board constituted with the representatives of the Irish Harbour Boards upon it, they would have the appointing afterwards.

4768. I wanted to get exactly your idea what the system should be, whether it should be nominations by superior authority, or representative, or in what way, just to get at the idea in your mind?—Well, I think it would be better to have a representative authority.

4769. Have a representative authority?—Oh, certainly.

Waterford Harbour Board: Extent of jurisdiction of,

4770. I notice here that you mention with regard to Waterford, your own authority, that you are 18 miles from the sea along a navigable fairway, and so on. That, I presume, comes within the functions of your authority to look after?—Yes. Well, we go down as far as Duncannon, and the Irish Lights take it up from there. Duncannon is about 4 miles, I think, from the mouth of the harbour.

4771. Well, would you still retain?—We would retain from Waterford City down to Duncannon two lights; we have nine lights, I think, there.

4772. You would propose still to retain the whole of that?—Oh, yes.

4773. What I might call the inland waters within your own administration, apart from the Irish

Mr. T. F. Cooke, Mr. H. J. Forde, Mr. M. Lynch, Mr. T. N. Redington.

26 Mar. 1907.

Authority, under reformed conditions?—Yes, I think it would be better that it should be so.

4774. And have the power of levying dues to maintain it—to maintain it as you do now?—Yes.

4775. That, you think, would be better than to have a pooling of the whole of the dues?—I think it would. You see, as Mr. Cooke pointed out, it is quite the case—we find it, too—that masters and mates of vessels come into the Harbour Office, and if they have anything that occurred to them about the lights round, they mention it there, and in that way the Harbour Authorities are in touch with the men who have actually to use the lights along the coasts.

4776. Mr. Lynch, might I ask you to make quite clear to my mind what your proposal was. Was it exactly what has now been developed by Mr. Forde?—(*Mr. Lynch.*) No, Sir, it is almost the opposite.

Irish Lights Board: Nomination of, by Government desirable.

4777. Or was it what I suggested to you?—Well, I do not know exactly what you suggested; but I think that this new Board should be an Imperial question, not representative, that it should be appointed, that is, an Imperial Board. I do not agree with Mr. Forde in that; I do not think it should be an elective Board—that is, the new Board of Irish Lights. I think it should be nominated by the Government. And I do not know if you understood me when I spoke about the Consulting Committee. The members of the Consulting Committee would not be on the Board of Irish Lights; they would simply be a Consulting Committee that would represent the wishes of their district to the Board of Irish Lights, who would be supreme. The Consulting Committee would have no power except the power of representing to the Board of Irish Lights, and then, if the Board of Irish Lights did not meet the wishes of the Consulting Committee, they could apply to the Board of Trade to decide the question as arbiter. That is what I meant, Sir.

4778. You propose that the Board of Irish Lights should be a Government Department?—Exactly, Sir, and that the present one should be abolished. Any good members, several of the members who are perhaps the best that could be found already, might be reappointed on the new Board. I do not at all find fault with or say anything against the present Board of Lights; all I say is that if there were any not up-to-date upon it, they should be weeded out, and all those who were considered the best men on the situation would be reappointed on the new Board of Lights.

Harbour Boards: Appointment of, as Advisory Committees advocated.

4779. Then you would have, I understand, an Advisory Committee?—An Advisory Committee. It would be more a begging committee, Sir; that is to say, they would ask. Of course you would have to group several Harbour Boards together, and divide the coasts of Ireland into certain portions and let a representative—the Advisory Committee have a representative, of course—bring the wants of their own district before the Board of Irish Lights.

4780. And the more importunate of the local authorities would probably get most?—Oh, well, that is human nature. If you do not apply for work you do not get anything, I believe.

4781. Then you propose also a controlling authority, which should be the Board of Trade?—Yes; that is the umpire to be called in.

4782. (*Mr. Ennis.*) Before I ask you, Mr. Cooke, further, I should like that we should clearly understand each other as to the grounds upon which you are proceeding. Are you thoroughly conversant with the existing system of lighthouse administration of the United Kingdom, and the channels through which your requests or the requests of any local authority have to pass before the work you desire is carried into effect?—I do not quite understand the question.

4783. Are you aware that you make application to the Irish Lights Board?—Yes.

4784. And that it is not within the powers of the Irish Lights Board to grant your request for new works, but that the Irish Lights Board must, in its turn, place its recommendation, in the event of its agreeing with you, before the Trinity House—that they must obtain the sanction of the Trinity House; and, having obtained that authority, they must obtain the sanction of the Board of Trade before the work is carried into effect?—No, I was not aware that they must consult the Trinity House.

4785. Yes, the Trinity House exercises a form of control over all the lighting of the coasts of the kingdom in the sense of holding a power of veto. Both the Northern Lights and the Irish Lights must submit their proposals for new work in the first instance to the Trinity House, they must obtain the assent of the Trinity House to their proposals; and, having obtained that assent, they must obtain the assent of the Board of Trade. Now, are you aware that some years since, eight or nine years since probably, a committee was appointed, known as the Advisory Committee?—No; I am not very familiar with the *modus operandi* on which these Lighthouse Boards are worked.

4786. Before we take your suggestions on this subject I think it is desirable that you should precisely understand the present position of affairs. This Advisory Committee meets and considers applications for new works made by the various Harbour Authorities; and, although the Advisory Committee has no statutory or any power to grant or refuse these works, yet their advice and their recommendations carry great weight with the Trinity House and with the Board of Trade?—How was the Advisory Committee elected?

4787. The Advisory Committee is a Board consisting of shipowners. So that I want you to clearly understand that an application from an Irish body for any new work must first of all pass the gauntlet of the Irish Lights, then the Trinity House, the Advisory Committee, and the Board of Trade?—May I ask, are the funds of all those, the Trinity House, the Northern Lights and the Irish Lights Board, all in common?

4788. They are the General Lighthouse Fund; and, consequently, with regard to applications from any of the countries involved it goes without saying that some controlling authority should exist. Otherwise, one of the countries might eat up the entire fund?—Quite so.

4789. The question of the incidence of the lighting dues is a question which is not before this Commission, and that is a question with which we have no power to deal. I want you to clearly understand that. But the fact that the shipowners have to pay the light dues is a factor in the question which bears very closely upon the efficiency or otherwise of the lighting of our coasts; because, naturally, people who have to pay for a service desire to have the service carried out at as low a cost as possible?—Quite so.

4790. Would you agree that in the consideration of the lighting of the coasts of the United Kingdom there are various interests to be considered?—Certainly.

4791. For example, we have the shipowners who pay the dues, that is, for the general lighting of the coasts outside the Harbour Authorities; you have the oversea trade, a trade which requires large leading lights, such as, say, the Fastnet and the Tuskar. Lights of that type, I presume, you would agree with me, would not be absolutely necessary for the mere convenience of Irish navigation; they are more closely allied to the necessities of the port of Liverpool?—They may be, but they are largely used by the coasting trade, all the same.

4792. Quite so; but I mean that the expenditure incurred upon those large lights more largely benefits the big oversea trade to Liverpool than any other portion of the country?—I daresay it does; but, as I say, they are used by the coasting trade just as much as they are by the liners.

4793. But the oversea trade being the larger in volume derives the most benefit from the expenditure?—No doubt.

4794. A general system of lighting which, presumably, might be most efficient for the oversea trade, might fail to be efficient for coasters or for fishermen?—Why so?

4795. Because some of it might lie upon portions of the coast which the great oversea trade did not pass by—for example, take the North of Scotland?—Yes, the North of Scotland is, of course, a place where the Atlantic trade does not pass by at all. The North coast of Ireland it does, a great deal of it.

4796. What I want to put to you is that the interests of different classes of seaborne commerce are not necessarily the same?—Yes, I follow you.

4797. And that you have different interests to consider?—Yes, I follow you.

4798. Therefore, in the constitution of any lighting authority, those varying interests ought to have adequate representation?—Quite so.

4799. If you constitute the Lighting Authority alto-

gether that of the shipowning interest, the tendency would be, shipowners having to pay the cost, to cut down the cost, and possibly to starve the service?—And also I do not think there is any way of making the shipowner amenable to public opinion at all.

4800. And, furthermore, the interests of the shipmasters and of the underwriters, Lloyd's, would be somewhat divergent from the interests of the shipowners; the shipmasters and underwriters being, no doubt, desirous that the lighting of the coasts should be as highly efficient as possible with the view to the safety of life and property, and to safeguard the interests that the underwriters have undertaken to cover by insurance?—Yes.

4801. Therefore I take it that you would be in agreement with the view that any Lighthouse Authority should contain an element of representation of the various interests involved, which are interests which may be somewhat divergent from each other?—Well, I dare say that would be only fair.

Irish Lights Board: Reconstitution of, suggested.

4802. Now, you have suggested that the Irish Lights Board should be remodelled to a limited extent, by putting upon it representatives of certain Harbour Boards in Ireland?—Yes.

4803. Harbour Boards having a valuation, or having an income of £10,000?—Yes, I only put it at round figures; I do not wish to be tied exactly to those figures.

4804. Do you understand the present constitution of the Irish Lights Board?—Yes, to a certain extent.

4805. Are you aware that the Irish Lights Board consists of a limited number of members *ex-officio* from the Dublin Corporation?—Yes.

4806. And that the remainder of the Board, a large proportion of the body, are members holding office for life and co-opted?—Yes, I am aware of that.

4807. Co-opted by the existing members of the Board?—Yes; and that is why I say I think you should replace some of the men who are upon it by better men; but some men on it I would certainly keep on.

4808. And that in effect it is practically a Dublin Board recruited from the City of Dublin?—Yes, it is, to a very large extent.

4809. To a large extent—with one representative from Belfast?—He has only been put on recently.

Harbour Boards: Representation of, on Irish Lights Board advocated.

4810. Now, it has been suggested to the Commissioners that if the Harbour Boards of Ireland had representation upon the Irish Lights Authority, there might be a difficulty as to members from distant places attending the Board's meetings; do you believe that difficulty would arise?—I do not; I think in the case of any Harbour Board of any size or any standing, their representative would attend the meetings.

4811. Therefore you think no difficulty would arise under that head?—No; I do not.

4812. And you further agree with the suggestion of Colonel Herbert that small harbours might be grouped together?—Yes, I think it is possible that that could be done.

4813. Would you approve of a system of dividing the coast of Ireland, as the Trinity House in England divide their coast, into districts, and having the harbours within the various districts grouped, as to representation on the central authority?—Yes, I think they might arrange some system of that sort. Speaking for instances, of places I am familiar with, Lough Foyle and that district, there is no port, except Derry, between Sligo and Larne. That is a coast line of 160 or 170 miles, and I think it is 185 miles to Belfast. Of course, Larne is a very small port; but from Sligo on the west coast to Belfast on the east it is 186 miles, or 187 miles of coast line.

4814. (*Chairman.*) There is Killybegs, is not there?—That is much further to the west.

4815. Between Derry and Sligo?—It is; but it is a very small port; there is very little done in it—a coal trade—no import trade.

4816. (*Mr. Ennis.*) But you would, as a matter of principle, agree to the grouping?—I think so; I think it might be worked in that way.

4817. And you would give absolute control to the Irish Lights Board of the lighting of the coasts of Ireland, in a similar manner to the powers held by the Irish Lights Board at the present time?—I would—constituted in that way.

Mr. T. F. Cooke, Mr H. J. Forde, Mr. M. Lynch, Mr. T. N. Redington.

26 Mar. 1907.

Trinity House control over Irish Board: Unnecessary.

4818. Would you approve of the existing system, whereby the Irish Lights Board have to place their proposals before the Trinity House prior to obtaining the sanction of the Board of Trade; or, would you suggest that the Irish Lights Board should go direct to the Board of Trade?—Well, of course, if the Irish Lights Board, the Northern Lights Commissioners, and the Trinity House were all one common fund, I daresay it is perfectly right they should consult each other in what they do. I thought the Irish Lights Board was responsible entirely to the Government and the Board of Trade in what they did.

4819. I want to put the position quite clearly, because it is a rather important point. The Trinity House is a paid Board, consisting of master mariners holding office for life, and obtaining their position by co-option from the ranks; they are known as the Elder Brethren, and they obtain their position by co-option from the ranks of those known as the Younger Brethren, master mariners on a supplementary list, as it may be called. The Scottish Board consists chiefly of the Sheriffs of counties; as a matter of fact, the Scottish Board is largely composed of lawyers, and you yourself know fairly well the composition of the Irish Board. But, whilst the Trinity House is absolute, subject to the control of the Board of Trade, with regard to the lighting of the coasts of England and Wales, they also administer indirectly the lighting of the coasts of Scotland and Ireland, by reason of their possessing a power of veto, as it were, over the proposals of the Scotch and Irish authorities for new works. And my question is: do you approve of that system continuing; or, would you prefer a system whereby Ireland and Scotland would submit their proposals direct to the Board of Trade?—Well, I think they might reasonably submit them to the Board of Trade; that would save a good deal of time and everything else. I do not see why they should submit them to any other.

Central Lighthouse Authority: Disapproved.

4820. Colonel Herbert has put a question to you with regard to the grouping of the Harbour Boards—that the lesser might be swallowed up by the bigger—there might be danger of that—that is, the interests of the lesser harbours might be swallowed up by the bigger; but, would not that argument apply with greater force to any suggestion to create a central board in London to deal with the entire coasts of the United Kingdom, and to abolish the Irish and Scotch Boards altogether; you would not approve of that?—I would not—I cannot myself see why the smaller Boards would be hit by the business at all—as I say, they have no representation at present, and it is impossible to expect them all to be put on the Board. If they were grouped and had one representative, they could make known their views to that representative.

4821. Would you approve, in any reconstitution of the Lighting Authorities, of the Irish and Scotch Boards existence being absolutely terminated, and the entire lighting of the coast of the United Kingdom being governed by a central body?—I would not like to see it governed by a central body; I would prefer to see them as they are.

Harbour Boards: Representation of, on Irish Lights Board advocated.

4822. Now, you have referred to specific instances with regard to your dealings with the Irish Lights Board, a buoy at the entrance to Lough Foyle, which you consider should be placed a couple of miles distant from its present position; you failed to obtain what you desired in that respect, and you consider that the representation of your own Harbour Board would be of advantage to them in such a connection as that?—I do, in local matters.

4823. You have also referred to the desirability of a light at Rathlin; now, I want to know, are you aware that in 1903 the Commissioners of Irish Lights submitted an estimate of £25,000 for a new light and fog-signal at Rathlin, which went through the channels that I have described to you; that this suggestion was recommended by the Commissioners of Irish Lights; that the Advisory Committee—this committee of shipowners which I told you of—recommended a light at Rathlin; but when they found that the light would cost £25,000 they dropped the suggestion and would not sanction it?—I was not aware of that.

4824. And that, therefore, with regard to that light at Rathlin, the difficulty seems to have arisen, not with the Irish Lights Board, which submitted the esti-

Mr. T. F. Cooke, Mr. H. J. Forde, Mr. M. Lynch, Mr. T. N. Redington.

26 Mar. 1907.

mate and proposal, but with the controlling Authorities on the other side.

4825. (*Chairman.*) Did not the suggestion for a light at Rathlin originate from the Advisory Committee?

4826. (*Mr. Ennis.*) Yes. I have stated that the Advisory Committee made a few suggestions for new works, but they recommended the vetoing of a very large number. One of the works they suggested was a light on Rathlin Island, but when the cost was ascertained to be £25,000 they would not touch it; and the suggestion was dropped?—Might I ask—I have gained a great deal of information here to-day about things I did not know anything about—is not the Irish Lights Board rather a wealthy institution?

4827. The General Lighthouse Fund is controlled by the Board of Trade; all expenditure from that fund must obtain the sanction of the Board of Trade, and the Irish Lights Commissioners must obtain sanction for all their expenditure from the Board of Trade. All new works must not alone obtain the sanction of the Board of Trade, but must, furthermore, obtain the sanction of the Trinity House, officially and unofficially, and of the Advisory Committee of Shipowners?—I understand; but the information I really asked for was, taking the light dues that are charged at present in Ireland by the Irish Lights Board, and taking their expenses on the other side, is there not a large surplus?

4828. (*Chairman.*) I think you are under a misapprehension as to that. The dues are charged upon vessels at so much a voyage; they are not locally charged?—I know, Sir.

4829. The funds so raised go to a common fund, called the Lighthouse Fund?—Of the United Kingdom. I understand now.

4830. (*Mr. Ennis.*) Formerly, dues were charged on particular lights, but by a recent Act that system was changed, and vessels pay so much per voyage now, irrespective of the particular lights they pass by. The money goes into the General Lighthouse Fund, and the various Authorities round the coast draw from that General Lighthouse Fund, which is controlled by the Board of Trade. But there is one point that you may desire information on. It is quite true that formerly the moneys raised from the Lighthouse Fund were applied to purposes other than the lighting of the coasts. That has ceased. The moneys now raised from the Lighthouse Fund are applied to the lighting of the coast solely; and, as a matter of fact, the light dues have been reduced by 12½ per cent., and a further reduction of 7½ per cent. in the near future is contemplated. I think that is all I have to ask you?—Thank you.

4831. Now, Mr. Forde, I do not quite grasp your suggestion with regard to this Irish Board. You understand now the position of the Irish Lights Board?—(*Mr. Forde.*) Yes, I do.

Irish Lights Board: Reconstitution advocated.

4832. And do you suggest that there should be advisory committees of the Harbour Boards?—Well, I do not think I suggest that. What I did suggest was that the present Board should be reconstituted, and that it should have upon it experts, master mariners and engineers, who would be paid, and that it should have upon it representatives of the Irish Harbour Boards. Of course, there would be some of the present representatives as representing Dublin.

4833. Yes, but I would point out that at present the Irish Lights Board have engineers and master mariners who are paid, but they do not sit upon the Board; they are the servants of the Board; they do not constitute the Board itself. I want to get a little more clearly your view upon that point. Do you propose to put the engineers and master mariners upon the Board itself, they being the paid servants of the Authority?—Under those circumstances I do not suppose you could put them on the Board, except, as I understand, is done by the Trinity House.

4834. Who would make the appointments of these experts that you suggest?—Well, I suggest that it be done by competition.

4835. Yes, but who would make the appointments?—The Board of Trade in the first instance, and then the Irish Lights Board afterwards.

4836. The Board of Trade in the first instance?—Well, you must make a beginning. Of course, if you were to reconstitute, make a new Board altogether.

4837. At present, if you had to appoint an engineer to a vacant position in the Irish Lights Board service, that engineer would be appointed by the existing Irish Lights Board?—I presume so.

4838. I want to know whether your suggestion is, that in future a vacancy in the office, of say an engineer or secretary—any of the paid officials—of that Board would be filled by the Irish Lights Board, or would be filled by a central authority in London?—I should say that in future it should be filled by the Irish Lights Board, provided that the man so appointed was a competent man, of course.

4839. Then you do not adhere to the suggestion that these paid officials should have seats upon the Board itself?—No, I do not.

4840. And, therefore, when you speak of the Harbour Boards, your idea is that the Irish Lights Board should consist, I presume, of the representatives of Dublin Corporation as at present, the *ex-officio* members?—I would not wish representatives of Dublin Corporation at all; I do not see why they should be.

4841. I have pointed out to you that that is the present composition of the Board, and I want to know whether you think they should continue?—No, I think they should be done away with.

4842. You think that the representation of Dublin Corporation should cease?—I do not see what they have to do with it at all. The Dublin Port and Docks Board, which is the Harbour Board for Dublin, should have a representation.

4843. The representation of the Dublin Port and Docks Board, which is the Harbour Board for Dublin, I take it, would be covered by the suggestion you have also made as to the election of representatives of the various Harbour Boards?—Certainly.

4844. They would have their ordinary share of representation on the Lights Board by election?—Yes.

Waterford Harbour Board: Constitution of.

4845. I do not know whether in the Waterford Harbour Board this obtains or not, but I do know that in some of the Irish Harbour Boards an element of the constitution of the Board is a certain number of members nominated by the Board of Trade?—No, that does not obtain with us. Under our constitution the Chamber of Commerce appoint a number; the Corporation appoints some, and, curiously enough, the town of Clonmel, which is thirty miles away, appoints five representatives.

4846. But you have no nomination upon your Harbour Board by the Board of Trade?—No nomination.

4847. I do not know what the other gentlemen's experience is, but I know in the Port of Wexford the Board of Trade nominates two members?—There are some harbours in Ireland constituted on the same basis.

4848. Would you approve, with a view of obtaining sufficient representatives, of master mariners on the Irish Lights Board; would you suggest men of that class being nominated by the Board of Trade?—Well, I have been thinking over what you have been saying to Mr. Cooke about the leading lights and the coast lights, and I must say that it would be only fair that the shipowners should have some representation on it. I do not say they should have much, because I think that the Harbour Boards would embody that representation to a certain extent, because they would be shipowners.

4849. In practice the Harbour Boards are largely composed of shipowners?—We will have shipowners naturally on them; in that way they do get representation; but I do think as to getting representation for the liners and oversea trade that the Board of Trade might have power to appoint a limited number to represent them.

Efficiency of lighting of coasts of Ireland.

4850. Is it your opinion that the lighting of the coast of Ireland at the present time is in a high state of efficiency?—So far as I know, it is. When I say that, I am not in a position really to know very much about it; but I do recollect now hearing about a friction that arose between the Trinity House, I think, and the Irish Lights Board in connection with a burner invented by Mr. Wigham, of Dublin. I think they refused to sanction the use of it for Ireland for a good many years, until the efficiency of it had first been proved in France, or somewhere else.

4851. You raised a question with regard to the lighting of a private harbour at Rosslare; it seems to me you are under some misconception?—Very possibly I am.

Local lights: Provision of, out of General Lighthouse Fund deprecated.

4852. Are you aware that the limits of Wexford Harbour extend from Greenore Point to Blackwater Head, a line which would contain Rosslare Harbour?—Yes; I was not aware that the Wexford jurisdiction extended there.

4853. The jurisdiction of the Wexford pilotage district, and that a light erected on the new pier at Rosslare has been erected by the company interested itself?—It has.

4854. I take it your question refers to a light in the fairway?—In the fairway.

4855. Close to the Tuskar, outside?—Yes.

4856. Are you aware that the Harbour Authorities have no power to erect lights outside their own jurisdiction?—No, I am not aware of that; but I know this, they were running a very grave risk in running their steamers along there without some light. I know that representations were made to them very strongly on the subject.

4857. I quite grasp your point that the payment for the service should be borne by private individuals, and not by the General Lighthouse Fund?—Yes.

4858. But I would also put it to you in this way: Will not such a route as that be a great public convenience?—Well, I do not wish to be deemed as objecting on the ground that it will not be of great public use, such a light there; but I do think that the expense of it, seeing that Rosslare is a harbour that would practically continue to be used solely by the railway company, and for their benefit, should be paid for by them.

4859. Your contention is, I take it, that the light was necessary?—Was absolutely necessary.

4860. Yes, but I want to get it from you in this way: Your contention, I take it, is not that the private company owning Rosslare Harbour should erect a light themselves in a locality in which they have no statutory power to erect a light, but that they should contribute towards the General Lighthouse Authority who does erect the light; they should contribute towards the cost?—Yes; I agree with you.

4861. But that the erection of that light should be made by the General Lighthouse Authority, because if you give private local authorities power to go into the fairway, into the great trade channels, and erect lights, they may carry out work which would be objectionable?—It would not do at all from that point of view.

Maintained by local funds.

4862. You are aware that the Harbour Authorities of the United Kingdom, with one notable exception—at least, one notable large exception—the port of London—pay for the lighting of their own harbours?—Yes; of course, we pay for the lighting of our own harbours.

4863. Are you aware that the port of London does not?—No, I was not; it is another grievance to Ireland.

4864. No, a grievance to the shipowning community, I should say. But the Harbour Authorities pay for the lighting of their own harbours, and there is necessarily a certain area, as it were, between the boundary line of the Harbour Authorities and the area administered by the General Lighthouse Authorities, which is, as it were, a kind of No Man's Sea?—Yes.

4865. And which, if inefficiently lighted, might very possibly lead to disaster to anyone bound for or trading to any particular harbour. I mean, take your harbour at Waterford. No matter how efficiently you light your own harbour, if the General Lighthouse Authority failed to erect proper lights, say, at the Hook or Dunmore, the entrance to your harbour, you might possibly have great disasters to your shipping?—Certainly.

4866. And therefore efficient co-operation between the local authorities and the General Lighthouse Authorities is eminently desirable?—Absolutely necessary.

4867. Mr. Lynch, I think you have said that you differ altogether from the views of Mr. Forde in regard to the constitution of the Irish Lighthouse Authority?—(*Mr. Lynch.*) Yes, Sir, I am sorry to say I do.

Irish Lights: Administration of, by Government advocated.

4868. Do you suggest that the existence of the present Irish Lights Board as a matter of fact should cease, and that a new board should be appointed?—Yes.

4869. By whom?—By the Government. Of course, when I say the Government I mean the Board of Trade. The Government consists of different kinds of offices—the Foreign Office, the Home Office, the Irish Office, and so forth—but by some department of the Government; it should be put under some department of the Government.

Mr. T. F. Cooke, Mr. H. J. Forde, Mr. M. Lynch, Mr. T. N. Redington.

26 Mar. 1907.

4870. Well, what do you suggest as the personnel of this Board that would be appointed by the Government; what should be its number; what should be its constitution?—The Government would be much wiser than I am. I leave that to themselves.

4871. How many members would you have?—Oh——

4872. Would you suggest a paid board?—No, sir.

4873. A non-paid board?—A non-paid board.

4874. To be nominated by the Government?—To be nominated by the Government.

4875. From the ranks of Irishmen, or from people across Channel, or where?—Well, for the Irish Lights I would certainly say from the ranks of Irishmen.

4876. Would you limit the appointement by the Government to any particular class?—Oh, no, Sir, the best they could get; what they consider the best.

4877. You would not make any qualification with regard to their possessing nautical knowledge?—Of course; I do not suppose an alderman of the City of Dublin would be chosen by the Government.

4878. Yes, but your suggestion would leave it open to the Government to choose such a person unless you make some restriction?—I assume the Government would choose the best. I would not presume to tell the Government whom they were to choose. I presume they would choose the people who were best fitted for the business.

4879. Will you suggest that the Irish Lights Board, having been abolished and a fresh board created by Government appointment, that Government appointment would be permanent; that vacancies would be filled up by Government appointment?—Yes, certainly, Sir; not co-opted.

4880. No, not co-opted, but it would be permanently a Government appointment?—Yes.

4881. There would be no representative element or elected element?—Not on the Board itself.

Harbour Boards: Appointment of, as local Advisory Committees approved.

4882. You suggest that the Harbour Boards should be advisory to that other board?—Yes.

4883. But would the Harbour Boards that you suggest as being advisory hold practically the same position that I have described with regard to the Shipowners Advisory Committee at present—bodies possessing authority to make suggestions, but having no power to carry those suggestions out themselves?—Certainly, Sir. Of course, with regard to the Trinity House Board, and the Advisory Committee at present, and the Board of Trade, and all that, I should like to see as much red tapeism cut out of it as possible.

Trinity House: Abolition of control over Irish lights suggested.

4884. Would you suggest that the Irish Board should still have to pass its proposals through the Trinity House, or that the proposals of the Board should go direct to the Board of Trade?—To the Board of Trade direct.

4885. In other words, which system would you consider most effective—a system as at present, whereby a board consists of non-nautical experts, who have to pass their proposals through the Trinity House, who are nautical experts to the Board of Trade, or a board containing a reasonable number of nautical experts within its own body, and making its recommendations direct to the Board of Trade?—I presume, Sir, that the new board as constituted would be equally scientific as the Trinity House. I do not at all assume, as at present, the aldermen of Dublin, whoever they may be, lawyers and so forth, would be on the board.

4886. Therefore, your suggestion would be that that board, the remodelled board, containing a sufficient amount of nautical element within itself, would, instead of passing through the Trinity House to the Board of Trade, go to the Board of Trade direct?—Yes, I presume the whole of the board—not a certain portion, but the whole of the board—would be capable men.

4887. But you would obtain no guarantee on that point except your belief that the Government would appoint capable men?—I do not see any guarantee that could be given except that.

4888. Your suggestion does not contain any pro-

Mr. T. F. Cooke, Mr. H. J. Forde, Mr. M. Lynch, Mr. T. N. Redington.
Mar. 1907.

posal that the men appointed by the Government should possess any nautical qualification?—That is to be presumed, Sir.

4889. But it is a statutory condition with regard to the Trinity House?—Well, they make it a statutory condition with the Government, too. I presume if you could not trust the Government you could say you could make it a condition to them that they should be capable men.

4890. I should just like to ask, Mr. Redington, do you agree with the views of Mr. Lynch?—(*Mr. Redington.*) Well, not precisely.

Irish Lights: Administration of, by Government advocated.

4891. Well, perhaps you would like to express your own views?—Well, the majority of my board seem to think the proposed new board, the reconstructed board, should take the form of a new Government Department, and should be composed among others of practical trained men, such as engineers and master mariners, and that these people should be obliged to pass an examination before the Board of Trade, and that the latter be paid and formed on the new board.

4892. You suggest a paid board?—Yes.

4893. What size do you suggest that Board should be?—Well, in or about the present number that is on the Board of Irish Lights.

4894. (*Chairman.*) May I just interpose this question? I should like to understand distinctly whether in making these suggestions Mr. Redington is speaking on behalf of the majority of the Boards that met in conference?—Well, I did not say that, Sir.

4895. And of which he was the Secretary?—I am alluding to my own Commission, Sir—the Harbour Commissioners in Galway.

4896. (*Mr. Ennis.*) Yes, Mr. Redington?—It has been suggested, Sir, that this new Board should be composed of practical men, master mariners and engineers, and that these men should be paid, and that their suggestions should be submitted, in the case of any new lights or buoys being constructed, that they bring these under the notice of the Board, and if the Board think it well to carry out the suggestions, that they submit their proposals to the Board of Trade.

Efficiency of lighting of coasts of Ireland.

4897. Does your Board hold that the existing administration of the lighting arrangements for the coast of Ireland by the Irish Lights Board is inefficient?—Well, in some parts. On the west coast it is good; we have very little to complain of. But I have heard of a number of wrecks on the north of Ireland, and the south, and different places.

4898. But you do not make any specific complaint? Oh, no, Sir.

4899. Of the want of effective lighting on the part of the Irish Board?—No, Sir, we say it might be better.

4900. But you understand thoroughly the proposals put forward by the Irish Lights Board, such as this proposal I have instanced with regard to Rathlin, that it does not necessarily follow that the Irish Lights Board is at fault with regard to the non-carrying out of that proposal, or of similar proposals?—Well, there is one instance in Galway that I could give you, and I believe it has been brought under their notice, and that is the particular spot the lighthouse is built on—it is built on the centre of the island, and it is placed much too low, and it has been brought under their notice that if the lighthouse were shifted and brought down to the extreme end of the island and higher built it would be ever so much better. Shipmasters have complained of it frequently.

4901. Have there been any wrecks to your knowledge in consequence of that?—I believe there was one owing to that.

4902. Have you failed to obtain redress from the Irish Lights Board on that point?—There has not been anything done.

4903. How long is it since you made the suggestion?—I think my predecessor in office made it years ago.

Irish Lights Board: Objections to constitution of,

4904. What I should like to ask is, if you have no grave charges of inefficiency to make against the Irish Lights Board, why do you suggest changing an unpaid body, which performs gratuitous services, for a paid body, which would be a severe tax?—We think the work would be carried out better. The present men are not seafaring men, they are not nautical men, they do not pretend to know. I am giving you the views of my Commission; I may be wrong.

4905. Quite so, I understand; but what I wish to arrive at is, though what you say is true, that the members of the present Board are not nautical men, and whilst suggestions have been made that the advice of the Harbour Boards would be very useful, provided representation from the various Harbour Boards were granted on the central authority, do you consider that there is sufficient dereliction of duty by the Irish Lights Board to call for the appointment of a paid board, which, were it anything like the size of the present Board, would undoubtedly cost a large annual sum?—I cannot give you any glaring instance of how these people are deficient in their duty. I cannot supply any information on that point.

4906. Do you think it is the opinion generally of the Irish Harbour Authorities, with whom you have been in consultation and conference, that the Lights Board should be reformed in the method that you suggest; that is, a paid body nominated by the Government?—I do not say that, Sir, but it is the unanimous feeling of all the Harbour Boards in Ireland that it should be reconstructed in some shape or form.

4907. But you do not bind yourself, I take it, or these other Boards, to the view that you have put forward, that the reconstruction should take the form of a board nominated by the Government, and paid?—No, I am simply speaking for my own Board as regards that point.

Central Lighthouse Authority: Approved.

4908. How would you view a proposal to abolish the Irish Lights Board altogether, and to merge its function in a central authority dealing with the entire United Kingdom, and operating from London?—Well, personally I would be in favour of that scheme, provided the central authority had the advice of experts or nautical men.

4909. But at the same time, if it is necessary to obtain a paid board for Ireland, would not a central board tend to economy?—Undoubtedly, but we seem to think that if this paid board were in existence the work would be done ever so much better.

4910. You may not be aware that with regard to works objected to by the Advisory Committee that I have spoken of——?—The Advisory Committee is composed of shipowners, you see.

4911. Who have no statutory power to stop anything, but whose advice is largely valued by the authorities who have such power——?—Pardon me one moment, Sir; a suggestion was made by Mr. Cooke as regards one light, and it was referred to the Advisory Committee, and the Advisory Committee condemned it—that is what I gathered from your remarks—condemned one particular light Mr. Cooke was talking about.

4912. No, the Advisory Committee recommended that light, but were not satisfied to spend the money on it that it would cost?—Oh, was that the reason?

4913. They were not satisfied to spend the money. They admitted the desirability of the light, but they were not satisfied that the money should be expended; but with regard to the operation of a central board, are you aware that the Advisory Committee objected to twenty-four works on the coast of Scotland, sixteen of which works were subsequently sanctioned by the Board of Trade?—I was not aware of that, Sir.

4914. Would not such an instance as that go to show that a central authority might possibly not be mindful of remote localities?—Yes, undoubtedly.

4915. Well, I take it then, that your evidence broadly amounts to this, that on behalf of the Galway Harbour Board you recommend the abolition of the Irish Lights Board, the appointment by the Government—nominated by the Board of Trade—of a paid Board in lieu of the Irish Lights Board, but that you do not seek in any way to bind any of the other Harbour Authorities in Ireland who have met in a conference, to which you acted as secretary?—Precisely, Sir.

4716. (*Chairman.*) I should like to supplement the last question of Mr. Ennis by a further one. You are here partly in the capacity of Secretary of a Conference between the various Harbour Authorities in Ireland, which, I understand, took place last year?—Yes, Sir.

4917. Was any view as to the constitution of the Irish Lights expressed by that Conference?—Yes, by a number of them, Sir; a number of proposals were suggested.

4918. Was there any point on which there was unanimity or a large preponderance of opinion?—Well, no, Sir; nearly each Harbour Board expressed different

Harbour Boards: Representation of, on Irish Lights Board,

views on the subject, but there was no unanimity. They were unanimous on this one point, that the Board should be amended or changed, so that the Harbour Boards should be represented on it.

4919. On that point there was unanimity?—There was absolute unanimity.

4920. (*Mr. Ennis.*) But if that was so with regard to the Harbour Boards, the view of the Galway Harbour Board differs from that altogether?—It does.

4921. Because you do not suggest that the Harbour Boards should be represented on this Authority at all; you suggest that they should be merely advisory to that Authority?—Quite so.

and Appointment of, as local Advisory Committees advocated.

4922. And that the Authority should be solely and wholly an Authority nominated by the Government and paid?—That is our view, Sir; yes.

4923. (*Admiral Henderson.*) You are aware that the functions of the present Board can be divided into two parts; first, those dealing with new works and alterations to existing lights, and secondly, the administration, the maintenance and the upkeep of what is existing?—(*Mr. Forde.*) Well, I was not aware that that was the way it was managed.

4924. I will ask Mr. Cooke. Were you aware of that? I am asking this question of both of you, rather than in a general sense. I wanted to know whether you were aware in criticising the present Board, that you may divide their functions into two parts; one is the putting forward and the execution of absolutely new works, or the alteration of existing works, that is, the improving of the lights; and, secondly, the upkeep, maintenance, and administration of the existing lights—the whole service. Now, I wanted to ask whether you have paid any attention to the second head? Have you ever considered the efficiency of the Irish Lights Board in regard to their administrative aspects?—(*Mr. Cooke.*) I have always understood and always heard that they have done their work satisfactorily as regards the administration of lights.

Irish Lights Board: Administration of, efficient.

4925. Have you paid any attention to any questions of detail on any of your Boards with regard to administration?—(*Mr. Forde.*) No, we have not; we have not had an opportunity of getting acquainted with the details. Things were managed in such an extraordinarily round-about way that it was useless for an Irish Harbour Board to try to get hold of anything.

4926. Now, you will admit that any improvement should have as its object, if possible, a decrease and not an increase of expenditure?—(*Mr. Cooke.*) So far as practicable for the proper lighting of the coasts.

4927. And your suggestion is that the Board which you recommend should remain an unpaid Board, as it is at present, except that certain officers who are connected with it for the details of duty should be paid as they are at present?—Well, my recommendation was that the Board should remain as at present constituted, with the exception of a certain number of gentlemen who have been co-opted from the Corporation of Dublin and places elsewhere. I cannot see that you can get any better Board. It is not a paid Board, and if they have the advantage of the local experience I think the Board would be all right.

Suggestion for reconstitution of,

4928. Now, would you suggest that in any reformed system use could be made of the Harbour Board officials to supervise a portion of the coast in their vicinity? I am speaking especially in reference to the upkeep of existing lighthouses and vessels?—I do not think that would work, because I think that most of the local Harbour Authorities have not the plant and everything else at their disposal to look after those lights. At present, of course, the Irish Lights have got their own tenders and steamers to supply them with oil and put down the buoys here and there.

Harbour Boards: Extension of jurisdiction of, deprecated.

4929. Your reason being that you do not think there is plant to do it?—No, I do not think it even would be practicable to do it.

4930. What I really mean is, supposing there was a lighthouse at Rathlin Island belonging to the Irish Lights Commissioners, could you maintain it by your existing appliances?—I do not think so; not economically.

4931. Is that your opinion, too?—(*Mr. Forde.*) Yes.

Irish Lights Board: Suggestions as to constitution of,

4932. Mr. Lynch, what you meant by the new Board you proposed was that it should be a Consultative—an Advisory Board?—(*Mr. Lynch.*) Which Board?

4933. The Board that you propose should be a Consultative—an Advisory Board; that is to say, that they should overhaul the work of their executive officers or Executive Board, which was the second Board you proposed, was it not?—Yes, Sir, the second Board; I proposed two. I proposed first of all a Board that would be over the Irish Lights, and then I also proposed a Committee—an Advisory Committee.

4934. They should be the consultative people, and they should say what new lights should be eventually put up?—What we were to ask from the Board of the Lights; what we thought necessary. For instance, now, in Galway—I know something about the harbour, because I had a yacht for many years, and I know it is not at all satisfactory—I was very nearly wrecked two or three times, and only a few months ago, on the request of several masters of ships, we asked the Board of Irish Lights to put lights on two sunken rocks there; there are buoys on them, but in fog you cannot see them, and on a dark night you cannot see them, and we asked them to put bells on them. No answer has been got; I suppose it will be many years before we shall get an answer.

4935. Mr. Redington, you, I think, proposed that the Board should be composed of as many members as the existing Board, that is, 25, should be paid. You said so just now, I understood you?—(*Mr. Redington.*) Well, I did not give any particular number.

4936. You said the same number as the existing Board?—I said in, or about the same.

4937. I think the existing Board is 25, and what would be your proposed rate of remuneration? The Trinity House people receive £500 a year?—And their number is?

4938. 13?—Well, I suppose if you had 5 or 10 in Ireland it would be sufficient.

4939. Because if you had 25 members at £500 a year?—That is out of the question.

4940. That is out of the question; it would amount to £12,500. I want to put before you what I believe to be the case, that the whole of the Head Office expenses, and the whole of the salaries of the existing Irish Lights Board is under £8,000 a year, so I mean in making proposals of this sort you have to be governed by ways and means?—Oh, yes; quite so.

4941. And you must not run the country or the shipowners at present into inordinate expense?—Yes, but it is natural to assume that when men are paid for doing certain work they will do that work more efficiently and better, look after it better; it is their duty. That is what we think; we may be wrong.

Mr. T. F. Cooke. Mr. H. J. Forde. Mr. M. Lynch, Mr. T. N. Redington.

26 Mar. 1907.

FOURTEENTH DAY.

Tuesday, 30th April 1907.

PRESENT:

The Right Hon. G. W. BALFOUR (*Chairman*).

Sir FRANK FORBES ADAM, C.I.E.
Colonel I. J. C. HERBERT, C.B., C.M.G., M.P.
Vice-Admiral W. H. HENDERSON.
Mr. M. A. ENNIS.
Captain C. BIGHAM, C.M.G. (*Secretary*).

Sir GEORGE VYVYAN, K.C.M.G., Captain A. W. CLARKE, called in; Mr. ARTHUR OWEN, recalled; and examined.

Sir G. Vyvyan, K.C.M.G., Captain A. W. Clarke, Mr. A. Owen.
30 Apr. 1907.

4942. (*Chairman.*) You are the Deputy-Master of the Trinity House?—(*Sir George Vyvyan.*) I am, Sir.

4943. And in that capacity official head of the Acting Elder Brethren who constitute the Lighthouse Authority?—Yes, Sir.

4944. The Secretary was instructed to send you the evidence which has been taken hitherto, in order that you might have an opportunity of furnishing the Commissioners with any additional evidence, either by way of supplement or by way of rebuttal, which you might desire to offer?—I am much obliged to you.

4945. And in addition to that you have been furnished with some written questions, which the Commissioners desire to put to you. I understand that you have prepared written answers to those questions?—Yes.

4946. Perhaps the most convenient course, therefore, would be for me to begin by reading out the questions, and if you would read your answers to them we would have both the questions and answers upon the minutes?—Certainly.

One Central Lighthouse Authority: Opinions as to,

4947. Do you think any important saving would be effected by substituting a single Lighting Authority for the existing system? Would Trinity House be prepared to undertake the work of the other two Authorities?—I am not prepared to say that no saving would result if this course were adopted; but I doubt whether the saving would be material, as in any case, it would, I take it, be necessary to have branch establishments in Scotland and Ireland to supervise the seamarks in those countries. Of course, if the Legislature decided in favour of one Lighting Authority the Trinity House would be prepared to undertake the work, but in saying this I wish it to be clearly understood that such a proposal will not come from us. The present system works well. I am personally firmly persuaded that local needs are best understood by local men.

Advisory Committee: Works well.

4948. Will you tell us whether, in your opinion, the Advisory Committee has worked well? Would it be a practicable plan to do away with the Advisory Committee, and provide that representatives of shipping and other interests should be placed on the Lighting Authority itself?—On the whole, I think I may say that the Advisory Committee is now working fairly well. I should not have given this answer some five or six years ago, for at the beginning our relations were very strained, but as they have got to know us, and we have got to know them, the friction has been removed, to a very large extent, and our arguments are carried out in a friendly spirit and manner, and I think that the purposes intended by Lord Ritchie when he founded the Committee are now in a fair way of possible accomplishment. Of course, we disagree; we start from essentially different points of view, but I think it is of advantage that these arguments should be produced, not only for the Advisory Committee, but also for the Trinity House. Since the Advisory Committee has been established, in 1900, we have carried out a large number of improvements which have cost a large amount of money, which I am prepared to hand in, if you wish to have it. The shipowners consider that those improvements are paid for by themselves, and, having regard to this position, have systematically opposed most of them, although some of these improvements involved an annual saving. Their position is quite intelligible. I should wish to illustrate it by repeating one incident. We have successfully improved the light at the Skerries, off Holyhead, by changing it from a fixed light of 7,500 candles to a flashing light of 274,000 candles, at a cost of £5,500. The same change was being proposed for the Smalls, another very important landfall, and was opposed. I pointed out that all their objections were merely a repetition of those brought forward against the Skerries, which change had been effected, and had produced a chorus of praise. The answer came at once: "Not from the people who paid for it." "No," said the President of the Board of Trade, "but from those who benefited by it." I think this illustrates the position of each party. You asked me, Sir, whether it would be a practicable plan to do away with the Advisory Committee, and provide that representatives of shipping and other interests should be placed on the Lighting Authority itself. When you say a "practicable plan," I suppose you mean a better one. I am inclined to prefer the present arrangement, and think the various interests are better served than they would be by representation. At present the interests protected are much more numerous than would be the case if representation existed; we are inclined to forget sometimes that the Advisory Committee is not restricted to shipowners, but includes underwriters, and merchants of the United Kingdom, and the members of the Committee are very numerous, although in practice the attendance numbers only from ten to twelve. You could have nothing like this number of representations on a Lighthouse Board. Representatives merely sitting on our Board would not be able to get the grasp of our work. Our Board meetings are only the outcome of our committee work, as our committees are the expression, so to speak, of our real work, which is done day by day by the different members of the committee. No shipowner could or would give his time to this work, even if he were paid for it, as he ought to be. At the same time, if, as a result of your labours here, representation is proposed, the Trinity House will not oppose the proposition, provided it does not destroy their charter.

Tendency of, to encourage economy rather than efficiency.

Shipping Community Representation of, on Lights Board disapproved.

4949. Has Trinity House itself any suggestion to make for altering the constitution of the Lighting Authorities or reforming the present system of lighting the coasts of the United Kingdom?—If I may be allowed to say so, Sir, I think the Trinity House as a body ought to refrain from criticising the composition of the kindred Boards; and with regard to the second part of the question, "or reforming the present system of lighting of the coasts of the United Kingdom," they have no observations to make.

4950. And you have no suggestion to make for a modification of your own constitution?—No, Sir.

Elder Turns.

4951. What is the history of the fees known as "Elder Turns," and what was the amount of those fees prior to 1822? Had the Elder Brethren any other source of income, in their capacity as Lighting Authority, before the Act of 1822 was passed?—We have been unsuccessful in discovering the exact definition of the term "Elder Turns," as they have been

described. The fees called "Elder Turns" were dues charged upon vessels, mainly foreign, entering or leaving the River Thames, which had been the dues of the Elder Brethren and had been divided amongst them from earliest times. In 1822, however, when the reciprocity system was about to be carried into effect, an Act of Parliament was passed by which these fees were carried to the Lighthouse Revenue, and in lieu thereof the Elder Brethren were allowed £7,000 per annum as remuneration for their services in carrying on the business of the Corporation, in their corporate capacity.

Abolition of,

4952. Were the "Elder Turns" secured to the Trinity House by charter?—By Act of Parliament.

4953. At what date?—1822.

4954. Excuse me, I do not think you have quite understood my question. I asked whether the "Elder Turns" were secured to the Trinity House by charter?—I beg your pardon. I cannot tell you.

Origin of, unknown.

4955. You had the right to "Elder Turns" from time immemorial?—As early as 1665.

4956. And perhaps earlier than that. You have traced them back to 1665?—Naturally, Sir, all money that was received would come to the authority which was then the paramount authority, namely, the Trinity House.

4957. Were the "Elder Turns" taken by the Trinity House in respect of any specific duties performed by them?—Of all corporate duties.

4958. Did their corporate duties include duties other than those of lighting the coasts?—Certainly. Some of the duties are specifically mentioned in the preamble of the Act.

Replacement of, by fixed salary.

4959. That is the Act of 1822?—The Act of 1822. It distinctly mentions the examining of pilots and the ballastage. The £7,000 which is divided among the Deputy Master and the Elder Brethren was originally provided by an Act of Parliament dated 29th July, 1822. The preamble to this Act recites the Act of 8 Elizabeth, cap. 13, which authorised the Corporation to set up seamarks, and a grant of 36 Elizabeth, vesting in the Corporation the beaconage and buoyage with all the fees, advantages, salaries, etc., thereto belonging. It further recites that the lighthouse and ballastage work of the Corporation, "and the regulation thereof, and the examination of pilots and the regulation of ballastage, and divers other important duties intrusted by Act and Grant to the Corporation in which the security of shipping and navigation and also of commerce were deeply involved, required the unremitting exertion and superintendence of the Master, Wardens, etc., of the Corporation, and that it was therefore expedient, just, and necessary that more effectual provision should be made for their remuneration." And it was then enacted that in lieu of the remuneration theretofore recited, the members of the Corporation should divide among them a sum out of the General Funds of the Corporation not exceeding £7,000 a year, and all specific rates, dues, etc., theretofore charged with their remuneration should be paid into the General Funds of the Corporation. Practically the available revenue of the Corporation was earned in connection with the lighthouse business; in other words, the £7,000 a year was provided by light dues, and therefore, in the year 1854, when the lighthouse business was separated from the general business of the Corporation by making it subject to the financial control of the Board of Trade, and light dues and also ballastage fees were directed to be paid into the Mercantile Marine Fund, all expenses of the General Lighthouse Authorities, including the remuneration aforesaid, became payable out of the Mercantile Marine Fund. There was, in fact, no other fund out of which the remuneration could be paid, as the amounts received from pilots were to be used for specific purposes, but though paid out of the Mercantile Marine Fund, the remuneration was clearly payable in respect of the general business of the Corporation. The most important specific duties of the Corporation are no doubt the management of the lighthouses and the general administration of the pilotage law, but it has also to be borne in mind that they are always ready to give expert assistance in all nautical matters, and are in fact the body usually applied to by the Board of Trade in reference to any questions of the kind. They have also the management of considerable charities for the benefit of seamen, and supply assessors to the Admiralty Court. They are, in fact, as appears by their history and charter, a body representing the Merchant Service of the country.

4960. The point I was anxious to get at was this. Was the title of the Corporation to these "Elder Turns," in your opinion, of such a kind that had they been deprived of their fees, the Corporation would have been entitled to compensation?—I should say so; by the action that they took they were commuted. The sum of £7,000 was considered then the value of the "Turns" which were taken from the Corporation.

4961. And to those "Turns" the Corporation had had a prescriptive right, which had existed for some hundreds of years?—Yes.

Elder Brethren: System of superannuation advocated.

4962. Do you consider it desirable that Trinity House should be empowered to pension off Acting Elder Brethren after a certain age? Is any deduction made from the salaries of Acting Elder Brethren, who may fail to attend meetings of the Board, or take their due share of the work? Is it open to the Acting Elder Brethren to divide the £7,000 granted annually under the Act of 1822 in any proportion they please?—It would be most desirable and advantageous that a system of pensioning off Acting Elder Brethren after a certain age should be adopted, and we would, I am sure, welcome any such suggestion or recommendation if put in a practical form. A deduction is made from the salaries of the Brethren through the ordinary form of fines, which could amount, if there was no attendance during the whole year, to £114. If you would like an individual instance, I can give you one, Sir?

4963. Oh, no; that is quite sufficient?—It rests entirely with the Elder Brethren to divide the £7,000 amongst themselves, but vouchers showing the appropriation are sent to the Board of Trade quarterly.

4964. The deduction from the salaries is by a regulation made by the Elder Brethren themselves?—By the Elder Brethren themselves, by court minute.

Absence on duty.

4965. In the statement of attendances of the Acting Elder Brethren at committee meetings, members of the committee are often described as being "absent on duty." Does this include duties outside of the statutory duties imposed on Trinity House as a Lighting Authority—*e.g.*, attendance as assessors in the Admiralty Court, duties in connection with the Pilotage and Estates Departments, and Corporation business generally? Do the Acting Elder Brethren receive any remuneration for such services?—Absence on duty includes any duty undertaken for the Corporation. If necessary, explanation of the absence is required, and an effort to attend a board or a committee is expected from every member. There are fees connected with the Admiralty Court, or wherever the Brethren may be summoned to attend as assessors in fulfilment of their corporate duties, and also for attendance at the Thames Conservancy by their representatives, which is a statutory obligation. The Pilotage and Estates work carries no fees beyond the ordinary salary of each Elder Brother.

Fees of, other than regular salary.

4966. Could you give us any idea of the amount of fees earned by attendance in the Admiralty Court of the Elder Brethren?—It varies, Sir; it averages at present about £150 to each Elder Brother; £1,500 a year, I think, in all.

4967. And for attendance at the meetings of the Thames Conservancy?—I believe it is only £60; I cannot give you that Sir. I understand it is £60.

4968. Is one Elder Brother appointed to attend the meetings of the Conservancy?—Two.

4969. The £100 would be divided between the two?—No, Sir; I believe it is £60 each. I have really never asked.

Daily attendance of, at Trinity House.

4970. What is involved in "daily attendance" at Trinity House?—Captain Clarke would be the best exponent of that, if you would allow him to answer. (*Captain Clarke.*) Do you mean the time, Sir, or in what way do you mean to put the question?

4971. Well, is it an important part of the duties of the Elder Brethren?—It is most important and necessary that some of the members shall be there every day—certainly the younger members. I may say that during the last 12 months I have seldom been away from the Trinity House, except on duty, and on Saturdays occasionally, and also the usual holidays allowed to the Elder Brethren during the year.

4972. Does that mean that you are in attendance at

Sir G. Vyvyan, K.C.M.G., Captain A. W. Clarke, Mr. A. Owen.

30 Apr. 1907.

Trinity House from morning till evening?—I will put it from about quarter-past ten to half-past four or a quarter to five.

4973. And is your time generally occupied on business of the Corporation?—Every minute of it, but I am acting at present as Chairman of the Examining and Pilotage Committee, therefore a little more work is thrown on my shoulders, but broadly speaking, many of the Elder Brethren attend from half-past ten to four, and the time is occupied in its entirety throughout. (*Sir George Vyvyan.*) That is as far as Captain Clarke is concerned.

Observations on Statement of Mr. Norman Hill: As to New Works.

4974. Will you kindly furnish the Commission with your observation in detail upon the statement made by Mr. Norman Hill, in answer to Questions 1802 to 1834?—(*Mr. Owen.*) The first deals with new works; Question 1802. The amount of £50,000, stated in the evidence before Lord Courtney's Committee, to represent a fairly satisfactory expenditure annually on new works, was only approximate, and in no sense an estimate. The necessity might arise any year when from unforeseen circumstances a large expenditure would have to be incurred for the rebuilding or reconstruction of an important lighthouse, such as happened in the case of the Eddystone, Bishops Rock, Beachy Head, and Fastnet. As a matter of fact, however, of the £56,000 given as the average expenditure by the three Lighthouse Boards on new works for the five years ending March, 1899, the amount spent annually by the Trinity House during that period only averages £26,490, as against the amount of £25,000 stated in Lord Courtney's report as being a fairly satisfactory sum to spend in new works in England and Wales. The average expenditure on new works for the Trinity House in the six years ending March, 1905, was £42,286, which is accounted for by the fact that during this period the following heavy outlays were considered necessary: Beachy Head, £56,000; Portland, £13,000; Dungeness, £22,000; Penlee, £6,500; Pendeen, £16,700. It will be observed that the expenditure on Trinity House new works for the year ending March, 1906, only amounted to £16,074. Question 1808 deals with annual maintenance. The Trinity House expenditure for the year 1905 was £242,552, which shows an increase approximately of 11 per cent. only, as compared with the average cost of maintenance for the six years ending 31st March, 1899, to which Mr. Norman Hill refers. If, however, a comparison is made with the year 1906, the increase of maintenance is only about 3 per cent., as compared with the average for the six years ending March, 1899, the figures being £224,134 for 1906, as against £217,185 for the period ending March, 1899. In addition, it should be borne in mind that during the period 1899 to 1905 there were established five new shore lights, eight additional fog-signals, and twenty-three gas-lighted buoys, the annual cost of which, apart from any question of rise of prices, wages, etc., would go far to explain the increase of the percentage on maintenance to which Mr. Hill refers. Then in respect of steam vessel expenditure, the Trinity House have always considered that to carry out the duties of the light service efficiently and expeditiously, it is absolutely necessary to provide lighthouse tenders at salient points round the coast of England and Wales. These vessels, to be of any real service, must be properly equipped to deal with the special requirements of the service, such as shifting lightships and buoys, and lifting and dealing with their moorings, etc., also marking and removing wrecks. To do work of this nature by means of hired tugs would be impracticable, the vessels not being fitted for the purpose, whilst the officers and crews of such vessels could not be expected to have the special knowledge which is essential for dealing with floating seamarks. It should be borne in mind also that so far as the Trinity House is concerned, there are in position to-day 52 lightships and over 600 buoys, of which 40 are lighted. It may be stated that as regards the Trinity House steam vessels, the average annual expenditure during the six years ending 31st March, 1905, was approximately only £8,000 more than in the preceding six years. Upwards of £2,000 of this increase is due to the cost of upkeep of the steam vessel which was substituted late in 1897-8 for the old sailing tender "Mermaid," whilst £1,500 per annum is due to the increased cost of coal, and during the period in question the repairs required to the various steam vessels, both as respects their hulls and machinery, were considerably more extensive than in the previous period, resulting in an annual increase of nearly £4,000

As to steam-vessel expenditure.

It may be mentioned, however, that in 1905-6 the cost of repairs was about £2,000 less than the average of the six preceding years. Question 1832, head office expenses: It is incorrect and misleading to include either "Miscellaneous Expenses" or "Superannuations" under heading of "Cost of Administration." By far the larger portion of the charges under "Miscellaneous Expenses" relate to wreck removals and general service expenses, which can in no way be classed as an administration expenditure. So far as the Trinity House is concerned there has been no increase to speak of in head office expenses, the increase in superannuations is automatic, and due to the fact that more men in the service became entitled to their pensions by reason of age than there were reductions in the pension list owing to death. The expenditure under the head of "Miscellaneous" varies of necessity, and, as stated above, is chiefly due to wreck work. Question 1834, Superannuations: The reply to the strictures as to the largeness of the pension list is a very simple one—viz., that all pensions are regulated on the same scale as other public departments; also that no man is admitted to the covenanted service of the Trinity House without being certified by the Corporation's Medical Officer to be of "sound constitution and unimpaired health," and no pensions are granted to men under 60 years of age unless they are reported by the Medical Officer to be permanently incapacitated for performing their duty.

As to head office expenses.

As to superannuation expenses.

4975. Now, Captain Clarke, perhaps you would make a statement about the "Irene"?—(*Captain Clarke.*) Well, it is more about the steamers generally I should like to speak. During that time when the expenses of maintenance of steamers went up so considerably, it was due mainly to the fact that the "Siren," the "Stella," the "Argus," the "Irene," the "Ready," the "Warden," and the "Satellite" were completely gutted out fore and aft, and scaled and painted inside, which was a very considerable expenditure, and becomes necessary from time to time, and has to be done in order to keep the ships in a fit and proper condition. There remain only to be gutted and scaled and painted the "Triton" and the "Vestal," and they will be due to be done in about two years' time. Also, during that time the "Warden" had new decks and mast, the "Satellite" had new decks and masts, and the "Argus" had a new mast. The ships were put, during those few years, in a thoroughly efficient and proper condition, and should, under ordinary circumstances, require no work of that sort for many years to come. That is the main cause why the expenditure went up so much. Also I am right in saying that during that time the "Irene" had new boilers. Also, there was considerable expense owing to the "Triton" getting on shore, and to the "Irene" being in collision with the "Ovingdean Grange." Those matters increased the expenditure on the steamships.

Steam vessels Maintenance and repair of

4976. I notice that the expenses of the "Irene" for annual maintenance, including wages, coal and stores, and general maintenance, with repairs, amounted to a sum of £9,049 on a seven years' average. Comparing that sum with the corresponding figures for the "Vestal," you have for the "Vestal" an expenditure of £5,969. The "Irene" and the "Vestal" are vessels approximately the same size; in fact, the "Vestal" is slightly the larger vessel of the two?—Slightly.

4977. What are the circumstances which explain that very large difference?—During what years, Sir, are you quoting from?

4978. My figures are based upon an average of seven years ending 31 March, 1906?—I think the answer to that will be, firstly, the "Irene" is an older ship, and secondly, during that time she has had new boilers.

4979. You attribute the greater expense of maintaining the "Irene" entirely to the fact that she is an old vessel?—That she is a little older than the other, and has had new boilers.

4980. Requiring important repairs?—And has had new boilers. She is a more expensive ship to keep in order, and she is kept in better order than the other ship, because the "Irene" is used mainly for the inspection work, as against the "Vestal," which is not so often used for inspection work, and therefore is not kept, it is only right to say, in the condition that the "Irene" is kept. (*Sir George Vyvyan.*) Also the "Irene" will cost less in the future, I think, owing to using one boiler instead of two. (*Captain Clarke.*) We are now in the "Irene," and have been for some time past, only using one boiler, and

saving thereby a sum of something like £240 per annum in coal expenditure; that is when she is doing her ordinary work as a tender. I suppose it is known here that the "Irene," when she is not doing inspection work, is used exactly in the same way as any other tender in the service, and does the reliefs, carrying of coal, oil, stores, and all the rest of the work, just exactly in the same way as all other tenders do round the coast.

4981. Then your further answer is that the "Irene" is a somewhat more expensive vessel?—Yes.

4982. The great discrepancy in the figures arises from special repairs having been carried out during the last seven years?—Exactly, Sir.

4983. (*Admiral Henderson.*) In working out these expenses, I find that the average cost of the "Irene" is £2,927 a year, exclusive of new boilers, whereas that of the "Vestal" is £1,593, the former being nearly double the "Vestal," which means that the "Irene" costs fully double any other of the vessels enumerated in this return that we have here—that is the big vessels of the Northern and the Irish lights?—(*Captain Clarke.*) Of course, I have not got the figures before me, but I take it that they are correct, and the only explanation I have to give is that the "Irene" is kept in better order than our other ships for special purposes, and that she is a more expensive ship to keep up.

Head Office Expenses: Comparison of three Boards as to,

4984. (*Chairman.*) In the table which was handed in by Sir Thomas Blomefield, the head office expenses, exclusive of miscellaneous expenses, and exclusive of superannuation allowances, of the Trinity House, and of the other Lighthouse Authorities, are represented by the following percentages on the average total expenditure of seven years, apart from new works; Trinity House 9.3, Irish Lights 8.5, Northern Lights 9.9. Do you not consider, having regard to the much greater output of Trinity House, the much larger amount of their annual expenditure, that the proportion of the head office expenditure ought to be less than in the case of the other Authorities?—(*Sir George Vyvyan.*) That is your Question 10, Sir, I think.

4985. No, this is a question in connection with the question which I have already put. I understood Mr. Owen to complain that Mr. Hill had given a misleading impression by including in head office expenses, miscellaneous expenses and superannuation allowances?—(*Mr. Owen.*) Yes.

4986. I am now excluding those, and taking the head office expenses apart from them. The percentage figures for the three Lighthouse Authorities are 9.3 of the total expenditure of Trinity House, 8.5 of the total expenditure of Irish Lights, and 9.9 of the total expenditure of the Northern Lights, excluding expenditure on new works. My question, then, was directed to this point: The percentage expenses of the Trinity House and the Scottish Lights are about the same; those of the Irish Lights somewhat less, but might we not reasonably expect that the percentage in the case of the Trinity House should be the smallest of the three, having regard to the fact that their total expenditure is so much greater?—(*Mr. Owen.*) But the head office expenditure of the Trinity House includes the remuneration of the Elder Brethren, which does not appear in the other two Boards.

4987. Is not that an admission——?—You cannot get away from that fact.

4988. Is not that an admission that the system, including, as it does, the payment of seven thousand pounds a year to the Elder Brethren, is a more expensive one than the system of administration of the Scottish and the Irish Lights by unpaid Boards?—(*Sir George Vyvyan.*) Yes, I suppose you may take that. (*Mr. Owen.*) That is a matter of opinion; the question is, under which arrangement the work is done most efficiently.

4989. You would contend that there was a corresponding advantage in efficiency?—I should say that, certainly. (*Sir George Vyvyan.*) The work is much larger, much more comprehensive. Now, taking the Scottish Board, they have no lightships, or only one. That in itself involves a very great deal of office work.

4990. Yes, clearly the office work may be expected to increase with the general work of the Board; that is obvious; but ought it to increase in proportion?—I am not prepared to answer that. (*Mr. Owen.*) I should take it, the more work the Board has to perform, the larger must its official staff be.

4991. But not necessarily in proportion. In a manufacturing establishment it is generally held to be a very great advantage to double your output, because you do not at the same time double the amount of your head office expenses?—(*Sir George Vyvyan.*) The figures are 9.3, 8.5, and 9.9, I think you said.

Sir G. Vyvyan, K.C.M.G., Captain A. W. Clarke, Mr. A. Owen.

30 Apr. 1907.

4992. I understand in a question put to you by another Commissioner this subject is specifically referred to; perhaps we had better leave it until we reach that question. I only put the question as arising out of my Question 8. Then I pass to Question 9. Do you consider that the expenditure on new works, including important alterations and improvements of existing lights, is likely to be greater or to be less in the future than in the past? Are there any expensive new works at present in contemplation by Trinity House?—On the whole, I am inclined to think that the expenditure on new works will be less in the future, the only large outlay that is at present contemplated by the Trinity House is that which would be involved in the improvement of the lights in the St. George's Channel and the approaches, this proposal including the Trevose, Hartland, St. Ann's, South Bishop, and Bardsey lights, etc., the estimated cost being about £20,000 approximately. This expenditure, however, will be spread over several years. I think you will remember that I made a similar reply to you on this subject at the conference with the Advisory Committee in the year 1903. It is also possible that we will have to provide a new vessel to replace the Argus, which is now nearly fifty years old. And I should like to add to that that since 1900, as I have already said, we have gone through a period of great improvements, involving such large figures as Beachy Head £56,000, Dungeness £21,000, Portland £13,000, Strumble Head £12,000, a new lightship £12,000, and a new steam vessel £15,500.

New Works: Decrease of future expenditure on, probable.

4993. Have you any suggestion to make as regards the provision of lights of local utility, outside the jurisdiction of any local Lighting Authority, and yet of little or no benefit to passing trade?—I think that seamarks of this nature might reasonably be considered a fair charge on the General Lighthouse Fund, more particularly as in such cases the expenditure in any particular instance would probably be quite inconsiderable.

Local lights: Provision of, by General Lighthouse Fund.

4994. You think that would be a fair and proper burden to place upon the General Lighthouse Fund?—As a rule, yes. Of course, I am dealing entirely with Trinity House, not with the Scottish and the Irish Boards, and each case will be considered on its merits.

4995. I pass now to the other paper of questions, and I will put them *seriatim*. What were the total number of communications respectively between the Board of Trade and Trinity House for the year 1905-6?—(*Mr. Owen.*) The number of official letters which passed between the Board of Trade and Trinity House during the year 1905-6 amounted to 890—viz., 396 inward and 494 outward. This is exclusive of communications and queries relating to accounts.

Number of communications between Board of Trade and Trinity House:

4996. When Mr. Matthews was giving evidence before us he was asked whether he would be prepared to furnish a report showing what economies might possibly be effected by establishing a single authority in place of the three existing Authorities. Is such a report forthcoming?—(*Sir George Vyvyan.*) No, Sir, this was a personal expression of opinion from the Engineer in his individual capacity, and Trinity House have not considered it necessary to send in a report.

4997. With reference to Questions 3395 to 3406, can you give any further answers or explanations?—(*Mr. Owen.*) The matters referred to herein have been dealt with generally in replying to Question 8, referring to Mr. Norman Hill's evidence, but the replies to certain specific questions are as follows:—Q. 3398. If we examine closely the component parts of the total outlay on steamers, we find that the causes which led to a sudden increase of about £11,000 in the year ending 31st March, 1901, were to some extent of a permanent nature, and that these causes, taken in conjunction with factors of more recent growth, have during the past six years maintained the expenditure under this head at a considerably higher level than the average of the six years ending March, 1899. Repairs, owing mainly to the increasing age of the vessels, have cost about £4,000 a year more since 1899. Coal, owing to the increase in price which set in in 1900, accounts for about £1,600 a year extra; whilst the addition of a steam vessel in 1897-8, the full effect of which was not felt at first, is responsible for a permanent increase of about £2,000 a year. Wages also show an increase

Expenditure of Trinity House: Explanation of various items.

Sir G. Vyvyan, K.C.M.G., Captain A. W. Clarke, Mr. A. Owen.

30 Apr. 1907.

of about £1,400, owing to the appointment of certain additional officers and engine-room hands, and to the fact that one superintendent is now charged to Steamers instead of District Storehouses. Then Question 3402. Up to the year 1905-6 the cost of maintenance of the Blackwall workshops was included under the head of District Storehouses; but in that year, at the request of the Board of Trade, this expense, which amounted to £4,364, was distributed over the various heads of service.

4998. Up to that date under the heading of Storehouses all the expenses of Blackwall were included?—Yes. Then Question 3403. The fluctuations in the amount expended on maintaining the lightships depends entirely on the number requiring to be brought in for repair, the extent of the repairs found to be necessary; also the outlay on chain cables varies considerably year by year. Question 3404. The answer to that is, this would not be practicable. I think that was in regard to bringing the vessels in more regularly, Sir.

4999. You have to see that the vessels are repaired when they need repair?—(*Captain Clarke.*) Some come in every three years, being iron ships; some come in every seven years, being wood or composite ships; and it would be practically impossible to bring them in so as to level the expenditure over the various years, because they must come in when their time becomes due. It would be difficult to arrange the time so that a certain number of iron ships in one year, and a certain number of wood ships in another year should come in; and it would result, broadly speaking, in no saving of expense to the General Lighthouse Fund. It might be necessary then, in order to keep the money equally divided between the ships, to bring the ships in when they did not require overhaul.

5000. There is a sufficient balance in the Lighthouse Fund to cover any inequalities of that kind?—Yes; and it is the most economical way of doing the work only to bring in a ship when it requires to come in. (*Sir George Vyvyan.*) Is there any disadvantage in the expenses varying a little year by year? (*Mr. Owen.*) Question 3045. There were not so many new buoys required for the Trinity House Service in 1905-6. Hence the reduced expenditure. A new scale of pay came into force during the year 1902-3, the staff being reduced and the hours increased. Question 3406. The drop in "Miscellaneous Expenses" in 1906 is almost entirely attributable to there being less wrecks to deal with in that year.

5001. I have now to put some questions arising from the returns which have been put in. First of all, Schedule A 9, Reliefs for Rock Stations (Ref. Q. 3386, *et seq.*). Could not the contract system of relief be applied more generally? Are these items debited to individual lighthouses?—The contract system of relief could be applied more generally, but as steam tenders are necessarily attached to the different districts for the purpose of buoy and wreck work, relieving light vessels, etc., they are, with a view to economy, utilised as far as possible for the relief of rock and pile lighthouses. (*Captain Clarke.*) I have here a list of the rock lights that are relieved by contract and are relieved by our own steamers, and if that is examined it will be found that in every case where the work can be done by contract, we having no steamer within a reasonable distance, it is done, and it is only in the places where it would be very expensive to get it done by tug or by shore boat that we do it ourselves, and only in such places that are, broadly speaking, *en route* to a lightship, or to some other station which must necessarily be done by the steamer.

Relief of Rock Stations.

5002. You consider carefully in every case which would be the most economical plan?—Yes; and we have altered the arrangements from time to time as necessity has arisen. It must also be borne in mind that our steamers are at their station always with steam up, and ready to do this or any urgent work, and we have always found it cheaper to do the reliefs at those places which you will find on the list; it is cheaper to do it by our own steamers than by contract from the shore, wherever it is possible.

Accounts of seamarks maintained by Trinity House for other Public Departments.

5003. Schedule A 16. In the accounts for the year ended 31st March, 1906, does the total sum for maintenance of lighthouses—namely, £45,342—include the cost in Return A 16, of seamarks maintained for other Public Departments? The amount is £5,234?—(*Mr. Owen.*) The cost shown in Return No. 16 of maintaining various seamarks for other Public Departments, for which the Trinity House receive an annual sum of £5,234, is included in the estimates under Abstract A, B, or C, as the case may be. That is lighthouses, lightvessels, buoys and beacons. The amounts received in repayment are shown as credits in the appropriate abstract of account. The cost of buoys and beacons maintained for other authorities is shown in Section 3 of the estimates—*i.e.*, Abstract C.

Pistons:

5004. Schedule B.10 (2): Where were the new pistons made, and how charged?—These pistons were purchased in the rough from an outside firm and finished at the Trinity House workshops, and they would be charged to the station for which they were required. I believe in this instance it was the Carnarvon Bay lightship.

Incandescent Burners: Cause of difference in cost of, in England and Scotland.

5005. Estimates of 1905-6, Abstract A.7: Conversion of incandescent burners. This item cost the Northern Lighthouse Board £100 in each case. Is there any explanation of the £275 each?—The difference in the cost of these burners in the Trinity House and Scotch services respectively is due to the fact that, in the Trinity House service the whole of the apparatus, including the air and oil receivers, valves, supply pipes, etc., is duplicated, which the Elder Brethren consider a necessary and desirable precaution, while opportunity is taken, when fitting the incandescent system, to overhaul and effect any necessary repairs to the revolving machinery, the cost of which is charged at the same time to the station. Even with this duplication and other work, the actual difference between the cost of establishing the incandescent oil light in England and Scotland is not really always so great, the average expediture per station for this purpose at six English lighthouse stations, where the system was recently adopted, being £195 only. (*Sir George Vyvyan.*) I should like to add to that, Sir, with your permission, that when these various methods were placed before the Canadians, who wished to introduce the incandescent burner, they preferred ours, although it was slightly more expensive, on account of the duplication.

5006. For the sake of the greater security gained thereby?—The Canadians have adopted our Trinity House arrangement in preference to either the Scottish or the Irish.

Estimates, 1905-6; Explanation of points arising from,

5007. Estimates 1905-6. Abstract A, Ordinary Repairs and Incidentals: What are the details of those items, and why should those of Trinity House so much exceed those of the other two General Lighthouse Authorities?—(*Mr. Owen.*) Under the headings of "Ordinary Repairs and Incidentals" is included the whole cost of upkeep, except wages and consumable stores, for all stations in the service, averaging about £70 per station for repairs and £30 for incidents. As we have no particulars of the details of expenditure comprised in the Scotch and Irish services under these headings it is not possible to make a comparison.

5008. Estimates of 1905-6: Where is the credit for removing wrecks shown?—The difference between the estimated and the actual cost of removing wrecks was not drawn upon, the saving being £4,850.

5009. The same estimates; where is the charge for temporary draughtsmen shown?—Any charge for a temporary draughtsman would be shown under the head of Abstract F.

5010. The same estimates, Abstract G: What is the Education Grant for?—The payment termed "Education Grant" is an annual allowance at the rate of £6 10s. per child made to keepers at certain isolated shore stations to assist them in defraying the cost of boarding out their children with their relatives or friends, or in the nearest town or village where there is a school. They have the same practice in the Scottish service. (*Sir George Vyvyan.*) Exactly; we adopted it from Scotland.

5011. Where is the cost of the Gibraltar light shown under maintenance?—(*Mr. Owen.*) The cost of maintaining Gibraltar light is included in Abstract A with that of all other lighthouses under the jurisdiction of the Trinity House.

Expenditure:

5012. I think you have a copy of the tables put in by Sir Thomas Blomefield?—Yes, Sir.

5013. If you will kindly look at Table A, perhaps you will tell us what is the explanation of the greater cost of Trinity House in respect of (*a*) light-

Explanation of points arising from Sir T. Blomefield's Tables.

houses, (*b*) buoys and beacons, (*c*) district storehouses, (*d*) head office, (*e*) miscellaneous expenses, as compared with the other General Lighthouse Authorities?—Well, Sir, in respect of (*a*) we have no opportunity of analysing the cost of upkeep of Scotch and Irish lighthouses, and it would be difficult to ascertain the cause of the apparent excess of cost. These figures of Sir Thomas Blomefield are prepared at the Board of Trade, and we have not seen them, other than what you have sent us. Then as respects (*b*) buoys and beacons, the extra cost is doubtless due to the greater number which the Trinity House maintain, the proportion being at least three to one. (*c*) The same remark applies to district storehouses, of which the Trinity House has nine. (*d*) Head office, the expenditure under this heading is made up as follows:—Elder Brethren, £7,000; Official Establishment (clerical), £6,400; Official Establishment (Engineer), £4,000; Scientific Adviser, Surveyor of Shipping, messengers, and others officers, £1,200; stationery and printing (for the entire service) £1,000. The general duties appertaining to the Trinity House as a General Lighthouse Authority are of much wider scope than those of the other two Boards, and consequently necessitate a larger staff at headquarters.

5014. Do the three Lighthouse Authorities ever compare their expenditure under different heads, in order to see whether one is not carrying on the work more economically than another? Would not such a comparison be useful to them?—I do not think that is the practice, Sir. You see, with the three Boards, each individual Board is responsible to the Board of Trade for its expenditure; and certainly that has not been the practice. (*Sir George Vyvyan.*) In all our consultations with the other Boards we have not done that, Sir. I do not think they would like it; at any rate, it has never been contemplated. It would be very difficult to carry out.

5015. Then I am afraid it will fall to the Commissioners themselves to make these comparisons in the best way that they may, and it would help us, I think, if you were to inform us of the number of the staff employed at your lighthouses?—Yes, Sir.

5016. Could you tell us that off-hand?—(*Mr. Owen.*) That is given at each lighthouse.

5017. And the total number?—That is given in the return that we sent to you. (*Sir George Vyvyan.*) I believe our number of keepers does not vary; they are very much the same in the three Boards. We have conference whenever necessary. We are going to have one very soon, but not on the matter of expense; I do not know why we should not; I do not know whether it would be possible.

5018. Another table was put in by Sir Thomas Blomefield with respect to lighthouses——?—(*Mr. Owen.*) Miscellaneous expenses, Sir.

5019. No, with respect to lighthouses, about which I should like to ask a question. The total number of Trinity House lighthouses is given as 96, including a certain number of double stations. What are double stations?—Where there are two lights and two cottages; a double establishment.

5020. A double establishment?—Such as Nash and St. Ann's; the others have been done away with.

5021. It is stated, for instance, that there are five lighthouses under Trinity House with a staff of five, but that one of these is a double station; does it mean that at the double station ten men are employed?—(*Captain Clarke.*) No, Sir.

5022. It does not?—No, Sir; no such thing. (*Mr. Owen.*) Those five stations include the four electric light stations. The stations where there are five men must be the electric stations, Souter Point, St. Catherine's, South Foreland, and the Lizard, and the double stations.

5023. Is it not rather a strange thing to treat a double station as if it were two lighthouses?—(*Captain Clarke.*) It is two lighthouses; at the Nash and St. Ann's there are two distinct lighthouses.

5024. Oh, I see, there are two distinct lighthouses; each of those lighthouses has got a staff?—Yes; of course the principal keeper being in charge of the whole station; but at the Nash there would be four keepers; at St. Ann's there are five keepers, because there are two distinct lighthouses and a fog-signal at some distance from them.

5025. At the Nash there would be two distinct lighthouses, with two keepers in each?—In each set of cottages, all subject to the head keeper, who exercises a general supervision.

Sir G. Vyvyan, K.C.M.G., *Mr. A. Owen*, *Captain A. W. Clarke.*

30 Apr. 1907

Lighthouses: Number under Trinity House.

5026. (*Admiral Henderson.*) I think that the Board of Trade return as to the number of lighthouses is incorrect. According to Mr. Owen's evidence he gives the number of lighthouses under the control of the Trinity House in the United Kingdom as 71. I think the Board of Trade have added in all the foreign lighthouses. I have tried to get to the bottom of it, as to what is the number of lighthouses actually charged to the expenses?—(*Mr. Owen.*) There are twelve unwatched lights. Perhaps the Board of Trade have included those.

5027. They are included with the others under the same heading, in the Scotch and Irish Boards—the unwatched lights?—They are.

5028. (*Chairman.*) I notice a discrepancy between this table and the evidence given by Mr. Owen. It was in answer to Question 302, Mr. Owen gives the number of Trinity House lighthouses as 71, with resident keepers, 12 unwatched, and two separate fog-signal stations?—Yes.

5029. That makes 85 altogether?—You may take it that is correct, Sir. (*Sir George Vyvyan.*) I am not sure that it is not 70.

5030. (*Admiral Henderson.*) It has been very difficult indeed to get at the actual numbers of the lights; I have tried to check them all the way round, both by the maps and otherwise, and I make it 71?—(*Captain Clarke.*) I think you are probably right.

5031. And this return that is sent in by the Board of Trade gives 96, but it includes in the return the whole of the unwatched lights under all three Boards.

5032. (*Chairman.*) There is certainly a discrepancy in the number given by Mr. Owen, and the number given in this table?—70 is correct. (*Sir George Vyvyan.*) We will test those for you, Sir; I think it is very unlikely that we should be wrong. (*Mr. Owen.*) We are quite prepared to stand by our figures.

5033. That is the number that is maintained under the heading of maintenance of lighthouses?—Yes.

5034. (*Admiral Henderson.*) That is what we want to get at; what is the number maintained as a charge on lighthouse maintenance?—We will have it checked and sent in.*

5035. (*Chairman.*) Perhaps you might inform us at the same time of the total number of men employed in the lighthouse work?—(*Mr. Owen.*) You have that all in the estimates; the total number, and how many at each station.

5036. There is one other question?—(*Mr. Owen.*) Yes, about miscellaneous expenses.

5037. Have you dealt with miscellaneous expenses?—That is drawing a comparison as to the large expenses as compared with the other two Boards. Here again the difficulty arises in making any comparison without the details in each case being available. It may, however, be observed that in the Trinity House the cost of removal of wrecks (averaging about £6,000 per annum) is included under this heading. I think the expenditure by the other two Boards for removal of wrecks is practically nil, Sir.

5038. Is very small?—(*Captain Clarke.*) Yes.

Submarine bell fog-signals: Correspondence as to, with Zeeland Steamship Company.

5039. Have you any observations to make regarding an article that appeared in the "Shipping Gazette" on the 1st of January of this year, with reference to the Zeeland Company's correspondence with the Trinity House?—(*Sir George Vyvyan.*) The offer of the Zeeland Steamship Company, as conveyed in their letter to the Trinity House, of 29th August, 1906, was "To instal an apparatus for submarine signalling on board the Tongue lightvessel free of cost, and to bear all expense for managing the apparatus until you decide to take over the apparatus, or till the same has been removed." The reply of the Trinity House was that "The Elder Brethren regret that as matters at present stand, they are unable to avail themselves of it." It should be borne in mind that the Trinity House had made experiments with this apparatus at the North

* *See* Appendix B, VI.

Sir G. Vyvyan, K.C.M.G., Captain A. W. C[illegible] Mr. A. Ower.

30 Apr. 1907.

Goodwin lightvessel in August, 1905, and as a result they provided in their estimates for the year 1906-7 the sum of £1,000 for the purpose of fitting submarine bells on two or three of their lightvessels. When their estimates came up for discussion before the Advisory Committee of Shipowners in January, 1906, this proposed expenditure met with such strong opposition on the part of the shipowners' representatives that the item was withdrawn from the estimates. In these circumstances the Elder Brethren felt they were compelled to decline the offer of the Zeeland Company because, in view of the favourable results which they themselves had obtained with this invention when experimenting with it at the North Goodwin lightvessel in August, 1905, they felt assured that if the invention were once installed at the Tongue it would have to remain, and they, as the General Lighthouse Authority, would have been thereby committed to the necessary expenditure involved, a responsibility which they were not at that moment in a position to accept. It may be added that in the estimates for the current year the Trinity House have again made provision for fitting submarine bells at certain of their stations, but, owing to the attitude of the Advisory Committee of Shipowners at the last conference in January of this year, the proposal has not yet been sanctioned, and is still under the consideration of the Board of Trade.

Elder Brethren: Time spent in serving on each Committee.

5040. Now, Sir George, I propose to pass to your own *précis* of evidence, and to take you through the different heads of it *seriatim*. As regards the constitution of the Trinity House and the duties of Committees, we have already had a very full account from the Secretary. I do not know if you wish to add anything to that account?—As you say, Sir, you have had it nearly all from the Secretary. I have just this addition. The time that each Elder Brother remains in the Lights and Examining Committees, supposing no vacancy occurs, is eight years, two of which are spent as chairman, but of recent years deaths and elections have interfered with this arrangement. For instance, I have been six years in the Examining Committee, nine and a half years in the Lights Committee.

Ages of,

5041. Then, as respects the ages of the Elder Brethren?—There is one over 70; between 60 and 70, two; 50 and 60, five; 40 and 50, there are four.

5042. That is twelve?—It varies very much at times. At present there is one very old member, Admiral Sir Leopold M'Clintock, aged about 87, not included in the above; his attendance and duties are merely nominal, and he cannot be said to take any part either in the deliberations of the Board or in the conduct of affairs, though he is represented as belonging to the Committee of Wardens. The average age of the twelve Brethren on the active list is 55 years, one of whom is a Rear-Admiral in the Royal Navy, and the others are all retired masters in the Merchant Service.

5043. Sir Leopold M'Clintock practically performs no duties; you really regard him, to all intents and purposes, as pensioned?—He draws his salary, minus his fines.

Election of,

5044. Then as regards election?—They are all elected by co-option from the list of the Younger Brethren, and to be qualified they must have commanded a ship for at least four years in the Merchant Service or three in the Royal Navy. There is no difference made as to the ports from which the candidates have sailed, Southampton, Newcastle, Liverpool, and London being all represented. I honestly believe that the chief desire in the minds of the Elder Brethren is to get the best man, and it is very natural, as we have to be companions for life.

5045. Just one question with regard to that. You say there is no difference made as to the ports from which candidates have sailed, Southampton, Newcastle, Liverpool, and London being all represented. Do you make any endeavour to secure that the Elder Brethren shall be representative of the different ports?—No, Sir, I cannot say that we do; we do not write to the ports, if that is what you mean.

5046. No, I did not mean that. In co-opting—I do not know exactly the process by which the co-option takes place—but in co-opting would you consider, as between two candidates whose claims you regarded as in other respects equal, that it was an advantage in favour of one, as against the other, that he came from a port not so well represented upon the Board?—Distinctly, yes; and not only ports, but trades. In the event of a vacancy occurring, the practice is, if it can be arranged, that the new member should join the Examining Committee, where he will have an opportunity of gaining experience in what we call the examining work, which has been described to you. This is occasionally very arduous work. I have been myself on my legs for fourteen hours, with the usual interval for meals. And it is advantageous that the younger members should belong to it, for the experience gained is of great value to the recipient in connection with the other matters which he will be called upon to deal with, and which will come before him in other Committees or at the Board. It is not, however, always possible to carry this arrangement out, and at the present time the two youngest members of the Board are on the Lights Committee owing to the number of vacancies which have occurred recently, *i.e.*, there have been five elections since and including 1900, but in the eight elections which have occurred since I have been Deputy-Master, five went straight into the Examining Committee. Practically no Elder Brother is now elected who is over 50. It is an unwritten law that we do not elect Brethren who are over 50. It has become practically the rule that of the thirteen members two should belong to the Royal Navy, but it has never been laid down, and it is within the right of any member of the Board to vote for any Younger Brother, regardless of the nature of his service.

5047. Would you describe to us the method of election?—Yes, Sir.

5048. Unless you have any objection?—No, Sir, I have no objection whatever. It is handed down from a very long time. There is a list of the Younger Brethren placed on the table, and each Elder Brother, beginning with the junior, makes three ticks or scratches, as we call them—the old term—three ticks against three Younger Brethren. No two ticks must be made against one Younger Brother, so that each Elder Brother has to tick for three Younger Brethren. The three getting the largest number of ticks go into the ballot box, and are balloted for, and the one receiving the greatest number of affirmative balls, always provided that is a majority of those present, is elected an Elder Brother. We arrange that there is a second ballot if necessary, so that the Younger Brother elected always receives a majority of balls.

5048a. Before you go to the ballot, is there any open discussion of the merits of the different candidates?—Yes. They are interviewed; we talk amongst ourselves; we write about them; we make every inquiry; and we take every conceivable method to find out whether we have got the best man, quite irrespective of anything else.

5049. I may take it that a great deal of trouble is taken in connection with the election of every Elder Brother?—A great deal of trouble; that is the reason that we delay the election as long as we can, in order that we may take every opportunity of finding out, because it is only then that we begin to discuss them. The fact of their being a Younger Brother does not involve any great research into their past history.

5050. The ballot is only the culmination of a really careful consideration of the whole matter in all its aspects?—Yes, we discuss it amongst ourselves; not officially, of course. Of course, we see something of them before they become candidates—what we call candidates. We have many opportunities. They dine with us once a year, those who are at home, and we encourage correspondence with them. There are about 200 of them; their qualification is not defined; they come from all parts of the United Kingdom. I believe you have a return of their names and their occupations.

5051. We have. The time of service which must elapse before a Younger Brother is eligible to become an Elder Brother is not laid down?—No, Sir, I was eighteen months a Younger Brother. Some of them have been four years, and some of them longer. I do not know whether you want to hear anything about the pilotage work; whether you consider that is outside?

Pilotage duties of,

5052. I hardly think the work of the Pilotage department comes within this Inquiry, except in so far as the work done on the Pilotage Committee might conceivably interfere with your work as a Lighting Authority. You do not think that is practically the case?—Interfere with the work?

5053. Yes?—It is their own Committee.

5054. The time of the Elder Brethren which is taken up with the pilotage duties is not such as to

interfere with the efficient performance of their duties as a Lighthouse Authority?—Oh, no; on the contrary, it is an advantage.

5054. (*Admiral Henderson.*) How is the expense of the Pilotage Committee met?—By the Pilotage Commiteee itself.

5055. Is any portion of the Head Office expenses used for the Pilotage Committee?—(*Mr. Owen.*) Oh, no.

5056. They have a separate staff entirely?—It is a distinct department entirely.

5057. (*Chairman.*) Except so far as the services of the Elder Brethren themselves are concerned?—Yes, it is to the great advantage of the Elder Brethren in their lighthouse work.

5058. I think you might just tell us what you have to say with regard to the outport pilotage districts?—(*Captain Clarke.*) The outport pilotage districts are also worked by the Elder Brethren of the Trinity House, who meet once a week, on Fridays, for about an hour and a half, or perhaps two hours, to deal with the outport work.

5059. How many outport districts are there?—Thirty-four outports; the names I have here before me.

5060. They are administered by Sub-Commissioners of the port?—They are administered by Sub-Commissioners of the port. At each of those ports there are Sub-Commissioners, not under three and not exceeding five. Their emoluments are the sums paid by the pilots for examination for pilotage and re-examination.

5061. And so far as these outport districts are concerned, the administration of Trinity House is practically confined to considering the reports of Sub-Commissioners?—Practically.

5062. And dealing with any questions raised?—Occasionally we go down to those outports when anything special arises, which is not often.

5063. (*Admiral Henderson.*) The examinations are held locally?—Locally, yes. We have, on special occasions, gone down to examine the pilots, when there has been some doubt as to the efficiency of the pilots, but that only occurs once in many years.

Services afloat,

5064. (*Chairman.*) With regard to the services afloat and Committees away from London?—(*Sir George Vyvyan.*) Except in Special Committees, the practice is for two Brethren to be away together, and it is generally of advantage, except on pilotage questions, that each Committee should be represented, and when on pilotage duties the Committee is frequently accompanied by a clerk.

5065. From what source would that clerk be paid?—He is a pilotage clerk. On special occasions, such as fog-signal experiments and special inspections, this rule does not apply. I frequently preside myself, and it is occasionally found expendient that as many members as can be spared should have an opportunity of seeing or hearing what is being tried, not necessarily as members of the Committee, but in order that their experience may be matured. I may say we have just come up last Friday from an examination of experiments off St. Catherine's. The Scottish Board were prevented from being represented; the Irish Commissioners and the Board of Trade were both represented. Last year I presided at several Committees afloat, visiting various works in the Bristol and English Channels, and to report on the alleged deficiency in sea area of the fog-signals on Lundy Island in connection with the loss of the "Montagu," a copy of which I believe you have had sent to you, and in connection with fog-signals generally, and submarine bells in particular. I took out from my diary, to give you an idea, the number of days one is away on duty, and I find before I became Deputy-Master the average of the year was 46 days in the year I was away on duty; I was so chiefly at inspections, and I have no doubt Captain Clarke has been more than that.

nd nspection duties of,

5066. The ordinary work of inspection is carried out partly by the Examining Committee and partly by the Lights Committee, but I understand the work of inspection is generally carried out by at least two Elder Brethren, one belonging to the Examining Committee and the other belonging to the Lights Committee?—The Lights Committee is always two on these occasions; very, very rarely, an unimportant Committee may be composed of one, but I always set my face against it as far as I can, and it is hardly ever the case.

5067. A question arose in the course of the evidence given by Captain Frederick, if you will refer to Questions 4245 to 4247. "4245. (*Mr. Ennis.*) Do you know that a Committee of the Irish Lights Board has been about a month afloat each year doing similar work?—(*A.*) I do not know how long, but they always spend a certain amount of time afloat visiting the lights; but in the case of the Trinity House they do more than that, you see. 4246. (*Admiral Henderson.*) But is not that a supererogatory duty, the fact of the Elder Brethren of the Trinity House actually fixing the position of a buoy; you cannot rely on the position of a buoy fixed once a year, it must be done continually and constantly, and it must be verified after every gale of wind?—(*A.*) Oh, I think they are constantly going out, the Elder Brethren of the Trinity House. 4247. I do not think that is the evidence we have had, it is only done when they make their annual inspection by the Elder Brethren?—(*A.*) Oh, I do not think that could have been given in evidence, but I should not have agreed with it if I had heard it"?—(*Sir George Vyvyan.*) If that means that we only go out for our annual inspections it is quite wrong. Do you take it as meaning that? That answer has not been brought to my notice.

5068. I wished to know what the exact facts were. Are these buoys fixed by the Committee of the Trinity House once in every two years?—(*Captain Clarke.*) Once in every two years the position of every buoy round the coast is checked personally by the Elder Brethren.

5069. And that work is not carried out at what is known as the annual inspection?—No.

5070. The annual inspection is something quite different?—Quite distinct, and not only that, but the buoys are checked and supervised by the superintendents of the respective districts, and also by the masters of the ships in their usual runs.

5071. That raises a question to which I just wish to call your attention. The Northern Lights are contented with the supervision exercised over the position of buoys by the officers of their steam vessels. The Irish Lights, in addition to the supervision of the officers of the steam vessels, have the buoys inspected by an inspector. I take it that the work of the inspector corresponds to the work of the Elder Brethren of the Trinity House?—Broadly speaking, yes.

5072. But Elder Brethren of the Trinity House impose the responsibility of seeing that the buoys are in their proper position not only upon the masters of their steam vessels, but also upon the superintendents of the different districts?—(*Sir George Vyvyan.*) Yes, Sir.

5073. And then, in addition to that, there is an inspection carried out by the Elder Brethren themselves once every two years?—Yes, there are two sorts of annual inspections; one is done by the Examining Committee.

5074. Do you think that this triplication of the work of inspection is necessary for the efficient maintaining of the buoys in position?—(*Captain Clarke.*) It is a great deal more than an inspection to ascertain if the buoys are in their places; it is a survey of the sands to see that the buoys are in the best situations, the soundings being carried from buoy to buoy and from buoy to sand, and it is only by such inspections—whether they are carried out by the officers of the steamers, which cannot be a very exhaustive one, or by the Elder Brethren, which is an exhaustive one—that the buoys are placed in the best positions to guard the danger.

5075. You do not think that if you were to content yourself with the amount of supervision exercised by the Northern Lights and the Irish Lights the work could be satisfactorily done as regards the coasts of England and Wales?—(*Captain Clarke.*) No; we certainly do not. We have outlying sands where it is impossible to get marks and angles for the buoys, and what the Elder Brethren do in their two years' examination is not only to check the position of the buoys, but to check it having regard to the configuration of the sand and to find whether the sand has grown out or not, and to move the buoys or direct their

Sir G. Vyvyan, K.C.M.G., Captain A. W. Clarke, Mr. A. Owen.

30 Apr. 1907.

removal, so as to guard that sand, and to acquaint the Admiralty with the fact that the sand is altering.

5076. (*Admiral Henderson.*) Do you think that really is more necessary in the case of the coasts of England and Wales than in regard to the coasts of Ireland and Scotland?—Particularly so, having regard to the outlying dangers on our coasts. (*Sir George Vyvyan.*) There is so much more traffic. (*Captain Clarke.*) It is right to say the superintendents and our masters check the positions of all buoys; when they pass in their usual routine they see that the buoys are in the proper positions, but they do not do that exhaustive checking and determining of the exact position of the buoys that we do when we are away on those inspections.

5077. Not even the superintendents?—Not even the superintendents, unless a superintendent is directed to do so in some particular case or cases.

5078. I notice in looking through the logs that the tenders are constantly taking soundings and taking the positions of buoys?—When directed.

5079. And also individual lightvessels. They constantly report in their logs that they find a lightvessel $3\frac{3}{4}$ cables out, and therefore one presumes the masters of those tenders are, as they should be, perfectly capable of making reports to Trinity House as to any increase of a shoal, or any alteration of a channel, or any discrepancy which they may find?—I would be sorry to say that they are not, but I do maintain that supervision—particularly in lighthouse work and over floating seamarks marking outlying dangers—is absolutely essential and necessary. Having regard to the coasts of Wales and England, no amount of superintendence is too great, in our opinion. And may I add, that, when occasion occurs, the two inspections have been conducted together with a view to saving money—that is to say, the general inspection of the lighthouse establishments and the checking of the positions of the buoys have been carried out simultaneously with a view to saving expenditure, but it is not advisable, and sometimes it is not possible, to do that, particularly in districts where we have a large number of floating seamarks.

Board of Trade: Control of, over Trinity House.

5080. (*Chairman.*) Passing from that subject to the connection between the Trinity House and the Board of Trade, have you any observations to make?—(*Sir George Vyvyan.*) Under the powers given them by the Merchant Shipping Act, 1894, the Board of Trade exercise a very strict control in matters of finance not only as respects new works, but also in regard to the general upkeep of the service. All expenditure for salaries, wages, or allowances is strictly in accordance with rates which have been previously sanctioned, and no departure therefrom is permitted without previous sanction. Again, full particulars of all expenditure required for repairs in any branch of the service has to be submitted for sanction before being put in hand, whilst at the termination of each quarter a detailed account of all disbursements for the various heads of the service, with the necessary vouchers, is transmitted to the Board of Trade, who, after examination, pass them on to the Department of the Comptroller and Auditor-General. The Board of Trade have always fully recognised that, notwithstanding this financial control, the responsibility for the efficient management of the service generally is not within their province, but rests entirely with the General Lighthouse Authority under the terms of the Merchant Shipping Act of 1894, and on these recognised lines the result has been for many years past (so far as the Trinity House is concerned) a cordial co-operation between the two Departments for the good of the service generally.

Control of Trinity House over Scottish and Irish Boards:

5081. Will you go on to the connection with the Scotch and Irish Boards?—I think it may be said that the existing arrangement, as provided by Statute, has been found to have its advantages, particularly in view of the fact that in the composition of the Scotch and Irish Boards the nautical element is almost, if not entirely, absent; and although cases have occurred occasionally in which the Trinity House and one or other of the two Boards have been in direct conflict, it has much more frequently happened that either the Trinity House has been able to accord its sanction to the proposals as first put forward or that, as the result of correspondence or consultation, very material modifications in the original proposals have been agreed to.

5082. In examining any scheme which is submitted to Trinity House for sanction by the Irish Lights or by the Northern Lights does the Trinity House take into account only general considerations, such, for instance, as the necessity for the light or the character of the light, or does it go into the details of the proposed scheme?—(*Captain Clarke.*) The details of the scheme are laid before the Trinity House when considered necessary, Sir.

5083. They would not be laid before the Trinity House as a matter of course, but only if the Trinity House asks for them?—Yes; in some cases it is not necessary to go into the details.

5084. Is the Trinity House in the habit of asking for them?—Yes, we are in the habit of asking for details. (*Sir George Vyvyan.*) We should not give statutory sanction unless we were satisfied.

5085. Has the practice of asking for details always obtained?—(*Sir George Vyvyan.*) No.

5086. I notice that Mr. Scott, when asked (3092) "In what light do you regard the control of the Trinity House and the Board of Trade? Do you find that it gives you very much extra work; do you think that it goes into too minute details"? replies: "Well, I think that the old arrangement, when the Trinity House did not bother about our methods of doing work, but simply had to sanction characters of lights, was better than the present arrangement, in which they go into details"?—I am afraid we found, Sir, it was absolutely necessary to go into details more than we had been doing. Circumstances arose which I need not detail here, and we found that it was only by going into details that things were discovered.

5087. I am afraid, Sir George, that I must press this question, because it is really of some importance. If there were reasons of that kind I think you ought to state them?—Well, it was a question, it came out incidentally, in which a steamer was involved, of which we had not been informed, and it became a a matter of augmentation of expense or an explanation of expense, and from that time I think we have been more particular. I may say that it is a very difficult matter to determine how far the Trinity House has to go into the matter of finance. It is impossible to avoid it; it would not be right to avoid it; but we never go into the question of finance, except as to whether the expenditure is necessary or ought to be spent.

5088. You mean that the amount which is proposed to be spent is an essential element in considering whether the expense should be made at all or not?—There was a time years ago when the question of finance was never considered by the Trinity House.

5089. And in reporting to the Board of Trade you would, I suppose, deal separately with the question of the method of carrying out the proposed new work, and with the necessity of some new work, apart from the method of carrying it out?—Yes; and we sometimes propose an alternative scheme.

5090. You think it is desirable that you should be placed in a position to criticise, not merely the necessity of the work, the character of the light, and so forth, but also the details of expenditure?—It must be done by somebody.

5091. You think it is an advantage that you should be placed in a position to examine details of the expenditure before reporting to the Board of Trade?—Yes, otherwise the Board of Trade would have to do it themselves.

5092. Are you clearly of opinion that some superior authority among the three Lighthouse Authorities is desirable, that one should be made superior to the others and have supervision over them?—I think that our nautical element gives us a distinct advantage, of which the Board of Trade are very glad to avail themselves.

5093. Whenever it is proposed to put up a new seamark, it may be of essential importance that the character of the mark should be considered in relation to the whole lighting of the coast; is that so?—It is so. There is very often a large scheme presented to us, of which the particular light forms a part.

5094. And that, I suppose, is the principal reason why you think one supervising authority is necessary, or, at all events, desirable, even apart from the supervision which might be exercised by the Board of Trade?—Yes, Sir, I think so. I am not very strong upon it. If, for instance, there was a strong nautical element on the Scottish Board, I think it would

relieve us of the supervision, which we are not very fond of, and it is done more for the benefit of the Board of Trade than our own, and certainly creates a certain amount of jealousy. But there being no nautical men on the Scottish Board, I think makes it necessary.

France: Difficulty of comparing Lighthouse Administration of, with that of England.

5095. Will you please pass to the next head: the comparison between France and England with respect to the lighting of their coasts?—The comparison between the two countries was gone into at some length by the Courtney Committee in the examination of Mr. Kent, and the difficulties connected with any proper comparison were brought out, Section 8, 7802, etc., etc. It was elicited that a fixed Budget, £114,136, was charged each year, that this sum did not include the expense of managing and supervising the Lighthouse Services, that their lightvessel service is inconsiderable, and that there is no wreck removal service connected with it; that the wages in France are, as compared with ours, much cheaper, say as 48 to 68 per annum; that the number of lightvessels in England, 50, as against the 7 in France, which represents at least £60,000 per annum; and our steam vessel service another £40,000. Also the crew of a French lightvessel is nearly double that of ours. I would add to the evidence then given one illustration: The coasts of England are n many places fringed with sandbanks between which are navigable channels, and in other parts there are extensive rock reefs, or isolated rocks, which require to be marked.

5096. By the coasts of England do you mean as opposed to those of the United Kingdom, or are you speaking of the United Kingdom generally?—I am speaking of England and Wales, and my reason for speaking of them is that the length of the French coast and the length of the English coast is not very far different. The French coasts, on the contrary, are not bordered by outlying dangers to anything like such an extent. To mark the dangers in question England has no less than 61 lightvessels, including spares, and 23 rock lighthouses, all of which require special service of reliefs, and are expensive establishments to keep up.

5097. Sixty-one lightvessels?—(*Mr. Owen.*) That is including the spare vessels. (*Sir George Vyvyan*) The French have only 7 lightships and one or two rock lighthouses. To show the difference this makes in our disbursements I will instance the east coast of Kent from the North to the South Foreland, a distance of fourteen miles. If there were no outlying dangers, the two existing lighthouses at the North and South Foreland would be a sufficient protection, costing about £1,350 per annum. But four lightvessels and ten buoys are also required, which cost nearly £6,000 a year to maintain, without reckoning the proportionate expense of the establishments and steam tenders which are necessary to attend to them. In the same way the east coast of England right up to the Spurn requires not only the land line, but always one, and generally two sea lines, to be guarded, and it is to be remembered that it is the floating service which involves by far the heaviest expenditure. It is believed that if the figures could be obtained, and the different conditions of coast taken into account, the expenditure on the English system would compare favourably with that for the French Service; and there is no other country which will bear comparison with ours. Of course, by "ours" I here include the Scottish and Irish Services.

Removal of Wrecks: Importance of.

5098. Have you anything to say with respect to the removal of wrecks, which is the next heading?—Particulars of the duties of the Trinity House in respect of wreck removals have already been furnished to the Commission by our Secretary (see Questions 278-281 of his evidence). I have only to add that the Corporation regard this work as one of their most important duties, and which, in their opinion, would go a long way to justify, if justification were needed, the apparent large expenditure involved in having specially-fitted Trinity House tenders stationed at different points on the coast, where they are ready at any moment to proceed in search of, or to deal with wrecks dangerous to navigation. It has been estimated that the time occupied by the various Trinity House steamers upon wreck work in any one year is equivalent to the continuous employment on such work of one steamer during the whole year.

5099. The wreck work of the Trinity House is very large as compared to that of the Irish Lights or the Northern Lights?—I should think so, very large; the Scottish have hardly any.

5100. The work of the Scotch and Irish Lights in that matter is insignificant?—I do not know that it is brought to our knowledge very much, but I believe there is no comparison between them.

Sir G. Vyvyan, K.C.M.G., Captain A. W. Clarke, Mr. A. Owen.
30 Apr. 1907.

5101. Can you give us any explanation of the difference?—First, the large amount of navigation, and, secondly, the difference in the dangers of the coast. There is no place like the Bristol Channel, or the Goodwin Sands, the Bristol Channel particularly, on account of the strong tides.

5102. The duty of removing wrecks is imposed upon you by the Wrecks Act?—By the Merchant Shipping Act, and it includes protection of lifeboats.

Duties of General Lighthouse Authorities as to,

5103. I notice that Mr. Pelham, in answer to Question 30, states that the removal of wrecks is not a duty imposed upon the Lighthouse Authorities; the Act merely gives them power to remove wrecks?—That is a legal definition. I know we have got to do it.

5104. You do not regard it as merely discretionary?—No, Sir. It would be impertinence in me to question Mr. Pelham's legal knowledge, but all I can say is this, that for the lifeboats we are obliged to carry it out; we satisfied ourselves that the obligation rests on us, and "may" means "shall" in this instance.

5105. I only wanted to have the point definitely cleared up?—It gives us the power to do so, and we have no alternative.

5106. (*Admiral Henderson.*) Do you say you have to do with lifeboats?—If a wreck is a danger, not to general navigation, but to the services of the lifeboats, there is a clause included in the Act which puts upon us the burden of removing such a danger.

Disputes as to,

5107. (*Chairman.*) Have difficulties often arisen between the General Lighthouse Authorities and the local authorities with respect to this duty of removing wrecks?—Yes, Sir, continually. It is an expensive duty and one which the local authorities generally shirk if they can, and we cannot compel them to remove the wreck. Take Yarmouth, a wreck occurs in the approaches to Yarmouth, they laugh at us, and we have to do it.

5108. It was stated by Mr. Cook that the local authorities have the right of appeal to the Board of Trade in cases of dispute respecting the removal?—(*Mr. Owen.*) That is all in the Act, Sir; this is in the 533rd Section of the Act: "If any question arises between a harbour or conservancy authority on the one hand, and a General Lighthouse Authority on the other hand, as to their respective powers under this part of the Act for the removal of wrecks, in relation to any place being in or near an approach to a harbour or tidal water, that question shall, on the application of either Authority, be referred to the decision of the Board of Trade, and the decision of that Board shall be final."

5109. I see; it is a bilateral appeal?—(*Captain Clarke.*) We always disperse the wreck if it is a danger to navigation, and then the appeal comes on afterwards.

5110. The appeal then is merely on the question of expense?—Exactly, Sir.

5111. The duty is carried out by you in any case?—In special cases; we could never see navigation stopped because of a wreck.

Local Lights: Position of Trinity House with regard to,

5112. You have already replied to a question about the local lights?—(*Sir George Vyvyan.*) There is a letter we wrote to the Board of Trade—I will ask the Secretary to read it—which I think will describe our position with regard to local lights. It is not a long one, and it is an official document by which we are bound. (*Mr. Owen.*) This is a letter which the Trinity House addressed to the Board of Trade on 8th January, 1907.

"Trinity House, London, E.C.,
8th January, 1907.

Sir,—I am directed to acknowledge the receipt of your letter, dated 22nd ultimo, requesting to be furnished with information as to the circumstances in which the responsibility for the lighting of the Thames was assigned to the Trinity House, and also as to any cases which may exist in the jurisdiction of this Corporation, where lights, which may be said to be of a local nature, are maintained at the expense of the General Lighthouse Fund.

In reply I am to state that, so far as the Thames estuary is concerned, a large proportion of the seamarks were in existence long before the passing of the Merchant Shipping Act of 1854, and were established by the Corporation under the powers vested in them,

Sir G. Vyvyan, K.C.M.G., *Captain A. W. Clarke*, *Mr. A. Owen*.

30 Apr. 1907.

(1) by their charter; (2) by patents and orders granted by the Crown; and (3) by various Acts of Parliament.

Prior to 1864 the responsibility for establishing and maintaining lights and buoys in the River Thames proper, below London Bridge, was vested in the Thames Conservancy, but, by an Act passed in that year (27 and 28 Vic., cap. 113, Section 52), the lighting was transferred to the Trinity House, and by a further Act of 1878 (41 and 42 Vic., cap. 216, Section 4), the buoys hitherto maintained by the Thames Conservancy were also transferred to the Trinity House, and became a charge on the Mercantile Marine Fund, now the General Lighthouse Fund.

It should, however, be borne in mind that, before April, 1899, light dues were charged on the principle that vessels paid for each light passed or from which benefit was derived, and that, in addition to the tolls levied for individual lights, etc., in the Thames and its approaches, special 'buoyage and beaconage' dues were charged upon all vessels entering the port of London, and certain places within the Thames estuary, and, in the aggregate, these tolls produced a revenue far in excess of the cost of the maintenance of the seamarks concerned.

With regard to the inquiry contained in the last paragraph of your letter as respects other seamarks on the coasts of England and Wales, which may be said to be of a local nature, and which are maintained by the Trinity House at the expense of the General Lighthouse Fund, I am directed to state that, in the opinion of the Elder Brethren, it would, at the present day, be very difficult to draw a hard and fast rule as to what seamarks should be regarded as "local" and what as 'general'; but I am to transmit herewith a list of those lights and buoys in existence before the Merchant Shipping Act of 1854 came into operation, which had always been treated as "local," and which were taken over, with the other seamarks belonging to the Corporation, without any question as to their local nature having been raised, so far as the Elder Brethren are aware.

Specific tolls were also levied in respect of these 'local' seamarks, and the revenue derived therefrom was originally sufficient to defray the cost of maintenance, but owing to subsequent reductions and abatements, this had ceased to be the case in the majority of instances at the time the tolls were abolished by the Act of 1898.

I am, etc.,

(Sd.) A. Owen.

The Assistant Secretary, Harbour Department, Board of Trade."

(Enclosure.)

List of lights and buoys which may be said to be of a local nature, but which are maintained by the Trinity House at the expense of the General Lighthouse Fund:

Name and Date of Establishment.	
Tees Buoys	Prior to 1710
Lynn Well Lightvessel	1828
Hunstanton Lighthouse (coal fire)	1665
Hunstanton Lighthouse (oil light) (Purchased 1837.)	1777
Woodbridge Buoys	1849
Calshot Spit Lightvessel	1842
Exeter Buoys — Exe Fairway Buoy laid	1816
St. Anthony's Point Lighthouse	1835
Bideford Bar (Two Lighthouses.)	1820
Carmarthen Buoys (When three were established.)	1825
Usk Lighthouse	1821
Burnham, Two Lighthouses (high light). Prior to	1813
" " " (low light)	1832
Aberdovey Buoys — First buoys laid	1830
Conway Buoys	1814
Menai Lighthouse	1838
Air Point Lighthouse and Dee Buoys	1776
(The Lighthouse was discontinued in 1883, and the Dee Lightvessel placed in lieu thereof.)	
St. Bees Lighthouse (coal fire)	1718
St. Bees Lighthouse (oil light)	1823

All these lights and buoys were established or purchased by the Trinity House for the benefit of navigation either upon direct representations from the trade or persons interested, or after it had been ascertained that they were willing to pay the tolls which it would be necessary to levy in order to defray the cost of their upkeep.

Trinity House, London, E.C.,
8th January, 1907.

Provision of, out of General Lighthouse Fund.

(*Sir George Vyvyan.*) Then, Sir, in determining whether or not a light or seamark, which might be considered a local light, should be paid for out of the General Lighthouse Fund, it should, I think, be borne in mind that our primary duty is to save life and property, and if we decided that the installation of such a light or seamark was necessary for this purpose, we ought not to refuse to erect it solely because the local authority declined to furnish the funds which were necessary, or because there were conflicting interests, or no authority at all. In the examination of the Professional Adviser to the Board of Trade before the Royal Commission in the year 1861, he lays down as a rule that harbour lights and buoys are not to be paid for out of the Mercantile Marine Fund—unless as a harbour of refuge—unless they are of use for the general passing trade. Practically, we have departed from that rule; we are improving Bideford, are placing a gas-buoy near Fleetwood. It has become a much broader question than it used to be; it is also a question of degree, and depends, to a certain extent, on the views held by the Advisory Committee. In that we have departed from the custom that was observed some 30 years ago, and if you look at the evidence before the Royal Commission of 1861 you will find that that is not the mode that the Board of Trade proceeded on in those days; they refused to allow anything to be regarded as coming under the General Lighthouse Fund—the Mercantile Marine Fund—if it could be paid for, if there was a local authority at all.

5113. That is not the attitude they take now?—That is not the attitude they take now; it has been altered.

5114. So far as the port of London is concerned, I understand the position is this: up to the year 1898 no hardship was inflicted upon the shipping community, generally, as regards the maintenance of lights in the Thames by the Trinity House, because special dues were raised in respect of those lights?—(*Mr. Owen.*) That is so.*

* *Note.*—The witness subsequently wrote: "I have been thinking over my reply to the Chairman's question, No. 5114, relating to the Thames lights being maintained out of the General Lighthouse Fund, and have since got out some figures with respect to the amount of light dues collected at London and Liverpool respectively, which may possibly be of interest. It will be seen therefrom that, for the six years prior to 1898, when vessels were charged on the principle of paying for each light that was passed, or from which benefit was derived, the average annual collection at London was between six and seven thousand pounds per annum in excess of the Liverpool collection, of which sum a large proportion would be for the special lights which were only charged upon vessels using the river Thames. Since the Act of 1898 came into operation the difference between the light dues received through the port of London as compared with Liverpool is even greater than it was prior to 1898, as, for the period 1900 to 1906, the average annual collection at London was nearly twenty thousand pounds in excess of that of Liverpool. This, in my opinion, points undoubtedly to the fact that the method of charging light dues which came into operation by the Act of 1898, under which vessels pay a fixed rate per annum, regardless of what port in the United Kingdom they may be using, operated more in favour of the trade of Liverpool than of the trade of London. It seems to me, therefore, with reference to the evidence of Mr. Norman Hill on this subject, that it might reasonably be argued from the above figures that Liverpool has no more grievance now in connection with the maintenance out of the General Lighthouse Fund of certain special seamarks in the river Thames than she had prior to 1898.

"(Signed) A. Owen."

	London.	Liverpool.	Difference.
Annual collection of light dues based on a six years' average, 1893—98	£122,476	£115,983	£6,493
Ditto 1900—6	99,064	79,700	19,364

5115. It was only when the system was changed that the shipping community, generally, might reasonably claim that they had some ground of complaint?—Well, Sir, prior to 1898 there was a handsome revenue brought to the account of the General Lighthouse Fund for those special seamarks which vessels had to pay for entering the port of London.

5116. But now, under the existing state of things, the obligation of Trinity House to light the Thames would, in any case, continue so long as there was no port authority?—(*Sir George Vyvyan.*) No port authority.

5117. On the general principle that the lighting of the coast is the duty of the General Lighthouse Authorities, wherever it is not the duty of local authorities?—Yes, and none of the lightvessels lying in the estuary of the Thames lie in any water controlled by the local authority; not one of them.

5118. Is there any other harbour which is in a similar position to the estuary of the Thames at the present time?—(*Mr. Owen*) The Mersey, Sir.

5119. But the Mersey is under a local harbour authority; I mean, instead of being under Trinity House and paid for out of the General Lighthouse Fund?—Not anything like to the same expenditure. A list has been handed in, I think, giving particulars of the local lights maintained by Trinity House, but the principal ones at the present time would be Exmouth, Aberdovey, Carmarthen and Bideford.

5120. And there, also, local dues were levied prior to the Act of 1898?—Prior to the Act of 1898, and now, not being levied, we carry on the work, because in these districts there are no local authorities. (*Mr. Owen.*) But those dues, in recent years, have been so small that they have not paid the whole expense of keeping these seamarks in position.

5121. (*Admiral Henderson.*) They are what you call the Trinity outports?—No. (*Captain Clarke.*) The Trinity outports are only those with regard to pilotage work.

5122. It has been mentioned in the evidence that you have something to do with the lighting and buoying of Southampton?—Nothing whatever.

Fog-signals.

5123. (*Chairman.*) Will you pass on to the next head concerning fog-signals?—(*Sir George Vyvyan.*) I do not know that there is anything to say. Returns have been put in giving particulars of fog-signals—44 signals at lighthouses and 52 at lightships, including the one at Dover.

Blackwall Workshops: System of apportioning accounts.

5124. And the Blackwall Establishment?—Well, that is the Engineer's evidence; I have nothing to say about that.

5125. I think you said a change had been made in the accounting of the expenditure at Blackwall?—Yes, that was made at the suggestion of the Board of Trade and the Auditor-General. (*Mr. Owen.*) The Comptroller and Auditor-General raised the question last year, and said it would be a better method to appropriate the money to the general headings instead of charging it to the Blackwall Wharf—that is the Blackwall Workshops we are speaking of.

5126. Does that include a proportion of the head offices expenses at Blackwall?—There is no head office expense; there is the district.

5127. I ought to say office expense—the expense of the staff?—Yes, certainly.

5128. You charge so much in respect of the expense of the staff for every service performed?—I should think that is so, Sir.

5129. Blackwall, then, I understand practically does not appear in your accounts at all now; every expenditure in Blackwall is distributed?—Distributed under the various heads of expenditure.

5130. (*Admiral Henderson.*) Except that portion of it which comes under the Storehouses side?—There is the superintendent's department, the depôt which is charged to Blackwall Wharf; you know Blackwall is our headquarters

5131. So far as Blackwall is a manufacturing establishment?—That is charged to the various headings. (*Sir George Vyvyan.*) When we talk about the Blackwall Establishment, I am afraid we have been thinking of the Engineer's department entirely.

5132. (*Chairman.*) Then as regards Colonial lights?—We do a great deal of work for the Indian and Colonial Governments. They frequently ask the aid and advice of the Trinity House in connection with proposals for new and improved lights. Here is a list: Cape Pembroke, Falkland Islands, Basses, Malacca Straits, South Nigeria, Madras, Burma, etc. The Secretary has referred to some of these. Most of the lighting stores required by the Indian and some of the Colonial Governments are supplied through Trinity House; in fact, nearly all of them.

Work done by Trinity House for Indian and Colonial Governments.

5133. With regard to these lights, you are only an advisory body, except in so far as you supply the funds?—Yes, we advance the money for those which are maintained out of the General Lighthouse Fund account.

5134. You find the money, but, on the other hand, the income from those lights covers the expenditure upon them?—A few of them.

5135. And that is a matter entirely separate from the General Lighthouse Fund?—Yes. The average annual amount of disbursements by Trinity House on account of these extraneous services is over £3,000 for the special Colonial lights above-mentioned and about £7,000 for Indian and Colonial Governments.

5136. Who are the administering authorities in the case of those lights?—Oh, they vary. (*Mr. Owen.*) Our work comes principally through the Crown Agents, and the Colonial and India Offices.

5137. It is the different Colonies and the India Office that maintain the lights?—Yes.

5138. (*Admiral Henderson.*) Are those sums recovered?—Oh, yes, and a charge of 2½ per cent. is made in addition in respect of such portion of the expenditure as is represented by labour at the Blackwall Establishment.

Notices to Mariners:

5139. (*Chairman.*) The last subject referred to in your *précis* is the issue of Notices to Mariners, about which we have had a good deal of evidence?—(*Sir George Vyvyan.*) Captain Tizard, Assistant Hydrographer to the Admiralty, stated in his evidence that, in his opinion, it would be an advantage if all Notices to Mariners were issued by the Admiralty, as he considered that the object of issuing notices is to enable the mariner to correct the various publications which enable him to navigate his ship safely, and he contends that the General Lighthouse Authorities do not give sufficient information for this to be done. Captain Tizard also said that General Lighthouse Authorities' notices only reach a very limited number of people, and that they do not touch foreign-going ships. Captain Tizard appears to be under a misapprehension in this matter, at all events so far as the Trinity House is concerned, as all important notices relating to lights and buoys under the jurisdiction of the Elder Brethren contain very full and all necessary information for the mariner. These notices are published directly the change in lights or buoys is effected, and are not only distributed to the Custom House and principal Mercantile Marine Offices round the coast, but to pilots, mercantile marine associations, and other bodies at home and abroad, and to the consuls in London of all the principal foreign countries, the majority of which reprint the Trinity House notice. Information relating to Trinity House seamarks is thus obtained by the mariner much more promptly than if particulars had first to be sent to the Admiralty, and then embodied by them in a notice. The information given in these notices is also inserted in an abbreviated form in the next Board of Trade Weekly Supplementary Summaries, and repeated in the Monthly Summaries, a special issue of which is made for foreign-going ships, and sent to various places abroad. Full details to enable the position of lights and buoys to be correctly plotted on the charts are sent from the Trinity House to the Hydrographer, in addition to copies of the notices. I do not agree also with Captain Tizard that the issue of notices relating to wrecks is unnecessary, for I am of opinion that it is most desirable mariners should have a warning of wrecks in British waters which, as obstructions to navigation, are being dealt with by a General Lighthouse Authority, and this can best be done in the form of a Notice to Mariners defining the position of wrecks and marking lightvessels and buoys.

Advantage of issue of, by Lighthouse Authorities.

5140. (*Colonel Herbert.*) There is very little I have got to ask you, you have given us so much information already; but there is one question I should like to put,

Sir G. Vyvyan, K.C.M.G., Captain A. W. Clarke, Mr. A. Owen,

30 Apr. 1907.

and that is with regard to a statement which is contained in a letter of yours which you have referred to already to-day—that administration would be simpler and less expensive if framed on one basis and under one authority. It is on page 6 of this letter of yours to Sir Francis Hopwood, dated 20th March, 1903?—I think I have said that; I think I may agree to that.

5141. You repeated something of the sort to-day?—Yes. I could not deny that it would be simpler and less expensive.

One Central Lighthouse Authority: Would be economical.

5142. That suggested the idea that you had probably considered the question of the establishment of a single authority?—Yes.

5143. And whether you could give us the result of your considerations on that subject?—You may take it as an axiom, I think, that centralisation promotes economy, that one Board must be necessarily cheaper than three. There is only one head office, one engineering head; perhaps there might be economy in the case of the fleet; and, generally, I think you may take it as a principle that one would be always cheaper than three.

5144. Have you ever considered the details of any scheme by which one authority might be substituted?—I think I may say that I have abstained from such considerations. I do not think it is part of my duty.

5145. I understand you saying that Trinity House did not consider it part of their duty to report on that subject, but I was asking you as Sir George Vyvyan now, upon your experience, as to whether you had any ideas on the subject which might be useful to us on the question we are inquiring into?—I think I have said in evidence to-day that it is my firm opinion that local authorities, local bodies, best appreciate, from their position, local needs.

Survey work of Trinity House

5146. There is only one other question that I wish to ask, and that is with regard to the hydrographical works involved in the fixing of your buoys. Captain Clarke, I think, described to us what is being done; you practically have to survey the banks?—(*Captain Clarke.*) Yes, banks and channels also. The outlying banks, where it is not possible to get objects from which to take angles.

5147. That is the work, is it not, of the Hydrographical Department?—Of the Hydrographical Department, quite right.

5148. Therefore you are duplicating that work?—Yes, but it is our duty to see that that bank is properly guarded for the navigator, and that the buoys round that bank are adequately guarding that bank. The finding out of the true position of the bank geographically is the work of the Hydrographical Department, and when we find that any change has taken place in the formation of the bank which necessitates the altering of the buoys, to guard it adequately for the seaman, we then inform the Hydrographical Department, and they make the special surveys by triangulation and other methods.

5149. In fact, the Hydrographical Department are dependent upon you?—Not altogether; assisted by us. (*Sir George Vyvyan.*) And I would say, if we were to be deprived of those duties, the hydrographical duties would be augmented in the same proportion.

5150. Yes, but it was merely to see how far the functions of the two bodies were crossing one another?—They do cut there. We are able to give assistance to the Hydrographical Department when we find that a bank is changing its configuration. We are in constant and friendly communication with the Hydrographical Department, and they constantly give us information when they find anything wrong with our buoys.

5151. (*Mr. Ennis.*) You have said during your examination to-day that you believe that local needs are best judged by local men?—(*Sir George Vyvyan.*) Best interpreted.

General Lighthouse Authorities: Representation of localities on, would be advantageous.

5152. And would you be disposed to push that opinion a little further and say that in the constitution of the Trinity House it would be desirable, and in the constitution of the other Lighthouse Authorities it would be desirable, to have the various large ports of the kingdom, so far as it would be practical to do so, represented on the General Lighting Authority?—I agree.

5153. You have described to us the method of election of an Elder Brother from the ranks of the Younger Brethren?—Yes.

Elder Brethren: Election of

5154. But I think I am right in assuming that, although it may not have obtained in practice in the past, there would be nothing illegal or contrary to regulation in your electing as an Elder Brother a Younger Brother who had held office for a very short time; in fact that you might, to push the argument to its extremity, elect a man a Younger Brother, at a meeting to-day, and in a fortnight's time elect him an Elder Brother?—Yes.

5155. I mean that it would be possible to do so?—Theoretically it would be possible, but I think his qualifications would have to be so phenomenally manifest that it is most unlikely.

5156. I have not suggested that in practice it has obtained?—It is a possibility.

5157. But my point is that if you recognise that it would be desirable to have the members of the Trinity House as nautical experts—if it would be desirable to have, say, a man with an intimate knowledge of the coasts of St. George's Channel and the Irish Sea, the port of Liverpool, and so on—that if such a man presented himself to your minds, that there would be no difficulty in making him a member of your Board, even though he had not previously been a Younger Brother?—I would not say there would be no difficulty, nor do I think that his knowledge of St. George's Channel or any particular channel would have much effect, as I do not suppose it is very likely that his knowledge would exceed ours, but if such an occasion were to arise that somebody of phenomenal experience, whose advice would be of inestimable benefit to us, came along, rather than lose him it is possible that we might even under those circumstances elect him.

5158. You accept in other words, I think, my suggestion that it would be desirable, so far as practicable, that the different Lighthouse Authorities in the kingdom should have expert knowledge of the various ports of the coast?—That goes without saying. It would be an advantage, as you say.

Advisory Committee:

5159. An advantage, yes. With regard to the Advisory Committee you have told us that at first your relations with that Committee were strained, but that they have now very much improved; can you point out to us any case of any public body in which the relations which are borne by the Advisory Committee to the Lighthouse Authorities exist; I mean is there an analogous case to your knowledge in any other public service where a committee has been established, without any statutory authority, which has no power of enforcing its views, but which at the same time carries large weight with the bodies with which it is associated?—I am afraid my knowledge of the public service is limited.

5160. You have no knowledge of any similar case?—No.

5161. (*Chairman.*) There is a Commercial Advisory Committee to the Board of Trade which is not statutory?—Yes; you must not take my evidence as of very much importance in this matter.

5162. (*Mr. Ennis.*) But with regard to the actual working of the Advisory Committee which was established in 1900, I should like to have your opinion in general terms as to whether the operation of that Committee has tended, in regard to lighthouse administration generally throughout the Kingdom, as a drag upon expenditure, or as an incentive to increased efficiency?—I cannot say; would you repeat the last paragraph; as a drag on the expenditure.

5163. As to the operation of the Advisory Committee as compared with the working of the Lighthouse Authorities before the Advisory Committee came into being, whether the effect has been as a drag on expenditure or as an incentive to increased efficiency?—I suppose that by "drag on expenditure" you mean whether it has resulted in any economies?

Effect of, on Lighthouse Expenditure.

5164. Any economies on the part of the Advisory Committee which were upheld by the Lighthouse Authorities with regard to proposed expenditure?—I cannot point to any decrease in expenditure that has occurred in consequence of the existence or the imposition of the Advisory Committee. I remember one small one at the very beginning, the first year a hulk was taken out of the list, and later the proposed expenditure for the submarine signal; that is all as far as the Trinity House was concerned—I should prefer to deal only with the Trinity House—those are the only two economies. And as to the efficiency, I do not think they have done any harm in that direction. They

certainly have proposed measures which we have accepted, and that we should not have accepted had we not deemed them efficient.

5165. Lists have been put in to the Commission of works recommended by the Advisory Committee, and also lists of works objected to by the Advisory Committee. Does not the list of works objected to largely exceed in number and in cost the works that have been recommended?—I have not seen the list; yes, I should say so.

5166. The Advisory Committee appear to have objected to a considerable number of works on the coast of Scotland which were not recommended by the Trinity House, but which the Board of Trade subsequently sanctioned?—Lately?

5167. No; since the establishment of the Advisory Committee. This return covers the period since the establishment of the Advisory Committee?—There can be no doubt that the Board of Trade have, and I think wisely and properly, exercised their jurisdiction in sanctioning works, the expenditure on which the Trinity House may have considered not quite justified.

Influence of, on decisions of Trinity House.

5168. My question was with reference to the effect of recommendations or otherwise of the Advisory Committee upon such works, as to whether the Trinity House were not influenced by the Advisory Committee in sometimes rejecting works that possibly they might not have rejected but for the action of the Advisory Committee?—No, I should think not.

5169. Well, with regard to this specific instance that you have mentioned as to the offer of the Zeeland Company to instal an apparatus for submarine signalling at the Tongue lightvessel at their own cost, and to remove it if the experiment should be deemed to be unsatisfactory by the Trinity House, or to hand it over if the Trinity House wished to take it over, you have told us, so far as I understand, that an estimate of £1,000 was put in for the cost of experiments?—Yes, hardly experimenting; for trial. I think you are talking of the year before last?

5170. Yes; and that this expenditure was objected to by the Advisory Committee?—Yes.

5171. And was then dropped by the Trinity House; you said you did not press it?—Yes.

5172. You have told us that you have brought this on again now, as the results of the experiments already carried out were so favourable that you have brought this proposal on again, but that so far it has not been passed?—It has not been sanctioned.

5173. It has not been sanctioned, yet the results having been favourable I take it that Trinity House would have been willing to make a practical trial of this experiment?—Pardon me one moment; I think it has passed the experimental stage.

5174. Yes; I was going to put that to you, because is it not a fact, as shown by the report of Colonel Anderson, of the Canadian Service, that submarine bells have practically been in operation off the coast of Anticosti and in the Bay of Fundy prior to 1905; the report is dated January, 1905?—Are you aware, Sir, that the Allan Company have withdrawn it from all their ships?

6175. We have been told so?—Yes; we have accepted it as true.

5176. We have no further information, but we have been told that is so; we have had no reason for it though, and the witnesses seemed to be agreed that the instalment of submarine signalling would undoubtedly be an advantage?—To some shipping.

5177. To what ships?—Cross Channel traffic, for instance.

5178. Those ships which might be fitted to receive it with microphone and telephone?—Yes.

5179. The advantage would be to those ships, I take it?—Yes.

5180. And I assume there is on the face of it the difficulty that those ships which are not provided with apparatus to receive this signal would not benefit by it, but I think if you would also assume that if it were installed on all lightships the underwriters, Lloyds, would be likely to make conditions as to insurance which would have the effect of practically compelling steamships to adopt it?—I do not think so.

5181. But at all events in that particular instance the recommendations of the Advisory Committee were adverse to the carrying out of this trial?—They have postponed it.

5182. Now then with regard to the absence on duty of the Elder Brethren of the Trinity House, could you give us any information as to roughly what percentage of the total time of the Elder Brethren is occupied in absence on duty. I mean absence on what I call the outside service?—What ratio the outside service bears to the actual service?

Sir G. Vyvyan K.C.M.G., Captain A. W. Clarke, Mr A. Owen,

30 Apr. 1907.

5183. Quite so?—I could not give you that. I should think inconsiderable.

5184. Now, with regard to the cost of maintenance of the steamship fleet, I understood—I think it was Captain Clarke who informed us on that point—that the entire fleet were gutted out, scaled, and painted, except two, within the period covered by the return?—(*Captain Clarke.*) Yes.

Steamvessels: Maintenance and repair of.

5185. And Captain Clarke stated that similar work would not require to be done for many years?—For several years to come.

5186. About how many years would you consider to be the life of the operation?—Well, I should think that that would not require to be done for something like 10 to 12 or even 15 years in some cases; much depends upon the ship and whether she is built of iron or steel.

5187. Quite so; but anything between 10 and 15 years would be a fair average for calculation as to spreading the cost of such operations over?—I should think so.

5188. You also said that the "Irene" was used—that the extra cost was to a certain degree due to the fact that she was used for inspection work?—She was specially built for that purpose.

5189. Is it not a fact that in the Irish Lights Service the "Alexandra" is used for that purpose?—(*Sir George Vyvyan.*) Both the other services have analogous ships.

5190. A comparison between the "Irene" and some of your own fleet may not be made with advantage, but a comparison between the "Irene" and the "Alexandra" would?—(*Captain Clarke.*) When the latter has been running for over 16 years.

5191. May I ask, Sir George, has there been an election of an Elder Brother since the 29th November last?—Yes, in the place of Captain Fenwick.

Elder Brethren: Ages of.

5192. I assumed there was, because in answer to a question you gave the average age of the Elder Brethren as 55?—I included the new member in the average I gave.

5193. In the return for 1906 the average then was 58, and in a printed return some time previously the average age worked out at 63?—In my average to-day I have eliminated Admiral McClintock also.

5194. I assumed that was so. I just wished to make it clear?—It is so.

5195. In the Scotch and Irish Boards you point out that the nautical element is absent, and we have already had evidence to that effect?—I have pointed it out; I suppose you may say so.

Control of Trinity House over Scotch and Irish Boards.

5196. I think you have also stated that the Trinity House have no special relish for the supervisory work that they do over the other Boards?—I do not think we yearn after it.

5197. And you consider that if the nautical element were properly provided in the Scotch and Irish Boards the *raison d'être* for the supervision of the Trinity House would to a certain extent cease?—In answer to that, I may say that for several years, until they were told it was an improper expression, the Scottish Board, in asking us for our sanction, abstained from using the word "statutory," and asked for "nautical"—"nautical sanction" instead of "statutory"—until we pointed out that it was a very improper term.

5198. You have referred to circumstances that arose in connection with the Irish Lights Board as to a steamer for the Fastnet?—Yes.

5199. That some circumstances arose which made you consider it necessary to have details of expenditure?—Yes; I think I omitted to say that our attention was drawn to the circumstances also by the Board of Trade.

5200. That, I suppose, referred to a steamer called the "Ierne"?—It did; I think it was the "Ierne."

5201. May I ask, in general terms, was your objec-

Sir G. Vyvyan, K.C.M.G., Captain A. W. Clarke, Mr. A. Owen.

30 Apr. 1907.

tion to the employment of the "Ierne" as an attendant steamer on the Fastnet, or to the money spent on the "Ierne"—to excessive expenditure?—I do not know that we object to the use of the steamer, and I do not know that the term "objection" is quite an appropriate one, but it became apparent to us that we were not in possession of all the details that we thought we were entitled to.

5202. You considered that the details furnished to you by the Irish Board were not satisfactory, or were not clear?—Were not clear.

Mizen Head light and fog-signal: Attitude of Trinity House and Irish Lights Board as to,

5203. Are you cognisant with a question about which evidence has been given here as to the demands made by Liverpool shipowners with regard to a fog-signal on Mizen Head? I think the application was made to the Board of Trade with regard to the establishment of a fog-signal at Mizen Head?—(*Captain Clarke.*) I am aware of it.

5204. Are you aware that the Irish Lights Board objected to the erection of a fog-signal unless accompanied by a light?—I am aware of that.

5205. That both fog-signal and light, as far as my information goes, I think I am correct in saying, were objected to by the Trinity House?—That would not be correct. The Trinity House are in favour of putting a light where a fog-signal is established, and have said so.

5206. The Trinity House are at one with the Irish Lights Board?—The Trinity House are at one with the Irish Lights Board on this subject.

5207. But in any case the actual facts are that a fog-signal minus a light is being established?—Is being established, yes; quite so. (*Sir George Vyvyan.*) With reference to a former question of yours, that there is some advantage in the Advisory Committee, I think the proposition first came from them. (*Captain Clarke.*) In 1905 the Commissioners of Irish Lights requested statutory approval to the establishment of a light and fog-signal on Mizen Head, which was granted by the Elder Brethren. The light, however, was not approved at the Conference, and the establishment of an explosive fog-signal only was eventually sanctioned in 1906, but the Trinity House have never departed from the opinion expressed by them, that a fog-signal should not be established there without a light.

5208. But it was not sanctioned by the Board of Trade?—No; ultimately it was decided to establish only a fog-signal there.

Port of London: Lighting of,

5209. With regard to the port of London and the lighting of the port of London, your evidence, I think, Sir George, has been to the effect that by the Acts of 1864 and 1878 provision was made with regard to the lighting and the buoyage of the Thames estuary, but that up to the period of the passing of the Act of 1898 that did not in any way injuriously affect the revenue of the General Lighthouse Authority, because the dues raised were more than sufficient to cover the cost?—(*Sir George Vyvyan.*) Yes, an ample profit.

5210. But since 1898 the fact of the change then made has resulted in a preferential treatment of the port of London with regard to the General Lighthouse Fund to the value of something which I assume to be between £40,000 and £50,000 per annum?—It may be so, but you cannot help it; the lights must be placed there. I will accept your figures; the lights must be placed there. What do you call the port of London? (*Captain Clarke.*) That is the point.

Limit of jurisdiction of Trinity House, over,

5211. That is the point I desire information upon; I have not been able to ascertain where your General Lighthouse Authority goes to?—(*Sir George Vyvyan.*) I think the Thames Conservancy end at London Stone—do you know the river?—which is above Southend, the London side of Southend. From there, there is no question that any light, if it is decided to be necessary, must be provided as if it were in any part of England apart from the port of London.

5212. And every lightvessel in the Thames estuary is under the control of the General Lighthouse Authority?—Outside that point.

5213. But there are none inside; therefore every lightvessel is?—Yes, every lightvessel.

5214. Now, with regard to lightvessels, there is one point which I should like information on; I before asked the question as to whether it would be possible to segregate the portion of time occupied by the steamers in attending the lightvessels and in discharging their other duties. I am told it is not possible?—The duties run into each other so much that it would be almost impossible.

Lightvessels: Relief of,

5215. I have here the returns sent in showing the period and cost of relief of both rock and coast lighthouses, and I suppose the same thing applies to the lightvessels, that is to say, that excepting in very isolated cases—there is one case here in which there is a weekly service; that is at Holyhead, and communication is along the breakwater, which simply means conveying relief along the breakwater at Holyhead—but in very few other cases is the relief other than monthly; there are very few cases of fortnightly relief; the great majority of the cases of relief is monthly. I take it that is the practice with regard to all lightvessels?—Yes, monthly.

5216. I would like to ask—this seems to me to be an important point for a Commission endeavouring to compare methods of different Lighthouse Authorities—if you relieved your lightvessels and rock lighthouses three times each month instead of once, would that very largely increase the cost of the service?—My first answer, without consideration, would be that it would treble it, but I do not suppose that would be accurate.

5217. It would not be so much as that. It would largely increase the cost, I suppose?—Yes, our steamers would be doing nothing else.

5218. Are you aware that the Irish Lights Board give three reliefs each month to their lightvessels and lighthouses; to the majority of them, at least?—Do they?

5219. I am anxious to arrive at your opinion as to whether that is or is not necessary, because it is manifestly a case of either too large an expenditure in the one case or too little in another?—I should like to hear the arguments put to the Commissioners.

5220. Well, the arguments seem to me, so far as I can gather, the health of the crews, providing them with fresh provisions?—We have had no complaints from them at all; they find themselves.

5221. You are satisfied that your system of monthly attendance is sufficient?—Quite, for our purpose——

5222. It is an important point?—(*Sir George Vyvyan.*) It would be very important if we had to relieve them three times a month.

New Works: Decrease of future expenditure on, probable.

5223. You said also with regard to expenditure on new works that in your opinion it is likely to be less in the future?—Yes, we trust so, and there is every reason to believe so.

5224. Of course, you contemplate that the light service must keep pace with modern improvements, and that inventors are pushing ahead very rapidly?—If any important improvement sprang out of any great invention we should have to adopt it.

5225. I think it has been given in evidence to us that there has been a desire on the part of the Lighthouse Authorities to gradually equip lighthouses and lightvessels with the most efficient form of illuminant and the most efficient apparatus of every kind?—We are obliged to do so.

5226. But is there not a danger that the pace at which these improvements are being effected may not keep pace with inventors; that more efficient methods may render an acceleration of the pace necessary, and, in that case, would the expenditure be likely to be less?—My estimate is based on the present circumstances.

5227. You mentioned Strumble Head?—Strumble Head is now on the point of being finished.

5228. Yes, but the money for that work has gone on the estimates?—Yes, minus £2,000.

5229. The bulk of the money required for the work has already been provided?—Yes.

5230. That is the point that struck me, because I knew it is not yet in operation?—I can hardly conceive that any such improvement is likely to happen in the future. We have fitted all our houses with the incandescent light; we have, with the exception of what I have mentioned to you, been doing away with the fixed lights in favour of flashing lights. We look forward to economy with regard to our lightships. We hope to adopt the dioptric apparatus in our lightships to a certain extent, which will result in economy, and,

Expenditure on, 1906.

as far as I can see, things point to a decided fall in our annual expenditure. Last year I may say that our outlay for new works were only just over £16,000.

Experiments.

5231. Do you consider that the amount of money expended in this country on experimental work is sufficient?—Yes, I think so. Whether it is sufficient or not, it is all we can do with the staff at our disposal.

5232. Yes, I understand that; but then, is it not a fact that some useful experiments have been conducted, and useful apparatus constructed, by foreign countries; you have had the mercury floats from France?—Yes.

5233. And similar apparatus; and does it not seem that the amount expended on experiments in this country is less, in proportion to the volume of general expenditure, than that expended by foreign countries?—If we had the staff at our disposal there is no doubt we should spend more money than we do; in fact, we do not spend as much money as we are allowed.

Gibraltar: Work involved in maintenance of seamarks of,

5234. Do you find any difficulty arising with regard to the care by the Trinity House of all lights outside the coast of the United Kingdom. For example, you have one lighthouse at Gibraltar?—Yes.

5235. And if a visit should be paid by the Engineer of the Trinity House, say, to Gibraltar, it would mean a considerable absence from his duties on the British coast. I mean the maintenance of that lighthouse, from the point of view of supervision and expert inspection, would be much greater than any lighthouse on the coast of the United Kingdom?—A little more; it is not much in these days; he is away about ten days at the outside, and his expenses are not very large. It is not so much a question of expense as taking him away from other work.

5236. It seems to me absence is the thing I would wish to lay most stress upon. In the event of any sudden danger, or anything occurring when he is absent at such a station as that, who takes his place?—We have a superintendent out there, a naval man; at home we have got an Assistant Engineer.

5237. You consider the other members of the staff would be sufficiently competent to deal with it?—Until he came home, yes. Something is always happening. Mr. Matthews is away at Gibraltar ten days or so.

Estimates of Trinity House: Form of accounts.

5238. (*Admiral Henderson.*) A good many of the questions I am going to ask you are connected with expenditure, which I have taken from the accounts for 1905-6, and from the estimates for the same period. First of all, I should like to ask you how this return which is made out by the Board of Trade under these various sections is made up; do you send in the completed account under those headings, or do they at the Board of Trade abstract it themselves. How are those headings made up; do you send in your returns of expenditure under those headings?—(*Mr. Owen.*) Yes, every quarter's accounts.

5239. Every quarter's accounts are sent in under those headings?—Yes.

5240. No, because they are not under the same headings as the estimates?—Are they not?

5241. That is what I want to know?—Abstract "A," Maintenance of Lighthouses; Abstract "B," Maintenance of Lightvessels; Abstract "C," Maintenance of Buoys and Beacons; Abstract "D 1.," Maintenance of Steam Vessels; and Abstract "D 2.," Maintenance of District Storehouses, etc.

5242. That is according to the numbers of this account?—Yes.

5243. I want to know how you send them in; whether you send them in under the same abstracts as you send your estimates in, and they are then abstracted by the Board of Trade, or whether you send them in under the numbered headings as they are shown in this published account?—Oh, no; the Board of Trade prepared those.

5244. I am going to ask you some questions upon expenditure upon lighthouses, and I take the lighthouses because, in comparing the administrative efficiency of the three Boards, they, being nearly on a level as to numbers, offer the best basis. The number of lighthouses, so far as I have been able to make out at present, are 71, 75 and 89, but as amended just now it is 85, 75 and 89; that is to say, the number of lighthouses of all sorts that are administered by the Trinity House are pretty nearly on a par with the Scotch Board, and are rather more than those of the Irish Board. Now, the total expenditure for the Trinity House is about, roughly speaking, £10,000 in excess of the two other Boards for lighthouses; this is 1905-6?—Yes.

5245. And if you turn to the details, I see that your cost for stores—I am presuming that you have got approximately the same amount to do—is £9,413 against £5,318 and £4,748?—Yes.

Comparison of cost of lighthouse maintenance with that of the other Boards.

5246. I want to know whether you can give any particular reason for that expenditure?—Well, I think we ought to have some opportunity of knowing what they charge under their headings; we have had no particulars of that at all; you merely give me the accounts; I do not know what is charged under those headings.

5247. In the estimates which are presented to the Board of Trade the Irish and Scotch are much more explicit than the Trinity House. I have abstracted here the whole of the estimates for the three Boards, and I find that the cost of illuminants, for instance, was: Trinity House £3,778, Irish £3,115, Scotch £3,128. There is not a very great difference; you are about £700 more for a less number of lights than the Scotch. I see you have a charge of £2,750 for fog-signal stores. There is no charge of that sort in the other Boards?—They must use those stores, and they must charge them somewhere. I am afraid we cannot help you on that unless we have some details to start with.

5248. You do not think that you can give any reason for that excess without a comparison with the others?—No, I do not think so.

5249. I see one of your charges is for paints. Why do you put in paints under the charge for "oil and lighting stores"?—Those are paints that the keepers use, keeping their places in good condition.

5250. Does it not come under the head of repairs, where your ordinary paints come in?—No, the repairs would be done by a local man; the incidental repairs to keep the places wind-tight and water-tight, are usually done by contract.

5251. Where does your cost for carriage of stores come in; you distribute these stores to the various stations, the lighthouses?—Well, I should think that comes in under the superintendents' accounts at the district, the district accounts.

Carriage of stores.

5252. It is not shown under the lighthouses, then?—Allow me to look at these returns.

5253. (*Chairman.*) In the statement showing that approximate cost of annual maintenance of lighthouses, you set out the carriage of stores under the heading of "incidentals"?—That would be charged to the particular station.

5254. (*Admiral Henderson.*) Do you not deliver most of your stores by your tenders?—Not to the actual stations; as a rule the stores are sent round to the depôts; of course, some of the stores are delivered by the tender at stations where it is possible and advantageous to do so.

5255. They do, but otherwise you take the ordinary land means of communication?—From the depôt. (*Captain Clarke.*) Whichever is the cheapest.

5256. Now, where is the cost of boat hire and relief shown, which I see by your return amounted to £594? The other Boards show their cost for boat hire and assistance generally?—(*Mr. Owen.*) Wherever there is a charge for boat hire to any particular station, it is charged to that station.

5257. Against that station; but then where is that shown on the general charges?—Well, it would be shown in the accounts which go to the Board of Trade.

Form of accounts.

5258. I have got all these estimates, which have come from the Board of Trade, and it is not shown anywhere unless it is shown under incidentals?—Have you seen the printed form of accounts which goes up to the Board of Trade each quarter for each station, because that would show how it is charged.

5259. No, I have only seen your estimates?—That does not give anything like the information that the accounts do. If you were to call for a specimen of the accounts, which are submitted to the Board of Trade for each station, that would give it you at a glance.

5260. (*Chairman.*) The quarterly accounts?—(*Captain Clarke.*) Yes, the quarterly accounts.

5261. (*Sir Frank Adam.*) Is that a form supplied by the Board of Trade?—(*Sir George Vyvyan.*) No.

Sir G. Vyvyan, K.C.M.G., Captain A. W. Clarke, Mr. A. Owen.

30 Apr. 1907.

5262. It is made up by yourselves?—It is a form that has been in use for years.

5263. (*Admiral Henderson.*) You do not know, of course, whether the other Boards send their returns in under the same headings?—(*Mr. Owen.*) No, I do not think they have quite the same forms as we have.

5264. Now, you have got a charge of £2,442 for incidentals; can you tell me what those incidentals comprise on the whole?—No, I am afraid I cannot without some reference.

5265. What do you put under incidentals; it is a good big charge, £2,442?—What accounts are you looking at now?

5266. I am looking at the estimates for 1905-6, which came out within £200 of the actual expenditure as given?—Yes.

5267. I see that one of the items put down in your estimates is incidentals £2,442; I wanted to know how a big sum like that is made up?—Well, I must confess I cannot tell you right off without some reference to the accounts.

5268. You think that most of these accounts can be answered by getting a single return from the Board of Trade?—Getting a return from the Board of Trade—getting the actual accounts—a specimen of the accounts submitted.

Cost of repairs to lighthouses.

5269. Now, then, turning to repairs to lighthouses, the Trinity House expenditure was £6,261, the Irish £2,906, and the Scotch £4,219. I am saying that you have a less number of lights to deal with than the Scotch Board; I take that in particular, and I want to know why there should be such an excessive expenditure?—Well, of course, to begin with, we have four electric lights, which are very expensive.

5270. Which means an addition of £300 or £400 a year each light?—Oh, pardon me, much more than that.

5271. Very well; but for the repairs thmselves—for repairs—I am talking of repairs?—For general upkeep, which is for repairs; the machinery repairs are a considerable item; it is a much larger station.

5272. Now, then, I am again speaking on the papers that we have got before us, you know I cannot go beyond them?—Which I have not seen, Sir, please.

5273. I see you sent in an estimate of £6,261, for which there are no details, for ordinary repairs?—For ordinary repairs, yes.

5274. Now, therefore, the Board of Trade take your estimate on trust for this large sum?—No, no, that is merely an estimate of the possible amount which we may expend in the year; that money is spent in annual repairs which are required for the upkeep of the lighthouses.

5275. And you send in a detailed account of that amount?—Yes, ultimately.

5276. At the end of every quarter?—At the end of every quarter.

Explanation of charges for special repairs.

5277. Now, then, we will turn to the expenditure on special repairs. I notice in the estimates that are sent along you include under special repairs thirteen conversions to incandescent oil; these are additions or alterations?—Yes.

5278. I asked a question about that before. It really means that if you add the ordinary repairs to what are called special repairs the actual sum spent is £12,966, £3,028, and £6,782. Can you give me any reason why your special repairs are much greater in comparison with the others? The Scotch have twelve alterations against your thirteen?—But are you sure that the alteration to incandescent in the Scotch service is charged under special repairs to lighthouses the same as we do?

5279. The Scotch are. There is one alteration of light only charged against the Irish under special repairs. I do not know where they put theirs under unless here?—Well, of course, I cannot tell you what their method is of charging their accounts; we never see their accounts, but abstract "A" contains special repairs for converting. The large number of stations that were converted to incandescent oil in one year would account for the very heavy expenditure under special repairs for that year.

5280. The special repairs, of course, is rather a misleading heading; it ought to be alterations and additions, as I have said before, because you may have a special repair which includes an alteration or addition; they are practically new works. Now, the next point I wanted to go to is lightvessels. We have it in evidence that all the Trinity lightvessels are attended by the steam tenders?—Yes.

5281. Excepting one; is it not on the North-Eastern district, or is that attended by a steam tender?—(*Sir George Vyvyan.*) There is no lightvessel in the North-Eastern district. (*Captain Clarke.*) Admiral Henderson means the Dee lightship where the men live in cottages in close proximity to the lightship, and they relieve themselves.

5282. No, I had it there was one lightship in the whole lot which was not attended by the steam tenders?—(*Mr. Owen.*) Not in our service.

5283. They all are?—Perhaps you are thinking of the Scotch lightvessel?

5284. No, I am not thinking of the Scotch at all. I see that your actual expenditure—of course, I am not able to compare the Boards very well in this, because of the excessive number of lightvessels that you have over the other Boards—but what I wanted to ask you was where was the charge for this special lightvessel shown, because I had made out that there was one; there is not one, you say?—No.

Buoys and Beacons. Cost of maintenance of,

5285. The average cost for buoys and beacons—I turn to buoys and beacons now—for the year 1905-6 was £9 9s., £12 7s., and £8 6s. Now, the fact that you have this large number of steam tenders should reduce the cost of your upkeep of buoys in comparison to the other Boards. If you take the number of bucys and the number of tenders, the average number of buoys that each tender has to deal with is 58, 56, and 52 respectively. I want to know why your cost should be comparatively so very much greater than that of the Scotch. It is not greater than the Irish Board, considering the large number that you have to deal with. That question has been asked two or three times before. What we are trying to drive at is this, that if you have a large establishment, the percentage of course, should come out at a less rate?—(*Captain Clarke.*) Cost of maintenance?

5286. Yes?—I should say the answer to that is that the bulk of the buoys are so far from headquarters, in outlying districts, as compared with the Scotch and Irish.

5287. I think they are distributed pretty well over the coast, very much the same in the Scotch and Irish?—(*Sir George Vyvyan.*) Our buoys are much larger.

5288. I think they have a larger number of gas buoys in the Scotch service than they have in the Trinity House; we have the numbers given somewhere in the Board of Trade return?—(*Captain Clarke.*) One would like to know what is included in that return; what are the items of it; we cannot give any answer without having the items.

5289. I think that the actual number of gas buoys is greater in the Northern Lights than it is in the Trinity House. You do not submit any estimate of the cost of buoys and beacons; there are none submitted?—(*Mr. Owen.*) If we want new buoys we submit an estimate, of course.

5290. But otherwise, you do not submit any estimate for their cost?—For the upkeep.

5291. Except the total; you do not give any details?—No.

Steam-vessels:

5292. I wanted to know whether, in consideration of the fact that you have such a very large number of steam tenders, that it is not an argument in favour of your percentage of cost being reduced in comparison with the other Boards. You have 11 steam tenders, and you naturally make use of them for all purposes, and the very fact of having these 11 steam tenders, with their attendant cost, recollecting that their cost is not put under the other service, therefore if you make full use of them the fact of their cost being on one that were converted to incandescent oil in one year would account for the very heavy expenditure under ease?—(*Sir George Vyvyan.*) It would seem so.

5293. I do not think that so far the figures that we

have got come out that it is so?—(*Captain Clarke.*) In any case, they are absolutely necessary for the services we have got to do round our coast.

5294. You have got, of course, a great many more lightvessels to deal with?—It could not be done without the steamers.

Are economically employed.

5295. I am not saying that; what I am saying is this, that having those vessels, do you make an economical use of them?—Absolutely.

5296. I am not certain that there could not be a more economical use made of them?—I wish it could be pointed out to us; we should be most happy to look into it.

5297. Do you consider this number is necessary?—Yes.

5298. I want to know, has it ever occurred to the Trinity House to consider whether they could be reduced by making arrangements with other local authorities?—We have considered it on every possible occasion, and we have found it in all cases advisable and more economical to use our own steamers.

5299. I mean to say, whether you could not reduce their radius of action; reduce the number by reducing the radius of action of those you have got, by putting within comparatively narrow limits some of the work they do out to contract?—(*Captain Clarke.*) We do that on all occasions with regard to reliefs, where it is more economical to do so; we could not do it with regard to dispersion of wrecks or attending our gas buoys, because the local vessels have not got the plant; our ships have the plant.

5300. I know that must be done in very many cases?—Discharging of buoys and relief of lightships. (*Sir George Vyvyan*). What work would you suggest?

5301. Well, such as relief of lightships might be one, and the supervision of buoys. (*Captain Clarke.*) We maintain it could not be done so cheaply as we do it with our tenders. (*Sir George Vyvyan.*) Wherever we have had recourse to that it is very expensive; occasionally we have to do it when our own vessel has not been available, and we always have to pay very heavily for it.

5302. Does the steamer at Penzance attend on the Channel Islands?—(*Captain Clarke.*) The Channel Islands lighthouses are attended by local boats.

5303. By contract?—It would not pay to do it by our own steamer.

5304. There you do it, because it is an extreme distance?—Exactly, because it is cheaper.

5305. Could you not apply that elsewhere?—We do apply it in every case where we can do it more cheaply.

Wreck work of,

5306. I see that one of their occupations, which you say comes to the rate of one steamer per year, is employment in the removal of wrecks. Of course, that means that to a certain extent you have always to have a stand-by vessel, and you must always have a vessel ready?—We must always have our vessels under steam.

5307. It occurred to me would it not be better to have a system of contracts for removal of wrecks; have you ever thought of it?—We have had wrecks removed by contract, but it is more expensive than doing it ourselves with our own ships.

5308. You think it is?—Yes, I am sure.

Size of,

5309. I see the tonnage of your vessels varies from 118 in the case of the "Ready," to 576 in the case of the "Vestal." I want to know whether you have yet reached a satisfactory mean size and design for a steam tender?—The size of a steamer depends upon the district she has to deal with.—(*Sir George Vyvyan.*) Yes, I should say that we have reached it.

5310. What I am asking is whether, when you have that very great discrepancy, on the whole there was not some mean?—(*Captain Clarke.*) It would be exceedingly difficult to have a mean.

5311. They would be inter-changeable when a vessel was laid up?—That occurs now; they are interchangeable even now, but it would be useless having a large ship to deal with a small district, with a larger crew and a larger expenditure.

5312. You use your steam vessels to supply shore stations sometimes?—Stores?

5313. Because I see that the "Mermaid" dropped a bag of lime at St. Anthony lighthouse. I want to know whether it would not be possible to get those supplies more direct overland cheaper?—If you inquire into that particular case it was only done because the "Mermaid" was going there on other business.

5314. And she stopped to do it?—She stopped to do it at little or no cost.

5315. You do distribute your stores by the ordinary means?—By rail where it is cheapest, and by steamers where steamers are bound to those stations on other duties.

Work of s.s. "Vestal."

5316. I noticed in the case of the "Vestal"—in looking through their logs—that from the 1st January to the 1st April, 1906, she was twenty-five days at work, or partially so, and sixty-five days at anchor. That is a long time?—It is because possibly during that time no serious work occurred which needed her services, but she has to be there, in our opinion, for the efficient maintenance of the outlying lightships and the relief of the stations in case of accident.

5317. That means to say that you have got more than you want for your routine duties?—Well, perhaps it might be right to say that, but still the ship must be there in case of need. It would not do on our service to have a lightship out of position for any length of time when an accident occurred.

Work of s.s. "Triton."

5318. I have particularly noticed in the "Triton's" log that she makes very slow work, that when she goes to relieve the Bahama Bank she generally does not start till 9 o'clock in the morning, then she goes over to Ramsey Bay and relieves the Bahama Lightvessel the following day, and gets back to Holyhead. It appears to me that some economy might be made supposing she should take the relief, say, not only of the Bahama but the Selker and Morecombe Bay Lightvessels on the same round?—I cannot verify that—I accept your statement as being correct, but I think if inquired into you would find it was the most expedient and economical way of doing the work, having in view the other work that she has to attend to, and probably her departure not before 9 o'clock is due to the tide.

5319. There is no question of tide at Holyhead?—No, not tide, except with regard to getting on board stores.

5320. They would be got on board over-night under any circumstances. It appears to me, looking over the log, she might do the work much more quickly than she does?—I do not think we would agree with you; we keep a very strict eye on her. (*Sir George Vyvyan.*) We do not take the men away at night if we can help it; the crew of the "Triton" are all lightvessel men. (*Mr. Owen.*) Do I understand she goes away with the Bahama relief, and comes back to Holyhead and takes the Selker relief on board?

5321. There is a circle of reliefs. A decent vessel could do them all in forty-eight hours?—I am inclined to think she takes the Selker relief with her when she goes to relieve the Bahama.

5322. She does not, or, at any rate, very seldom. I looked, and I found that on several occasions she goes over to Ramsey Bay, relieves the Bahama Bank, and goes back to Holyhead. It occurred to me, looking at that, why should she not make the relief of the three vessels in the same trip?—(*Sir George Vyvyan.*) We will inquire into that. (*Captain Clarke.*) She is a new ship, the "Triton," with a very fair speed.

5323. I did not know that. It is only about forty-six miles from Holyhead to the Bahama Lightvessel?—You will find there is some special reason.

Work of s.s. "Stella."

5324. The "Stella," from the 1st January, 1906, to the 19th March, 1906, was only twenty-nine days at work, as against fifty-one moored. She is in the Thames district. It means to say you have plenty of stand-by "Stella" is a very small ship, and she is not fit to do vessels, apparently, in the Thames district?—The the work that the "Vestal" is required to do.

Sir C. Vyvyan, K.C.M.G., Captain A. W. Clarke, Mr. A. Owen.

30 Apr. 1907.

5325. Not outside?—No, she is only suitable for the inside work which she attends to.*

5326. How many days' average consumption of oil, water, and coal does a lightvessel carry?—I should say she could comfortably carry six weeks', but they are relieved monthly, therefore there is an ample margin.

Lightvessels: Method of supplying, with oil.

5327. I notice there is a great deal of work made in the supply of these vessels, in that you supply all your oil in casks, and in a great many cases water is supplied in barrels. Nowadays all the oil—and I suppose the quantity is sufficient to warrant it—in a supply tender might be pumped into the lightvessels? If our steamships were fitted with tanks it might be possible to do that under some circumstances, but sometimes the weather is so bad when those reliefs are made that it would be impossible.

5328. You could do that more easily when the weather was bad, because the tenders make fast to the stern of the lightvessels?—I do not think in actual practice that would be so. I have been at the relief many, many times; I do not think that would pan out in actual practice.

5329. But it would be an economy, do you not think, to fit the tenders with an oil tank for a supply of oil?—I do not think it would be an economy under the present conditions of our tenders to incur this expense.

5330. You do not think so?—No.

5331. Because everywhere else in the world it is found that it is an economy?—If one were building new ships it might be considered, but with our present ships, no

Steam-vessels: Time of, occupied in repairs.

5332. I notice the "Irene" was about the same time as the "Vestal" at Blackwall, and it also appears to me the average number of days under repair is very heavy for such steamers?—Under repair?

5333. I think the "Irene" returned an average of over forty days?—I think the work that our ships do in the relieving of lightships and attending to buoys and wreck-dispersing makes their repairs more heavy.

5334. It appears that your vessels are a longer time under refit and longer in dock than any coasting tender would be. Do you not think that is important considering you have to pay for the dock?—I think there is an explanation of that. That has been carefully considered by us, and we find it cheaper to allow the ship to remain a little longer in dock to do the work instead of paying overtime, which no doubt is often done in outside ships.

5335. Take an ordinary vessel. To clean and paint her bottom, examine her under-water fittings, and even withdraw her screw shaft—ten, twelve, or fourteen days is a very long time?—It would be, but we do not spend a penny in overtime, therefore we gain in the end; that is our opinion.

5336. Now I want to know why is the pay of the district superintendents charged to storehouses? It amounts in the year 1905-6 to £2,123. It is part of the general administration; it has no business to be charged to the storehouses, which are only depôts for stores; the superintendents have charge of their districts, and of the lighthouses, vessels, buoys and beacons in them. They are part of your official system?—(*Mr. Owen.*) But they have a headquarters and a depôt, and very many of them are residents, and therefore they are the superintendents of that depôt.

District Superintendents: Reason for charging, to District Storehouses.

5337. They are part and parcel of the depôt, but what they have to do with the depôt is a very minor concern compared with charge of the district. I think it is part of the system that you have for superintending the administration of the lights over the kingdom, and with the other Boards it is all charged to head office expenses; in Trinity House it is not?—(*Captain Clarke.*) With respect, it does not make much difference.

5338. It makes a difference of £2,123?—But does it make any difference to the General Lighthouse Fund whether it is charged to the one or the other account.

5339. I do not think that is the question. The question we have to inquire into is the administration of the Lighthouse Authorities. It is not a question of the Lighthouse Fund. That is why I am asking these questions. It is part of our particular business to do so?—I should think the pay of the superintendent is properly charged to the district, as the pay of the other employees in the district.

Distribution of Stores.

5340. I think I have asked you about the stores. We have had evidence that all your stores are first delivered at Blackwall, are they not?—I think it would not be right to say that of a very considerable portion.

5341. And then they are distributed to the district storehouses, and from there to the lighthouses. I want to know whether you have ever considered the advisability of inspecting stores at their place of origin, and packing them up and sending them direct to the lighthouses?—That has been done in several cases, but, broadly speaking, we have found it more advisable, and it is probably not more costly to do it at Blackwall.

5342. It used to be part of the Admiralty and War Office systems, but they are giving it up now, as they find direct action much more economical?—I think I am right in saying that that now is under the consideration of a Committee of the Trinity House specially appointed for dealing with it. They have made certain alterations, and they may, if they find it more economical and efficient, make further alterations. The question of efficiency is most important.

Head Office Expenses of Trinity House: Reason for excess of, over those of Scotch and Irish Boards.

5343. The next is the head office. If you take the head office expenses, I have compared those for the year, and you take the secretariat itself alone, the Trinity House has twenty-five members, the Irish nine, and the Scotch eight, and the expenditure, exclusive of the engineering side, is £13,441, £2,599, and £2,422. I want to know why the cost of your head office should be comparatively so much more

---

* *Note.*—With reference to Questions 5316 to 5235, the Trinity House subsequently sent in the following statement:—"On referring to the log of the 'Triton,' which has now been returned to this House, it would appear that, in no circumstances does she ever effect the *monthly* relief of the Bahama Bank Lightvessel without on the same trip performing a similar duty for the other three lightvessels to the north of Holyhead. The particular trip which was apparently referred to in the Question No. 5318 was made on the *11th* January, and, as stated in the 'Triton's' log, was to convey to the Bahama Bank Lightvessel (which is 65 miles distant from Holyhead, *not* 46) a supply of coal and coke for the fog-signal of which she must have run short. Further, it is stated in the log that the 'Triton' left Holyhead at 9.15 a.m., and at 5.15 p.m. anchored for shelter in Ramsey Bay (with both anchors), the wind then being force 9 to 10, and that, at 9 a.m. on the following day, the weather having moderated, the 'Triton' ran out to the lightship, delivered 6 tons of coke and 1 ton of coal, and returned to Ramsey Bay, the weather being still unfit to proceed to Holyhead. I am further to state that the monthly relief of all lightvessels in this service commences regularly on the 15th of each month, weather and other circumstances permitting, and the procedure at Holyhead is as follows:—The Carnarvon Bay lightvessel is relieved separately, by which arrangement the four relieved members of the crew of this vessel are available for work ashore whilst the 'Triton' is away with the north reliefs, consisting of the other four lightships in the district. These vessels—*e.g.*, the 'Dee,' 'Morecambe Bay,' 'Bahama Bank,' and 'Selker,' are invariably relieved in one round trip. With this evidence before them, as contained in the vessels' logs, the Elder Brethren are unable to acquiesce in the statement "that she makes very slow work.'

"With regard to the 'Vestal' and 'Stella' steamvessels, to which reference was also made (Questions 5316 and 5324), I am to point out that the first three months of the year would of necessity be a comparatively slack time, the weather as a rule being unsuitable for performing work at sea, such as the shifting of buoys, renewing lightvessels' cables, and other duties peculiar to the Lighthouse Service.

"The Elder Brethren have, however, caused an analysis of the logs of these vessels to be made from 1st January to 30th November of last year (*i.e.*, the books which have been laid before the Royal Commission), and they find that from 1st January to 1st April the 'Vestal' was cruising 35 days, and was at Blackwall 55, and that, during the whole period under examination, she was 176 days cruising under weigh and 158 days at Blackwall in dry dock. For the same period the figures for the 'Stella' are:—Cruising (or under weigh a portion of the day) 161 days, and at Blackwall 172 days, 22 of which the vessel was under repair."

than that of the other Boards. Even if you take the £6,000 away it still gives you more than double the cost for your secretariat than that of the other Boards. Well, of course, I say, that, having larger sums to deal with, the percentage should be reduced, and it appears to me that if you look into the details, the number of clerks you have, and especially two very highly paid principals who get a maximum of £800 a year each, is comparatively very great; and I want to know whether it would not be possible to reduce the expenses of your head office in that respect?—(*Mr. Owen.*) What did you say, Sir, was the cost of the head office?

5344. I will come to the whole total, but your secretariat, as given in your estimate, the Elder Brethren, secretary, principals, four first-class clerks, four second-class clerks, four lower-grade clerks, duty pay, extra clerks, seven boys, and a typist, is £13,441—that is to say, you have got 25 members against nine of the Irish Board and eight of the Scotch Board?—That includes the remuneration to the Board.

5345. If you take the remuneration to the Board away it leaves £6,000, as against £2,500 and £2,400?—Yes. (*Sir George Vyvyan.*) Do you compare the work that we do?

5346. I know you have an excess number of lightships, but I do not know that there is any necessity for the excess number of very highly-paid principals and clerks?—(*Mr. Owen.*) There is one department we have which the Scotch and Irish Boards have not, and that is the Collection Account Department. We examine and correct all the detailed accounts of the collectors of light dues.

5347. Of the Customs?—Yes.

5348. You do that entirely?—We do that entirely for England, Scotland, and Ireland.

5349. You do the whole of that?—We do the whole of that; that is one department entirely; there are six all told in that department.

5350. You see a great part of your expenditure is fixed—that is, all the wages and allowances, the head office salaries, superannuation and control, and the amount for new works belongs to the engineer, so that really you have only got half the sum to deal with, so to speak, that requires any very serious expenditure on the part of the secretariat?—Well, there must of necessity be much more work at the Trinity House.

5351. Yes, but I am wanting to know whether it is not rather excessive on the part of the Trinity House; I can only take comparisons with the other Boards?—The reply to that is, the matter was fairly considered by the Board of Trade at the time. Whenever any increases of salaries have been agreed to the matter has been gone into very carefully by the Board of Trade by their own Departmental Committee, and they have not sanctioned them unless they thought they were fair and reasonable. Quite lately the staff has been reduced in number and the salaries increased, and they could not be reduced more at the time. (*Sir George Vyvyan.*) We found it was too much reduced, and we had to make it up again. (*Captain Clarke.*) We have much correspondence with the Colonial Office, the India Office and the Admiralty; numberless things are referred to us for opinion and advice.

5352. Which are not referred to the other Boards?—Which are not referred to the other Boards.

5353. I come to your Engineers' Department, which numbers twelve members—eight Irish, one Scotch. This does not include the Scotch Engineer's Office. The total expenses come to £4,022, Irish £3,036, and Scotch £1,930. There is a very considerable difference there again?—Again, it can only be considered that it is due to the manifold duties that our Engineer and his staff do as against the Engineers and staffs in the other Lighthouse Departments.

5354. You think that your excess of work justifies it?—Justifies it.

5355. Your excess of work. What is outside the others is due to your lightships?—Is due to our lightships and the various other Lighthouse Boards who consult us; the Admiralty also. We are carrying on experiments which we do in a measure for the other Lighthouse Boards.

5356. Working these things out on the estimates of expenditure for 1905-6, the total percentage is 8.5 Trinity House, 5.3 the Irish Board, and 6.1 the Scotch Board. That is the comparison, of course, of administration, and I think that that is correct.* And then there is another question which has to be added to that, the comparison of house and office expenses. Again I see that your office expenses are much heavier than the others; do you give any account for your head office expenses in your quarterly returns; do you give the details of your head office expenses?—Yes, we give the same particulars there that we do with the other districts. That is Abstract "E" of the estimates, and we give the same particulars quarter by quarter.

5357. Now if you work out on the same basis I did before, the head office and the house and office expenses, I see that the average comes to 9·7 for Trinity House, 7·5 for the Irish Board, and 7 for the Scotch Board?—(*Mr. Owen.*) It is a bigger establishment.

5358. You consider that your work is very, very much greater?—(*Captain Clarke.*) There is no comparison.

5359. But any great proportion of this work above that is extra, should it fall on the General Lighthouse Fund if other people come from the outside to you—should it fall on the General Lighthouse Fund, this extra expenditure?—(*Sir George Vyvyan.*) It is not for us to say, Sir.

Extraneous services of Trinity House: Repayment for,

5360. (*Mr. Ennis.*) May I interpose a question I wish to ask? I think we had evidence that you do work for Colonial people, and all that, and that you are paid for it?—(*Mr. Owen.*) There is a percentage charged.

5361. Is it taken into account?—It goes to the General Lighthouse Fund.

5362-3. (*Mr. Ennis.*) It is not credited in the office expenditure?—No.

5364. (*Admiral Henderson.*) You do not get anything from it?—No, it goes to the General Lighthouse Fund.

5365. The allegations that are made by outsiders amount to a question of suspicion, and you may understand that I believe that there is sufficient cause to give rise for their suspicions, because the accounts are not shown; it is very difficult even for myself to get them clear?—Otherwise you would not put the question; we quite appreciate that.

5366. Is there really a deduction on these head office expenses?—No, there is no deduction.

5367. No, but there should be a deduction?—Yes, I take it there should be, looking at it from your point of view.

5368. To show a true and faithful account there should be a deduction?—Yes, on all the work we do for other parties.

5369. That is what I wanted to get at?—Unquestionably. (*Mr. Owen.*) If Admiral Henderson will look at the General Lighthouse Fund Account for 1905-6 he will see on page 2 that the Trinity House is credited with a sum of £1,821 3s. 1d., and that includes percentages for extraneous services.

5370. Oh, yes?—I can only say that our accounts as rendered satisfy the Comptroller and Auditor General's Department. I am sure if we can satisfy them we should regard ourselves as being very fortunate.

5371. (*Chairman.*) I think the matter is quite plain; the Lighthouse Fund does not suffer, but in these accounts all these charges are placed to the head office account and not deducted?—That is so.

5372. (*Sir Frank Adam.*) When the form of accounts was prepared it was not with the view to a coming Commission of Inquiry?—No, that is so.

5373. (*Mr. Ennis.*) If the head office were to receive a credit of the amounts they received, it would make a difference in your charges?—I dare say it would; the General Lighthouse Fund would be no better off, and it would mean more staff to allocate it.

Lighthouses Abroad: Functions of Trinity House as to,

5374. (*Admiral Henderson.*) This question has been asked more or less before: What are the functions of the Trinity House with regard to the lighthouses abroad, and how do you exercise control over those at the Falkland Islands and the Bahamas?—(*Sir George Vyvyan.*) We have no control.

5375. You do not exercise any control at all; have you any engineering questions?—Yes, all engineering questions are sent to us, and we are at present at work at the Falkland Islands.

* This was based on a calculation of Admiral Henderson's.

Sir G. Vyvyan, K.C.M.G., Captain A. W. Clarke, Mr. A. Owen.

30 Apr. 1907.

5376. Do you carry out any work there?—Yes, we carry it out.

5377. How do you do it; what does it mean, the engineering work?—We had an engineer there; he has just come back.

5378. You have not anything to do with the local control or management?—(*Mr. Owen.*) Not the slightest.

5379. It goes to the Board of Trade?—Undoubtedly.

5380. Therefore, strictly speaking, the only foreign lighthouse that you directly manage is Gibraltar?—(*Sir George Vyvyan.*) Yes. (*Mr. Owen.*) You were speaking of Falkland; the Falkland lighthouse was in a bad state, and the Board of Trade thought it the most economical and the most efficient arrangement to send out a skilled engineer, and they asked the Trinity House to lend one.

5381. I know that certainly by these returns one is rather inclined to think when all these extraneous duties are presented that you have something to say about their control; you have nothing whatever to do with it except Gibraltar?—(*Captain Clarke.*) Except Gibraltar, no.

5382. Therefore it does not affect your duties at all?—(*Sir George Vyvyan.*) Oh, no.

5383. Who does the Trinity House belong to—the Corporation?—Of the Trinity House.

5384. The Trinity House itself, the building?—Yes.

5385. It is the private property of the Corporation?—I suppose so.

5386. You never had any question about it?—We regard it as such.

Buoys: Charted and assigned positions of.

5387. There is a question I wanted to ask about the assigned and charted positions of buoys. I notice in the reports of the committees, I particularly refer to pages 430 and 431, that a large number of the buoys they say are in an assigned position or not in an assigned position, or so far from charted position. I want to know what your position is with regard to the charted or assigned position of buoys?—(*Captain Clarke.*) When we go away to check the position of buoys we find sometimes a buoy is in its assigned position, but it is incorrectly charted.

5388. That is the fault of the Hydrographer?—That may be the fault of the Hydrographer, or it may be when the surveyor was there the buoy was not in its assigned position, but as a rule the difference is so small that it is scarcly worth paying much attention to.

5389. You do not consider if the assigned position is not the same as the charted position it is a matter of importance?—We report all the important discrepancies to the Hydrographer.

5390. He alters it?—He alters it.

5391. The assigned position of the buoy is entirely in your control?—Yes.

5392. It is the Hydrographer's duty to make his chart correspond with the assigned positions of the buoys?—With where the buoys are, and the assigned position is for us to determine.

5393. It is true to say that for the two years between the inspections by the Elder Brethren, the local superintendent is responsible for the assigned position of the buoys and the lightvessels?—Is responsible for the assigned position of the buoy and the lightvessel.

Work of Committees.

5394. Why do you split the Acting Elder Brethren up into three committees, simply because having those numbers to deal with, to find distribution for the work?—(*Sir George Vyvyan.*) Four is the smallest number that two working committees ought to have considering their manifold duties.

5395. A great part of the work of these committees is reporting by one-third of the Trinity House members to the other two-thirds. In every committee most questions are referred to the Wardens Committee, or referred to the Lights Committee, or to the Examining Committee, or to the Board. It seems to me a very great deal of that work might be avoided, and is due to the existence of the committees?—It is only finance that is referred to the Wardens.

5396. Other committees have no power over finance?—No.

5397. Should not the Board itself have power over finance?—Yes, it has.

5398. Do you not think a good deal of the committees' work in this sort of way might be done by one man; I am speaking of the office work of the committees, I am not speaking of your inspecting work?—Well, it would be simpler.

5399. A one man show?—(*Sir George Vyvyan.*) I do not believe in a one man show.

5400. I want to ask Sir George Vyvyan if he were to reconstitute the Trinity House whether he would have thirteen managing directors?—I think I might certainly say without the slightest hesitation, if I had the power of creation, and these Boards came to me, they would not be as they are now. I think that goes without saying. I should not have men 80 or 90 years old. I have already said that I approve of superannuation.

5401. And you think really that if it were reconstituted the work of the committees of the Board could be done with less than thirteen directors?—Certainly it would be done with less than thirteen now, if the office were not for life.

5402. (*Colonel Herbert.*) As a matter of fact, it is done with less?—(*Captain Clarke.*) Yes.

5403. (*Admiral Henderson.*) It is done with nine. Do you think it could be done with less than nine?—(*Sir George Vyvyan.*) Why do you say it is done by nine?

5404. Because the other four are practically superannuated?—Only one.

5405. They are on the verge?—Oh, dear, no.

5406. You have only got one man now who is inefficient?—Only one. If you had said that nine years ago you would have been very near the truth.

5407. I only want to ask two more questions?—I am not the oldest man in the Trinity House; there are only two older than myself.

Medway: Maintenance of seamarks of,

5408. The Medway, is that lit and buoyed by the Admiralty?—(*Captain Clarke.*) Certain buoys at the estuary of the Medway are maintained by us at Admiralty charge, but the upper Medway is maintained by the Medway Conservators.

5409. The Admiralty do not take charge of the buoyage and lighting of the Medway at all?—No.

5410. In the number of buoys that you show in the list?—(*Sir George Vyvyan.*) Outside Sheerness.

5411. That includes all those you do for other services for which you get repayment?—(*Captain Clarke.*) Yes, other services for which we get repayment.

5412. The amount for these buoys is in this account?—Yes.

5413. You are really showing on this return more work than you do for the purpose of the Lighthouse Fund itself?—I do not think perhaps it is right to say that, because, without knowing much about it, I should think that the repayment is not credited to these buoys; it is on exactly the same system as doing the work that I spoke of before. I could not be sure of that without looking into the matter.

5414. Inquiring into these returns, here there is really more work paid for than actually appertains to the Lighthouse Fund itself?—Yes. (*Sir George Vyvyan.*) We appear at a disadvantage, as we maintain many other lights for the Admiralty.

Notices to Mariners:

5415. Notices to Mariners. The three Lighthouse Boards issue their notices, the Board of Trade issues a complete set of notices, and the Admiralty issues notices. I want to know whether you do not think there could be some harmony between them, and to get one authority, whether the Trinity House, the Board of Trade, or the Admiralty, as the case might be, to issue Notices to Mariners; would not that be a simplification and an economy all round?—(*Sir George Vyvyan.*) Prior to 1887 the Trinity House issued notices relating to lights, buoys, and beacons, etc., under their jurisdiction to all Custom Houses in England and Wales, and to certain other public authorities and private persons, besides extensively advertising them in London and provincial daily newspapers. These notices were afterwards reprinted by the Admiralty, and again distributed by the Board of Trade, in many cases to the same authorities. All notices, foreign and British, issued by the Hydrographer, other than those relating to lights and buoys, etc., belonging to the Trinity House, or the Scotch and Irish Boards, were also reprinted and reissued by this

System of issue prior to 1887.

Corporation. Copies of notices issued by the Scotch and Irish Boards were distributed by the Trinity House to selected Custom Houses in England and Wales. As a result of inquiry into the matter by a Departmental Committee, in 1887, the following amendments were made, viz.:—(1) Advertisement of notices in London daily papers (other than "Shipping Gazette") discontinued, except in special cases, and, where possible, then only in abbreviated form. Important notices also advertised in one or two good local papers. (2) Redistribution by Trinity House of Admiralty notices relating to foreign lights discontinued. (3) Distribution of Admiralty reprints of home notices discontinued by Board of Trade, and now done by the Trinity House, so far as affects those home notices which have not already been issued direct by a General Lighthouse Authority. (4) Copies of notices issued by English, Scotch, and Irish Lighthouse Boards sent direct by Trinity House to list of addresses to which reprints were formerly sent by the Board of Trade. By the above arrangements the duplicating and unnecessary distribution of notices which previously existed was avoided. (5) Monthly summaries of all notices, British and foreign, issued by the Board of Trade, through the Mercantile Marine Offices throughout the United Kingdom, "With every log-book for a foreign-going ship and to every master, owner, or agent of any other ship when paying light dues, or on application at the Mercantile Marine Offices throughout the United Kingdom." Copies of these summaries also sent to Governors of colonies, principal shipping officers and Consuls abroad. Supplementary summaries containing latest information are now issued weekly by the Board of Trade, in addition to the monthly pamphlets. Our notices are issued for those by the Board of Trade. I am eliminating the Navy altogether. The notices to the Navy are undertaken by the Admiralty for their purposes entirely, but between the Board of Trade and the Trinity House the Board of Trade issue monthly notices, which are compiled from the notices given out by Trinity House, with weekly supplements.

and subsequently.

5416. That means to say that the Trinity House issue instant notices, the Board of Trade monthly notices, supplemented by weekly notices, and the Admiralty daily notices; is not that it?—(*Captain Clarke.*) The latter mainly for the Navy. (*Sir George Vyvyan.*) Ours are daily notices, too.

5417. There is a good deal of waste of money in the business; some system might be devised?—We had a committee in 1887; before that we issued all notices. The Board of Trade commenced their monthly notices; they have continued that since. Our notices are issued to the Local Marine Board and the Custom Houses, and have been considered necessary; and I think it would be a very bad policy to give them up. (*Captain Clarke.*) We send them to pilots and the principal shipping companies also.

5418. Yes, but you would have those other notices which need instant notification, which cannot be given them to send. If one authority issued them, they might send as many as you issue now for you to distribute?—Would it be any saving if we issued the monthly and the fortnightly notices? (*Sir George Vyvyan.*) No, the Board of Trade issue them for nothing. (*Captain Clarke.*) I do not think it would make any pecuniary difference.

Observations on objections to certain lighthouses: Lundy.

5419. (*Sir Frank Adam.*) I wanted to go upon another series of questions altogether. It is with regard to evidence that has been put before us by different witnesses that have taken strong exception to the cost of certain lighthouses, and I thought I would ask you a few questions, to have your views with regard to the evidence that was given to us. First we will take North and South Lundy?—(*Sir George Vyvyan.*) Are you alluding to Captain Wentworth Wade's evidence; he said they were too high?

5420. Yes, he said: "For those lighthouses are on the solid rock, and then they took and put a bed of concrete down. I do not know what that was for, except it was to spend money, and they took and built these great big structures. We did not ask them, the lighthouses were quite high enough, taking the base instead of the vane, and things would have been much better if they had just simply put a light apparatus a few feet above the rock"?—I have brought a photograph of them. I think that disposes of the whole. We must have the lighthouses a certain height, in order that the weight may fall in order to revolve the apparatus. I do not suppose it is more than 6 ft. high. How Captain Wentworth Wade could have them lower than that I do not know. (*Exhibiting photograph.*)

Sir G. Vyvyan, K.C.M.G., Captain A. W. Clarke, Mr. A. Owen.

30 Apr. 1907.

5421. I would ask you, with a view to its appearing in print—we will not be able to show the photograph—to answer me?—Well, they could not be built lower; they are built as low as they can be, having regard to the necessity for providing sufficient depth by the driving weight of the apparatus. And the expense is inconsiderable; it is only bricks and mortar at Lundy. We built it ourselves, because we found it cheaper; and also Beachy Head.

5422. Allow me to take them in order. The next one was Foreland, in the Bristol Channel, built at a very great height, and a considerable tower built up; he wanted to know why these immense structures should have been built?—Though you cannot put it into the evidence, if you would like to look at it, I will show you a photograph. (*Photograph produced.*) (*Captain Clarke.*) That is the Foreland, as low as it possibly can be. (*Sir George Vyvyan.*) And excavated out of the rock which was used in making the lighthouse. It is one of the most difficult we have had to deal with, and the lighthouse itself is as low as it possibly can be.

Foreland, Bristol Channel.

5423. You consider it was made as low as it possibly could be?—Yes. (*Captain Clarke.*) The lighthouse is actually lower than the buildings themselves.

5424. There was another; he referred to the lights on the Nash?—(*Sir George Vyvyan.*) I did not read his evidence.

Nash and Caldy Island.

5425. "We still have two lights at Milford, St. Ann's Head. We have two lights on the Nash; we have a high light placed on Caldy Island, up in the clouds almost, while a smaller light lower down would be a guide to the roads, and would be far more valuable"?—(*Captain Clarke.*) Those are all improvements that will come in the future. Caldy Island is an old light built in 1829.

5426. You admit improvements are possible?—And will come in time. (*Sir George Vyvyan.*) Well, whenever we are spoken to about a light, the first question is how far are we to see it—that is, what is the radius of the light. (*Captain Clarke.*) St. Ann's is now under consideration. (*Sir George Vyvyan.*) Does Captain Wade wish the Nash lights to be single?

5427. What he said was simply that there were two lights when one might be sufficient?—Yes.

5428. And I suppose that means the improvement which you say will be brought about? Then there was another question of Beachy Head. That, I think, you were going to refer to just now. Another witness, not Captain Wade, said that the lighthouse was built on an extravagant principle, and what cost £56,000 might have cost and yet provide an adequate light below the cliff about £20,000?—As an iron pile lighthouse?

Beachy Head.

5429. As an iron pile lighthouse?—It was perfectly impossible; the tower is practically double the height of the Maplin, which is an iron pile lighthouse, and if it had been built as an iron pile lighthouse with the radius necessary in that position it would have been much more expensive than the lighthouse is now.

5430. Was that carried out by contract?—We did it, and thereby saved £5,600.

5430a. I understand there was a good deal of extra cost, because you had to carry materials from above?—(*Captain Clarke.*) No, that cheapened the cost; it would have been more costly to carry them by steamer. It was done by a wire and carrier.

5431. (*Admiral Henderson.*) Might I ask whether there is land communication with the lighthouse?—Yes, at low tide.

5432. (*Chairman.*) Are there any particular criticisms that you have come across in the evidence, to which you would like to give a reply, besides those which have been mentioned? (*Sir George Vyvyan.*) I do not think so.

5433. I think one witness complained of the cost of your lightvessels, basing his criticism upon the length of them?—I will give you some figures I got from our surveyor. I have not been able to go through

Sir G. Vyvyan, K.C.M.G., Captain A. W. Clarke, Mr. A. Owen.

30 April 1907.

them myself. What was brought to me I have read. I had those figures taken out by the surveyor, the cost of a lightvessel number 75, that is our last lightvessel, as compared with the "Irene," as compared with a channel passenger steamer, as compared with a tramp steam vessel, a fast boat and a slow boat, all of which are actual ships.

Cost of different types of vessels.

COMPARISONS OF COSTS PER TON (GROSS) OF DIFFERENT TYPES OF VESSELS.

Ship.	(No. 1). Gross Tons.	(No. 2). Hull. Per Ton (gross).	(Nos. 3 and 4). Hull and Machinery. Per ton (gross).	Cost per *ton weight* of Hull.
		£ s. d.	£ s. d.	£ s. d.
No. 75 L. V. "St. Govan" - - -	250	31 18 0	46 0 0	22 15 0
"Irene" S. V. - - - - -	543	22 2 0	58 10 0	30 0 0
Channel Passenger Steamer - - -	996	23 18 0	52 6 0	33 0 0
Tramp Steamer - - - - -	270	24 0 0	34 9 0	24 0 0
Tramp Steamer (slow speed) - - -	520	13 9 0	19 14 0	16 0 0

Note 1.—No. 75 lightvessel is built 18 per cent. above Lloyd's rules, and to bring the other vessels up to the same footing £1 per ton should be added. In addition, the arrangement of hawsepipes, bitts, etc., involves an outlay of quite £450, which also should be added to the other vessels to put them on the same footing.

Note 2.—In the "Hull and Machinery" price of No. 75, machinery, lighting apparatus, anchors, cables, and sea outfit are included, in fact, everything, excepting ground moorings (mushroom and 150 fathoms of $1\frac{5}{8}$ cable), this being, in my opinion, equal to a steamer's machinery.

Note 3.—It will be seen that the larger the tramp steamer the less cost per ton.

Note 4.—I have worked out the total weights of hulls of the foregoing vessels; the results show that, on this scale, the lightvessel works out the next to the cheapest on the list.

Generally.—There is difficulty in getting a true comparison either of build, form of vessel, fittings, construction, etc., etc., with a lightvessel to that of any other vessel.

It is known that the recent lightvessels are not in any way constructed beyond the requirements of the service, and that keen competition has been the rule in getting prices, and it must be seen that under this system the vessels are cheaply built.

N.B.—If No. 75 lightvessel had the cost of the 18 per cent. above Lloyd's rules, viz., £1 per ton (gross), and the extra cost of fitment of hawsepipes, etc., £450, total £700, deducted for her cost of construction, the figures for the "Hull per gross ton" would be £29 2s., and for the "Hull and Machinery per gross ton," £43 12s.

I think that disposes of any extravagance, Sir; I will hand those figures in.

5434. (*Sir Frank Adam.*) May I ask, by what means did you arrive at those figures as regards tramps and channel steamers?—That is done by our surveyor.

5435. By taking the average of steamers, tramps and channel steamers?—No, this is a particular ship.

5436. In each case?—In each case.

(*Chairman.*) We are very much obliged to you for your evidence.

FIFTEENTH DAY.

Wednesday, 8th May 1907.

PRESENT:

The Right Hon. G. W. Balfour (*Chairman*).

Sir Frank Forbes Adam, C.I.E.
Colonel I. J. C. Herbert, C.B., C.M.G., M.P.
Vice-Admiral W. H. Henderson.
Mr. M. A. Ennis.
Captain C. Bigham, C.M.G. (*Secretary*).

Mr. Donald Crawford, K.C. (Sheriff of Aberdeen, Kincardine and Banff), Mr. James A. Fleming, K.C. (Sheriff of Dumfries and Galloway), called in; Mr. C. Dick Peddie, recalled; and examined.

Mr. D. Crawford, K.C., Mr. J. A. Fleming, K.C., Mr. C. D. Peddie.

8 May 1907.

5437. (*Chairman.*) Mr. Crawford, you are Sheriff of Aberdeen, Kincardine and Banff?—(*Mr. Crawford.*) Yes, Sir.

5438. And you and your colleague, Mr. Fleming, who is Sheriff of Dumfries and Galloway, are here to-day as the representatives of the Northern Lights Board?—Yes, Sir.

5439. I think you have had an opportunity of seeing the evidence which has been offered to the Royal Commission up to the present time?—Yes, we have seen a revise; we have not seen the appendices, which are rather important in the matter of figures, but I do not know that that will detract from any value of our evidence to-day. You see, for instance, Sir Thomas Blomefield gives evidence about the figures of the three different Authorities. They were almost all embodied in appendices, which we have not seen.

5440. You have also been furnished with some written questions to which we should desire to have your reply?—Yes.

5441. Perhaps the most convenient thing would be for me to begin with the different questions in order that we may get your answers on the minutes?—Yes.

5442. Do you think any important saving would be effected by substituting a single lighting authority for the existing system?—We do not think so. You see,

One Central Lighthouse Authority: Would not effect economy.

looking at what the money is spent upon, by far the greater part of it is spent on the maintenance of the lighthouses, the wages of the keepers, and the stores. And then another large head is new works, and perhaps a third head, if you chose to treat it separately, would be steamers, and then all that remains are the expenses of our office in Edinburgh, which is a very small proportion of the total. Now, we hope that there is evidence before you that the maintenance of the lighthouses—I take that first—is done as economically as it can be done, and in those branches, excluding for the moment office expenses, the expenditure—this is a question at present only of economy—the expenditure is controlled by the Board of Trade. We try to run the thing as economically as we can, but we are not allowed to spend a single shilling without the authority of the Board of Trade, and we are not allowed to spend a single shilling until the Board of Trade knows what it is for and approves of it. So that there is a complete central control, and in respect to the administration of the Lighthouse Fund, which is the life-blood of the whole system, that is entirely in the hands of a Public Department, the Board of Trade, directly responsible to Parliament, and the same authority for the whole three kingdoms. Then while it would not be conclusive to draw a comparison between our expenditure and that of the other Lighthouse Authorities, and we rather shrink from doing that, and for my part I have not got the figures myself very exact; but still I think when this question is asked it has a bearing upon it, and I think from the figures I have seen it will be found that our expenditure compares favourably—I might say very favourably—with the other two. Now assuming that the maintenance of the lighthouses, the new works which are so very carefully scrutinised, as you know, Sir, every year, and the steamers, assuming that they are as economically administered as they can be, all that is left is the maintenance of our offices in Edinburgh. I understand that that is something under £7,000. The whole expenditure of our office is thus less than the salaries of the Elder Brethren of the Trinity House, which is £7,000. We do not think that, supposing for any reason it were thought desirable over and above the pecuniary control to have a central administrative body sitting in London actually to spend the money, we do not think that centralisation could be carried so far as to dispense with a branch office in Scotland. You may compare it with almost any other branch of the public service, and you will find that such a branch office would be necessary. Very well, we think that the expense of our office, bearing in mind the fact that you get a directorate, which, whether good or bad, has a good deal of brain work in it, and it is the real directorate of the thing, because the Commissioners apply their minds even to the minutest details and are thoroughly acquainted with the service—I mean those who take an active part—well, you get that for nothing, and we think that as to the remainder the result would certainly be that a branch office would be at least as costly under any central system as our office is at present, because you get as I say the directorate for nothing. While we think that the evidence will show that the other branches of the service that I have mentioned are economically managed. The Board of Trade enforces very strict economy; and since the question is raised I am bound to say that in the matter of the office I think they have exercised not only a strict but a somewhat rigorous economy. The payment of our officers is hardly what we should like it to be. Our relations during all my time with the Board of Trade, which will be twelve years next month, have been exceedingly pleasant and friendly, and I think they try to meet us, but particularly with regard to the office the economy enforced upon us has been rigorous. I might point to the position of the Secretary, who is really general manager, and everything passes through his hands, although the Commissioners apply their minds definitely to every thing, and he in no way runs the matter; it is the Commissioners who run it; but his salary is quite inadequate.

5443. Do you think no economy could be effected in the matter of the purchase of stores if a central authority were established?—No, we do not think so; we have considered that. (*Mr. Fleming.*) The total stores come to £15,000; of these, coals account for £6,500, oil for practically £2,000, fresh provisions £3,000, and the general store, upon which possibly a saving might be effected by one contract for the whole three services, amount to under £3,000. The highest amount for any one article of those is cotton waste £319, and our view is that the matter is so small that, considering the difficulty and the expense of carriage from the contractor to these different places that there is no room for any economy of any substantial amount. (*Mr. Crawford.*) Mr. Fleming knows more about that than I do; but all that I do know about it personally is that we go into that carefully. All the stores, of course, are got by contract, and both in the matter of contracts for coal, for instance, and oil, the Commissioners take the greatest pains. As a rule, of course, we take the lowest tender, but we take great pains about the selection of the people who are invited to tender, and in rare instances, where by experience we have found out that the very lowest is not the best, we depart from it, and take one we know. That is very exceptional indeed, but great trouble is taken in settling those matters.

Mr. D. Crawford, K.C., *Mr. J. A. Fleming*, K.C., *Mr. C. D. Peddie.*

8 May 1907.

5444. In short, I take it as your answer that neither in the purchase of stores nor in any possible reduction of head office expenses, nor in the matter of uniformity of administration, is there any substantial economy likely to be produced by a centralised management?—That is our opinion, Sir.

General Lighthouse Authorities: Communication between,

5445. (*Admiral Henderson.*) That would be as far as the Scotch Board is concerned, of course?—That is all we can speak for. With regard to uniformity of administration, in some important respects there is complete uniformity. For instance, the pay of the lighthouse-keepers; we always work together with the other two Authorities, and the pay of the lighthouse-keepers is identical—practically identical.

5446. (*Chairman.*) I think not long ago you sent your superintendent to London in order to study the methods of Trinity House, did you not?—I believe we did; yes. (*Mr. Fleming.*) We did, Sir. (*Mr Crawford.*) And he visited some of the lighthouses, I know.

5447. Did you obtain any useful hints from his visit?—I do not remember. The Secretary will tell us better. I do not remember that there were any innovations introduced owing to that, but we are always on the alert to learn anything from the other Boards, and I rather think, in the matter of scientific inventions, and so on, that the Boards have derived benefit from each other's experience. We always endeavour to be in touch with them, particularly with the Trinity House.

Advisory Committee: Deprecated.

5448. I proceed to the next question. Will you tell us whether, in your opinion, the Advisory Committee has worked well. Would it be a practicable plan to do away with the Advisory Committee, and provide that representatives of shipping and other interests should be placed on the Lighting Authority itself?—Well, frankly, Sir, we do not think that the Advisory Committee has worked well at all. Our own intercourse with it has been at the annual meetings only. I have been, I think, at about three, and Mr. Fleming has been at several. At some of those you were in the chair, Sir. In the evidence which I have read it is stated, on behalf of the Board of Trade, that they have derived benefit from their advice, and of course I do not know what communications have passed between the Board of Trade and the Advisory Committee; but the only occasions that we meet them are once a year in conference at the Board of Trade. Now, I do not think that those conferences, so far as we are concerned, contributed anything to the public service or to the despatch of business. The proceedings were not deliberative at all, as we think that the controlling authority of a public business like this ought to be. They consisted of an attack always, and we had to stand on the defensive. It may savour of exaggeration, and perhaps the statement, speaking only from my recollection, may be somewhat exaggerated, but according to my impression of the Advisory Committee, although no doubt it is composed of men of eminence in business, the way they looked at their duties was that they practically objected to everything that we proposed. The remark, I do not know whether it is reported, but it was made several times in my hearing, was this, they said, "This is our money, and we ought to have the spending of it." Well, that is not our view. Of course, I am not here to argue that question, but they practically objected to everything, and I see in the evidence that out of twenty-four proposals of ours to which they objected sixteen were eventually passed as being desir-

Mr. D. Crawford, K.C., *Mr. J. A. Fleming*, K.C., *Mr. C. D. Peddie.*

8 May 1907.

able and necessary, and I understand that the remaining eight were not condemned but merely postponed. And I do not remember—perhaps my friend and colleague may correct that—I do not remember anything that they proposed which we had overlooked except perhaps a light and fog-signal on the Holy Island outside of Arran which we had considered, but we did not think was necessary to navigation, although it was quite true that certain lines of ships belonging to members of the Advisory Committee could save a very little distance by taking a short cut which would bring them close to the Island of Arran, but that for the safety of navigation that light was not required at all, and it was an expensive work. However, that was our only objection to it and that light was carried out, and it is now in existence.

5449. We had evidence from the Trinity House that in the first instance there had been a certain amount of friction between them and the Advisory Committee, but that matters had improved of late years?—I think, as far as actual friction goes—I have not been myself I think, at the last two, but from what I understand —I think we should quite confirm that, as far as the pleasantness of the proceedings goes, but not otherwise.

Abolition of, advocated.

5450. Well, Mr. Crawford, as to the second part of my question: Would it be a practicable plan to provide that representatives of shipping and other interests should be placed on the Lighting Authority itself?—Well, Sir, with regard to that I think you have some questions further down, where perhaps I could answer that more fully. Our general position, however, is this, that whether such representation would be practicable and advisable it is for the Commission and for Parliament to decide, but we should like to see the Advisory Committee done away with.

5451. You would like the Advisory Committee definitely done away with?—Yes; I think we should certainly. As to the words, "and provide that representatives of shipping and other interests should be placed on the Lighting Authority itself," Mr. Fleming and I are not empowered to make any suggestions as to the constitution of the Board or improvements on it. But I may say that this question had been raised before I became a member of the Board, twelve years ago. Its constitution was fixed in the eighteenth century, and very likely if it were started now for the first time it might not be constituted in exactly the same way. We have always been perfectly open, without making any definite proposals ourselves, we are quite open to the idea that our Board might be improved by putting on it representatives of the shipping interest, such as shipmasters and shipowners, for the sake of their practical knowledge. It is for the Commission to judge. We do not honestly think that the practical result would be one whit better or that a penny would be saved, but if for the sake of theory, or for the satisfaction of public opinion, it were thought desirable to put on representatives, I do not think that our Board (of course they have no right to oppose it) would object to it in any way.

Northern Lighthouse Board: Representation of shipping community on, not opposed by Board.

5452. I quite understand, and that by anticipation answers to some extent question No. 3, but I had better put question No. 3 in order that you may supplement what you have already said. Has your Board itself any suggestion to make for amending its own constitution, or altering the relations at present subsisting between it and the Trinity House, or generally for modifying the present arrangements for lighting the coasts of the United Kingdom?—Well, Sir, we are not empowered to make any suggestion for amending our own constitution. I will come to the Trinity House immediately. I do not see in the evidence given a detailed statement of our working, and it might be perhaps useful if I stated what that was. The Board consists of 25 members. Ten of those are representatives of shipping towns, and are members of the Town Councils of these towns; they are elected at intervals of three years, the Bailies for one year—that is, ten. Then there is the Lord Advocate and the Solicitor-General, and there are 13 Sheriffs; 13 out of the 15 Sheriffs in Scotland. There are 15 Sheriffs in Scotland, and every Sheriff who is Sheriff of a county with a seaboard is *ex officio* a member of the Board. In consequence of the large seaboard of Scotland, and that most of us are Sheriffs of more than one county, 13 out of the 15 are qualified. Now, as to the attendance of these members. A considerable number of the municipal members practically never attend. It can hardly be expected. There is the Lord Provost of Aberdeen, the Provost of Inverness, and the Provost of Campbeltown; the Lord Provost of Dundee and the Provost of Greenock; practically they never attend. The Lord Provost of Glasgow, I may add. Glasgow and Edinburgh have two muncipal representatives, the Provost and the Senior Bailie. From time to time naturally, as these gentlemen—the Bailies only last for a year—their attendance varies, because one man will take more interest in the work than another, and it has not infrequently happened that the Senior Bailie of Glasgow has given a pretty fairly regular attendance. Then in Edinburgh it naturally varies too. We have had Lord Provosts who gave a useful attendance. I remember particularly Sir Andrew McDonald, who was Lord Provost when I was first appointed to the Board, and sometimes the Senior Bailie is pretty regular too. The Provost of Leith has generally been a pretty regular attendant, and a useful member of the Board, and that is a very good thing, because, of course, Leith is a very considerable seaport. The reason is that the Provost of Leith is very often re-elected for another term of years. The present Provost has been seven years in office, and he is an exceedingly active and useful member of the Board, and is at present our Chairman, an office which we take in rotation. Then coming to the other members, the Lord Advocate and the Solicitor-General, the two Law Officers of the Crown, they practically never attend. The only exception has been very recent indeed—namely, the present Solicitor-General, Mr. Ure. When he is in Edinburgh he generally comes, but of course his other duties, parliamentary and otherwise, make his residence in Edinburgh very rare, so that it is hardly an exception, and you may say that the Law Officers do not attend. Then you come to the 13 Sheriffs. The Sheriff of Lanarkshire, who is resident in Glasgow, is an exceedingly busy man. It is hardly possible for him ever to attend. That reduces the number to 12. The Sheriff of Ayr, Mr. Brand, is also Chairman of the Crofters Commission, and is, I am sorry to say, in very bad health; he cannot attend. That reduces the number to 11. Now, of the 11 Sheriffs, a large proportion attend, many with perfect regularity, I may say, and others with considerable regularity. I think you have got statistics about that, to which I would refer. And the way the thing works is this; as far as the Sheriffs are concerned, there are always four or five who are very much interested in the work, and have had a good many years experience of it; and as one can without much difficulty suppose, the work is rather of an attractive nature, and as junior Sheriffs come in they, as it were, enter on their apprenticeship. Four or five have been at it actively for years; the younger ones are put on committees and initiated into the work as soon as possible, so that there are always some seven or eight who take very strong interest in the work. Half of those are Sheriffs who have been at it for a long time, and others who have been at it for a shorter time. They all take a great pleasure in personally acquainting themselves with all the details, they know all the lighthouses, they go round and know a great many of the men; are thoroughly conversant with the policy of the Board, which has been continued for a great many years; know everything about our relations with the Board of Trade, and so on; and, in fact, are as minutely conversant with the work as it is possible for any body of directors to be.

Description of constitution of,

Attendance of members.

Sheriffs: Duties of,

5453. Are most of the gentlemen of whom you are now speaking resident in Edinburgh?—They are all resident in Edinburgh. The Sheriff Principal must reside in Edinburgh, except the Sheriff of Lanark at Glasgow. He is supposed to be in attendance on the Courts, and he can practise if he likes, except the Sheriffs of Lanark and the Lothians. The official corresponding to the County Court Judge is resident. For instance, I have three Sheriffs Substitute in my counties, but I as Sheriff Principal have to reside in Edinburgh. Then as to the qualifications of the Sheriff, it is impossible not to advert to a very natural observation often made outside, that we are all lawyers. Well, so we are, but the Sheriffs are all men of considerable experience. They have been and are in practice at the Bar, some in very large practice, and others much less so. Out of the thirteen judges, more than half have been Sheriffs. A man in practice at the Bar has to make himself acquainted with, and has to learn, the art of dealing rapidly, and acquainting himself thoroughly with a great variety of public business. Then besides that there are our duties as Sheriffs.

It is true that the part of our duties which occupies most of our time is the judicial part, mostly as the Appeal Judge from the Sheriff Substitute, whom I have described as a County Court Judge, but theoretically at all events the more important part is the administrative part, which is quite separate. The Sheriff is the principal Crown Officer in the county next to the Lord Lieutenant, and in virtue of that he has a definite precedence assigned to him next to the Lord Lieutenant. He is responsible for the peace of the county. If there is a riot, he would have to go down and take the lead in putting it down, and within the last 20 years that has happened several times in the Crofter riots in the West coast. Then he is head of the police in the county. If there is a difference of opinion between the Police Committee of the County Council and the Sheriff, the Sheriff's orders must prevail, though there is an appeal to the Secretary for Scotland. Then he has various administrative duties which he must perform personally. For instance, if a borough wants to enlarge its boundaries, the Sheriff Principal must do that; must settle it. If a district wants a water scheme, the Sheriff Principal must settle that; he cannot delegate it to one of his substitutes. And there are other things which at a pinch we can delegate, but which we do not often do. For instance, I am Returning Officer for six divisions, and we are Revising Barristers. We in short do a great deal of miscellaneous administrative work, and even our judicial work brings us, being maritime Sheriffs into contact with business which is quite germane to the business of our Board. For instance, in Aberdeen I have a great many shipping cases to decide; collision and all sorts of shipping cases; so that in short it is for the Commission and others to judge, but as practical business men I think the Sheriffs are very well qualified to conduct this business.

5454. Would you kindly refer to Question 1,300?—Yes.

Membership of Northern Lighthouse Board *ex-officio*.

5455. The object of Question 1,300 was to ascertain whether, when a Commissioner had been co-opted, he remained a member of the Board for life?—Well, Sir, that refers to a state of things that is long before my time. That is to say, I understand that a great many years ago, and it may be statutory still, the Board had power for instance if we wanted to add to the municipal representatives, besides the Provosts of Inverness, and so on—supposing there were some other seaport became important—to co-opt a representative officially into the Board. That is the whole meaning of that power.

5456. That does not refer to the Sheriffs at all then?—No, I think the Sheriffs are now settled by Statute.

(*Mr. Fleming.*) Perhaps you will allow me to answer, Sir. By the 1854 Act, certain Sheriffs were named, with power to assume other Sheriffs of maritime counties. That power was exercised, but when the 1894 Act was passed, by inadvertence several of those Sheriffs were omitted from the Act. Those Sheriffs have since been assumed, but either by the 1894 Act or by assumption since, all the Sheriffs of maritime counties are now on the Board; we have treated them not as individuals, but as holders of the office; the office is assumed, not the individual.

5457. Then if the Sheriff of a county abutting on the coast were transferred to an inland district, would he cease to be a member of the Board?—Yes. There was a case of that sort quite recently. The Sheriff of Inverness, Sheriff Johnston, was transferred to Perthshire. He ceased to be a member of the Board. His successor as Sheriff of Inverness became a member of the Board in his place. (*Mr. Crawford.*) There are only 15 Sheriffs altogether, and two are not members of the Board. (*Mr. Fleming.*) The provision is Section 668, Sub-section 3, of the Merchant Shipping Act, 1894. "The Commissioners may elect the Provost or Chief Magistrate of any Royal or Parliamentary burgh on or near any part of the coasts of Scotland and the Sheriff of any county abutting on those coasts to be a member of their body."

Constitution of Northern Lighthouse Board: Large numbers cause no inconvenience.

5458. One of the criticisms passed upon the constitution of the Scottish Board has been that the numbers are too large, and that, as you have told us, a good many of them never attend?—(*Mr. Crawford.*) That is true.

5459. Do you think there would be any advantage in allowing the Board to select certain of its members to be an Acting Board, somewhat after the fashion in which Scottish representative peers are chosen?—It is a novel suggestion to me, Sir. Of course, the duty would be a so newhat invidious one, I am afraid. Of course, any suggestion of the kind, coming from you, would receive our best and respectful consideration. One thing we should probably say is—it may not be a complete answer, because the objection is that the system does not look well outside, but the thing settles itself. There are a certain number who always act, and there are others, as I have tried to describe, who do not.

Mr. D. Crawford, K.C. *Mr. J. A. Fleming*, K.C., *Mr. C. D. Peddie.*

8 May 1907.

5460. And that does not give rise to any practical inconvenience?—None whatever.

5461. The Board are not liable to be flooded at any given moment by members who do not habitually attend?—No, the only case—it is the sort of thing that might happen—I think perhaps there might be rather a larger attendance if there was one of the more important posts in our gift, such as the Secretary, to be filled up; probably we might expect rather a full attendance when that took place, but I am not quite sure that it did happen. The only instance in my time is some years ago. (*Mr. Fleming.*) Yes, there was rather a larger attendance than usual. (*Mr. Crawford.*) But that, I think, might almost be left out of account.

5462. So that in your judgment the excessive numbers of the whole Board compared with the numbers that actually attend does not give rise to any practical inconvenience?—Oh, I should say that with every confidence.

Control of Trinity House over Scottish Board: Deprecated.

5463. Perhaps you will kindly now proceed to the second part of the question, Mr. Crawford?—Yes, Sir, whether the Board has any suggestion to make for altering the relations at present subsisting between it and the Trinity House, or generally for modifying the present arrangements for lighting the coasts of the United Kingdom. Well, as to Trinity House, our relations with the Trinity House, I am glad to say, have been most agreeable and thoroughly cordial, but when we are asked this question I cannot help saying that we think that the present relation between the two Authorities is not quite sound. The Trinity House claims a considerable control over our operations in erecting seamarks, and I think it is in evidence, in Mr. Dick Peddie's evidence, how that arose, or, at all events, the date of it. I think it was in 1836 that they got a right which is expressed in a certain clause, the terms of which I do not remember, which authorised them to interfere and to exercise some control over the proposals of the Northern Lights Board in erecting seamarks. Now our view is that at that time, when there was no supervising authority over the whole three, like the Board of Trade, it was a very reasonable thing that where the proposals of the English and Scottish Authorities clashed, as it is perfectly likely they might do, there should be some means of deciding the question, and that it was by no means unreasonable that the larger Authority should be invested with that power. There is some difference of opinion, I think, as to whether that was intended to go further than to provide for an actual clashing of the two Authorities where their limits approached each other, or whether it meant that the Trinity House were to exercise a wider control right round the coast of the island, and that view no doubt is arguable and defensible because uniformity is desirable, the uniformity of system. But then we think that when the authority of the Board of Trade was established in 1853 the necessity for the control of the Trinity House over our work ceased, and that it is not advantageous that it should be continued, because it is impossible, we think, that the Trinity House should be so well acquainted with the wants of our coast as we are ourselves. Probably theoretical questions may be urged to the constitution of both Boards, and it may be said that the Trinity House contains more practical men than we do; but, on the whole, we submit that they are not better qualified to exercise a general control and have no more substantial right to it than we have, and that uniformity and everything that is really wanting is secured by the complete and active control of the Board of Trade. We have an appeal from the decision of the Trinity House to the Board of Trade, and there have been a very considerable number I believe in which ultimately we were found to be right when we asked for a thing. If the Commission desires the examples I think the Secretary will be able to furnish them. I believe a statement has been put in about that so we should propose that the Trinity House and we should be put on the same footing with

Appeal from, to Board of Trade.

Mr. D. Crawford, K.C., *Mr. J. A. Fleming*, K.C., *Mr. C. D. Peddie.*

8 May 1907.

regard to authority. We are quite satisfied with and welcome the general supervision of the Board of Trade, and that it is a very effective one, because they have the entire power of the purse, and we think that is entirely desirable, and that it is a sufficient supervision.

5464. Has it been the case that of late years the Trinity House has not been satisfied to consider any scheme submitted to them by you as regards the principle of that scheme, but has further required you to furnish minute details of expenditure in connection with the scheme?—I think that such cases have occurred within the last eight years, but that has been a sort of debatable ground, I think, between the Boards for a long time. The statutory power of the Trinity House up to a certain point is incontestable, but we thought that they had no right to interfere in financial details, and I understand that they rather maintain that they have.

Nature of,

5465. But they have not, as a matter of fact, insisted on seeing your schemes worked out in detail before giving their sanction?—The total expense only, not the details.

5466. So that in effect as regards their relations with you when their sanction is asked for any scheme, their decision is given upon general questions of principle, and not of detail?—Yes, I think so.—(*Mr. Fleming.*) Well, Sir, I think that a misapprehension arises from not noticing the words "minute details" in your previous question. For instance, in the case of Tod Head they certainly demanded information regarding the cost of the works which we declined to give, but which, I think, we ultimately *ex gratia* gave them. Since then they have had from us an estimate, a rough estimate, but a fairly close estimate, of the cost of the work, so that they might judge of the description of the class of work in respect of cost. In other words, they have claimed a general financial control over us in every case. They have not asked for minute detail; we have given them a general estimate. They have done it in this way constantly, and, I think, when you were in the chair this sort of question came up: we proposed to put up a lighthouse, a first-class lighthouse; the answer was, "This will cost £12,000, which is far too much. Put up an unattended light which will cost £500 or £600, and that will do." That is the sort of way they have exercised their control. (*Mr. Crawford.*) That sort of thing is frequent.

5467. A decision of that kind by the Trinity House, would, to a large extent, rest upon the question of principle. It would be the character of the light with which they were concerned?—(*Mr. Fleming.*) They agreed with our view that a light should be established there, that a seamark was wanted, and that there was a danger there which should be marked. They did not agree with our view that in carrying that out into practice it was impossible to do it except by an attended lighthouse with residences for the keepers. The difference between that and the unattended lighthouse makes a difference in cost. There is an instance of that quite recently, the proposed light at Neist Point; and there is another instance in the case of Bressay, which is at the entrance to Lerwick, where we proposed to put up a fog-signal. They agree in principle that a fog-signal is wanted there, but they say that a reed signal is quite enough; the difference in cost being, I think, the difference between £3,000 and £4,000. Our view is that their own experiments at St. Catherine's show that a reed signal would not carry sufficiently far outside the entrance to that channel to make it useful. We must have a signal which would enable the navigators to pick up the entrance outside before they are in danger.

5468. It comes to this, does it not, that the interest of Trinity House in the case of any scheme is limited to the bearing of the cost upon the general character of the seamark to be put up. If, for instance, it was a question between an important lighthouse and a minor light?—I think not, Sir; take the case of Rhu Rhea.

5469. That would involve a question of principle?—The principle was that a light should be established there; we were agreed on that point, but the position they took up was that an unattended light would be probably sufficient to mark that danger in these waters, and would cost much less. Our view was that an unattended light was not sufficiently powerful for these waters, and a further difficulty was that from the configuration of the land, from the inaccessibility of the point it was impossible to trust to an unwatched light. There was no person near enough to attend to it, therefore we had to have an attendant, therefore we had to have two, as our consistent policy has been never to leave one man alone; therefore we had to have houses, and at once you have the cost of the full establishment. The difference between us there was entirely, I think, a question of cost. I do not know whether you know where Rhu Rhea is, Sir, it is on the mainland north of Skye.

5470. You would prefer to be freed from the control of Trinity House altogether, I take it, but if that was not done you would then rather that that control extended only so far as the necessity of some proposed seamark was concerned and should not extend to the character of the seamark or the cost of it?—That is so, our view, of course, being that when the Board of Trade control was established in 1853 or 1854, the necessity for having one superior authority to settle questions arising between the three Boards was gone, and we do not see quite what the Trinity House has to do with the characteristics of lights in Orkney and Shetland, for instance, and we do feel that it is anomalous that one spending department should have a financial control, however slight it might be, over other claimants on the same fund, although of course I do not mean to suggest for one moment that Trinity House have been actuated by any feeling of that sort.

Anomaly of,

5471. It has been contended that the Northern Commissioners suffer from the absence of nautical advice, and it has been urged that the control of Trinity House to some extent makes good that deficiency; what is your view on that subject?—(*Mr. Crawford.*) Well, Sir, I do not think we suffer practically from it, but it has often been suggested that our Board would be more complete if we had a nautical adviser; if a nautical adviser were added to our staff. In practice I do not think the want is felt. It so happens that, for instance, our Engineer has a very minute knowledge of nautical matters all round the coasts; he is in the third generation of Engineers to our Board and the fourth in succession, for his uncle was, and his father was, and he has been bred up in it, and he has a thorough acquaintance with the coast. Then we have very experienced and very intelligent masters of our steamers. The master of the "Pharos," our principal steamer, whose father was also a master of one of our steamers, and Captain Harvie, the master of the "Hesperus," and our other two masters; we have very great confidence in their nautical knowledge, and practically, we do not think that we suffer from the want of a nautical assessor. At the same time, I think we should be very glad to have one. I think he would need to be a paid assessor; I do not think a retired sailor on the Board, perhaps, would serve the purpose. It would be difficult to get one—a qualified one who would attend quite regularly—and I think that a paid assessor would be a preferable solution. We do feel rather acutely that it is abnormal and not desirable that we should be under the Trinity House in the way that we are.

Appointment of Nautical Adviser to Scottish Board would remove need for,

5472. I suppose you have not considered the principle of Mr. MacArthur's Bill and the suggestion which has been made before us that the existing Lighting Authorities should be swept away altogether and a Government Department substituted for them?—No, Sir, we have not considered that proposal at all.

5473. Have you anything else to say with reference to Question 3?—No, nothing more on Question 3.

5474. Then I come to Question 4. Will you kindly furnish the Commission with your observations in detail upon the statements made by Mr. Norman Hill in answer to Questions 1802 to 1834?—Well, I read those questions carefully, and I could, I think, give a general answer of a satisfactory kind, but they involve figures so much and the Commission desired the presence of our Secretary; I would ask you to put that question to him, he is fully prepared to answer it.

Observations on statements of Mr. Norman Hill.

5475. Yes, by all means?—As my friend Mr. Fleming reminds me, the general answer undoubtedly is very great increase in the service of the number of seamarks that has to be served; that accounts for the increase in the expense.

5476. Do you think that is a sufficient explanation?—(*Mr. Fleming.*) We do; it comes out in figures which the Secretary will give you as quite a sufficient explanation.

5477. I will ask you, Mr. Dick Peddie, some questions with reference to figures put in by Sir Thomas Blomefield. I see that under the heading of "Maintenance of Lighthouses," the average annual expendi-

ture for seven years ending 31st March, 1899, on pay and allowances of staff, including provisions, amounted to £13,571; that figure increased in the subsequent seven years to £16,654; could you give us any explanation of the increase?—(*Mr. Dick Peddie.*) Entirely the increase of the service, I should say, Sir, the details of which I can supply to the Commission.

5478. Arising out of the added new works?—The added new works. I prepared them in the order of Mr. Norman Hill's questions; as a matter of fact, they will all come out in reply to the figures stated by Mr. Norman Hill in his evidence.

5479. Then I will ask you the question I put to Mr. Crawford. Will you kindly furnish the Commission with your observations in detail upon the statement made by Mr. Norman Hill in answer to Questions 1802 to 1834?—Well, Sir, I may perhaps be allowed to refer first of all to Question 1796, because there is a slight error in the figures stated by Mr. Norman Hill which may be corrected. As regards the Northern Lights Commissioners, the figure should be that the total expense has increased from £83,576 to £92,247, instead of from £82,964 to £92,247, an increase of 10·4 per cent. instead of 11·2 as stated by Mr. Norman Hill.

5480. You are taking the six years ending in 1905?—Yes, Sir, the two periods of six years taken by Mr. Norman Hill, 1893-4 to 1898-9, and then from 1899-1900 up to 1904-5. Then, Sir, I do not know whether the Commission desire me to deal with Questions 1802, etc., which touch on the Report of Lord Courtney's Committee?

On increase of average annual expenditure.

5481. I think we have already had some evidence on that subject, either from yourself or from Mr. Stevenson?—From Mr. Stevenson. I think it is quite clear on reading the report of the Committee's proceedings and the statement put in by the Commissioners exactly what their position was. Then, Sir, in answer to Question 1808, Mr. Norman Hill makes certain comparisons. He includes new works, and he brings out that the average yearly expenditure in a comparison of the two periods has increased by 12·8 per cent. Now, Sir, as far as the Northern Lighthouse Board is concerned, the apparent increase is £10,440, or 18 per cent., but for comparative purposes there falls to be deducted a sum of about £1,450 in the latter period which in the first period was charged to new works, being the commission of the Engineer and the salary of an inspector of new works apparatus. Sir Thomas Blomefield has already pointed that out, I notice, in his evidence. Making that necessary deduction, the increase in this service is 15½ per cent. Mr. Norman Hill goes on to compare the average of the six years in the first period with the last year of the second period. This, I would submit, is hardly a fair comparison, but making it, the increase in Scotland is nearly 22 per cent. But if, Sir, you compare the last year of the first period with the last year of the second period, which the Commissioners think is a fairer way of doing, the increase in Scotland is only 4·7 per cent. That is after an interval of six years.

5482. But you are taking single years, not an average of years, then?—Mr. Norman Hill takes an average of the first six years, but he takes the last year of the second six years.

And the causes of that increase.

5483. But if you take the average of the first six years and compare it with the average of the second six years, what is the figure?—The figure then, Sir, is 15½ per cent. Now, Sir, in answer to Question 1809, Mr. Norman Hill states that he knows of no reason for the increases, and I have prepared a statement of the number of new seamarks, etc., established by the Commissioners in the second period or at the very end of the first period, and the charges for whose maintenance actually fell in the second period. Now, Sir, there are seven fully-equipped lighthouses, ten fog-signals, of which eight are sirens, and two explosives, there are seven minor lights attended, there are 21 additional light-keepers and seven minor light attendants, there are seven gas beacons, 13 gas buoys, one gas work, one steamer, and one pier and storehouse at Stromness. The percentages of increase are in lighthouses from 72 to 79, or 9·8; in fog-signals from 19 to 29, or over 50 per cent.; in minor lights from three to nine, or 200 per cent.; in regular light-keepers from 183 to 204, or 11½ per cent.; and in minor light attendants from three to nine, or 200 per cent. The gas beacons increased from 7 to 14, or 100 per cent.; the gas buoys increased from 14 to 27, or nearly 100 per cent.; the gas works are now three instead of two, steamers four instead of three, and storehouses two instead of one, all of which, Sir, the Commissioners think shows an increase which more than justifies the increased cost of maintenance in the last six years.

Mr. D. Crawford, K.C., Mr. J. A Fleming, K.C. Mr. C. D. Peddie.

8 May 1907.

5484. You think those additions, compared with the total number of previously-existing seamarks, represent at least an addition of 15 per cent.?—In our service, Sir.

5485. Yes?—Oh, at least.

5486. At least, so that having regard to the circumstances you mention, it would appear that there was rather a saving than an increase of expenditure?—Well, I should be inclined to say there was.

5486a. Relatively speaking?—Yes. There is one other figure which I might give, the appositeness of which depends to a certain extent on the extent to which the other Services have increased in the same time. The Commissioners believe that they have not increased to the same extent as ours, and if you compare the increase of expenditure, excluding new works, in the Northern Lighthouse Service with the total increase, excluding new works, over the whole three Services, the percentage for our Service is under 3 per cent., and that is less than in either of the other Services.

5487. (*Admiral Henderson.*) Do you know what it is in the others; what the increase is in the other Boards?—On that basis, Sir?

5488. Yes?—Yes; the Trinity House is 4·85, the Irish Lights is 2·97, and the Northern Lights is 2·94, or less, if the sum of £1,450 already mentioned is deducted.

5489. (*Chairman.*) Have there been any other circumstances tending to unavoidable increase of expenditure?—Nothing, Sir, I think. Of course, there have been the ordinary increments of salary. As we are situated in the head office at the present, almost without exception, the officials have been a very long time in the Service, and are all approaching their maximum.

5490. That is a matter of chance?—A matter of chance entirely; that will drop back, but it does represent in the six years an average increase of £450. I think the ordinary yearly increments are about £140, but that of course will rectify itself.

5491. Has there been any increase in the price of coal?—Yes, and in addition the consumption has been enormously increased. For instance, I may say the average steaming of three steamers in the first six years was 29,790 miles per annum; in the second six years it was 38,700 miles for four steamers; last year it was about 45,000 miles.

5492. So that the average work done by each steamer has been steadily increasing each year?—Yes.

5493. Has there been any increase in the ordinary remuneration of lighthouse-keepers?—There has been a readjustment of pay, but I do not think the increases were so material as to call for any mention; there is a slight increase.

5494. In short, we may take it that the cause of the increase is the additional number of seamarks?—I think so; it more than accounts for it really.

On expenditure of the Mersey Docks and Harbour Board.

5495. Are there any other points?—Well, Sir, there are the figures given concerning the Mersey Board, upon which I do not think that we are called upon to make any remarks, but on the face of them those figures are rather startling if, as appears to be the case from Question 1996, these figures do not include maintenance of the seamarks enumerated by Mr. Hill. You will see, Sir, that, excluding new works, the total cost of the Mersey Board is very nearly half of the Northern Lighthouse Service, and it is more than one-third of the Northern Lighthouse Service if new works are included in each case. It is very difficult to understand, considering the small number of seamarks and the extremely restricted area in which they are situated. I may say that, allowing them for each of their lightships and lighthouses more than we allow for our own, and the same for their beacons and buoys, and allowing them for expenses of administration a proportion the same as is allowed in our Service, it is impossible to say where about between £12,000 and £15,000 goes, unless it goes in steamer service, which is unlikely. However, Sir, I do not know after all how these figures are made up, and do not attach much importance to this comparison, as expenditure may be included which has nothing to do with the seamarks given.

Mr. D. Crawford, K.C., *Mr. J. A. Fleming*, K.C., *Mr. C. D. Peddie.*

8 May 1907.

5496. I think Mr. Norman Hill probably quoted the figures not with a view to totals, but to the fact that during the six years for which he gives the figures there had been no increase in the expenses of the Mersey Conservancy. But that would be no doubt fully accounted for if there had been no new works?—Perhaps so. Then, Sir, as far as steamers are concerned, Mr. Norman Hill draws attention to the expenditure in Question 1819. The increase as far as the Northern Lighthouse Board is concerned is 12·3 per cent. I do not think I need to point out further what has given rise to that. Of course, the extra miles steamed nothing like represent the extra work thrown on the steamers; it includes more coaling, more time for loading, more time for gassing, an enormously increased amount of work done by the crews in connection with boating and landing stores, and in carrying them up. They also do a large amount of work in the way of conveying material for new works and erecting that material. For instance, all the gas beacons are conveyed and placed in position by the steam tenders and their crews.

On increased cost of steam-vessel service.

5497. I see from Sir Thomas Blomefield's Table that pay and allowance of staff, including provisions, accounts for more than 10 per cent. out of a total increase of 16½ per cent. in connection with the maintenance of steam and sailing vessels. Sir Thomas Blomefield's figures are somewhat different from those which you have just given, because they refer to a seven years' period ending 31st March, 1906, compared with a seven years' period ending 31st March, 1899?—Yes, Sir, I believe that is so, but I have not seen the Table.

5498. But I quote them because we have them here before us, and probably the proportion in which the different items have increased is very much the same whether you take seven years or six years as the basis of comparison?—Very much the same.

5499. Can you account for that large increase in pay and allowances of the staff?—Well, there is an additional steamer, Sir, which fell on maintenance for the first time in the first year of Mr. Norman Hill's second period.

5500. That accounts for it?—That accounts for it fully; that is to say, the average annual cost of the new steamer, added to the extra coal consumed, absolutely accounts for the whole increase in the periods with which I have dealt. Of course, I have not seen Sir Thomas Blomefield's figures. Then, Sir, Mr. Norman Hill remarks generally that the steamers are unnecessary, and that to the knowledge of the shipowners the work might be done by hired tugs, and so on. I do not know if that is a matter with which I ought to deal, but I may remark that there is no tug that I know of between Aberdeen and the Clyde; and that when a few years ago we had to charter a tug on account of the loss of one of our steamers, we only found one tug at Glasgow which was in any way suitable for the work, and for that tug we had to pay £220 a month, and to find the crew and everything else; we had her for 14 months. But apart from the question of expense, and the fact that specially equipped vessels are required for gassing and heavy work, tugs do not exist in the places in which they are most required. Then, Sir, in answer to Question 1832, a comparison of what Mr. Norman Hill calls the expenses of administration with the total cost; I think there is one source of error, and that is that superannuations are included in the expenses of administration. Now, the great bulk of the superannuation allowances paid in the Commissioners' service are to lightkeepers and to the crews and officers of steam tenders, and form part really of their wages and allowances, and therefore they should not be accounted as expenses of administration. But otherwise there is practically nothing to draw attention to which is not accounted for by the increase in the service, if the necessary deduction is made of the commissions for new works paid to the Engineer, which in the first of Mr. Norman Hill's periods were charged to new works, but in the second are charged to the head office.

On necessity for steam-vessels.

On administration expenses.

Observations on Sir T. Blomefield's Tables.

5501. Yes, quite so. I see in Sir Thomas Blomefield's Table salaries and allowances at the head office have increased in the first of his periods as compared with the second by 69·6 per cent., but that is mostly accounted for by the change in accounting which you mention?—That is so, Sir; that made a difference of £2,150 on the average in the head office expenses, which previously amounted in all to about £4,000 odd, and rose to £6,000 odd. There has also been an increase in the head office staff of one clerk and a female typist, but otherwise there has been nothing. Then, Sir, superannuations have increased too. They account for £710 out of £1,690 of the increase, and of course you know, Sir, that is more or less automatic under the Superannuation Acts. £530 of that is attributable to the allowance of the late Secretary; practically three-fourths of the total amount.

5502. Have you anything to add, Mr. Dick Peddie?—I think not, Sir, not in answer to these questions.

5503. Very well. We will proceed to the next question, Mr. Crawford. Do you consider that the desirable expenditure on new works, including important alterations and improvements of existing lights, is likely to be greater or less in the future than in the past?—(*Mr. Crawford.*) Well, the view of our Board is that it would not be safe to count on a very large reduction. No doubt the coast is being gradually lighted up, and though it appears in the evidence that there are longer blanks considerably in Scotland than elsewhere, we always have a programme looking a good long way ahead, and as far as possible on a certain system and scheme, and in the immediate future we do not look forward to more than about four or five fully equipped lighthouses. I do not remember the names of all of them at present exactly; the last perhaps would be one which shows the sort of contingency one must keep in view; the Vee Skerries, which has often been mentioned, and which is mentioned in the evidence here. That would at present, unless some cheaper way is discovered of doing it, be an extremely costly work, and it is an extremely dangerous place. It is a place which has never been taken in hand simply because of the very great cost, and it was thought by everybody that with such money as was at our disposal it had better be spent on something else, notwithstanding the great danger. But then, in addition to those, we have still got a proportion of our lighthouses which are not lighted on the most modern or efficient system. We have got a proportion which are still catoptric, as the Engineer described them, and we have converted a great many. That is a somewhat costly process. Then we found it necessary of late years to spend a good deal of money in ways that it could not have been spent in before, owing to new inventions, and in the way of lighted buoys, and so on, and we are advised that it is quite probable that in the advance of science we should be naturally led to spend a good deal of money in similar ways. It would be imprudent to form a restricted forecast in that respect of what the expenditure would be. But then there is another reason why too economical a view of the expenditure should not be entertained—it runs partly into the following question, and that is that hitherto the General Lighthouse Fund, formerly the Mercantile Marine Fund, has only been applied to the wants of passing navigation. Coasting vessels and fishing boats and local requirements which cannot be said to belong to general navigation have not been allowed to participate in the benefits of the Fund. In answer to the next question, I shall have something to say to that, but I say in anticipation that our view is that there is nothing in the charter of our duties which confines it to seagoing ships, and that, assuming it to be the case that a limited number of more fully equipped lighthouses will complete the system as it has been at present worked for general navigation, then the claim of the local lights will come in, and we think it would be unwise to take too low an estimate of the expenditure as far as people can reasonably forecast say for 20 or 25 years. Apparently the recent average for new works has been about £20,000 or £21,000. Well, if I were asked personally I should say it would probably be less than that in an average of years, somewhat less soon after we have done those big works, but we think as a Board that it would be unwise to base the policy of the Lighthouse Authorities generally on a low estimate of what the next few years would be.

New Works: Decrease of expenditure on, is improbable.

Necessity for, in Scotland.

Claims of coasting and fishing vessels to,

5504. So far as the Scottish lights are concerned?—So far as the Scottish lights are concerned.

5505. You think you see your way usefully to spend something like the same annual sum in new works that you have spent lately?—Probably, or not much less.

5506. And in particular you think it likely that claims will be made upon the General Lighthouse Authorities to erect local lights, or lights comparatively of a local character, to a greater extent than formerly?—Oh, I think so, Sir, and when I said not much less I mean that with regard to the next immediate few years we really have no reason to anticipate

any reduction of what we would like to see and like to get for our useful purpose.

Mr. D. Crawford, K.C., *Mr. J. A. Fleming*, K.C., *Mr. C. D. Peddie*, 8 May 1907.

Local Lights: Opinion as to provision of, by General Lighthouse Fund.

5507. I come to Question 5. Have you any suggestion to make as regards the provision of lights of local utility outside the jurisdiction of any local lighting authority, and yet of little or no benefit to passing trade. You have answered that to some extent already, but I think you said you would answer it more fully?—Yes, Sir, the Secretary has given me some particulars about that which I might be allowed to glance at. This has been a somewhat debated question because we are naturally constantly liable to applications for assistance to local lights, some of which would be unquestionably very useful, and the applicants are not very readily satisfied with our reply that we are not able to do it, because such a light has not been useful for general navigation. The Board would like to make it quite plain to the Commission that we by no means think it would be a misapplication of the General Lighthouse Fund, at all events of such portion of it as we are entrusted with the administration of, to assist local lights or to assist fishermen who do not pay lighthouse dues, as opposed to merchant shipping who do pay lighthouse dues. There is a class of dangers at sea which may be described as, so to speak, between wind and water; they are not under the jurisdiction of a local Harbour Authority, nor would the erection of a seamark upon them be of benefit to the general navigation, and accordingly, in the meantime, they do not get any assistance. It is true that a local Harbour Authority, I believe, would not find very much difficulty in getting its powers extended to take in anything of that kind approaching that harbour, but then that is a question of money, and some of those local Harbour Authorities are very poor; they could not do it; it is impossible, and in many cases there is no harbour authority in the neighbourhood. The question has often been raised. So long ago as 1834 a Select Committee—I presume of the House of Commons—on Lighthouses, recommended "that in future a distinction should clearly be made between those lights, which by their situation are useful to the general navigation of the country, and ought to be maintained by general contribution, from those which are useful only to the harbour or locality where erected, and which the local dues and funds should maintain." And it is said that this recommendation arose out of the practice in Ireland of the General Lighthouse Authority maintaining out of the general funds many purely harbour lights. In Scotland harbour lights in the same sense have never been undertaken by the Commissioners. The meaning of the recommendation of the Select Committee was that, while lights of a local character but outside the jurisdiction of Local Authorities might be erected by the General Authority, such lights should be maintained by local dues and funds—*i.e.*, by light dues leviable on the shipping frequenting say a particular port or locality. I am reading from a statement drawn up by the Secretary. Then, several such lights have been erected in Scotland, for instance, Cromarty, Chanonry, Montroseness, Loch Ryan, Devaar, Lamlash, Loch Indaal. For the maintenance of these lights special duties were charged on local shipping. The distinction made by the Select Committee has, however, now ceased to have any force. Light dues are now regulated by the "Merchant Shipping (Mercantile Marine Fund) Act, 1898," and under it there is no longer a differentiation between "general passing" and "local" lights. The only distinction now made is between "home trade" ships and "foreign going" ships. Local dues in such cases were more than double the general passing dues. This distinction was done away with by the Act of 1898. Well, in that way, a great many years ago, the distinction that I have referred to was recognised and emphasised by that Select Committee of 1834. Local lights of considerable importance, a good many of them did get something, because the system at that time was that they paid nearly double dues, and in that way they were self-supporting more than the others. But now that is done away with, and they are in a worse position than ever. Then, I think, I can say certainly for the Board that we have acquiesced in the policy of the Board of Trade, which we had no choice but to do, and with the Trinity House in observing this distinction between general navigation and local lights, but we have sometimes differed in the application of the principle. Differences on the matter have arisen between the Commissioners on the one hand, and the Trinity House and the Board of Trade on the other, and different views have been held as to what constituted "local traffic." For instance, the Trinity House refused to approve of four minor lights in Shetland on the ground that they were "local" lights. The Commissioners maintained that they were something more than purely "local" lights, and in any case they protested against the idea that the fishing interest had no claim upon the attention of a General Lighthouse Authority. It may be said that the Commissioners recognise no distinction between "general" and "local" traffic, except one of relative importance deciding the priority of the erection of the lights proposed. That is the view that we have taken. There are several instances here; it is rather long, I think, to read; there are some that the Secretary gives from the Solway Firth.

Lights erected by General Authority and maintained by local dues.

5508. Perhaps we might have that memorandum put in; would there be any objection to that?—The Secretary will revise it and put it in.

5509. If Mr. Dick Peddie will kindly revise it and put it in, I think it would be of service to us?—Yes, that is the position of the matter, and I may add that in the northern parts of Scotland there might have been still greater practical difficulty than there has been, because there was a considerable number of lights that we thought would be of immense service, and were cryingly wanted by the population, and yet we could not get them passed by the Board of Trade or the Trinity House either, on the ground that they were too local. Well, in several important cases that difficulty has been got over by the Congested Districts Board, which is a comparatively recent body, assisting the population in the poorer districts of the north of Scotland. Of course, their funds are not very large, but with their assistance, at their expense, in short, we have got a good many of those lights which were very much needed, and which we would not have otherwise got, and we maintain them with our service, but at their expense.

Lights maintained by Congested Districts Board.

5510. I think this evidence differs to some slight extent from that which was offered by the Secretary at an earlier stage of our proceedings, because in Question 1546 I see he says:—"The Commissioners have rather been driven to decide that seamarks purely for the convenience and safety of the fisheries are not within their province, because fishing boats pay no light dues, although the preamble of the 1786 Act which constituted the Commissioners, actually bore that it was for safeguarding navigation and the fisheries." I think you are taking rather a more liberal view, Mr. Crawford?—Yes, I think the inconsistency is only apparent. In refusing those applications we have had to answer briefly, without going into argument, and we gave that as the reason; that is the policy; but it is the policy which has been imposed upon us, partly by the other Authorities, and partly by what we recognise to be the inadequacy of the Fund.

5511. You would, as a matter of fact, approve of a more liberal policy in respect to fisheries and local lights being adopted?—We should, certainly.

5512. Where there is no local lighting authority?—Yes.

5513. (*Admiral Henderson.*) Has not the character of the fishing trade altered very much by the adoption of steamers within recent years in Scotland?—Oh, it has very much.

Light dues: Freedom of fishing industry from,

5514. That being the case, is there any reason why these steam fishing vessels should not pay light dues? To all intents and purposes they make use of the sea-going lights, and go long distances?—Yes; we have never considered that as a Board. I should not like to answer that question off-hand. (*Mr. Fleming.*) It is hardly within our province to consider it.

5515. No, but I am asking your opinion in this sort of way, whether some of the difficulties of these questions might not be got over by making fishing vessels of a certain class and character pay their light dues?—I may mention this: that I have heard it several times stated by fishermen that they would willingly pay the dues provided they get lights which they clamantly need, but which we cannot give them, because they are purely for fishing purposes.

5516. What I want to impress is that it is true, I

Mr. D. Crawford, K.C., *Mr. J. A. Fleming*, K.C., *Mr. C. D. Peddie.*

8 May 1907.

believe, to say that the character of the fishing vessels has altered altogether?—Undoubtedly.

5517. The old sailing vessel has died out; most of them are steam-trawlers and vessels; to all intents and purposes, seagoing vessels using sea lights?—Steam liners, trawlers and drifters.

5518. (*Colonel Herbert.*) Has the grievance, if you may call it a grievance, of the fishing vessels been accentuated by the alteration of 1898?—(*Mr. Crawford.*) The alteration by the legislation with regard to dues?

5519. The alteration by the legislation with regard to dues?—I do not think so; no, I do not think so.

5520. (*Chairman.*) There has always been a reluctance on the part of the General Lighthouse Authorities to set up local seamarks at the expense of the General Fund?—Oh, that has been so from the beginning.

5521. But fishermen and other local interests are not less generously treated now than they were before 1898?—No, I should say not.

5522. (*Admiral Henderson.*) It would not be possible to lay down any general line of demarcation between what is local and what is general?—No, you see they have been trying to do it, you may say, for almost 100 years, and it is laid down pretty sharply in practice; except on pretty numerous occasions, some of which are noted in this statement that the Secretary will put in, when our Board have been inclined to take a more liberal view than we could get sanctioned by the Trinity House have reduced their consumption of oil. May I add that there was a distinction drawn in former days among general lights, on account of the tolls that were to be charged in respect of them? Those instances that Sheriff Crawford gave were established as local lights in this sense, that for them were charged local dues—it was so much a vessel, I think, of a certain size—whereas the passing toll was a fraction of a penny a ton. The result was, the local dues were about twice the amount of the passing dues, but that distinction was drawn by Trinity House and the Board of Trade, and it has now been swept away.

Local dues.

5523. (*Colonel Herbert.*) Can this question be said to be one that is purely a Scotch one, in that in England we have not got the same condition that you have in the north of Scotland, where there is not much passing trade, but there is a considerable fishing trade?—(*Mr. Crawford.*) Well, I do not know the circumstances of England in this respect, but I should have thought that though the question was not so large a one in England, perhaps, it must exist in England too; the question of local lights and other lights.

5524. I am speaking specially with regard to the fishing interest?—Yes, I do not know; I cannot say how England would compare with Scotland in that way.

5525. I mean, where there is a large fishing interest in England there is also a large passing trade, which causes the establishment of lights which are also of benefit to the fishing trade, whereas that is not the case in the north of Scotland?—(*Mr. Fleming.*) In England the harbours are less remote from the general lines of passing trade. (*Mr. Crawford.*) A good many of the important fishing harbours in Scotland, like Aberdeen, for instance, are large seaports as well, but then there are no doubt a great many smaller fishing centres. I am afraid they are tending to disappear, but there are a good many fishing villages.

Communications between Board of Trade and Northern Lighthouse Board.

5526. (*Chairman.*) I pass to the next question. What was the total number of communications respectively between the Board of Trade and your Board for the year 1905-6?—I understand, Sir, that the communications from us to the Board of Trade were 236, and those from the Board of Trade to us were 234. Those are official and semi-official communications, and the queries received and answered 95.

5527. Does that represent additional communications, that figure of 95?—Additional, yes. (*Mr. Fleming.*) Additional on accounts and estimates. (*Mr. Crawford.*) And then the Commissioners received from the Board of Trade, through the Trinity House, 26 communications.

Lightkeepers: Number of,

5528. In addition to these questions which we sent you, there are just one or two which I should like to ask with reference to lighthouse maintenance. What is the total number of your lighthouse staff?—205.

5529. Two hundred and five lightkeepers. That does not include the occasional keepers, does it?—No; over 70.

5530. It does include the attendants on minor lights?—(*Mr. Peddie.*) No.

5531. Could you give us the number of attendants on minor lights?—(*Mr. Fleming.*) Twelve now.

Lighthouses: Number under Northern Lighthouse Board.

5532. I think those figures clear up my difficulty. In answer to Question 1439, the number of fully equipped lighthouses under the Commissioners of Northern Lights is given as 80, in addition to which there are 27 minor lights. The table of lighthouses put in by Sir Thomas Blomefield gives figures which I cannot quite reconcile with those; perhaps you could explain the difference?—(*Mr. Crawford.*) I think it was 80.

5533. According to the table put in by Sir Thomas Blomefield, the total number of lighthouses is 89?—(*Mr. Fleming.*) That is 80 lighthouses and 9 minor lights. Sir Thomas Blomefield has considered the lighthouses charged in abstract "A"; we are dealing with fully equipped lighthouses; there are 80 of them; there were 9 minor lights.

5534. How comes it that only 9 out of 27 minor lights are reckoned under heading "A"?—(*Mr. Peddie.*) They are the Congested District Board's lights, and are not included in the lighthouse accounts. There are 12 minor lights now, 11 of which are charged to abstract "A" of our accounts and one to abstract "C," but at that date with which Sir Thomas Blomefield is dealing, I think there were 9 only charged to abstract "A." (*Mr. Fleming.*) Nine of ours and fifteen of the Congested Districts Board's Lights and two of ours established since.

5535. In your abstract of expenditure, the expenditure on these minor lights is not included?—(*Mr. Peddie.*) Of the 12 it is, but not of the 15. Abstract "A" includes all fully equipped lighthouses and 11 minor lights.

5536. And minor lights, save those which are paid for by the Congested District Board?—Yes, Sir, the latter do not appear at all.

5537. That concludes the questions which I propose to ask you, Mr. Crawford, but perhaps there are some other points on which you would wish to offer your observations in connection with the evidence that has been previously given?—(*Mr. Crawford.*) I do not think so, Sir. I read the evidence carefully, and I had your questions before me, which seemed to me to cover very much the general field of our work. I have nothing more to add.

Board of Trade Control: Efficiency of.

5538. (*Colonel Herbert.*) I wish to ask you one or two questions on the question of the control of the Board of Trade, which I think you said was established in 1853?—I think so, yes.

5539. That control, I understood you to say, was exercised over every item of your proposed expenditure?—It is, yes.

5540. Now, in your opinion, has the Board of Trade got the means and the machinery for exercising the technical control, and for making the examination that is necessary in order to exercise that control?—Well, I suppose that question would apply only or chiefly to questions of new works. For instance, in matters of approving of a contract, or anything of that kind, even an engineering contract, I should have thought that they had abundant expert knowledge on that point. But in regard to purely nautical matters, of course, the amount of advice at the command of the Board of Trade is not a matter in which our Board has any actual knowledge. I think that some of the questions in the evidence which I have read were directed to bring out that in such questions they were entirely dependent on the opinion of one officer, Captain Frederick. Well, we do not know anything about that, but our experience is that in deciding questions of that sort we did not always get what we wanted, but we thought that their decision was eminently intelligent, and that it did not show any want of knowledge on the subject.

5541. Does it come to this, in your opinion—that under the arrangement of 1836 the real control, technical control, is exercised by Trinity House and not by the Board of Trade?—No, I do not think so; during all the time that I have been at the Board we always considered the Board of Trade as the real operative Authority; and the Trinity House—of course we have to get its sanction for new works, but we never thought of it as a supervising Authority in the same light, not at all.

5542. Well, I may say we have had it in evidence

that this supervision is considered necessary, because the Board of Trade has not got the machinery to carry it out. That I understood was the evidence of Sir George Vyvyan?—Yes, we have not seen his evidence.

5543. I wanted to know whether your experience bears that out?—Well, of course, we did not know very much about the constitution of those bodies, but it would be quite a new view to our Board that the real brains of the control of our service was the Trinity House and not the Board of Trade; it never occurred to us at all. Of course, we quite recognise the statutory powers of the Trinity House, but we rather considered it as an interloper, although, of course, it had the statutory power.

5544. The point, you see, in my mind is to ascertain whether the control of the Board of Trade is a real control, exercised directly by the Board of Trade, or whether it is merely an official fiction?—Well, I should say it was a real control in this way. For instance, it is not very uncommon that we differ from the Trinity House and appeal to the Board of Trade, and it is not very uncommon that we are successful. The Trinity House decision on nautical matters is reversed, and our decision is accepted.

5545. That is on an appeal?—That is on an appeal. We have put in a statement showing the occasions on which we have differed from the Trinity House, and where the Board of Trade has sustained our view. That, I think, is as much evidence as we could be expected to give that the control and authority of the Board of Trade is real, and, whether it is wisely exercised or not, that it is superior to the authority of the Trinity House in practice.

5546. (*Chairman.*) Where the Commissioners of Northern Lights and the Trinity House have differed as to the expediency of putting up a new work, the Board of Trade have, I think, invariably decided, after hearing the question argued by yourselves and the Trinity House and the Advisory Committee, is not that so?—I think so, at all events, in any case of the slightest importance, yes. My friend reminds me of a case—I was thinking of it while he was answering questions before—it is a case about the expediency of short flashes in lighthouses. Our Engineer had a very strong opinion about it; we have very great confidence in him, and he had strong objection to very short flashes in new lighthouses, and the Trinity House insisted on short flashes, and on several occasions they objected to our proposal because it did not include short flashes. Well, we said that short flashes are dangerous, and we strongly remonstrated against being obliged to do it, and ultimately our view prevailed, and the Board of Trade decided we were right; the Trinity House gave in.

5547. (*Colonel Herbert.*) We have had some evidence on that point about long and short flashes. Those cases that you have referred to include the 24 proposals to which you referred just now, where the Advisory Committee intervened?—(*Mr. Dick Peddie.*) It is impossible in the office to trace what those 24 are. They are stated in a table put in by the Board of Trade.

5548. I understood you to say just now that to those 24 cases the objections were raised by the Advisory Committee?—(*Mr. Crawford.*) That is so. (*Mr. Fleming.*) So the Board of Trade witnesses have said, but we ourselves have no information as to these figures.

5549. This return, of course, includes others?—All we have is the answer in the evidence in which that statement is put in; we have never seen the statement; we do not know anything about it; we cannot trace figures agreeing with them from our records.

Control of Trinity House and Advisory Committee: Objected to.

5550. Your proposals have to run the gauntlet of the Trinity House and the Advisory Committee?—And the Board of Trade. (*Mr. Crawford.*) And the Board of Trade.

5551. The Board of Trade I put in a different category. As you say, that is the legitimate controlling Authority?—(*Mr. Fleming.*) Yes, we take no objection to the Board of Trade's control.

5552. But you object to the others?—We do, Sir.

5553. Emphatically?—We do. We think that one is needless and the other is anomalous.

5554. To go to another point: You have had no opportunity, I understood, of instituting any comparison of expenditure between your expenditure and that of the other Lighting Authorities?—No, Sir, and if I might be allowed here to make a few remarks, which I intended to ask leave to do afterwards, it is extremely difficult for us to do so. We have the published statements of accounts in which the various items of expenditure are entered under separate heads. Now we know that this system of working, which is different in the three Boards, certainly as regards Trinity House and us, results in this, that there are items of maintenance which appear under one head in our accounts and under another head in Trinity House accounts. Now I might point out one that the Chairman referred to, the Head Office expenses, which in our accounts appears as something like £7,000. That includes the salaries of district superintendents. District superintendents are the officers who travel about accompanied by artificers and do all the repairs in the light rooms and engine rooms. These are overhauled annually by them. In the Trinity House a great part of that work is done at their works at Blackwall, I think, which appears under a separate head in the accounts.

Mr D. Crawford, K.C., Mr. J. A. Fleming, K.C., Mr. C. D. Peddie.

8 May 1907.

Expenditure: Difficulty of comparing the three Boards as regards,

5555. Not now?—That meets my remark.

5556. (*Admiral Henderson.*) You charge your superintendents to the Head Office expenses?—To the Head Office.

5557. The Trinity House charge their superintendents to the district storehouses?—Then you also notice under the heading of District Storehouses, Trinity House, £9,000; whereas our storehouses are £900. The difference there is that with us a storehouse is simply a place into which stores are received from the contractors; they are distributed into smaller parcels for conveyance to the lighthouses and sent out, and also there are some few testings of oils and smaller matters done there, but it is purely a storehouse, not in any sense a workshop. Now we understand the Trinity House storehouse is to a very large extent a workshop. All that expense of workshop is included as regards the salary of the district superintendents under our head office expenses, and as regards the actual work done, the wages of all the artificers, I think, are apportioned to each lighthouse, and appear in Abstract "A."

5558. (*Colonel Herbert.*) Does not that fact of the different system of accounting indicate that the control of the Board of Trade is a very light one?—No, Sir, I take it that the Board of Trade is equally able to control one system of administration as another. You see the difference of the system of accounting results, it seems to me, entirely from the difference of system of working. Our work is done *in situ*; the work here is done at headquarters.

5559. The controlling Authority of all those systems should be able to institute a comparison between them?—Of course, the difficulty in answering is that I do not know what the other Authorities' accounts are. You could ascertain the facts from our accounts, but I do not know whether you could from the other Lighting it would not. But if you ask me whether it would bring them into line with our accounts; that I do not know.

5560. (*Mr. Ennis.*) I think you have said, Mr. Crawford, that you are of opinion that a single Lighting Authority would not be as effectual as the triple arrangement that at present exists for the lighting of the coasts of the kingdom?—(*Mr. Crawford.*) I do not think it would. The question that we were actually asked was whether it would be more economical, and I gave reasons for thinking it would not. But if you ask me whether it would be more effective, I think not. I think that centralisation to the extent that it is carried is desirable; that is to say that you have all the money—public money, and under a public Department which is directly accountable to Parliament; but on the other hand, for the spending of the money within the limits, within the limits that actually exist, I think it would be, and is, more effectually done by giving those who understand the local wants a certain freedom of hand, and that the actual administration is more effective. Of course, I look upon it from the point of view of our Scottish Board, and I really can hardly conceive that our work would be nearly so effectively done if the office were removed to London.

One Central Lighthouse Authority: Disapproved.

5561. Well, I gather that your view is also that whilst you prefer the continuance of the existing arrangement with regard to three Lighting Authorities for the various countries, that you admit that the constitution of each of the several Authorities is more

Mr. D. Crawford, K.C., *Mr. J. A. Fleming*, K.C., *Mr. C. D. Peddie.*

8 May 1907.

or less of a mediæval character, and that it might with advantage be modified to suit modern requirements?—Well, they are all theoretically very different and very peculiar; there is no doubt about that; but as to our own, of course we do not desire any change, and we should be a little afraid of anything which would diminish the efficiency of what we think is a good practical machine just now merely for the sake of theory or for the sake of change. As to the addition of some members of technical knowledge—it may be that it may be thought by Parliament or by the Commission that that would improve our body—that is a thing we do not oppose.

Northern Lighthouse Board: Constitution of,

5562. I understood you to say that the addition of representatives of the shipping and nautical interests would be desirable, and that you had, as a matter of fact, certain representation in so far as the large shipping towns had at the present time representation on your Board?—Yes. I should say rather may be, than would be, desirable; may be desirable, if it is thought that the expert knowledge of our Board requires reinforcement.

5563. But I think I also gathered from your evidence that the Provosts and Bailies representing those towns were not very constant in attendance at your meetings?—That is perfectly true, and while Mr. Fleming and I are not commissioned by our Board to discuss any proposed changes that is an aspect of it which I think one cannot fail to recognise that if the Provosts of certain towns are put there for the purpose of representing and making known the true interests of those towns, and if they do not come that perhaps the object might be better attained by giving us some personal knowledge in a different way.

5564. I put it to you in this way; you claim that the sole governing authority for the Northern Lights should be the Board of Trade?—Yes.

5565. You desire to see both the authority of the Trinity House and—I will not say the authority of the Advisory Committee because they have no statutory authority—but the operation of their advice as applicable to your needs dispensed with?—Yes.

5566. Do you not consider it would be an additional argument in favour of your contention if a nautical element were introduced into both the Northern Lights and the Irish Lights, seeing that the Trinity House consists practically of nautical experts, and that the allegation with regard to both the other Boards is that they are, theoretically at least, lacking in nautical knowledge?—Well, speaking for myself, Sir, I am bound to say that I think there is a good deal of force in that, that there is a good deal to be said for the view that a nautical element might strengthen our Board, either by giving us a nautical assessor or a representation of shipmasters, and possibly shipowners, on the Board.

5567. With a proper mixture of nautical element in those Boards your argument that the control of the Trinity House is unnecessary would carry greater weight, would it not?—No doubt it might; yes.

Coast Lighting of United Kingdom: Importance of,

5568. I take it that you would agree to the principle that the lighting of the coasts of the United Kingdom ought to be highly efficient?—Certainly.

5569. Quite as efficient as the lighting of the coasts of any other country in the world?—Oh, unquestionably.

5570. Looking to the volume of trade that this country deals with; but you also recognise that there are various classes of users of the maritime highways interested in their efficient lighting; that it is not confined to the oversea trade?—No.

5571. That you have the oversea trade, the coasting trade, His Majesty's Navy, cross-channel steamers, the fishing fleet, and, of course, the small coasting trade?—Yes.

Light dues: Relative proportion of local and general, prior to 1898.

5572. You stated, I think, in your evidence, I am not sure if it is in the paper you proposed to hand in, that local dues at a particular period—I did not quite catch the period that you stated—were more than double the passing dues?—I think up to 1898.

5573. At the time that the light dues were collected as applicable to different classes of trade?—Yes, it was differentiated by lights, I believe; a particular light.

5574. But I understood you to make the statement that at this particular period the amount of revenue derived from local dues was more than double the revenue derived from passing ships?—No, I beg your pardon, I did not express myself properly. What I meant to say, and I hope that is correct, for I am not fully acquainted with the details, is this, that if you had a local light of that kind, say Cromarty or Chanonry, a vessel paying dues in respect of it used to pay double the dues that steamers passing an outside light would pay.

5575. By reason of passing more frequently, is it?—Not passing at all; each time it passed it paid about double what a steamer passing an outside light would do. (*Mr. Fleming.*) In those days a ship paid for every light it used. It was decided that it used a light if it passed within a certain number of miles of it; it had to pay for each light it used a fraction of 1d. a ton, very often one-sixteenth, sometimes even one-thirty-second, a small thing of that sort. It also had to pay for every local light it used. The payment the toll paid for the local light amounted in the case of a ship to double the toll for the general light, an outside light.

Local lights.

5576. That is so, that the rate levied by the local authority?—Not by the local authority; the rate levied by us.

5577. By the General Authority?—There is room for a slight misapprehension here. These lights were put up by the General Authority although dues at a special local rate were levied for them. They were not put up by, and they were not under the control of, any local authority at all; they remained under our control.

5578. What would be known as a local light at present would be a light erected and maintained by a local authority?—Yes.

5579. And outside the purview of the General Lighthouse Authority altogether?—Yes, except for their duty of general supervision.

5580. But the local light you are speaking of does not come within that category at all?—No.

5581. That is where my misapprehension arose?—It is a misapprehension that might very easily arise from the use of the word "local" in two senses.

5582. (*Sir Frank Adam.*) Do you keep those funds separate?—No.

5583. They all go into the General Fund?—They all went into the General Lighthouse Fund; the Mercantile Marine Fund.

5584. (*Mr. Ennis.*) In any event, these various classes of trade and commerce use the lights on the coast of the kingdom, and I would like to ask, would you not provide for each and every one of these different classes of users?—(*Mr. Crawford.*) Provide for there being a service?

Provision of, out of General Lighthouse Fund.

5585. Provide for your fishermen, and assuming there was a stretch of coast on which there was a good fishing trade, and there was no passing trade, do you consider the lighting of the coast would be efficient if the needs of the fishermen were not catered for?—No, we do not, and we do not think that the lighting is complete yet. We think—and the view has been imposed upon us, but I do not know that we seriously differ from it—that the general navigation has the first claim. That is arguable, but that is the policy that has been followed for long before our time. But certainly our Board quite concurs with what I understand to be the spirit of your question—namely, that all the others—for example fishermen and the coasting trade—have a claim; that the sooner they are provided for the better; that they ought to be provided for out of the General Lighthouse Fund.

5586. The question of the incidence of dues in regard to lights does not come within the purview of this Commission?—No.

5587. But we have to inquire into the general efficiency of the lighting of the coasts. My question is, do you consider the lighting of the coast would be efficient if these various classes of users of the coast lights, and the various people whose lives and property would be endangered by the lack of efficient lighting, were not cared for?—Our view is that it would not, and the contrary view of the people who pay light dues, that in consequence of that the lighthouses are practically their property, and they ought to be administered solely for their benefit—that is a view that we do not assent to at all.

5588. Have you felt any appreciable effect of the appointment of the Advisory Committee in 1900 in the direction of rendering your applications for

Advisory Committee: Deprecated

sanction for works more difficult to obtain?—Well, undoubtedly, my personal opinion is—we have never deliberated that at the Board—I must say that I think it has been an additional obstacle and difficulty to overcome. We always quite recognise, in the case of the Board of Trade, that with a due regard to economy, and to the Fund that they had custody of, we could not expect them to give us all we asked for, that is to say, our programme must be worked out by degrees, and we have probably openly asked for rather more than we expected to get every year; I think that is quite fair on both sides, but the Advisory Committee in practice raised irritating obstacles, and we were sure to meet with refusal for most of our proposals. And then I must say that we were afraid, at least, I was—this is speaking for myself—that when you are putting an authority in the position that they could object to everything, the Board of Trade would be more than human if they had not a tendency to give them a sop now and again, and to refuse something that they would not otherwise have refused if it had not been for the Advisory Committee.

General Lighthouse Fund:

5589. The General Lighthouse Fund, you have stated—I think we have had it from other witnesses—is a fund which is for the benefit of the lighting of the coasts of the entire kingdom, and is drawn upon, so far as the Board of Trade sanctions it, by the various Lighthouse Authorities. Would not the fact of objections taken to works, applied for by the Scottish or Irish Authorities, being successfully urged, have the effect of leaving a larger surplus of money to be applied to the lighting of the coasts of England?—Well, Sir, no doubt it would, but we have never had the slightest suspicion that the Trinity House has been actuated by that motive; no suspicion of that.

5590. My question did not exactly refer to the Trinity House; it referred to the general principle that there is no apportionment as between the three countries of the income of the General Lighthouse Fund?—No.

5591. You have not, either in theory or in practice, when making your estimates of cost, to look to a fixed sum that you would be supposed to expend within a given period?—No; we have what for practical purposes is an unlimited fund to draw upon—to apply to. The fund was not always in so flourishing a condition, but I believe at present it is more than enough to meet all reasonable requirements.

5592. Are you aware that the ship-owning community, that is, the people who pay the light dues, received 12½ per cent. concession some time recently with regard to light dues and that a further concession of 7½ per cent. is contemplated, which would be very proper, provided the efficiency of the service was not interfered with?—Yes.

5593. But do you consider that the operation of the Advisory Committee does or does not tend towards starving the service, and, possibly, to a decrease in efficiency?—Well, I have expressed myself very plainly about the Advisory Committee. I do not want to say anything more against it, but I am not in favour of it at all.

5594. I think, if I mistake not, that Mr. Fleming has dealt with the question of the difficulty of comparison between the heads of expenditure of the different Boards. Now, there is one point in which there seems to me to be a wide discrepancy between the practice of the different Lighting Authorities, and it is an item in which a very considerable saving, or the reverse, might accrue from the efficiency or inefficiency of the system adopted. It is with regard to the relief of your lightvessels and rock lighthouses. How frequently do you relieve those stations in your service?—(*Mr. Fleming.*) Fortnightly.

Lightvessels and Rock Lighthouses: Relief of,

5595. That is your universal practice?—Yes.

5596. Are you aware that in the Trinity House service the reliefs are, in five-sixths of the cases, monthly?—So I see from the evidence.

5597. I think the reliefs by the Irish Lights Board are three reliefs each month?—I also see that in the evidence.

5598. Therefore, when the Commissioners come to endeavour to compare the cost of that particular branch of the service, we are faced with the fact that the Trinity House relieves monthly, the Northern Lights relieves fortnightly, and the Irish Lights relieves every ten days?—Yes.

Mr. D. Crawford, K.C., Mr. J. A. Fleming, K.C., Mr. C. D. Peddie.

8 May 1907.

5599. And we cannot make an exact sum in proportion of it, because, manifestly, assuming that the Irish Lights were to reduce their services to the same proportion as the Trinity House, that is, the monthly services in place of a service each ten days, they would certainly not save two-thirds of the cost. They might make some saving, but they would certainly not save two-thirds of the cost. But what I chiefly wish to ask is, why do you consider the fortnightly service desirable?—Our view is that in the extremely isolated stations, where we make reliefs, six weeks is quite long enough to keep a man in such a place, away from his wife and family; secondly, that it is desirable, especially during the winter months, that the relief should be made as frequently, in reason, as possible, in case of illness or anything or that sort, because many of these places are outside all communication at all; and, thirdly, that many of these stations are stations which can only be relieved at certain states of the tide, and it is necessary that we should take advantage of those tides. I may just add that there is a proposal to connect up the Flannan Islands, which is a very isolated place, and a difficult landing, with a wireless system of telegraphy. If that is carried out, we are prepared to consider whether the increased communication that the lightkeepers on the rock will have with their families at home will not make it possible for us to halve the numbers of reliefs; give a monthly relief, instead of a fortnightly one.

5600. I should like some further information with regard to reliefs. I understand, from your reply, that you relieve the men in your rock lighthouses each six weeks. Is that so?—Yes, each man each six weeks. There are, as a rule, four men on the staff of a rock lighthouse; there is always one at the shore station; there are always three on the rock. A fortnightly relief is made, and one man is changed. The result is that each man has a fortnight off and six weeks on.

5601. You have, I believe, a very limited number of lightships?—One.

5602. You have some unattended lightships?—We have two.

5603. But you have only one attended lightship?—Only one manned lightship, and that has a foghorn on it.

5604. What is your system with regard to reliefs on your lightship?—That is fortnightly relief also.

5605. Similar to the rock lighthouses?—The lightship is on the north side of the Firth of Forth. The steamer that makes the relief to the Bell Rock makes that relief too.

5606. You make it coincide with the relief of the other?—Yes, and there is no extra steaming.

Congested Districts Board: Lights maintained for,

5607. I think you spoke of the Congested Districts Board and local lights; I think they have a number of those?—Fifteen out of the twenty-six, which is the correct number, not twenty-seven, as has been mentioned; we have now eleven, which we maintain out of the General Lighthouse Fund; and there are fifteen which they pay us for maintaining.

5608. I mean that you have joined hand in hand with the Congested Districts Board to provide these lights?—Not quite so; we have not joined hand in hand with the Congested Districts Board in providing, but they have provided the funds for their erection and maintenance by us. We give our service for payment, and the payment is calculated upon what we think it costs the service, so that there may be no burden thrown upon the Lighthouse Fund.

5609. You do co-operate with them, but you do not co-operate with them financially?—No.

5610. You deal with them in a sympathetic spirit, and you give them the benefit of the service and your staff, and all that?—At a price.

Firth of Forth: Lighting of

5611. Have you in Scotland any instance, such as that of the port of London, where the cost of lighting a port is borne by the General Lighthouse Authority?—No. The nearest approach to it is the lights in the Firth of Forth; but in the Firth of Forth there are several ports, and there is no one authority that could take up the lighting. The Clyde is in the same position as the Forth as regards having a number of ports, but before the Northern Lighthouse Board was instituted there was a local board for the Clyde, and they

Mr D. Crawford, K.C., Mr. J. A. Fleming, K.C., Mr. C. D. Peddie.

8 May 1907.

continued to look after their lights; a local board incorporated by Act of Parliament.

5612. But as to the Clyde Lighting Authority, the cost of the maintenance of those lights does not fall on the General Lighthouse Fund?—No, it falls on local dues.

5613. It does not fall on the General Lighthouse Fund?—No, but the point of my answer was that the Firth of Forth in our view is not a port the same as the port of London is; it is a sea access to several ports.

5614. (*Sir Frank Adam.*) It is under your control?—Those lights are.

5615. (*Mr. Ennis.*) Under the control of the General Lighthouse Authority?—Yes; the principal lights are Inch Keith, which is opposite Leith, the Ox Car, and one or two buoys further up.

5616. (*Chairman.*) But you quite recognise that it approaches the character of the estuary of the Thames?—Except in this, that there is more than one port; there is no one local authority we could come to and say "You light this," or "You light the other." There are lights which serve more than one port.

5617. In the case of the port of London there is no Harbour Authority at all.

5618. (*Mr. Ennis.*) Could you give us an approximate idea as to the cost to the General Lighthouse Fund of the lighting of the Firth of Forth?—I should first of all have to ask your opinion as to where the Firth of Forth begins. The Isle of May in the old days, before 1898, charged both local dues and passing dues.

5619. I fear I am not in a position to assist you there?—I can give it quite roughly in this way. There is one lighthouse with a fog-signal, costing about £400 or £450 a year, and several small gaslights, which would run the total cost up to £600 or £700 at the outside—that is from Inch Keith upwards. The Secretary will put that in if you wish it.

Cost of beamarks in,

5620. Just an approximation?—(*Mr. Dick Peddie.*) Yes, from Inchkeith inwards.

Lighthouses; short flashes deprecated.

5621. Then you spoke of the rapidity of the flashes; you objected to equipping your lighthouses with flashes of a duration of one-tenth of a second?—(*Mr. Fleming.*) Our Engineer, whom we consider one of the most skilful lighthouse engineers living now, gave us reasons against a quick flash which commended themselves to us. By a quick flash I mean a flash of under half a second.

5622. Do you recollect the reason which was given, because we have had evidence given on this subject before, and I want to compare?—I would rather not give evidence of that, because I am speaking from recollection on a very technical matter, which I am not very conversant with.

5623. It has been pointed out that the difficulty of flashes of one-tenth of a second was the difficulty of a shipmaster taking a bearing?—That is, I understand, the main point, and the difficulty arises from the slowness of the working of the human eye if the flash is too quick. However, acting on our Engineer's advice, we declined to put forward any proposal for a light with a shorter flash than half a second. The Trinity House pressed upon us the example of the French lights—pressed it strongly upon us—but we kept our own view, and finally the Trinity House have come round to our own view, and I understand that they are not putting up short flashes now.

Experiments:

5624. I think we had evidence with regard to the rigorous economy of the Board of Trade with regard to some of your requirements. Do you consider that this rigorous economy has been carried to the extent of interfering with efficient experimental work; have you found any difficulty in that regard? Have you been desirous of carrying out experiments with regard to improved forms of illuminant, fog-signals, and so on, which you were not permitted to carry out?—Yes, I remember one instance where we wished to try an explosive automatic signal. We applied for sanction to the Board of Trade for the cost of that, but were refused, on the ground that Trinity House were carrying out a similar experiment. That I considered a proper refusal, as there was no use carrying out two experiments, and a fortunate refusal, because I understand the system is not reliable.

5625. You have no serious complaint to make that you have been hampered in carrying out experiments that you desire to carry out?—No. Of course, you understand, Sir, that experiments which necessitate any appreciable sum of money are not of frequent occurrence in our service. The experiments which are of most frequent occurrence are those day by day experiments of the Engineer, which do not cost much money.

Fog-signals:

5626. But you have heard of submarine bells as an improved form of fog-signal?—Yes.

Submarine bell.

5627. You have none of those things on your coast?—No, but I may say we have experimented with the bell, and proved ourselves that it is quite a reasonable thing—I mean to say, a possible thing to use. It is no use to us. We have only one station in the service in which we could use a submarine bell, and that is the lightship, because the bell must be suspended in water and struck in water, so that the waves of sound may be originated. We cannot do that at our lighthouse stations; it would be of no use there.

5628. It would not be of practical value to Scotland?—None at all.

5629. Does the coast of Scotland suffer from fog to a large extent?—Very much; we have had fogs for eighty hours—continuous fog.

Siren advocated.

5630. And no doubt the best and most efficient system of fog-signalling apparatus is a matter of anxiety to your Board?—We have taken all means to find what is the best means of giving a signal in danger, in a fog; our experiments and our experience of what we have put up have shown us that the best we have got yet is the motor-driven siren, so that you can get at once on to the full note.

5631. Has a diaphone been tried on your coast?—It was tried, and Mr. Stevenson gave evidence to you of what he found; it is to be tried again shortly.

5632. (*Admiral Henderson.*) I would premise by saying that, in any financial questions that I ask you, the information is got by comparing the accounts and the estimates of 1905-6, and I do it because it gives the latest effect of all the amounts of expenditure rather than the seven years mean, which was taken by the Board of Trade. I want to ask whether in your return from which this published acount is made out it is under the headings as enumerated here?—Yes, it is.

5633. One or two of these questions, I think, probably would be for the Secretary?—(*Mr. Peddie.*) It is practically the same.

5634. What I want to know is, whether you send your returns in under these various headings of details of expenditure?—Yes, we do.

5635. They are all sent in under these headings separately?—In most extensive detail.

Financial Control of Board of Trade:

5636. We have not seen those yet. Very well. Now as to the question of the administrative control of the Board of Trade from its financial aspect—I am not meaning anything to do with new works whatever, that is entirely a question of how much money they may have to spend—but I want to know in what light you view the administrative control of the Board of Trade; whether you consider that going into the details as it does, it is necessary; whether they should not give you as administrators rather larger powers than you have, and that a good deal of correspondence and time might be saved?—(*Mr. Fleming.*) Possibly it might; we would be perfectly willing to accept the responsibility of the greater freedom of spending. At the same time I think it is quite fair to say that I think all of us agree with what Mr. Crawford has said, that we have found that this control, although it may go into matters of very small account, has been exercised with the greatest desire to secure efficiency in work, and we do not for a moment complain of it in any way; and we do not complain of the amount of correspondence that results from this control. It is a fairly-exercised, very close control; at the same time, I say we are perfectly prepared to take the responsibility.

Efficiency of.

5637. If you were given a certain sum for contingencies every year, for which you should account, instead of having to send up every petty demand for approval for something over a £5 note?—Well, to a certain extent we have that, because our estimates, which are all carefully gone over, and carefully considered by the Board of Trade, include round sums for such items of expenditure as office expenses,

stationery, this, that, and the other, and there is always a slight margin there.

5638. But such an item as the recovery of a buoy, for instance?—That would be done in the ordinary course of the steamer's work.

5639. What I am driving at is, that it seems to me that the Commissioners should be able to be responsible to say what is the price to be paid to a tug for towing a drifting buoy to its place, or towing it into harbour, instead of being obliged to send such an item as that up for the sanction of the Board of Trade?—We have found no practical difficulty in that; that is the only answer I can make, Sir. Of course, we have numberless instances of what we call special repairs, but we have found no practical difficulty in the system, that we must get sanction before we embark on anything which is of a serious nature.

Northern Lighthouse Board: Efficiency of administrative system.

5640. You said just now that it is very difficult to compare the expenditure of the Boards, and I will admit that it is very difficult, because none of the estimates—that is one of the points on which the Board of Trade has not laid down a law—none of the estimates are on the same forms, and we have not really seen the accounts. But I would ask, first of all, as the one point on which something can be got, as to the cost of the lighthouses, because, as far as I can make out now from the returns, the Trinity House have 71 lighthouses as against your 80, and 12 unwatched lights, against your 9, and in addition to that the Trinity House have two fog-signal stations which come under that heading, making altogether 85 stations, whereas you have 89 stations; and in the return that we have before us you have a greater number of men employed on the lighthouses than the Trinity House has. I do not know what the exact numbers are, but on the actual return the numbers given are that you employ 294, against 236 of the Trinity House. That includes occasional lightkeepers, and on that your economy or efficiency is £10,000 a year greater than that of the Trinity House. Now, I want to know whether you are thoroughly satisfied with the efficiency of your system and of your lights?—Thoroughly satisfied with the efficiency of the lights we have at present?

5641. As they are?—I am not satisfied with the sufficiency of the lighting of the coasts of Scotland.

5642. That has nothing to do with this. I am speaking in the administrative sense, and not from the other side. Now, again, you see that your actual expenditure for this greater number of lighthouses, the amount for oil, coal, and for stores, was £5,978, as against £9,921 of the Trinity House, an economy of nearly £4,000. Are you satisfied that your supplies are in every respect sufficient?—Quite satisfied.

5643. Can you give any reason to account for this great discrepancy?—No.

5644. On either of those heads?—I suppose that expenditure on oil at Trinity House does not include oil on lightvessels.

5645. No, it does not; it is sent in on the Trinity House return under the heading of Lighthouse Stores, and that is the abstract of the estimates for 1905-6, which shows the expenditure of the three Boards under various heads. It is very difficult to get at them correctly, but I see that paraffin and heavy oil that is required for the lighthouses, the light and cleaning stores, fog-signal stores, which you do not put in for; where do you put in for your fog-signal stores?—(*Mr. Peddie.*) That is engine room stores.

5646. Do you make a special item of that?—Yes, Sir, but only the largest items are stated separately in the estimates sent to the Board of Trade. Paints and certain small articles are not expressly allocated.

5647. It is not in the estimates for 1905-6; fuel, coal for gas-lights, and you put in boat hire and assistance, which the Trinity House apparently do not. I wanted to know in general terms whether you know why you should be so much more economical than the Trinity House in these respects?—(*Mr. Fleming.*) Without seeing those figures, which we have not yet seen, I cannot give a satisfactory answer to my own mind. There may be an explanation in this, that I know Trinity House used large—I think 8 or 10-wick—lamps; we never had more than a 6-wick lamp, and these have been reduced, and we are burning incandescent oil now, and it is reducing the quantity of oil still further. I do not know to what extent the Trinity House have reduced their consumption of oil.

5648. Your consumption of oil and illuminants generally amounts to £650 less than the Trinity House?—The figures, I think, of our consumption of oil were £1,936.

Mr. D. Crawford, K.C., Mr. J. A. Fleming, K.C., Mr. C. D. Peddie.

8 May 1907.

5649. And you think that is because your system of lighting is more efficient?—I do not wish to say that, because our system of lighting never included these large 8-wick lamps, which burn immensely more than 6-wick lamps. Then, again, our oil is all Scotch oil, which is considerably cheaper than American oil. I do not know what oil the Trinity House take.

5650. They take paraffin?—Ours is Scotch paraffin, which costs us roughly about 4d.

5651. Now, I wanted to know whether you have made any comparison, or have any idea, whether the cost of supply to the various lighthouses on the coast of Scotland, distributed, say, all over the place, with smaller numbers of railways and roads, should not really be greater than that of the Trinity House, where they are close to railways and roads in every direction?—Our idea is that our economy is all the more marked, considering the greater difficulty we have in keeping in touch with our lighthouses. That includes supplying them with oil and coal, and supplying them with provisions, and supplying them with relief. We have on the mainland of Scotland, I think, only 24 lighthouses out of the total number, and even on the mainland there are some of those lighthouses, like Cape Wrath, which are practically inaccessible by the land, being an enormous distance from the nearest train, and are frequently inaccessible by sea.

Economy of.

5652. I have asked several questions on that point in the evidence, and I believe that the difficulties are greater with the Scotch and the Irish Board than they should be with the English Board in the matter of supply?—I cannot make any comparison; I know that the difficulties of our Service are very great indeed.

Incandescent burners: Supply of duplicate apparatus for,

5653. Now, there is one question only remaining; special repairs for 1905-6; you put down 12 conversions to incandescent oil of £100 each; the Trinity House put down 13 for £275 each, and the Deputy Master of the Trinity House, in his evidence the other day, stated that one of the reasons for the great additional extra cost on the Trinity House was because they provided a spare set of apparatus to each lighthouse that was converted?—A spare set?

5654. A spare set. Now do you do that, or what form does it take with you?—We send spares to the lighthouses of various small breakable portions of it, the valves.

5655. Which you consider sufficient?—(*Mr. Peddie.*) Perhaps I might be allowed to say, as a matter of fact, we supply everything in duplicate except the compressed air receivers. There are two compressed air receivers for each installation. We do not supply spare receivers.

5656. Because you do not think they are necessary?—Yes, practically they are not necessary.

5657. What is the cost of a receiver?—I am not certain of that, but the whole cost of a 55 millimeter installation in our service is rather over £80.

5658. I was very much struck by it in comparing these estimates, that what you do for £100 the Trinity House do for £275?—It is really much less than £100; it is really a little over £80 that we do it for.

5659. You consider you have a sufficient number of spare parts for all emergencies?—We have not the slightest doubt of it; we have at least double of everything except the welded receivers. (*Mr. Fleming.*) The light which we put in is a different light from the Trinity House. We put in Chance's light; they put in Matthew's burner.

5660. There could not be that great difference in cost?—We do not know; I think you will find if you refer to the evidence that the Irish Engineer speaks about the difference of those two lights.

5661. Should not, properly applied, the additional number of steam tenders used by the Trinity House reduce the cost to the various other items of service? If you had a larger number of steam tenders whose cost was under a separate heading, would you reduce the cost of your services at all?—I do not quite follow.

5662. I am speaking from the point of view of administration. The Trinity House have eleven tenders against your four, and what I want to ask is whether

Mr. D. Crawford, K.C., *Mr. J. A. Fleming*, K.C., *Mr. C. D. Peddie.*

8 May 1907.

Steam-vessels:

an economical use of those tenders does not to a very considerable extent reduce the cost of supply to the lighthouses, and that it should bear throughout the service, in fact?—I do not think that we could effect any economy by using steam tenders in places where we do not at present use them. Our steam tenders are fully worked, and we have to face sooner or later, with the extension of the service, some addition to their number; but that is another matter. We use our steam tenders, I think, to the utmost practicable pitch; I do not think we could economically use them further.

5663. I have very carefully looked through the logs of the tenders of all the Boards, and I should like to commend to the other Boards your system of log, which is much superior to any of the others. You can see exactly what the vessels do, and it saves a great deal of paper, and I cannot see in any comparison that I have made that I can find anything to find fault with in regard to the economical efficiency of your Board.

5664. (*Sir Frank Adam.*) There is only one question here, with regard to Captain Tizard's evidence, the Hydrographer to the Admiralty. If you turn to Question 3477, he is arguing that it is not necessary for the Lighthouse Authorities to issue information to mariners; he thinks it might be all done by the Admiralty, and he says he gets a certain amount of information from the Northern Lights Commissioners, but they are very lax in giving it?—Yes.

Notices to Mariners: Observation on complaint against Northern Lighthouse Board as to,

5665. I would like to know if you have got anything to say with regard to the point?—It is the one point which I had noted as being a complaint against us, and my first answer is that it is the first we have heard of it. No such complaint has ever been communicated to us before. So far as I can read it, his complaint is that we do not give latitude and longitude. We are perfectly willing to do so, so far as we can ascertain the exact site of the new mark from the Admiralty Charts in existence for those Northern seas, which are sometimes inaccurate. In many cases it is impossible to give the Hydrographer in writing the information which will enable him to mark their site on the chart, but we can easily mark it ourselves and send the chart to him with the notice, if he desires us to do so.

5666. But, apparently, he says he wrote to you repeatedly, asking you to state or mark on the chart the exact position of any lighthouse or beacon?—Yes, Sir, he has occasionally, but he has not accompanied that with any complaint that it is in consequence of faulty information.

5667. And in every case you gave him what he wanted?—At once, and not only any lights under our control, but we have marked for him on charts local lights over which we have simply a supervising control.

Advantage of issue of by Lighthouse Authorities.

5668. Then what is your general opinion with regard to his proposal?—Well, I look upon it as our duty, first of all, to light the coasts, and, secondly, to give to the mariner full information of what these lights are. What we do is to distribute our own notices, and the notices of the Trinity House and the Irish Board which are sent to us, to every port and harbour and creek in Scotland. They are distributed in great numbers, and come into the hands of every person frequenting these ports. The same course is followed by the Trinity House and by the Irish Board. In that way we think that the mariners get full notice of any change or any establishment of any new light. Of course, if the Admiralty or any other body were to relieve us of that responsibility we are perfectly willing that they should do so, but we have done to the best of our ability what we think is an important part of our duty.

5669. Do you think that information would reach mariners as quickly, going through from you and from the other Boards to the Central Authority, the Admiralty, and being distributed by them only, as it does now under the present system?—I should doubt it, but I give that answer with a great deal of hesitation, because I do not know much about how the different notices are distributed.

5670. The evidence, so far as it goes, seems to point to this: that in certain cases, but not numerous cases, it would reach them faster?—Through the Admiralty?

5671. The Admiralty issues a much more widespread and far-reaching notice than the Lighthouse Authorities?—Of course. In Scotland, where there is comparatively a small traffic, in many ports it might be inconvenient to the master of a small vessel to have hurled at his head a great bundle of notices of all manner of lights all over the world, such as the Admiralty post; whereas he gets our notices about the home lights, with which alone he is concerned. But that is comparatively a small criticism. So long as we think that there is any other authority desirous to fulfil this duty of giving Notice to Mariners, and which will do it so that it reaches the mariners, we offer no objection to that.

5672. (*Admiral Henderson.*) The Admiralty issues notices as well?—Yes, they do.

5673. There are five parties giving notices?—Yes.

Lighting of Scottish coast. Not yet sufficient.

5674. (*Mr. Ennis.*) Arising out of an answer you gave to Admiral Henderson, I want to ask, do I take it you do not regard the lighting of the Scotch coast as being thoroughly efficient at present?—I do not think it is sufficient.

5675. What capital sum would you roughly estimate would be needed to put the lighting of the coasts of Scotland, as you think, in a perfectly efficient condition?—I could not estimate that for several reasons. In the first place, I think the coast of Scotland has dark blanks on it, where there is no light at all, at places where there should be lights. In the second place, there are many dangers in the open seas; for instance, the Vee Skerries; and the Nun Rock is another which I think, Sir, should be marked. To put up the old style of pillar lighthouse on the Vee Skerries would cost an enormous amount of money—£50,000 or £60,000 at least; but I think it may be found in the near future that both these dangers can be lit by unwatched lightvessels. We have had one of them, the Otter boat, for some time. We have established one at Skerrinoe, and they have both been exceedingly satisfactory.

Unwatched Lightvessels: Advocated.

5676. You have a high opinion of the unwatched light?—We have a high opinion of these unwatched lightvessels.

5677. So far as your experience goes?—So far as our experience goes.

5678. Just one further question. With regard to the notices that you spoke of issuing to mariners, do you give on those notices diagrams of the lights?—No.

5679. Are you aware that the American authorities do?—I noticed, from the evidence of some witnesses, that they do so, but I have not seen the American notices. The Secretary tells me they do not give them in their notices, but they give some in their annual list of lights. May I ask if we might be allowed to have an opportunity of examining the tables put in by Sir Thomas Blomefield, and making remarks on them if we think they call for any?

Comparisons of cost of seamarks of the Three Lighthouse Authorities.

5680. (*Chairman.*) Oh, I think so; there is not the slightest objection. We shall be very much obliged to you?—I might say, with reference to questions which have been asked of certain witnesses before, as to the means of comparing the cost of the different seamarks in the three services, that I have endeavoured to find some practicable method. I have tried to do so by taking as the unit a lighthouse, and I have allowed multiples or fractions of that unit for the various other classes of seamarks, according to their relative costliness, thus reducing all the classes of seamarks to one common denomination. I have then divided the total cost per annum for each of the three Services, excluding only the cost for new works by the number of seamarks in that Service, thus reduced to the common denomination, and I find that the cost per unit is greatest in the case of the Trinity House and is least in the case of the Scotch Board. I do not profess that the multiples or fractions of the unit which I have taken for the seamarks other than lighthouses are accurate, and I put forward the statement containing my calculation on these lines, which I now hand in, merely as a suggestion of how some such comparison might be made.

(*Chairman.*) We shall be very glad to see your calculation.

SIXTEENTH DAY.

Wednesday, 15th May, 1907.

PRESENT:

The Right Hon. G. W. Balfour (*Chairman*).
Sir Frank Forbes Adam, C.I.E.
Colonel I. J. C. Herbert, C.B., C.M.G., M.P.
Vice-Admiral W. H. Henderson.
Mr. M. A. Ennis.
Captain C. Bigham, C.M.G. (*Secretary*).

Sir William Watson, D.L., Sir Robert S. Ball, LL.D., F.R.S., called in; and Mr. H. G. Cook, recalled; and examined.

Sir W. Watson, D.L., Sir R. S. Ball, LL.D., F.R.S., Mr. H. G. Cook.

15 May 1907.

5681. (*Chairman.*) You are here to-day to give evidence on behalf of your colleagues the Commissioners of Irish Lights?—(*Sir William Watson.*) The Commissioners of Irish Lights.

5682. You have had an opportunity of seeing the evidence which has been given to the Royal Commission up to the present time, I think?—I have.

5683. And you have also received some written questions addressed to you by the Commissioners?—I have.

5684. I will put these written questions *seriatim* and ask you to give your answers to them, and to afford us opportunity of interpolating any questions immediately arising out of them that may seem convenient?—Yes.

5685. Do you think any important saving could be effected by substituting a single Lighting Authority for the existing system?—Well, I have not considered that subject, and I cannot say that I do. Of course, I look at it principally with regard to the Board that I have the honour to be a member of, and that Board is an unpaid Board, and of course if any Authority were substituted for it it would have to be paid, and that of itself would mean a very considerable increase in money; but I doubt myself, taking the thing even apart from the Irish Lights Board, whether any saving would be made by substituting a General Authority, quite apart from whether a General Authority would be better or not; merely answering the question, my opinion is that nothing would be saved in money.

5686. Has that question been before your Board at all?—No; but the members of the Board of course have considered the subject generally, and I know my colleagues' views pretty well, and they left me very free to deal with the matter, therefore I am of course representing the Board; but, on the other hand, in answer to some of these questions I could not give very definite opinions, because they would, as it were, commit the whole Board perhaps more than an individual would be justified in doing; but on that question I can answer definitely that in my opinion, which I believe is shared by my colleagues, nothing would be saved as far as money is concerned by substituting one General Board.

5687. The question refers to economy alone, not to efficiency?—Not to efficiency at all, I understand.

5688. Will you tell us whether in your opinion the Advisory Committee has worked well? Would it be a practicable plan to do away with the Advisory Committee, and provide that representatives of shipping and other interests should be placed on the Lighthouse Authority itself?—Well, as regards that, I have been present, I think, at nearly all the conferences where the Advisory Committee and the Board of Trade (first under you, Sir), and the three Lighthouse Authorities met, and I think the Advisory Committee works well. I think it is subject to a defect that nearly all the members of it have local interests; perhaps it is not quite a correct expression, but I think it conveys my meaning, that it is rather deal with in a parochial manner, not in a wide one. I think the members of the Advisory Committee are generally very much influenced by the localities from which they come, or which they take the greatest interest in. And I also think that they give themselves too much trouble to try to stop expenditure. Now, I always understood that the main object of the Advisory Committee was to say what works were necessary, and what works therefore, I presume, were not necessary; but I have not found that they approach these subjects in a wide way. There was one case especially struck me very much some years ago, when the Trinity House applied to improve the Skerries Light off Holyhead, one of the main important lights in the Channel on the approach to Liverpool, and the Advisory Committee opposed that in the most strenuous way, to my mind entirely for wrong reasons, and I think they were influenced by that sort of spirit that I name, *i.e.*, of working for particular interests rather than for the entire lighting of the coast, which I understood was to be their use.

5689. What was the particular interest for which you think they were working in that case?—I think there were some people in Liverpool who seemed to be opposed to it, and that they went against it on that account. I do not desire to impute, remember, the slightest intention otherwise than of doing everything that was right, but I give it as an instance where certainly the Advisory Committee were wrong.

5690. One would have thought that local interest would rather have made in the direction of improving a local light?—Well, it surprised me very much that they took that view, but I think it was a local view for some reason or another that was prevalent in Liverpool, and that they took it. The work, I am glad to say, was carried out. The light has been improved, greatly to the benefit of the Liverpool trade, and the total expense of that was only £5,000. But you asked me whether I think it works well; I think it does work well.

5691. You think on the whole?—I think on the whole it works well.

5692. Its creation has been of service?—I think it has. I think it has satisfied a great many ports and shipowners; and I think the members of the Advisory Committee whom I have the pleasure of knowing take a great interest in it; but still I think it is subject to that parochial view of being led by the views and ideas of particular places.

5693. And also a tendency to economise where economy was unwise?—I think so. I think economy comes in too much, because my view is that in the present state of shipping you cannot improve the lighting of the coast too much.

and to encourage undue economy.

5694. (*Colonel Herbert.*) Do you think that that parochial view is influenced by the incidence of the light dues?—Well, it is supposed to be, but I cannot feel that it is, because whether a light is put up in one place or another does not make any particular shipowner pay more or less; therefore I do not see why that should come in, though one would naturally say that it must. They take the view, and always have expressed the view, "We pay the dues, and therefore we have a right to say what is to be done with the money." If it saved money to their particular port, you could easily understand their taking the view, but they go steadily for cutting off anything they can. I must say that I speak rather independently, for I think the Advisory Committee have treated the Irish Lights propositions exceedingly fairly. I do not think any proposition of ours has been rejected, therefore I rather speak more in the wide sense on that point than the particular

Sir W. Watson, D.L., *Sir R. S. Ball* LL.D., F.R.S., *Mr. H. G. Cook.*

15 May 1907.

sense. Then when we come to the second part of the question I have no hesitation whatever in saying that the Advisory Committee is entirely superior to putting representatives, either of shipping or any interests—harbour interests—on the Boards. That would appear to me to be necessarily followed by the disestablishment of all the present Boards. I do not think any of the present Boards would work with their present independent elections if official or—what shall I call it—elected representatives were put upon them. I think it would destroy the character of the Boards, without expressing an opinion as to whether a central authority would be an improvement or not, but I think it would mean doing away with the present Boards.

Constitution of Irish Lights Board:

5695. (*Chairman.*) That brings us to the third question. Has your Board itself any suggestion to make for amending its own constitution or altering the relations at present subsisting between it and the Trinity House, or generally for modifying the present arrangements for lighting the coasts of the United Kingdom? Let us take the first point. To begin with, has your Board itself any suggestion to make for amending its own constitution? I rather gather from what you have just said that you prefer to keep your constitution as it is?—I have no proposition, and our Board has no proposition to make on that subject, and I would like to guard myself without as it were clinging to our position of Lighthouse Commissioners at all, because our Board is a very independent Board; all the members of it are completely uninterested in any personal way in the lighting question, and of course they would desire the lighting of the coast to be done in whatever way was the best. I feel that an unpaid Board like ours have no clinging to office. If an arrangement were made for lighting the coasts out of the public funds, and doing it better than at present, of course they would be only too glad to see it. I am a shipowner myself, and my personal view is that this great Empire ought to light their coasts free to shipowners.

Central Lighthouse Authority.

5696. The question of who should pay the cost of lighting the coasts does not come within the purview of our inquiry, but from the point of view of efficiency do you think it would be desirable to sweep away the present system altogether and establish a single central authority?—Well, I do not say as regards efficiency; I say as regards economy no economy would be gained; and as regards efficiency, coupling it with this question as to whether we propose anything, we do not propose anything. You say you have nothing to say to the question of remitting money.

5697. We have nothing to say to that?—Of course, as a shipowner, I have expressed my view that I think the shipowners should be relieved of the cost of the lights, but I see, if you will allow me to express an opinion, great difficulties in the way. My main difficulties are that if the Government take up the lighting of the coast, the great harbours like the Mersey and other places would say that they should be taken up also. I think they would consider it a very unfair thing that all the coasts should be lighted, and that they should go on paying for the lighting of the great estuary of the Mersey, which is just as beneficial to shipping as the outer lights.

5698. It is not within our province to go into the question of who is to pay the lighting charges, but it is possible to suppose that there might be an advantage in substituting a Government Department for the existing Authorities, even though no change was made in the present financial arrangements?—Of course it is.

5699. Have you formed any opinion on that point?—As I say, we have not thought about that, but personally as a shipowner, and as an independent Board, if it really were the better way of doing it, we would not have any objection. How could we? We have no voice in the matter. But in addition to that, I would like to couple it with two observations. The first is that we feel that if there were to be a single authority, it ought to be the Trinity House. We would be very, very much opposed personally, at all events, to the abolition of Trinity House, because you ask me as regards the relations subsisting between us and them, they are of a most satisfactory nature, and we find our propositions very carefully and very fully considered, and we do not think that as a supreme authority it would be at all easy to improve upon it; and, of course, if that is the case, as a single authority it would also be good, except perhaps as regards Scotland. I do not know whether I am travelling outside my province in making a remark on the Scotch question. I think there are many reasons for a separate Scotch Board that do not exist in the case of the Irish Board, and I may put them under two heads. The first is that in the north of Scotland and all these islands there are a great many places—shall I use the expression—who have no godfathers, that are independent and outlying places altogether, and might be overlooked very much if there was a central authority only sitting in London. It has struck me always that that would be the case, while Ireland is, pure and simple, a part of the United Kingdom for lighting. The lights in Ireland that we maintain are not for Ireland or Irish trade; they are entirely for the trade of the kingdom. The actual ocean-going shipowners in Ireland could be counted on your hand, it is the trade both of England and Scotland and foreign nations passing Ireland that require these lights. The result is, of course, that in that sense it could be included in the General Lighthouse Authority just as easily as the south of England or any other part. Perhaps I am going outside my province in expressing these views, but they have rather arisen out of your question.

Trinity House would be best,

5700. We are interested to hear them. Then may I take it to be your position that while the Irish Lights Commissioners do not desire to express any opinion as to whether it would be expedient to do away with the Irish Lights Board and substitute some other authority, if such a proposal was carried out, you think the substituted authority should be the Trinity House and not a Government Department?—We do distinctly. To go back to the economy, perhaps this also may be rather an additional point to make, but I am perfectly certain that a Government Department would be asked to do a great many works, and pressed to do a great many works, that the present machinery have a better power of refusing than the Government Department would have, because every interest round the coast would be down on the Government Department to give them their special lights. I think that stands to reason, and therefore that to a certain extent rather goes beyond what I said at the beginning as to whether it would secure—shall I call it efficiency? It might secure efficiency by getting better lighting, by getting more places than hitherto have been lit.

but system would not be economical.

5701. But at a very much larger expense?—At a very much larger expense, even if those local harbours did not come under it, and I do not see how they are not to come under it. And I think I would like to make an observation coupled with that, that I understand out of the present between £400,000 and £500,000 that the lighting costs, foreign nations contribute about £160,000; if the lights were left free you would transfer that from the foreign nations to the taxpayers at home, which seems rather a doubtful proceeding. On receiving these questions, as you may see, I have thought over the matter pretty well, with the view of being able to answer any question you asked me, and those I think are the points which have arisen out of 1, 2, and 3.

Trinity House control over Irish Board: Works well.

5702. Well, there is one other point arising out of 3. At present your Board is for certain purposes under the control of the Trinity House. Do you think that in that respect the relations between the two Boards have worked well?—Oh, I have no hesitation in saying they have.

5703. You would not desire to see the position changed?—No, I think it would be a great mistake. I think that part, the central control of the Trinity House over both the Scotch and Irish Boards, to a great extent, meets all that is necessary in having a single authority. Now, it prevents clashing, it prevents mistakes being made. It means there is a central authority dealing with all propositions. Of course, they can compare an Irish proposition with an English or a Scotch one, and see whether those would clash, either as regards characteristic in lights or signals, or something of that kind.

5704. And your Board have no complaint to make of the way in which the Trinity House have exercised this control?—None whatever; on the contrary, our relations have been of the most satisfactory character. They do not always agree with us; they ought not to. We do not always agree with them, but we have then to submit; but I have no hesitation in answering it in that way. I would like to add, I suppose it goes without saying that if a central authority was put in

chief possession and our Board done away with, we would never consider it a right thing to do without coupling it with the preservation of the rights and interests of all our present officers. I suppose that would go without saying, but I am quite certain it would not either in actual working or in the question of new lights cause any economy.

Sir W. Watson, D.L., Sir R. S. Ball, LL.D., F.R.S. Mr. H. G. Cook.

15 May 1907.

Observations on Statements of Mr. Norman Hill.

5705. Will you kindly furnish the Commission with your observations in detail upon the statements made by Mr. Norman Hill, in answer to Questions 1802 to 1834?—Well, I have read these questions through very carefully, and I would preface any remarks I would make with a general remark. First of all I would like to say that Mr. Norman Hill is a great friend of mine, and he is the Secretary of our Liverpool Steamship Owners' Association, of which I am a very old member, and I have the greatest regard both for his opinion and his wonderful activity and power in dealing with questions, so that I am rather disappointed with his evidence, because his evidence seems to me to be briefly comprehended in the following. "I say that everything that the Lighthouse Boards do is against economy; that they are spending too much money under nearly every department." He is then asked why he says it. He says it is because he knows it; and he is then asked to give figures, and so on, but he says, "I cannot, because I have not got the figures; give me the figures and I will show it." Now, that seems to me to be a curious way of bringing a charge of want of efficiency or economy against any Board. The only case that he does give is the case of the lighting of the River Mersey. There he does give figures, and I think I will begin by answering it. He, in Question 1815, gives what the lighting of the Mersey costs in six years; roughly speaking, I think it is something under £32,000 a year. There is £34,194, £32,047, £33,526, £30,120, £34,149, and 1905, the last year, he gives as £30,187. Well, the Irish Lights figures for the same years are—I think I need only give the thousands perhaps; I will give the actual ones if you like.

As to expenditure of Mersey Docks and Harbour Board.

5706. No, that will do?—£83,000, £96,000, £93,000, £93,000, £92,000, £91,000. Well, those are in or about three times the other. The number of lightships and lighthouses in the Mersey is 15; the number of lighthouses and lightships under the Irish Lights is 86. Well, three times 15 is 45, and yet our expenditure is only—with its 86 lightships—three times the Mersey; in addition to which those 15 lights and ships of the Mersey are all at home, in the same port, and ours are all round the coast of Ireland, involving great distances and difficult places of access.

5707. I think it is only fair to say that the figures for the Mersey were cited by Mr. Norman Hill to show that there had been no increase during those years?—I use them for my purpose, do you see.

5708. I think it is hardly safe to use them unless we knew the items; for instance, some of these may be for dredging?—Oh, no.

5709. You are quite sure none of them is for dredging?—I am quite sure none of them are for dredging; quite sure.

5710. I quite see your general point; I think it is hardly possible for us to continue——?—I am asked to answer a particular question, and, of course, I at once say, I do not include buoys and beacons, because the buoys and beacons in the Mersey are small, as compared to the other questions. I do not want, as you quite understand, to prove anything against my friend Mr. Norman Hill, but if I were talking to him on the subject to-day, I would talk quite as I am talking now, and quite as freely, but I do not think it is a right or a fair thing to say that we know people are very uneconomical and very extravagant, and not be able to produce any figures. But perhaps that is enough to say upon that, Sir, and I will go back to the general questions. The first Question is 1802, on new works, and that is based principally upon this statement that the Irish Lights Board said that they would only spend, or thought they ought only to spend, £15,000 a year. Well, we never agreed to that. At Advisory Committee meetings I have often drawn attention to the fact that that was stated in Lord Courtney's Committee, but that we were not answerable for it, though I believe if the figures are actually gone into, you will find that in a series of years we have not very much exceeded it, and of late years, in the five years spoken of, there has been very heavy expenditure. For instance, the Fastnet Lighthouse, which cost £84,000, added very much to a series of years, and two lightships were sunk and had to be replaced, apart from the ordinary—what shall I call it—renewal of lightships, and though one of them was half paid for—her actual value at the time was paid by the ship that sunk her—still that added a good deal. Then there were several new stations, like the Black Head Station in Belfast Lough, and a complete system of gas buoys was laid down, and a new steamer built to replace the old one, the old steamer having been in use ever since the year our present Queen was married, which I do not think shows that we were very extravagant since 1863—I am glad to say the new steamer bears Her Majesty's name also—but she lasted from the year 1863 to the year 1904. That was a good while for the life of a steamer. Then 1803 is very much the same. I do not think I need add to it. We feel that it is our duty to suggest and ask the sanction of Trinity House for any new works that we really think necessary for the improvement of the lighting of the coasts. It is for the Trinity House to say whether they think they are proper works. If they say they are proper works, it is for the Board of Trade to say whether they think the money ought to be spent, and we cannot do it without first getting the Trinity House sanction, and, secondly, getting the Board of Trade sanction. But in the case of all the works that were charged with want of economy in execution, we have got both sanctions, and therefore it seems to me not very fair to charge them against us as want of economy, or as having done more works than were necessary, when our scientific and financial Authorities have confirmed our view that they should be done.

As to expenditure on new works.

5711. I think we need hardly go into Questions 1804, 1805, and 1806. They all refer to the same subject?—I was just going to say that they refer to the same subject.

5712. We quite understand the view which you take upon it?—Yes.

As to other expenditure.

5713. Then Question 1808?—Oh, yes, excluding new works, the average annual expenditure of the three Boards has increased from £347,331 to £392,088. Well, the fact of the new lighthouses and the new lightships of course increases the annual maintenance; it necessarily must, because there are additional keepers and additional crews to lightships. On the other hand, when we look to the years 1903, 1904, 1905, we find that the expenditure was £86,000, £85,000, and £83,000 under this head, showing that our improvements in lighting are beginning to tell in the direction of economy. For instance, many years ago, we were the first to establish gas lighthouses, and did so with very great advantage to the mariner. But the new invention of incandescent gas, in which the petroleum is turned into gas in the burner, and does away entirely with gasworks and gas makers, means a saving in every lighthouse which is now altered. We are at present altering Galley Head in that way, which was a very costly and very powerful coal gas lighthouse. We have altered Wicklow Head, and we are going to alter several others as time and circumstances allow; because one thing which I say works against economy very much is our engineering staff. It is so very small that it is really impossible for us, I would say, to do more works than a very limited amount. We have an Engineer, an assistant engineer, two outdoor assistants, and a clerk, and they have got to do the entire work, which I think necessarily limits the amount that can be done very materially. But I hold that not only are we economical in that sense, but we by our late improvements are saving in maintenance as these lighthouses are altered, we have got Mew Island, Tory Island, and St. John's Point, County Down to do. St. John's Point is in hand for alteration, and when Mew Island and Tory are altered, it will mean a good many hundreds of pounds saving, all due to that improved form of lighting. I give the old gas inventors a great deal of the credit, because they first showed the flexibility and safety with which gas could be used, and the one great advantage that coal gas had originally over oil, which was that when you lit your lamp you had your full power straight off, while in the oil lamp of the old nature it required the most constant watchfulness on the part of the keeper to keep anything like the flame it professed to keep.

5714. Has there been an actual saving in respect of the fuel employed in the lights?—Oh, yes.

5715. Not merely a relative seving in proportion to the intensity of the light, but an actual saving?—No,

Sir W. Watson, D.L., *Sir R. S. Ball*, LL.D., F.R.S., *Mr. H. G. Cook.*

15 May 1907.

we have, in sending in the estimates to the Board of Trade, pointed out exactly what it will save in keepers and oil and other things. Now the Cannel coal used in making the gas, which was a very large item, will disappear altogether, because you will have no gas-works; all you have got is a receiver and a pump, a thing that could be placed between the Commissioners and myself here, and the pump is kept with a pressure on the oil, which forces it up through a small tube—but my friend here, Sir Robert Ball, will describe that to you scientifically, perhaps, better than I can—into the little retort which is a part of the burner, and in that retort, which is kept red hot by a kind of by-pass, the oil is turned into gas, and then can be exhibited in an incandescent mantle, so that once you have lit it you have the light at full power, unless the mantle breaks down, which, of course, is replaced in a moment; you have the full power at all times at a less cost, and not only the full power, but a much greater power than the old light gives. The increases are enormous.

5716. Should you say, broadly speaking, that the actual increase in the number of seamarks round the coast, which, of course, require attendance, is in itself sufficient to account for the increases in expenditure to which Mr. Norman Hill points?—I think that any increases in expenditure are all accounted for by that. I am not sure whether wages come in, whether there was any increase; I think there were allowances and certain things within that period that have been increased, but a good deal of materials have been increased.

5717. Cost of materials?—This year, which does not come into this account, we have had increased coal prices, but that will in future be only house coal, with the exception of the coal for the steamers, and house coal for the different stations. When we have altered all the coast stations the Cannel coal question will quite disappear. But where you put the new works and the other increases, and then take off these savings, I think you would find everything fully accounted for. I would not like to fall into any mistake of giving an opinion, though, of course, I have figures before me, which Mr. Norman Hill had not. But we have furnished the Commission with the full particulars that they have asked for, all our figures, so that you can draw your own conclusions as to whether the figures are right or not, or whether they bear out what I say.

As to superannuation charges.

5718. There is one figure as to which I understand the explanation is that the increase is outside your control; that is the amount of superannuation allowances. In the period of seven years, ending March 31st, 1899, the superannuation allowances showed an average of £3,950 a year; in the period ending March 31st, 1906, the average annual figure is £6,700, an increase of about 70 per cent. That is remarkable, but I understand it is outside your control?—It is entirely outside our control, because it is on the system, and each case, of course, is sanctioned, the superannuation, by the Board of Trade; that is not a question where economy would come in. We think it is a wise thing to superannuate a keeper at sixty years. We think that when he has these important places to look after that it is old enough for a man to be there. I believe that some of the other Lighthouse Authorities let them stay till they show signs of failing. Well, we, rightly or wrongly, do the other.

5719. You have always done the other?—I think we have carried it out more strictly lately than before, but as you say, it is not in our hands, because those cases, of course, go direct to the Board of Trade; the Trinity House have nothing to say to them, and they are carried out in that way. But I see here that some items of labour have increased very much. For instance, the cost of labour, as labour, apart from staff, has doubled. We used to get it for 1s. 6d. a day, where now we pay 3s. That would affect new works more than maintenance.

5720. Since what period has that rise in wages taken place?—During the five years, and the labour and material have both increased. Of course the price of all brasswork, and everything of that kind, has enormously increased.

5721. I think the wages of labourers in Ireland have increased much more in proportion than in England or Scotland?—Well, they were very low in parts of Ireland; they were very low—in fact, they are very low at present even in the summer, but in the winter they do not get 7s. a week. I suppose the ordinary agricultural labourer not so much. I believe 7s. as an average would be thought very good, but we could never get them at such a rate.

As to maintenance of steamvessels.

5722. Have you anything to say as regards the expenditure on the maintenance of steam vessels? That is Question 1819?—Well, I think Mr. Norman Hill is mistaken there, because he talks as if the larger steamers were employed relieving lighthouses. They are not. We have only one small steamer, the "Ierne," down on the south-west coast, that serves the four contiguous rock stations—the Tearaght, Skelligs, Bull, and Fastnet—and Roancarrig. That is the only steam tender we have for the lighthouses. The other two steamers are employed in doing all the work of the coast, distributing oil and materials of every kind, shifting the buoys, bringing in the lightships, and attending them in that way, and I can only say that I believe it is done as economically as it could be. Mr. Norman Hill suggested employing tugs casually. Well, that is absolutely impossible. First of all, you must have special gear on board your steamer for handling these heavy buoys and dealing with them, and you must have trained men, or it would be attended with great difficulty and risk, and it could not be done without two steamers. In fact, sometimes, if we have works going on, and the Engineer wants materials or things brought so as to enable the thing to be carried out more properly, it is very difficult to get the services of one of the steamers—they have so much to do—and with the number of these buoys that have to be brought in every year for cleaning and repairing, and the movements of lightships, I have no hesitation in saying myself, I have some experience in dealing with ships, and the Board try to deal with the ships as they would if they were their own in every particular.

5723. In short you, speaking as a shipowner, regard these vague accusations of Mr. Norman Hill with respect to the expense of the steamships as quite unfounded?—Well, you see, his steamer accusation is that we do not want the steamers at all, and that certainly is entirely unfounded. Whether every penny that was spent was absolutely necessary. If you did something else no human being could say, but I am quite certain that it is carried on properly; I know it is. We have a Finance Committee which consists of nine members of the Board, elected for the whole year, and three of those attend every Friday, and every account that is paid by the Board is first brought before them to be passed, and afterwards at a subsequent meeting brought before them after it is receipted, and every single account in that way is liable to be questioned. I do not see how any company could do it better.

5724. You entirely repudiate these charges of wholesale extravagance?—I say they have no foundation. But I do not charge Mr. Norman Hill with making false charges because he has no facts. What I find fault with Mr. Norman Hill for, if I find fault with him at all, is his making these charges and then saying he has no grounds for them, which I think is not a fair remark.

5725. Well, let us pass on to Question 1832?—I do not think I have much to say on those others.

5726. Head office expenses, miscellaneous expenses, and superannuation allowances?—Oh yes. Oh, I have a good deal here, but I have already said it; 1828, that is the place where he brings in about the tugs, but I have said all that, 1829.

As to head office and miscellaneous expenses.

5727. I left out those intermediate questions because they really refer to the same subject with which you have already been dealing?—£80,186 has on the average of the last six years been spent on account of head office expenses, miscellaneous expenses, and superannuation allowances, the details are as under: head office expenses, £36,159; miscellaneous, £17,791; superannuation allowances, £26,236; I have said all I have to say on the superannuation allowances.

5728. Yes?—But I do not think that the miscellaneous expenses can properly be charged in bulk to the cost of administration. Well, first of all, you must omit the superannuation allowances altogether, and, secondly, you would require a good deal more detail to be able to go into the parts of the £30,000 head office expenses. I could not answer that question right off. I think that comes under what I have already said, that we furnish or have furnished you

with all the figures in the case to form your own opinion upon.

5729. Coming to miscellaneous expenses, there is only one item which in the second period, as compared with the first, seems to have largely increased, that is the item of travelling, which in the period ended the 31st March, 1899, as compared with the period ending 31st March, 1906, shows an increase of close upon 20 per cent.; is there any explanation of that?—That turns very much upon the new works in hand, where there must be a good deal of travelling, and I think there has been more inspection also. I do not mean inspection by the Commissioners, but by their officers. I was looking into those figures the other day, and the travelling expenses of our inspector and assistant inspector come to a good deal, and I would say the more the better, because that shows they are constantly on the move looking after the different lights, because really the main way of keeping everything in order is by inspection. The Commissioners inspect once a year, and they have the advantage of knowing that everything is right once in twelve months; but that, of course, can only be done in the summer time, because it would take too long at any other time, and the members of our Board give a wonderful amount of attention and attendance, I consider, to the duties of the Board, but their time is, of course, much occupied elsewhere.

5730. You think that to some extent the increase in the item of travelling represents increased activity on the part of the inspector?—I would say to a certain extent. I speak rather with hesitation on that point, because I do not like to speak definitely without the actual figures before me, and I have not those as taken out from the whole, but I think my answer really is to compare them with the other Lighthouse Authorities and with the matters of a similar kind in commercial departments. I think Mr. Norman Hill and the Advisory Committee think that that could be carried out exactly as a commercial money-making department. That is not at all the case, because we have, as it were, to be looking out for new works. Supposing we neglected, were charged with not putting up lights, the very same party that object to lights are charging us with not putting up lights in proper places. If we put up all the lights we are asked for we should have a very much larger addition to our expenditure.

5731. Can you tell me the principal charges which are included under the heading of travelling expenses?—That I would ask our Secretary to give you. (*Mr. Cook.*) They are included in Abstract G.—the Commissioners' expenses when travelling, the officers' expenses—*viz.*, the inspector, Engineer, assistant engineer, assistant inspectors, foreman of works—also lightkeepers, lightship men, etc., etc. Removal of wrecks also come under Abstract G, as well as subscription to Hospitals Donation Fund £40, allowances to Commissioners for refreshments, experiments and law costs. (*Sir William Watson.*) And I think when it is remembered that it includes all that the Secretary has pointed out, and the distances that have to be covered from these outlying places, I do not think it is much. I know this, that any unusual charge for travelling, especially by keepers, is gone into very, very carefully, not only by the officers, but brought before the Board. We had two or three cases lately in which we considered that an overcharge was made, and disallowed it; nothing is spent for want of very complete inquiry.

New Works: Possibility of future decrease in expenditure on.

5732. I think we may pass on now to Question 5. Do you consider that the desirable expenditure on new works, including important alterations and improvements of existing lights is likely to be greater or less in the future than in the past?—Well, that is a question which I have been considering what answe rit is possible to give, and in one way I would say that it ought to be less, because with the exception of these alterations of stations, which you cannot call obsolete, but that can be greatly improved, coupled with decrease in maintenance, I do not know of any very heavy works pending at present. Of course, there is one which was urgently asked for by the Shipowners' Advisory Committee, but when the amount that we had to name for doing it—£25,000—was stated, they said it was not worth it, and postponed it. That was a light on a point called Crockantirrive, on the west end of Rathlin Island, nearly, which I think myself would be a most important place for a light and fog-signal. Not that I believe there have been wrecks there, but I doubt very much whether the presence or absence of wrecks is a sufficient reason for putting or not putting lights up. I would say you should take the map and find out really what place is too far off from the adjacent lights or in such a position that it really requires a light, when you are coming to take the thing as a whole.

Sir W. Watson, D.L., *Sir R. S. Ball*, LL.D., F.R.S., *Mr. H. G. Cook.*

15 May 1907.

5733. That particular light was in the first instance suggested by the Advisory Committee?—Oh, that was so; it was not suggested by us, and we never brought it forward on our own account. We were asked by the Board of Trade to give an estimate. Well, for anyone who, as I have seen it, knows the position of it, it is a most difficult place to build a light. You would have to go down and build it on the face of a very steep cliff, and we, of course, gave an estimate of what we thought was the proper light and signal to put there, and it stands now that it was postponed, and it is postponed *sine die*. The only other light of that kind that we did not suggest was Mizen Head.

5734. Yes?—You know, Sir, the history of Mizen Head, I need not say anything unless you wish.

5735. I think Mr. Ennis will very likely have some question to ask about Mizen Head?—But I must speak with hesitation of that No. 5. I have a very, very strong feeling that the coasts of this kingdom ought to be an object lesson to the world in everything that it possibly can be done as regards efficiency, coupled, of course, with practical economy, but I think France and America will go off into what I may call necessary expenditure where we hesitate. In America you know they go to most astonishing expenditure. Of course, circumstances often require it that a lightship is fitted with engines so that she can move about on her own account, which makes an enormous difference in cost. We try to keep everything as moderate as possible, I have no hesitation in saying this.

Local Lights: Provision of, by General Lighthouse Fund disapproved.

5736. Have you any suggestion to make with regard to the provision of lights of local utility outside the jurisdiction of any local lighting authority and yet of little or no benefit to passing trade?—Well, that is a question which rather follows my remark with reference to Scotland; I think that applies more to Scotland than to us; I do not think there are many such cases with us. There are gaps in our lighting, but it is very hard to say that they come under our purview. Since the Mercantile Marine Fund, or rather when the Mercantile Marine Fund was started in 1854, certain lighthouses then under the Ballast Board, which was the then Authority, were taken over, and the Board of Trade have ever since held—and I know in my own time, which now I am sorry to say is 35 years during which I have been a Commissioner, it has governed us very much—that it is not our duty to light local places except to maintain those that we then took over, and a considerable sum of money was handed over by the Ballast Board to the Mercantile Marine Fund at the time. I forget what the amount was—£95,000, I think. There have been cases where either considerable pressure was made or some good reason was given where local lights of the very class you are speaking of were put on the Mercantile Marine Fund since 1854; for instance, there is a very small light on Lough Swilly, on the end of Pencrannon Pier; it is only a little pillar lighthouse that was put up. There were two leading lights put into Carlingford Lough. Well, at Ardglass, in County Down, many years ago, long before my time, the lighthouse at the end of the pier had fallen into the sea, and there was a light there shown just for Ardglass Harbour from a window beyond the harbour for many years. It was thought right to reinstate that lighthouse; it was rebuilt by the Board of Works, but it is maintained by us.

5737. You would not consider it part of your duties to see that a stretch of coast was properly lighted if the lights would only be of use to fishermen, let us say?—Oh, no; we consider unless they benefit passing trade it is not our duty; if we dealt with them it would be on some special case that was brought before us. We might think it our duty to ask the Trinity House for their sanction, and, if they approved, to ask the Board of Trade's sanction; but we would not ordinarily consider it our duty, and the numbers of applications that we have had in which we said that we were not able and had not funds for the purpose have been very numerous.

5738. You would not regard the question as one chiefly of priority; that is to say, you would not think that when the principal lights required by passing trade had been erected, and there was money available for lights of a more local character, that it would then

Sir W. Watson, D.L., *Sir R. S. Ball*, LL.D., F.R.S., *Mr. H. G. Cook.* 15 May 1907.

become your duty to consider whether such lights ought or ought not to be put up?—No; we have not considered it in that view. We have always thought that if a light was not for the benefit of the passing trade to some extent, it was not within our purview.

5739. It was absolutely not within your functions?—Rightly or wrongly, that is the view we have taken. Take the case the other day, the light at Rosslare Pier, that has been put up by the Great Western Railway; we have had nothing to say to it as a local light, while the lighted buoy to mark the fair way in we very strongly urged should be put on the Mercantile Marine Fund, and, though at first refused, it has since been put on.

Number of communications between Board of Trade and Irish Lights Board.

5740. What were the total number of communications respectively between the Board of Trade and your Board for the year 1905-6?—That I must leave to the Secretary. (*Mr. Cook.*) The communications to the Board of Trade number 532, and the communications from the Board of Trade 572; these include letters and queries and answers to same, application for imprests, etc., but do not include the semi-official correspondence, a very large amount of which takes place annually. Officers in the Board of Trade write to officers in the Irish Lights; we have not included those.

5741. You are giving only the official communications?—The official letters that are registered, that we have got official cognisance of.

5742. That completes the written questions that were sent to you; I do not know if there are any observations you would like to make on the evidence that other witnesses have given?—(*Sir W. Watson.*) Well, there are two or three which, with your permission, I would wish to make.

5743. Well, perhaps you had better take this opportunity of doing it?—Mr. Pelham, in his evidence (Questions 43 and 44), said the administration of the Irish Lighthouse Authority was not so satisfactory as that of the other two Authorities, and he cited 12 cases in which he did not think they acted in a business-like manner. Well, I would like to make observations on one or two of those cases, and the others I would like the Secretary to give more details about. But I would rather, I think, go on to deal with them by themselves, if you would allow me, as most of the other points I can deal with at once. The next was Question 194, in which he said he had great difficulty in getting the Commissioners of Irish Lights to discharge the duties of local inspections. Well, that is a question which has only arisen with the Board of Trade of late years. The Acts of Parliament of 1854 and 1894 impose upon the several General Lighthouse Authorities the duties of inspecting the lights under the jurisdiction of local authorities, which we have always done, and it provides that two things are necessary. Whenever an inspection is made, a report of it is to be sent to the harbour inspected and to the Board of Trade, which has also been done. But the Act does not provide how often or when the inspections are to be made. In the year 1869—I have looked back through the correspondence, and I cannot exactly say what it arose from, but my impression is that it arose from the fact that the Commissioners made rather too many inspections—it was the Ballast Board then—and that the Board of Trade thought the expense too heavy; but, be that as it may, there was a practical arrangement that they were to be triennial, and we have always looked upon it that to examine every three years in or about was an absolute fulfilment of the Act of Parliament. I may say that in the evidence given by Mr. Dick Peddie, in Question 1341, he says the Scottish Lights Board do it every three years, and in Question 278, Mr. Owen, of the Trinity House, says every four years; but we hold that that is our entire duty, while Mr. Pelham seems to put it that we are bound to furnish a list annually. Now as a matter of fact we consider that we inspect these local authorities quite sufficiently, and know that they are all in order. We have done what the Scottish Board do not do, I think. We always inspect ourselves. All the reports have been made by Commissioners, and I cannot understand why Mr. Pelham considers that we have not discharged our duties. About two years ago there were some of the lighthouses—I suppose the Commissioners perhaps had been unusually busy—that had perhaps not been officially inspected for four or five years, but I think none of them are so now. I think they have all been inspected fully up to date. But even when that is done there is no record that we are bound to inspect them every three years. What we are bound to do is to inspect them, and I would ask anyone who finds fault to point out any place where it has been neglected, because we do not consider it has been.

Observations on statements of other Witnesses: As to inspection of local lights by Irish Lights Board.

5744. I suppose that some of those lights are inspected every year?—Well, they are literally inspected, but not a written report sent in. You are quite right, because in the annual cruise of the Commissioners they see nearly every one of them.

5745. When you speak of reporting triennially on the local lights——?—It means an inspection made for the purpose.

5746. Once in every three years?—Once in every three years.

5747. Do you distribute the work over three years, so that in the course of every three years every local light has been inspected?—That is our object; that is our intention.

5748. I presume Mr. Pelham's question was directed to this, that the Board of Trade desired that a report should be made with regard to the inspection of the lights that had been inspected in any given year?—That had always been done, but he put it rather as if he expected a long list every year; it rather reads as if they should all be inspected every year, which is certainly not necessary. We hold that we have inspected them, because—as you have just made a remark, I was going to add that very thing—in going round the coast there are very few of these places that we do not go into and literally we could note those as inspections without saying anything; but our custom has been to give the Harbour Boards notice when we are going to inspect, so that they might accompany us and answer questions that may be put to them. The very last case that I inspected was Belfast, a little while ago, on which occasion the Commissioners took us down in their steamer, and we made a most thorough inspection of it. But all our inspections have been done by two or three of the Commissioners, with the knowledge and, generally, presence of the local authorities, not merely looking at them in passing.

As to constitution of Irish Lights Board.

5749. Do you now send in a report every year?—No, we send in every time we make an inspection, each report exactly in accordance with Section 652 of the Merchant Shipping Act, 1894. Well, then, the next point I have to say is this: that is, Mr. Norman Hill states that the Irish Lights Commissioners especially are not qualified or practical enough to control the lighting of the coast. Our idea is this: we do not want to praise ourselves in the slightest degree; what we have done is, when a vacancy arose we have got the best man we can, and we are the only Authority that are to select, subject to the veto of the Lord Lieutenant, not subject to his sanction. Our present Inspecting Committee, not even to speak of all the other members of the Board, instead of not being qualified, are particularly well qualified, to my mind as a shipowner, following my previous observations, they are better qualified than if they were either Commissioners of a port or shipowners. There are actually only two nautical men on it at present, one Commander Riall, of the Royal Navy, who is the next senior Commissioner to myself, and the other Captain Burnside, who is a Mercantile Marine captain of great experience, who has only quite lately retired, and I know this, he is a great addition to our Board. Then follow Mr. Thompson, who is a very old member of the Board, the gold medallist in science in experimental physics in Trinity College, and a yachtsman of great reputation; he is vice-commodore of the Royal St. George's Yacht Club. Then Mr. John Jameson, whose name is pretty well known as a yachtsman, who was brought up as an engineer; we have Mr. King, who is a man of very great general information, has travelled a great deal, and has scientific knowledge; Dr. Scovell, who is a most practical and useful member; Mr. Frank Fitzgerald, a shipping director and a very practical man of business, and myself; and we have also Professor Jolly, one of the professors of the Engineering School of Trinity College, who brings to bear upon scientific questions the greatest possible knowledge and acumen, Sir Howard Grubb, the greatest British expert on optical matters, and Captain Walker, a merchant captain of great experience. The other members of the Board all bring much practical and general knowledge to bear on discussions. Indeed, it seems to me that a body like that—I will not say that they are the best qualified, I will not say they are the best body that could be got—but to say they are wholly unqualified, I venture to say, is absolutely wrong. I know all questions of any im-

portance are referred by the Board to that Committee, and come before the Committee for the fullest investigation, and why Sir Thomas Blomefield should say that he thought our schemes were less well-thought-out, I think is the expression, I fail entirely to understand how he could know they were thought out. If he had been at the Inspecting Committee's meeting last Monday, where we were considering among many other very important things, the new character of one of these new lighthouses, he would have seen what great care was taken in dealing with the matter. I really have great hesitation in making these remarks, because I dislike very much saying a word for ourselves, and I think I am bound to answer what are practically charges, whether the Commission desire me or whether they do not.

5750. I think you are perfectly entitled to give an answer: I am sure no one will complain of that?—I would dislike very much the idea that we were, as it were, clinging to office; an office which involves a great deal of trouble and a great deal of responsibility. I do not hesitate to say that I am not so young as I was; I shall be very pleased to be relieved from any responsibility in it. Now, as regards the Mizen Head, that comes next. That was asked for by the Advisory Committee, and the Commissioners of Irish Lights were asked their opinion, and, so far as regards their not being economical, they thought that it was a position that did not require a light and fog-signal. I do not know what the opinions of the other Commissioners are, but I know it is my opinion still, because we have two most important lights down there, the Fastnet and the Bull, and outside those, not very far outside, the 50-fathom soundings run, and if anybody coming in there sounds in time he would never go on Mizen Head. The three heads run out like that (*indicating*); this is Brow Head, this is Mizen Head, and this is Three Castles Head, with deep bays miles long between them. I maintain if you wanted a light on one, you would want a light on all three, because you might miss the one and run on the other. The Advisory Committee brought forward a great statement that an enormous number of wrecks had happened on this Mizen Head. Well, they brought forward 16 cases, and of those 16 cases only two were near Mizen Head. I suppose they took them up out of some wreck chart or other, which did not give the exact places, because more than half of them were coasting vessels which had dragged their moorings in some of the adjacent harbours and gone ashore; some of them were miles away from the place, and the only two cases were ships that were coming in in a fog and did not sound, the masters of both of which lost their certificates for careless navigation. If every dangerous head had a light on it and a fog-signal, it would be safer for the mariner. It is stated here that we refused to establish a fog-signal; we never did any such thing. What we said was this: that we are often charged with doing very heavy new works, and if we did not honestly believe this to be a necessity, it was hardly fair that we should get credit for what is a very expensive work. Then it went on, and it was suggested, I think—I forget who suggested it first—that there should be a powerful light there, as well as a fog-signal—this was not our suggestion either—and we were asked to provide an estimate for a light and fog-signal, and we prepared what we thought was really a good one. It was very costly. Well, that has since been changed at the request of the Board of Trade to a fog-signal only, which I think will cost about £7,000. It is a most difficult place to put a fog-signal on; an outlying rock which has to be connected with the mainland by a bridge, as the only means of access to it. I think the bridge is 200 ft. above the water. I am not saying a word against Mizen Head as a light station; I am only saying it is charged against us as a thing that we ought to have done and refused to do. Well, we did not think it was nearly as necessary as some other things, but we never refused to do it. As soon as the Board of Trade asked us to get the sanction of Trinity House we got sanction, and then they gave us the sanction after passing the Advisory Committee, and it is in hand.

As to Mizen Head light and fog-signal.

5751. It is a case of a difference of opinion?—It is a case of a difference of opinion.

5752. Between you and the Advisory Committee?—Yes.

5753. And such differences of opinion are bound from time to time to arise?—Yes; if everybody here agreed with everybody else, what would be the use of three bodies. We might have but one. Well, I have already referred to what Sir Thomas Blomefield said of our not having our schemes so systematically well thought out as the other General Authorities. Well, how he knows how they are thought out I am at a loss to understand. He might say they have not come before him in that way, but I can only say that the thought given to them, I am sure, has been as great as any other scheme of any other body. The next I have to remark on is Question 3476, by Captain Tizard, Notices to Mariners. In old days the Lighthouse Authorities did not give the latitude and longitude of the different places, and I think it was a mistake, but for some years past they have always been given, so that the Hydrographer can plot them at once exactly where they are. Coupled with that I see he says the information is all right now. That was only a past, shall I call it, objection. There was a curious mistake happened in the case of the Oyster Island Lighthouse at Sligo, which I would like to refer to. The approach into Sligo is like that (*indicating*). Here is the sea and here is the river, and the island with the light was here, and to keep clear of the shoals there was a sector of light, like that, from S.21 E. to S.29 E.; that is to say, the sector was only 8 deg. in width. In the Notice to Mariners issued many years ago, about 1901, I think, it is said that it was from S.21 E. by E. to S.29, and it appears that that meant that the light showed all round from the land instead of from the sea. Well, of course, it was a mistake in the notice, and it has been put to rights some years ago; I do not think anyone would say it was a very serious matter; how the "by" got into it I cannot say. It should be from E.21 E. to S.29 E. That is all about it, but it said S.21 E. by E. to S.29, which, of course, meant, instead of 8 deg., 352 deg. of light.

Sir W. Watson, D.L., Sir R. S. Ball, LL.D., F.R.S., Mr. H. G. Cook.

15 May 1907.

As to Issue of Notices to Mariners.

5754. It was a clerical error not discovered?—It was a clerical error not discovered; in fact, the Admiralty did not discover it; it remained in the book for a considerable time. As regards signalling there are three matters. Captain Inglefield said that there are no extra expenses of the General Lighthouse Fund for signalling. They do cost a considerable amount. Now, the best case we have, the most perfect installation, is the wireless telegraphy now on the Fastnet. Of course, Lloyd's had to pay the additional keeper, they had to pay allowances to all the men who took their turn in signalling, and they had to build a house on shore for the additional keeper. There was a statement—I think it was made by Mr. Pelham—that the Board of Irish Lights defied the Board of Trade with reference to this; I do not think they could have used the word in the ordinary sense.

As to signalling expenses.

5755. Was not that Mr. Norman Hill?—Oh, yes, I should not have said Mr. Pelham.

5756. I think the expression "defied" was used by Mr. Norman Hill?—What happened was this. We were asked to allow this to be done, and the Admiralty had distinctly told us they were opposed in the strongest possible way to lighthouses being used for signalling, because in the case of war it would destroy their neutral character, and that they would suffer accordingly. Well, we were very much impressed by this, and even though the Act of 1889 practically said that they were to be borne by the Fund if commercial signals were sent, private signals, I believe we hesitated over it till the Admiralty withdrew that, and then we went forward and we established it, but I venture to think as an independent Board we had a right to consider the subject, and I think Mr. Hill's—I intend to ask him about it the next time I see him—use of the word "defied" was most unjustifiable. Well, as regards the signalling question Mr. Ennis raised about our fog-gongs on board the lightships, we are substituting reed horns for all those, but it takes a little time. The reed horn is only a thing of very modern invention, and certainly it is a wonderful thing for such a purpose.

As to inefficiency of fog-gongs.

5757. It is hand-worked, the reed horn?—Yes, in the lightship, but the non-manual one that is at the South Stack Lighthouse on Holyhead is heard four miles off. We have one already fixed in the Codling Bank Lightship, and one immediately south of Kingstown, nearest the Kish Lightship, and they are going out to the other lightships. Wherever there is a gong at present, there will be one substituted for it. The Mercantile Marine Association; I really need not say anything about them. No board, in their opinion, is either efficient or economical. Our late Inspector, Mr. Boxer, gave evidence, but I do not think I need comment on his evidence. He is not a Captain in the Royal Navy I may say; he is a retired

Sir W. Watson, D.L., *Sir R. S. Ball*, LL.D., F.R.S., *Mr. H. G. Cook.*

15 May 1907.

navigating officer. That was the only rank he ever held. He was our Inspector, and he retired from age under our 60 rule. And Mr. Samuel Lawther gave some evidence that we were incompetent, but he did say one thing in 4,474, which I would like to put on record, about St. John's point light, which was a very old light and a very bad light. Well, it is quite true it was built 70 or 80 years ago, but it is not 10 years since it was improved and made what it now is, a very good light, but at present we are making it a 400,000 candle light. It was a red light originally, and a very badly seen light, and we improved it as much as we could, but now with these quick-flashing lights we have a much greater variety of character available without clashing with the adjacent lights, and we are putting in a quick-flashing light of 46,000 candles, which will be an enormous improvement on the present red light. I merely mention that because it would look as if that 70 years was the age of the present illumination. The Harbour Authorities round Ireland, mostly seem to think that the Board should consist of the local harbour representatives. Well, I have already said that that would be the very worst Board that you could possibly have for two reasons, that their interests are so much confined to local places, and also that each of these Boards at present have all their places lit by themselves. Take, for instance, Belfast; all the lights from the town to the Carrick Buoy, that is a good bit off the entrance to the channel, are lit by Belfast Harbour Board; while Derry lights all their river down to Moville; and in the same way Limerick lights all the upper lights as far as the Beeves Rock; while Cork we light as far as Spitbank. It is one of the few places where the harbours are lit by the Board of Irish Lights. At Waterford River we have only the lights on the entrance to it.

As to lighting of coast of County Down.

As to representation of Harbour Authorities on Irish Lights Board.

5758. (*Admiral Henderson.*) Do you light Queenstown as well?—Not Queenstown; and the river up above Queenstown is lit by Cork Harbour Board.

5759. Do you light the river up above Queenstown?—No; we light Roches Point, the main entrance, Daunts Rock Ship, the Spitbank light, which is the Queenstown light, but, of course, the Cork River proper is lit by the Cork Harbour Commissioners; that is above Monkstown; the Cork Harbour Commissioners like others have their own lights, and there is no reason why they should be on a General Lighthouse Authority. I do not think they would get free from the idea of Cork, and in connection with that I would mention a charge that I have heard against our Board, that it is a Dublin Board, and therefore must have Dublin interests, but the fact is that no one on the Board is interested in the lighting of the port of Dublin. Formerly there were seven Lighthouse Commissioners on the Dublin Port and Docks Board, in accordance with the Act of 1867 when the two were separate, but at present there is no Lighthouse Commissioner upon it; that was done away with when the Board got a new Act in 1902.

5760. (*Chairman.*) Then is the lighting of the port of Dublin done by the Irish Lights Commissioners?—No, entirely done by the local Board, by the Port Board, and we have nothing to say until we come to Howth Bailey outside.

5761. Would not that be a reason for Dublin not being represented on the Irish Lights Commissioners?—That is a reason, and I want to say it is not represented; we are not a Dublin Board; we are only a set of people who live in Dublin, but we have no Dublin connection. That is my point; I hope I make it quite clear. If we did not live in Dublin we could not get the attendance. The Trinity House people all live in London; if we lived all over the country we would not get the attendance. I hope I make that quite clear, Sir. We are not a Dublin Board; we are a Board of people who live in Dublin. I myself, I may say, am almost the only man on the Board that has shipping interests in Dublin. There is Mr. Charles Martin, who is a large shipowner, but his ships trade between ports all over the world; they never come to Ireland, therefore he is not a Dublin man. Mr. Frank Fitzgerald is a director of the British and Irish Steam Packet Company, but that is his only connection with shipping.

5762. But there are certain *ex officio* members representing Dublin?—But those do not represent the Port Board. Those represent the Dublin Corporation, which has nothing to say even to the lighting in Dublin. That point our Secretary, I think, could make quite clear: that when the Act of 1786 was passed, called the Act for Preserving and Improving the Port of Dublin, it formed the present Board.

5762*a*. We quite understand that, but the fact remains that Dublin is the only place which *ex officio* has representatives upon your Board?—Of course they are; they are on it by that Act. Well, it is better for me not to give any opinion whether they ought to remain on it or not. That is the Act of 1786. Someone said our Board only began in 1867; that was the time when the Port Board was separated from it, and we have remained exactly on the old Act, and its old elective principle or selection principle. You do not want, I suppose, any further information on that?

5763. I think we know all the facts?—All the facts, yes.

5764. I gather you are not very anxious to express any views as to whether the presence of those five gentlemen is desirable or undesirable?—I cannot say it is undesirable, because they are put on for a year; they naturally do not take much part. I would like to say this, that we have had two or three Aldermen of late of the City of Dublin, and one at present, who gave a good deal of attention, and who have been very useful. In answer to a question of yours, Mr. Ennis, about the Margaretta Shoal in Galway Bay at the present day whether the marking of that shoal can be improved is under consideration. It is very well marked at present. You see those two buoys outside Galway, and the Mutton Light, which is the only light there, are under our Board. Mutton Island Light is a very old light, but neither of them would be under us if they were now being put there for the first time. Oyster Island, that was one of the questions which I have answered. Now, as regards the other points, of those 12 cases raised by Mr. Pelham, there are one or two that I would like to speak about. I have answered Oyster Island, the mistake in the announcements, and I have also answered Mizen Head. The only other one—I think the Secretary will answer all the others—that I wish to answer is the "Ierne." The steamship "Ierne" was built entirely to be used by the Engineer in building the Fastnet Lighthouse, and she was fitted specially for that purpose, and enabled the work to be carried on most successfully. Her duty was bringing out the stones and material to it, and I must say to the credit of our engineering staff—I cannot help naming it here—there were nearly 3,000 stones, weighing about 2 tons apiece, used in the construction of that lighthouse, and not one single one of those was either lost or broken in moving them from Cornwall, or in bringing them off from the quay in County Cork to the lighthouse there, largely owing to the Engineer's prescience and care, and to this steamer. They used to be loaded in this steamer. Her decks below were all fitted with rollers, so that you could move stones about without any difficulty, and they were set in order, lifted, and brought off to the lighthouse, and put in their proper places. When the lighthouse was built we, of course, had arranged to get rid of this steamer, and we expected to get a considerable sum for her, but we had a steamer called the "Moya," attending the lights on that coast—those five lights that I already spoke of—the Fastnet, the Bull, the Skelligs, the Tearaght, and Roancarrig—and she was very much older than the "Ierne." The "Ierne" turned out to be the better sea boat, so we asked the Board of Trade to agree to our keeping the "Ierne" and selling the "Moya." We sold the "Moya." Of course, she did not fetch very much; she was much more lucky in our hands than she was in her new owners. They lost her almost immediately; she went ashore and became a total wreck. But we then had to spend a considerable sum of money in altering the "Ierne" for our purposes, and Mr. Pelham rather raises a question, as if we did not deal with that in a proper way. We had first said £1,000 would be required, but I believe it cost nearly double; but on the other hand, if we did make a mistake with regard to the sanctions, we are sorry for it, but it did not put the Mercantile Marine Fund to any expense, because a general overhaul of the "Moya" to keep her would have cost more money a good deal than we spent on the "Ierne," and I can only say we are prepared to justify anything in connection with the "Ierne," except any technical mistake with regard to sanction, which, of course, if there was, we regret. The other question is the "Alexandra," on which I understand there is a question raised about extra expenses. Well, I think,

As to marking of Margaretta Shoal.

As to unbusiness-like methods of Irish Lights Board.

looking at it as a matter that I have had a good deal of experience in, the difficulty of keeping clear of extras in building a ship, I do not think we did at all badly. This is a question I would like to answer myself, and to a certain extent I am personally answerable, because the ship was built under the supervision of our shipwright, Mr. Idle, and our mechanical engineer, Mr. Rochford, and a committee was appointed, which consisted of Mr. Jameson, Mr. Thompson, and myself, and we certainly exercised all possible care in it. The tender which was accepted by the Board of Trade was £29,794. Well, when the ship came out on her first voyage, we found she was not supplied with a donkey boiler, with the result that the water in the boilers could not be properly circulated, and the boiler was an absolute necessity, and that added £805. There were certain other extras which only amounted to £200, which I do not think so very much of, but it brought her cost up to £30,868; that was only £1,100, including the donkey boiler.

5765. (*Mr. Ennis.*) I have taken the figures here from the Return given, and I make it £31,500?—Yes, I was going to explain that to you. When the time came for her to go back for examination at the end of the six months of the guaranteed period to the builders, there were certain works had to be done. We would not accept the vessel, because her speed would not come up to the proper figure. They guaranteed that she would go 13 knots, and she did not do it, and we said we would not take the vessel unless she did it. They had in consequence to fit artificial draft to the boilers, which the builders did at their own expense. Well, that is the first thing to show that we were not, what shall I call it, over-indulgent to the builders. And this artificial draft, and the donkey boiler with which she was fitted at the same time, kept the ship very much longer at Barrow than we ever expected, and there was a total amount of lodging money for the crew, etc., £333; and then nautical instruments not included in the original contract, £168, and some other small items which make a total of £868 18s. 11d., and brought the figure up to the one you name.

5766. (*Chairman.*) If the donkey boiler was an absolute necessity, do you not think that necessity ought to have been foreseen?—It ought; I quite say so.

5767. Is is not that kind of case that Sir Thomas Blomefield had in his mind when he said your schemes are not always perfectly thought out?—Dealing with these matters we are left to our foreman mechanist—not our engineer, Mr. Scott, but our head mechanist, Mr. Rochford, and he maintains to this day that the donkey boiler was not wanted, and that he was right in omitting it. It was not an omission by mistake, you quite understand, but I can only say I have had about 40 years' experience in dealing with ships and boilers, and I maintain that it was absolutely necessary, and so did the rest of the Committee, and we were not aware that the boiler had been omitted. But it is rather a peculiar case, and I thought it was fair to the Commission to tell them the actual facts here; I have no desire to conceal anything about it. What I would add is that the builders brought us in a bill for £1,446, sheer extras altogether, and they said our people had agreed to modifications, which saved expense of £990, and that we owed them a balance of £456, but we repudiated the bill absolutely; they had no ground for it whatever in our mind, and I think that showed—both the artificial draft, and not giving them these extras—that we treated them exactly as we would if we had built the ship for ourselves. As regards the donkey boiler, that is a matter of opinion, and if our mechanical engineer, Mr. Rochford, were here, I know what he would say, namely, that he had made no mistake, because the boiler was not wanted, but I know, if you consider my opinion of any importance, it was wanted.

5768. And in the official communications to the Board of Trade that addition was stated to be absolutely essential?—It was; it was stated, too, there is no question that it is essential. I could bring you expert evidence to show this. I do not know that I have anything further to say. I just see two lists of questions here. Oh, yes, there is a reference made, I forgot; the reference to Rockall, as to whether there should be a light on that extreme rock, or group of rocks, 200 miles away to the north-west of Ireland. We have often had them under discussion, and we maintain, if they were to be lit, it would come under the Irish Lights Board. I believe the Scotch people say it would come under them; it is 200 miles from us, and 200 miles from them. I do not know under whose authority it is. I was very much interested in seeing it brought up now, for I personally am very strongly of opinion that they ought to be lighted. There was a very terrible shipwreck there some time ago. It is a very interesting group there; you have the remains evidently of an island, or a group of islands, and there is nothing now above water but two rocks (*indicating*) about 40 or 50 feet high. I believe you could build a lighthouse on it, but it would be enormously costly. I only allude to it because it was mentioned. I do not think I need go into the various uses that our steamers are put to, and the duties they have to perform, more than I have already done, but I can say, in addition to what I have already said, that our two steamers, the "Alexandra" and the "Tearaght," are fully occupied, not only with the regular work, but with, you may say, the casual work which arises. At any time that we hear a lightship is out of position we have to send down straight off to get her replaced. We hear that there is wreckage which must be removed; the "Alexandra" or the "Tearaght"—I forget which— was engaged for a very long time in Dublin Bay on such work. There was a very sad wreck, a collier foundered, and was reported to be very near the west of Howth, and we were hunting there for her for days. Well, if we are told of a danger of that kind, we must have a ship for the purpose of removing it, and she is taken off her regular work. I have nothing further to add. I am very much obliged to you for the patience with which you have listened to me.

Sir W. Watson, D.L., Sir R. S. Ball, LL.D., F.R.S., Mr. H. G. Cook.

15 May 1907.

5769. The Secretary, I understand, is prepared to give evidence with regard to the remaining instances of unsatisfactory methods put in by Mr. Pelham?—Yes, he has particulars.

5770. (*Admiral Henderson.*) I should like to clear up the question about Cork Harbour; I understand it is Queenstown Harbour, and that you do not have anything to do with any lighting inside the entrance to Queenstown Harbour?—Oh, no; we have the Spit Bank Light, which is inside the entrance to Queenstown Harbour.

Lighting of Cork Harbour.

5771. Inside; but do you light Queenstown Harbour itself?—No, but we have a light in Queenstown Harbour.

5772. There is the Pile Lighthouse there?—That is ours.

5773. Do you do the buoyage in Queenstown Harbour?—No, the Admiralty and Cork Harbour Board do that. There is the entrance, there is Camden Fort, and there is Carlisle Fort (*indicating*). The buoys outside are ours, the Pollock and Daunts Rock; and Roches Point Light, with its fog-signal, and then inside the Spit Bank Light.

5774. And none of the buoyage inside the Point?—And none of the buoyage inside the Point; it is either Cork Harbour Board or the Admiralty.

5775. (*Chairman.*) Perhaps Mr. Cook would give that evidence?—(*Mr. Cook.*) Of the remaining instances that Mr. Pelham includes of unsatisfactory methods, one was about the accounts presented to the Commissioners of Irish Lights for repairs of nautical instruments by Messrs. F. M. Moore and Co. Well, I cannot say that any blame can be attached to the Commissioners in connection with this transaction. Several applications were made from time to time to this firm to render their account, as it was known they had outstanding claims unsettled, as shown by our Register of Orders, but without success. Till the matter came into the hands of the liquidators we could not get a statement of accounts from them, and when the matter came forward it was fully discussed by our Finance Committee, and the Committee decided they should pay the bills. If we knew they were due, we had no right to take advantage of any clause of limitation. Mr. Martin I know was very strong on that point. He said it would be a dishonest transaction, if we knew the money was due, to take advantage of a man's carelessness.

Observations on statement of Mr. Pelham: As to unbusiness-like methods of Irish Light Board.

5776. You consider, in that matter, no blame attaches to the Irish Board?—No blame whatever. I know myself I wrote several times to them, and asked them to furnish the account, informing them I would bring the matter before the Commissioners if they did not do so, to have their name struck off the list of contractors. Mr. Moore, who was in charge of the firm's business in Dublin, was afterwards transferred

Sir W. Watson, D.L., *Sir R. S. Ball*, LL.D., F.R.S., *Mr. H. G. Cook.*

15 May 1907.

to Belfast, and the matter passed into the hands of liquidators. The next Question is No. 5, regarding charges for clocks for timing fog-signals in the Irish Lights Service. This is simply a case of difference of opinion, in which the Commissioners consider it would conduce to greatly increased efficiency, and eventually to economy as well, if good clocks with strong English movements and loud trembling alarms, sounding for five or six seconds, were substituted for cheap stamped American clocks with weak single stroke alarms, which are often inaudible at a few feet distance in stormy weather. The good clocks proposed have the further great advantage that they can be made interchangeable, being capable of alteration to any desired interval of sounding in a few minutes; one spare clock kept at Kingstown could therefore be posted to any station where the clock required repairs. The cheap clocks can only be altered from one character to another by a clockmaker at considerable expense

Observations on statements of Mr. Pelham.

5777. No. 6?—No. 6. These are claims made by the keepers of the Skelligs and Inishtearaght Lighthouses for lodging allowance, owing to the new dwellings at Valentia not being ready for occupation. The late accountant was responsible for the original delay in dealing with the matter. Having regard to the fact that the keepers were directed to occupy the dwellings on the 11th April, 1901, and that one of them went into occupation on 17th April, 1901, there was a difficulty in deciding up to what date the allowances should be paid to the others, as, although six of the keepers were at the lighthouses, there was nothing to prevent their families from moving into the new dwellings during their absence, and I recollect that he did not consider the keepers entitled to payment of the full amount claimed. The matter was in dispute till the Inspecting Committee visited the station, and the light keepers there made a report to the Committee, and they investigated it at the time, and decided that the money should be paid.

5778. There seems to have been an oversight in that case?—Mr. O'Grady thought the men were not entitled to it, but the Commissioners decided against Mr. O'Grady, the late accountant. (*Sir William Watson.*) It was rather a complicated case.

5779. But the statement made to the Board of Trade was that through some oversight the matter was lost sight of?—(*Mr. Cook.*) Mr. O'Grady decided against the keepers, and the Commissioners when they visited the station decided in favour of the keepers.

5780. Was no communication to the effect I have just mentioned made to the Board of Trade?—I am unable to say, Sir.

5781. Will you proceed to the next case?—The next is, transfer of Mr. T. Byrne, lightkeeper, from Clare Island to Eagle Island. The Board of Trade complained that they got rather a curt letter. The fact of the matter was that on account of a disagreement between the families of an assistant keeper and the principal keeper at Eagle Island Lighthouse Station, which, from the reports that came to hand, appeared likely to lead to a free fight, it became necessary to promptly effect an exchange of keepers, which was done, Byrne being the keeper selected to effect an exchange, as the station he belonged to was conveniently situated for this purpose. We had to take this man away suddenly.

5782. The complaint of the Board of Trade there is that they did not receive a sufficient explanation?—The Commissioners were asked for the reasons for the sudden transfer; Mr. Pelham says they replied rather curtly that a keeper was suddenly required at a neighbouring station, and this man was sent. That is the only answer we could send; it was perfectly true.

5783. No. 10?—This is the works at Kingstown on land leased from the Board of Works. The statement that we had entered into an agreement with the Board of Works in which we bound ourselves to carry out certain works is true. There was a mistake in that case, but I might state as an extenuating circumstance that our late Secretary, Mr. Armstrong, had just returned from sick leave. The Commissioners entered into an agreement with the Board of Works without informing the Board of Trade, but the mistake was altogether due, I think, to the illness of Mr. Armstrong.

5784. Case 11?—Case 11 is the cost of manual reed fog-horns in the Irish Lights service. Well, Sir, I asked Mr. Scott; this is more a point for him than anybody else, and he handed me this statement:—"The Board of Trade were first approached with a view to finding out whether they would approve of our obtaining horns from Messrs. Chance, and a quotation for a single horn, amounting to £88, was forwarded for their information. It was fully intended that as soon as the Commissioners were authorised to deal with Messrs. Chance, negotiations should be entered into to get the price reduced if an order were to be placed with them for a quantity. The Commissioners are frequently hampered in negotiating for low prices by having to wait, frequently many weeks, for the Board of Trade sanction before they can give an order, and it was anticipated that better terms could be obtained in this instance if they could approach the contractors with power to give an order on the spot the moment a price was agreed on. The Commissioners had previously obtained reed horns from Trinity House, and the price had come out at about £60 each, while they had of course no power to make any objections if the goods were not in all respects what they might desire. Moreover, as this price only included a charge of 10½ per cent. for establishment charges, which is less than half what the most economical commercial engineering works can do such work for, it was highly probable that £60 did not really represent the total cost to the General Lighthouse Fund. By dealing with a contractor, however, they could agree on a definite sum which would certainly represent the total cost, and could insist on having every detail carried out to their entire satisfaction. Having succeeded in getting the price reduced to £70 each for an order for seven horns, which they believe to be better articles than the Trinity House horns, even without having the power to place an immediate order, they were convinced that it would be much more satisfactory to accept this offer than to obtain the horns from Trinity House and pay £60 each."

5785. The original proposal, however, had been, I understand, to purchase seven of these horns from Messrs. Chance Bros., at a cost of £88?—It was one, Sir; we only got a quotation for one, and afterwards——

5786. The statement put in by Mr. Pelham is not accurate if that be so. "The Commissioners of Irish Lights proposed to establish these fog-horns on certain lightships, and asked for our sanction to the purchase of seven of Messrs. Chance Bros. and Co., at a cost of £88"?—Mr. Scott distinctly states that the Board of Trade were first approached with a view to finding out whether they would approve of our obtaining horns from Messrs. Chance, and a quotation for a single horn amounting to £88 was received and forwarded. We had some time previously asked for a quotation for a single horn. I presume that is what Mr. Scott means when they found they were to get a number—seven of them—we got the price reduced to £70 each.

5787. There remains the 12th case?—Yes, about the fog-bell at Barr Point, Larne. We wrote a letter to the Board of Trade. I do not know why this case should ever have been brought forward. I have brought the letter to show that we acted perfectly fairly with the Board of Trade on the matter. We wrote to the Board of Trade on the 15th October, 1902:—

"Sir,—Referring to your letter of 12th June last, and to the sanction contained therein.

"I am now directed by the Commissioners of Irish Lights to state, for the information of the Board of Trade, that they have given the subject of establishing a gas station at Ferris Point, Larne, every consideration, and I am now directed to submit a detailed estimate prepared by the Engineer amounting to eight thousand nine hundred and thirty pounds, viz.:—

	£
For gas station	4,800
For keepers' dwellings	3,200
For Conversion Chaine Towerlight	200
For Barr Point bell	730
	£8,930

"This scheme provides for the formation at Ferris Point of a gas station where gas can be made to charge not only all the buoys in the Larne district, but also those sanctioned for Dublin Bay, to keep an unwatched light at Chaine Tower, to provide dwellings for Maidens keepers, and to work Barr Point bell.

"The present rented dwellings at Larne and the services of the Chaine Tower keeper could be dispensed with if scheme were adopted. The staff would consist of

a principal keeper and female assistant, and four assistant keepers, three on the rock and one on shore, and it is expected that the keepers on shore would be asked to make the gas, look after the Ferris light, the Chaine Tower unwatched light, and the Barr Point bell. The Chaine Tower would be fitted with gas holders charged once a month, and would be lighted and extinguished at sunset and sunrise by one of the keepers from Ferris Point, but left unwatched at night. The Tower, however, would be visible from Ferris Point Lighthouse.

"The fog-bell at Barr Point would be rung by a compressed air driven clock, the air being supplied by a half horse-power gas engine in service room of lighthouse, where also would be installed an electric indicator bell to advise the keeper of the correct working of the fog-bell. I have to point out that this scheme should be adopted in its entirety to produce the results for which it was framed, namely, to work five different interests from one establishment, and to so concentrate operations as to save the cost of two additional keepers while promoting greater efficiency. The Commissioners hope the Board of Trade will be good enough to favourably consider this scheme, which they believe to be the most economical and comprehensive that can be framed, and to accord their sanction at as early a date as possible, to the expenditure of three thousand eight hundred and fifty pounds, beyond the sums already sanctioned, viz., five thousand and eighty pounds."

Well, as Mr. Scott tells you, the original proposal for this signal was to utilise an existing bell rung by a clockwork machine which would necessitate the employment of two keepers, and the estimated cost of the erection of the bell was £80. Before the work was commenced, the Commissioners' Engineer resigned, and a new Engineer was appointed; the latter, on looking into the matter in conjunction with a scheme for working all the lights and gas buoy depôt at Larne by a combined staff, recommended the Board to instal a compressed air driven clock, for which he afterwards substituted an electrical plant by means of which the bell could be actuated from Ferris Point Lighthouse by the keeper in charge of the light, the additional cost being estimated at less than £550, which brought up the total estimate, including £100 provided to cover the cost of obtaining the land, to the sum of £730. This additional £550 was estimated to save an annual expenditure of nearly £200 for the two keepers required by the original scheme. The Commissioners immediately put this improved scheme forward, and inserted the increased estimate in the annual estimates for the next year, and it was sanctioned by the Board of Trade and approved by the Advisory Committee when it came before them. I do not know why the Board brought that forward.

5788. As far as I understand, the complaint is that the original proposal of £80 was sanctioned, but then the Commissioners changed their plan and put down the new plan as amongst the works which had been sanctioned by the Board of Trade, whereas it had not been sanctioned in that form?—They had not been sanctioned in that form; they sanctioned £80 in the first instance.

5789. That seems to me to be a very reasonable complaint on the part of the Board of Trade?—We informed the Board of Trade we were saving the cost of maintaining two keepers by spending £550; we informed the Board of Trade of that.

5790. I think the complaint of the Board of Trade was not that the new scheme would not be a better one than the old scheme, but that it appeared under the heading of new works sanctioned, whereas it had not been sanctioned, it had only been sanctioned in the old form?—There was £80 sanctioned in the first instance for the bell at Barr Point; next year we went forward for the larger amount, and explained the reason why we did so.

5791. I think the matter is fairly clear?—That special £80 was sanctioned in the first instance; the following year we put in for the larger amount, because we found that it meant saving so much money annually.

Irish Lights Board: Representation of various interests on, disapproved.

5792. (*Colonel Herbert.*) I should like to ask Sir William Watson one or two questions with regard to the constitution of your Board. We have had it in evidence that they are practically all co-opted, 17 members are co-opted, and we have also had evidence to which you referred with regard to a desire for representation on that Board. Have you ever considered any practical way to meet that view granting them representation?—(*Sir William Watson.*) No, we have always, as I have said, thought representation of ports on the Board would be a great mistake, and we prefer the Commission remaining as it is on its present footing; it must be independent; if you let in any interests you disturb the nature of the Board.

Sir W. Watson, D.L., Sir R. S. Ball, LL.D., F.R.S. Mr. H. G. Cook.

15 May 1907.

5793. You would admit representation on the part of shipowners?—No, we consider it would be unwise; as a shipowner myself, I think it is unwise.

5794. As matter of fact you are shipowners, several of you?—Two of us are shipowners, myself and Mr. Martin, I know, who shares the same views.

5795. But would you not give the shipowning interest a right to representation?—No, I think, as I said already, that as the Advisory Committee they come in in a much more useful way than they would if on the Board. Of course, they could not be both. No, it is my distinct opinion as a shipowner and as a Commissioner that that would not be the right way of meeting it.

Control of, by Board of Trade and Trinity House, satisfactory.

5796. To pass to the control which is exercised by Trinity House, you seem satisfied with that?—I am quite satisfied with it.

5797. But there is likewise a control exercised by the Board of Trade?—Of course there is; the money control is entirely in their hands; absolutely.

5798. Do you think that the system of dual control is satisfactory?—Well, as things are, taking the way the funds are arrived at, and everything, I think it is very hard to improve upon it. I think it has done its work very well in the past.

5799. You believe it is a real practical control; not a fictitious control?—Oh, I know it is; it is an absolute control; I think nothing shows that more than Mr. Pelham's questions. It seems to me if we go wrong in the very slightest degree that we commit a very serious offence, and we do not desire to do it. If any of those were mistakes we admit it at once, because we believe that control should be exercised properly and that we are bound to obey it and that it is a real control.

5800. But what might be called a petty interference is not necessarily effective control?—These rather came upon me as a surprise that Mr. Pelham should bring them forward, because we have not suffered from petty control at all. Our relations with the Board of Trade as the supreme financial authority have been very satisfactory. They never asked questions that they were not entitled to ask. Our correspondence has been very very satisfactory. I was rather surprised that either he or Sir Thomas Blomefield should make those observations, because I thought they looked as if they were under the impression that things were wrong, which I did not think was so. We had gone on with them and the Trinity House for many years most satisfactorily. I do not make much of those things at all; perhaps I am wrong, but I think, finding out twelve like that, shows how well the work was done, that there are only twelve things which even they can call mistakes; and I think we have explained away most of them.

5801. That I may call it petty criticism you do not consider arises from the fact that they have not got a thorough grasp of the whole condition of things, which they would have if they were a real supreme controlling authority?—Well, that as I say, I cannot answer, but I think they have a thorough grasp because they ask for the most detailed information, much more so than in former years. For instance, years ago the Trinity House used never to go into the question of money at all. They used simply to go into the question as a lighting question, as a marine question and leave the money question to the Board of Trade. Now the Trinity House has to be furnished with the estimates as to what the cost of work is, and whether it is a large or small work, and the Board of Trade always used to get the estimates, but I think the control is greater than formerly; not weaker.

5802. Is not what you say now rather an exaggeration of the dual control?—Well. I do not think so.

5803. That you have two bodies inquiring after the same thing?—Yes, but they are inquiring for different reasons. The one, of course, is inquiring into the money question; the other with the view of saying, supposing it cost very little, "I think it is a thing that ought to be done." If it was very expensive they would say, "Well, perhaps there is

Sir W. Watson, D.L., *Sir R. S. Ball*, LL.D., F.R.S., *Mr. H. G. Cook.*

15 May 1907.

other work which would be better done this year," and postpone it. I do not think there is any clashing; dual control may be a bad thing, I am quite free to admit it, but I do not think this dual control does any harm, and before it is altered I would like to see it altered for something better.

5804. You think it could be altered?—I do not mean to say it could not.

5805. You would, as I understood, preserve Trinity House as a superior Authority?—I have no hesitation in saying that.

5806. But you think its functions might be altered in a way that would improve it as a controlling Authority?—Well, by giving it Ireland to deal with as well as England; no other way.

5807. That would be making it an executive Authority for Ireland?—It is the executive Authority for England, but I put that with a good deal of diffidence, because our Board has done its work well in the past, and I have no desire to see it disestablished.

5808. (*Chairman.*) If any change is made, that is the change you would like to see?—Oh, I have no hesitation in saying that, Sir. I think that would be the right change, but I would not put shipowners on the Trinity House any more than on our Board. They are an independent Board, just as we are; they may be old-fashioned and unusual in the present democratic state of things, but it works very well, and I know myself the Trinity Brethren take a very deep interest in their work, and, of course, they give their entire time to it, as they are paid for it.

5809. (*Colonel Herbert.*) Has it ever occurred to you that a representation of Scotland and Ireland on that Trinity House Board might be desirable?—Well, it would be a very difficult thing to bring about. It never has occurred to me, Sir; I would rather not discuss it. As I have said already, I think you will find it hard to deal with Scotland properly without a separate Board.

5810. I am not talking of abolishing the other Boards, but I am dealing with Trinity House as a controlling Authority which it is now over all the Boards?—I conceive just like our own Board, that, if it is to go on as it is, it ought to be left as a co-opted Board.

5811. Exactly as it is?—Exactly as it is. I think if you introduce elected or nominated members, you will surely, I say, spoil it; I think it is more independent as it is now.

Inspection: Value of, by Inspecting Committee.

5812. To turn to another question, that of your inspections; we had some evidence from the Secretary on the subject, and that was carried out; I daresay you may have seen it in the evidence?—Yes, I read his evidence.

5813. Oh, that was carried out by the Inspecting Committee?—Yes.

5814. It struck me, and I asked some questions at the time as to the necessity of such a large body of inspectors. In your experience has that got a practical value, or could it not be carried out as well by technical inspectors?—I do not think so at all. I think the personal control of the Board, as things are, is absolutely necessary, and as regards a large body, it is anything but easy to get a large body. Once or twice we have had, I think, six members going round and that has been very unusual. Very often we have been reduced to two or three; it is no easy thing to get men of business, and in the middle of the yachting season, to get men to go and give three weeks to it. I have done it as often as I possibly could, but I think I have done it by simply making it my holiday, for I take a great interest in the work, otherwise I could not have given the time, and several years have passed when I could not go; I had too much to do.

5815. Is it not an expensive form of inspection?—No, I do not think so at all; I think the cost is most moderate.

5816. You spoke of the increase of expenditure on inspections?—It costs less than it did in former days, I believe, because in former days it was done on a different principle. The members of the Committee were given two guineas a day, and they arranged for their own catering. Now it is just paid out of the £400 allocated for inspection and refreshments; I think it is a very moderate sum, I say it with a certain amount of diffidence, I consider it a most valuable inspection. Well, we have not often had the opportunity of either Board of Trade or Trinity House friends accompanying us, but we had on one occasion Lord Farrer (then Sir John Farrer). He came round the coast, and I know his opinion was that it was a very real and a very valuable inspection. We begin sometimes at 6 o'clock in the morning, and very often we do not end till 9 o'clock at night. Some people consider it rather a curious form of amusement, when they hear outside people call it amusement, but I can only say this, we visit each station and we go into everything connected with it, and it is, as I said in the beginning, the one main object that we know that everything is in order once in a year, at all events, and a complete inspection of that kind can only be done in summer weather. If you went at any other time you would miss so many of the places that the inspection would be very imperfect. Now, I think last year we did not miss a single station, we inspected every one round the coast; it means about six or seven in the day.

United Kingdom: Importance of coast lighting of,

5817. (*Mr. Ennis.*) You said, taking the general question of lighthouse administration as affecting the entire kingdom, that the coasts of the United Kingdom should be an object lesson to the world?—Yes.

5818. With regard to the efficiency of the lighting arrangements, and you also said that France and America spend money more freely than this country spends it on the services. Now, you would, of course, differentiate proper economy which can be effected without impairing efficiency?—Oh, of course.

5819. As compared with economy which could only be obtained at the expense of efficiency?—I maintained that the very greatest economy of the first kind should be observed.

5820. But that no economy should obtain which would in the smallest degree impair efficiency?—I mean by economy there, economy in not carrying out new works that ought to be carried out.

Advisory Committee: Tendency of, to reduce expenditure.

5821. Well, now I wish to ask your opinion; you have given us your opinion on several aspects of the operation of the Advisory Committee; do you consider that since the Advisory Committee was formed in the year 1900 the general tendency of the work of that body has been in the direction of starving the service or of promoting efficiency?—Well, now, that is a question that I do not know if I could give "yes" or "no" to. Starving the service is a large order, and I would not like to accuse them of that. I think they have, especially in the Scottish cases, set themselves very much against a great many new works proposals. Having done that is one of the things that makes me take rather a different view about Scotland and Ireland. I may add this, that in many of those cases where the Scottish Board were opposed by the Advisory Committee they had not the Trinity House with them, showing that a central authority might leave Scotland out in the cold.

5822. The Commissioners have had put in a list of works objected to by the Advisory Committee and a list of works recommended by the Advisory Committee?—Yes.

5823. The list of works recommended by the Committee cover less than a page; the list of works objected to by the Advisory Committee covers nearly four pages?—Yes.

5824. And in the list recommended by the Advisory Committee comes a work connected with your own service, the matter of the light on Rathlin Island?—Yes.

5825. That, no doubt, was recommended by the Advisory Committee, but the result as it is here was the Commissioners of Irish Lights submitted an estimate of £25,000 for the new light and fog-signal, and the Advisory Committee considered this too much, and the suggestion was dropped?—Yes.

5826. Though they recommended the light they were unwilling to spend money necessary to provide it?—That is exactly how it stood.

5827. And do you consider that was a light which in itself was needed and desirable, and was objected to by the Advisory Committee on the ground of cost?—In that case it was, but then remember that was a light proposed by them. If that light had been started by us or the Trinity House I would take a different view. We thought other things more important, otherwise we would have pressed for that. It was not a child of ours; not that we are opposed to it, because in that case we are very strongly in favour of it. It was not like Mizen Head, that any of us thought it unnecessary. I think it is necessary, but we have not brought

it up on our own account yet, because other things were more necessary.

5828. Putting on one side the paternity of the proposal, if the Advisory Committee or any other body recommend a work as being desirable, and afterwards object to it on the ground of cost, would you or would you not, holding the views you have expressed with regard to the lighting of the coast, describe that to be starving the service?—Well, it is very hard to say, if it was one that the General Lighthouse Authority and Trinity House were entirely in favour of, I think it would be very like it, but where it was one proposed by the Committee I think perhaps generally one feels that the proposer of a motion has the right to withdraw it. I would not use the word "starve." I think myself that when time allows it is a useful thing to do, and ought to be done, and certainly your figures there, which, of course, I am familiar with, show how many they objected to, but, on the other hand, the numbers that they brought forward have been very small, and the numbers that have been put before them have been very large; many of those that they objected to have been done. For instance, take Strumble Head.

5829. Yes, but I put it to you that the fact that the Advisory Committee objected to, I think it is, 24 works in Scotland, 16 of which were afterwards carried into effect, that does not lessen the objection by the Advisory Committee. The fact that they were afterwards overruled by a higher Authority does not lessen or minimise the effort in the direction of economy, possibly at the expense of efficiency, which was made by the Advisory Committee?—But you see the question of stopping the lights would apply to many of those, but it would not apply to Rathlin; Rathlin was their own case. The others were the Scotch Board's cases. They have been stopped for a time by the Advisory Committee. The Board of Trade have never held that they were in the least degree bound by the Advisory Committee's opinion. They have said "we will hear you, we will consider it." Take Strumble Head, which cost £14,000, the Advisory Committee opposed it strongly, and the President on that occasion said that they would consider it, and the result was it was carried out only with a contribution of £2,000 from the Great Western Railway.

5830. I would put it to you in this way: is it not a stronger line of action for a body like the Advisory Committee to take to object to a proposal which has been made by themselves than to object to a proposal which has been made from another source?—I do not know that one may draw any conclusions from that. One might infer they had made the original proposal without sufficient thought, or they had no idea it was going to cost money. We would say they had no idea of the place where they proposed the lighthouse, because it was one of the most inaccessible places; I would not like to carry it too far beyond what I said already, that their chief course has been trying to economise by stopping new works. And that case, Rathlin, being one of their own, shows that, very likely in a remarkable degree, though it did not strike me so much, as, being their own, one felt they had more or less a right to pass any opinion they liked upon it, because I think it is fair to them to say that they only had gone so far before as to agree to our sending in an estimate; they had asked for it, but it had not been in any way passed by them. I cannot say it had been adopted subject, or rather, with the estimate before them.

5831. You have also referred, I think, to other cases on the coast of England where the Advisory Committee objected to works, and you say it does not save money. I think it was the case of the Skerries you referred to —the Skerries Light—that it does not save money to that particular port, but does it not save money? Every objection that is made by the Advisory Committee of necessity saves money to the General Lighthouse Fund; is not that so?—It does, but it effects them very indirectly. The course that the Government have taken lately of reducing the percentage has saved some money, 20 per cent. taken off their dues.

5832. 12½ per cent. and 7½ per cent.?—12½ per cent. and 7½ per cent., that is 20 per cent.

5833. And naturally, therefore, constant pressure in the direction of economy, whether wise economy or otherwise, would tend to a lightening of the burden on shipowners in England?—To a certain extent you are right, of course, but as regards the Skerries that is a very remarkable case. I would have to condemn the Advisory Committee altogether for that, because it was most certainly a right case, and only a matter of £5,000; they delayed that, I think, over two years.

Sir W. Watson, D.L., Sir R. S. Ball, LL.D., F.R.S., Mr. H. G. Cook.

15 May 1907

5834. You are aware, of course, that the Advisory Committee have objected to several works proposed by your Board?—Well, I do not think they have stopped any works.

5835. I do not say stopped. The fact of their objecting—you are quite aware, of course, that the Advisory Committee is a body which possesses absolutely no statutory power?—Of course we know; we and the Board of Trade have no intention of being necessarily guided by them.

New Works objected to by,

5836. And therefore all the Advisory Committee can do is to recommend or object; their function ends there; first, the Skelligs, they objected to that?—They objected to that.

5837. They objected also to the Barr Point?—The Skelligs is a very peculiar case. The Skelligs is a case that we thought ought to be done. It is an island which has a very poor light on it at present, and we wanted a fog-signal and light put on it. We brought it before the Conference in a peculiar way. The Trinity House thought our proposal was too expensive; we rather make a rule never to bring a thing before the Advisory Committee Conference without having the sanction of the Trinity House, and we agreed with the Trinity House that we would bring it in and discuss before them that we would then ask the Conference, or rather, the President of the Board of Trade, who is the authority, to ask the Trinity House to send representatives, and to send his own representative to see the site, and we brought them out to the island when we were on our own inspection (Captain Frederick, Captain Clarke, and Captain Blake), and we left the matter to their decision. That is rather a different case, and it has been decided that a very small improvement is to be carried out at once. What we objected to was improving the old lighthouse by spending a great deal of money on a new light in an absolutely improper position, and these representatives reported that the old lighthouse should be improved by having a very fair light put into it without going to the heavy expense and a fog-signal. I think their decision was wrong; I disagreed with it, but, of course, under the circumstances we accepted their decision.

5838. The objections I am going into are the objections of the Advisory Committee to the dwellings for keepers at the Skelligs and Inishtearaght, and of the new steamer to replace the "Alexandra"?—Those were not really before them, and the Board of Trade held that the new steamer was not before the Advisory Committee; they withdrew it from the Advisory Committee. The dwellings we discussed, but those have all been carried out or sanctioned, but they were not lighthouses. If my own opinion were asked, I do not think they ought to be brought before the Advisory Committee, for they were maintenance works.

5839. This is the list of works handed in by the Board of Trade as being objected to by the Advisory Committee?—Well, of course, it is quite true they did object; they object to all dwellings, they object to all keepers' dwellings, and we have rather strong views—the three Lighthouse Authorities—that our keepers ought to be properly housed, and of late years the reason of the heavy cost of these dwellings is that it was a wretched thing having families on these outlying rock stations, and we have built dwellings on the mainland.

5840. They also objected to the re-erection of a lighthouse at Skelligs and of a light for the approach to Rosslare Harbour?—The erection of a lighthouse at Skelligs I have already explained; it never came up for sanction; it was only brought forward by us in that tentative way asking for the investigation; but, if I may venture to say, your view was quite borne out that they have objected to a great deal more than they approved.

5841. I am simply giving the figures as they are laid before us?—Oh, yes, quite so. What I stated was rather dealing with it, coupling the result with what took place; therefore, in our case, shall I say the Advisory Committee have very little interfered with our work.

5842. Without putting it exactly in the phraseology of "starving" the service, do you consider that the existence of the Advisory Committee since it has been formed in 1900 has or has not had a tendency towards

Sir W. Watson, D.L., *Sir R. S. Ball*, LL.D., F.R.S., *Mr. H. G. Cook*.

15 May 1907.

economy as distinct from efficiency?—Well, I really could not say that I do. I do not like to say it has not done good; I think it has done good; perhaps it makes people think more, you know; but I do not think it has ever made us either abandon a work that we had brought up or not bring up a work that we thought ought to be brought up.

5843. You believe that the Advisory Committee is a desirable body, and you are also satisfied with your present relations with the Trinity House?—Certainly we are. I would qualify my view about the Advisory Committee by stating that it was a much superior body to what it would be introducing such elements on the Board, and that I thought, on the whole, it was good, and that is the way I put it.

Shipowners: Representation of, on Lighthouse Boards disapproved.

5844. In other words, you would prefer a non-official body, such as the Advisory Committee, possessing no statutory authority, to representatives of the similar interest sitting on the various Lighthouse Authorities with a reasonable share in the administration of these bodies?—Oh, certainly, that I can answer straight off. I think the latter would upset the entire present principle, and you would have to adopt a wholly new way of dealing with the matter either by a Central Authority or otherwise; it would mean doing so with the present system.

5845. Does it not occur to you that economy, if carried to too great an extent, might mean that the coast of some foreign country might become the object-lesson to the world, which you desire England to be?—Certainly, I think this Advisory Committee tends to that view. We are accused of going too fast, but I do not think that we have been going fast enough. We have been going in Ireland as fast as our engineering staff could go, therefore we can only say we have no right to complain.

New Works: Cost of,

5846. You have referred to a suggestion that your expenditure on new works each year should not exceed £15,000?—Yes.

5847. I understand you, and Mr. Cook also, have repudiated that as an arrangement which you never sanctioned?—We never sanctioned it.

5848. And the cost of the Fastnet Light alone would have eaten up six years' expenditure of £15,000?—Practically £90,000.

5849. Now, as to combined efficiency and economy, do you consider that the existence of three different Lighting Authorities in the kingdom, if the Authorities were worked on somewhat more similar lines than they are worked on at present to render a comparison between their individual services easier, that that would be a tendency towards economy, as it would create a competition between the different Authorities for combining efficiency and economy?—I think that exists at present; they are worked very much on the same lines. What I said before on that was, take our case and the Scotch Board. You get the Board for nothing. If you adopted any other plan you would have to pay for them; therefore economy would not be served.

General Lighthouse Authorities: Comparison of,

5850. Have you made any calculation at any period at your Board as to the relative cost of your service as compared with Trinity House and the Northern Lights?—I do not know that I have, but, for instance, take the cost of our lightships; it compares very favourably with Trinity House. In the case of the Scotch Board, we cannot compare it, because they have only one, and only one lightship will cost more than the average of 11; and other cases we have.

5851. Do you not consider, as the different Authorities work their business, there is a certain difficulty of comparison?—Well, of course, you have to make allowances for the difference, but there would be that in any case. For instance, take what I said about lightships. All our lightships are in exposed deep-water places round the coast. The Trinity House have a large number of lightships in the estuary of the Thames and other places, they are very much easier of access. You would have to make a variety of corrections in making the comparisons. Really, all you could do at present is to take the total cost of lightships and divide it by the number. Take the total cost of our lightships and divide it by the number, and it may or may not be an accurate comparison. As a general comparison it is good.

5852. As our Chairman has pointed out to you, the question of the incidence of the light dues is outside the purview of this Commission altogether?—So I understand.

5853. But, at the same time, the fact that the cost has to be borne by the shipowners affects the question so seriously that in almost every aspect of it you are brought face to face with the fact that the money has to be obtained from that particular body, and that fact has a certain effect upon the general working of the system?—I do not know that it affects the general working of the system now, because I hold that it is being worked as well as it can be; it has an effect upon the minds of the shipowners, because they think that they have a greater right to have a voice in the matter.

5854. You would agree that the users of the maritime highways are more than one class?—Oh, yes, a variety of classes.

5855. You have a big oversea trade, which, of course, as regards tonnage and importance in every way is considered to be the largest factor; you have the Navy; you have the coasting trade; you have cross Channel steamers; you have the Rosslare Light, the Skerries Light; both these are cases with which the needs of cross Channel steamers are undoubtedly more associated than the oversea trade?—The Skerries was much more oversea trade than cross Channel if you take tonnage; it is the turning point for all the Liverpool traffic coming up from the south.

5856. But it serves cross Channel traffic as well?—Yes.

5857. The users of these various lights may be divided into several classes?—Of course they may.

5858. Then you have the fishing industry?—The fishing industry, yes.

5859. An industry which, if properly developed, is of enormous commercial importance to the kingdom?—Of course it is.

Local lights: Provision of, out of General Lighthouse Fund disapproved.

5860. I think I understand your view to be that unless lights benefit passing trade they do not come within the scope of the duties of the Lighting Authority?—That is our impression. The fishing industry pays nothing towards it, and unless it benefits those people who supply the funds that has been the general rule.

5861. That just brings in the point that I have been already putting to you, that although we have nothing to say to the incidence of taxation, we are brought up against the fact frequently in the course of our investigation?—Yes.

5862. But your reply on that subject made rather clearer to me the replies to some previous questions where you spoke of the desirability of maintaining the Scotch Lighting Authority intact on the ground that in the case of Scotland a portion of the coast of Scotland had no godfather?—Yes.

Efficiency of lighting of coast of Ireland.

5863. Now if you do not regard the case of Ireland as being altogether one to be dealt with in the interests of passing trade, is there not a large stretch of the coast of Ireland which has no godfather either; if you regard the interest of the fishing community and other users would there not also be a very considerable stretch of the coast of Ireland, the placing of lights on which would not benefit passing trade?—I do not think there is a stretch where there are no lights. Take the coast of Ireland at present from Tory Island down to Tearaght, the passing trade is very small. There is a large trade passing Tory going to Scotland and passing Tearaght going up Channel, but between the two I have often gone from the one to the other without seeing a sail. But the lights are there, and the lights are very close together. There is only one stretch of the Irish coast that has not a light at present, and that is from Eagle Island to Sligo, along the north coast of Mayo. Downpatrick Head is the only place not lit, and it has always been held that the passing trade is so small that it does not warrant a light. There is a little local light guiding into the river Moy to Ballina; while in Scotland there are numerous places.

5864. As a Commissioner of very wide experience I should like to ask you are you satisfied that the lighting of the coast of Ireland at the present time is as highly efficient as you would desire to see it?—Oh, I could not say that; I always think that we should be moving onwards. The last improvements of ours with new lighthouses that have been put up, and the improvement of lights that were thought to be exceedingly good a short while ago, are all in the way of advancement. This replacing by the incandescent oil and the new lightship that is going to be placed off the south end of the County Down, we hope will be great improvements. Might I make one observation with reference to the numbers that go on the Inspecting Committee? You spoke as if they were large. The fact is, supposing we had the full number of six, which is about the

outside we ever had when we come to some of these outside stations, we save a great deal of time by it, because we will go away, two and two in three boats, and get three stations done in the same time as we would one, and the work is sometimes very much reduced, and as we have been often reduced to two and three it means more time and a good deal more fatigue, so we really never have had a number that was at all too many. I just wanted to say that.

5865. I think we were on the subject of the relation of your Board to the Trinity House and the Board of Trade?—Yes.

Control of Board of Trade and Trinity House over Irish Board satisfactory:

5866. That is the dual control that has been spoken of before, or rather, I should call it the triple control, because although the Advisory Committee has no statutory control, still you recognise that their recommendations or the reverse exercise a very considerable influence over the result of your applications?—Well they may have done so, but we have always considered that the Advisory Committee are pure and simple for the Board of Trade, not for us. The Board of Trade ask them for their opinion. We do not, as it were, consider it, not that we ignore it in the slightest degree, but it is the Board of Trade that have asked it.

5867. I take it that on general lines you are satisfied with the existing arrangements?—Yes, we do not suggest any change; that is the better way of putting it

5868. You differ from the Scotch Board in so far as the Northern Lights strongly object to both the existing control of the Trinity House and to the operations of the Advisory Committee?—We say nothing about the Advisory Committee because we consider that is the province of the Board of Trade, and instead of objecting to the Trinity House, we approve. I would like to put it in that way because it is stronger. We think that the Central Authority as regards, you may say, controlling the inception of new works is a necessity, and we think that if either of the others were independent absolutely it would destroy the harmony, and what shall we call it, the freedom from mistakes that might be made.

Local lights: Provision of, in Ireland.

5869. Holding the views that you have expressed with regard to the limitation of your functions into providing only lights that will benefit passing trade and not to take into consideration the fishing industry and other classes of users of the highway, do you suggest that fishermen, say, should be left without any provision for their requirements?—No; we conceive that in Ireland it is the Congested Districts Board's duty, or the Fishery Board's duty, one or the other, to find such lights. But, on the other hand, do not misunderstand me; if we were told that really the Lighthouse Fund does cover these we would be quite ready to do it for them, because we feel the necessity for fishing lights, and those very, very much, and it is only that we do not feel at present at liberty to spend the money on them, and we feel if we asked the Board of Trade for sanction they would refuse it.

5870. But you recognise that any seafaring men would have a claim to have their interests considered, whether it were to be done by your Board or not?—We recognise that the lighting of the coast, whether for local or general needs, ought to be as good as possible, but we do not feel at present we are the custodians of that part of it.

5871. But you would consider it desirable that it should be very clearly defined as to within whose sphere of operations such work would come?—We are informed by our law agents that the Congested Districts Board is a local authority. We had some discussion on that, and some doubt, some time ago. If a local authority applies for a light, we are authorised by Act of Parliament to give sanction, apart from the Board of Trade, without applying to the Board of Trade. Well, it used to be the grand juries, and we thought that that fell then upon the County Councils, but we are practically advised that it is the Congested Districts Board.

5872. The Congested Districts Board deals only with a limited section of the coast?—Yes, therefore you are quite right; if it were made quite clear it would be all the better.

Number of maintained by Irish Lights Board.

5873. Arising out of that, I should like to ask you this: Mr. Scott, I think, has handed in a list of thirteen lights which he says are of no practical value as aids to passing ships, or guides to necessary harbours of refuge, and he claims that it is inequitable that the maintenance of these thirteen local lights should be imposed upon your Board?—I could not answer that question without seeing it.

5874. We have a return handed in?—I would have to see the names of the lights.

5875. In these thirteen lights three occur as to which he gives the names of the local authorities that he holds ought to maintain them, Dunmore, Donaghadee, and Howth—the Board of Works. Do you suggest that the Board of Works should take over the cost of the lighting of these places, or do you suggest that the lights are not necessary for any purpose?—No, I do not suggest any such thing. I do not know on what Mr. Scott bases his opinion, but, of course, that is the Engineer's opinion. Looking at those lights from the widest view, Donaghadee, Dunmore and Howth were the first ports, the first three packet harbours from which mail steamers ran from Ireland to England, and I have always looked upon them as practically Royal Harbours, and those came to us from the Corporation for Preserving the Port of Dublin in 1854, and they are part of the local lights that were then taken over, and therefore they are our duty. Mr. Scott means that they are really not for passing trade; neither are they, but when you come to Dunmore, the southmost of those, the main outlying light on the other tower is, of course, a coast light, and also the entrance light to Waterford Harbour on the starboard hand, and I do not think I could agree with Mr. Scott on that.

5876. I shall ask Captain Bigham for the return when he comes back; I saw it yesterday?—Those three harbours are very much in the same position. From Dublin the mails went originally from the Pigeon House, which is in Dublin River; then, when Howth was constructed for that purpose they went from Howth, and then when Kingstown was constructed they went from Kingstown. And then in the same way Donaghadee was the port for one of the very early mail service between England and Ireland; even before steam sailing vessels used to go, and those have come over to us from the previous authority.

5877. (*Chairman.*) They are lights which in these days would be regarded as local lights, which it is proper for a local authority to maintain?—Quite clearly.

5878. (*Mr. Ennis.*) But Dunmore is a Royal Harbour?—Is it a Royal Harbour? Now Howth we know is; Howth is under the Board of Works the same as Kingstown, and, I think, Donaghadee and Dunmore are. On Dunmore was spent an enormous amount of money, on the inception of steam, but now, of course, it is only a fishing harbour really, nothing else.

Maintenance of lights between jurisdiction of General and Local Authorities.

5879. In your experience I take it that you have frequently found a difficulty in determining as to lights on what I may call the border line between the area governed by the General Lighthouse Authority and the area governed by local authorities?—Well, I do not know that we have had of late years. When a light is asked for that clearly was not a passing light, I think it spoke for itself except in those few cases I named to you, like Buncrana.

5880. But, of course, it goes without saying that you could not give to a local authority power or permission to place in a great fairway lights which must, if inefficiently looked after by the local authority, do more harm than good?—Of course, we could not.

5881. Take, for example, this particular case that you have referred to as having been objected to by the Advisory Committee, the light leading into the approaches to Rosslare Harbour; as you gave in evidence, the Great Western Railway Company have put a light on Rosslare Pier?—Yes.

5882. That, of course, is a local light maintained by them?—Yes.

5883. But supposing a light were to be placed—I think we have had evidence before from Mr. Cook or Mr. Scott as to the placing of a lighted buoy in the Shear leading to that—that buoy would manifestly be, if inefficiently attended, a danger to general navigation?—Yes.

5884. And therefore it would be a light which you could not possibly allow to pass from your own control?—We always held that that should be ours, and we recommended that we should get sanction for it, and it has been approved by the Trinity House and the Board of Trade, and it is now under us.

5885. I only instanced that particular light as one I have personal knowledge of—It is the last.

Sir W. Watson, D.L., *Sir R. S. Ball*, LL.D., F.R.S., *Mr. H. G. Cook.*

15 May 1907.

5886. To instance what I mean that there is a kind of belt between the area of the General Lighting Authority and that of the Harbour Authority?—Yes.

5887. A Harbour Authority may most efficiently light their own harbour and yet that harbour may be practically useless to the Harbour Authority unless the General Lighthouse Authority facilitates it by putting lights outside?—In that case we held it was an outside light and it is altogether outside the jurisdiction either of Wexford or Rosslare, which are limited either by Act of Parliament or Order in Council. By Provisional Order they have limited jurisdiction, and Rosslare could not nor Wexford.

5888. The point I am coming to is that you recognise the responsibility on the part of the General Lighting Authority to provide efficient coast lighting to get vessels into the various harbours?—That would have to stand on each case; you could not give that as a general proposition; our present rule practically is passing trade.

5889. Would you regard as passing trade the coasting trade, which would go, say from a Welsh coal port to a port on the south or east coast of Ireland?—To lead into a harbour; we have not held it was our duty. You name rather a peculiar case, because you see the approaches to Rosslare are outside the jurisdiction of any local authority, therefore if we did not put it up nobody else would put it up, and therefore in that particular case we felt it our duty to recommend it, but I could not give that as a general conclusion, that you ought to put a light leading into any harbour; I would need to go into the particular case.

5890. I wish to arrive at the views of your Board on the question as to whether you regard the coasting trade with the same favour, or as deserving of the same care, as the oversea trade?—Well, we consider the coasting trade ought to be treated properly. I am naturally very much interested in it, because my own business is coasting trade pure and simple, but with regard to a light that is only to lead into a harbour, that ought to belong to the Harbour Board. Now, for instance, take Dublin Bay; Kingstown Pier Light is under us; if Kingstown Pier Light were to be established to-morrow we should not consider it our duty.

5891. But you would consider it your duty to have the Kish?—Of course we would, but the Kish is clearly a passing signal, and so is Howth Bailey.

Fog-signals.

5892. Then, with reference to light ships, I intended to ask you a question on the subject of fog-gongs; you intend to dispense with the fog-gongs and put reed signals instead of fog-gongs?—Oh, yes, that is arranged.

Irish Lights Board: Constitution of,

5893. But with regard to the constitution of your own Board, I gather from your replies to our Chairman and Colonel Herbert, that you do not consider a change desirable?—I say we suggest no change; that is the answer I gave.

5894. Yes, I understand that, but at the same time would you object to a change?—I gave my opinion on that already.

5895. Because you have said I think also that the Board are people who live in Dublin, and who can give an attendance, and that if members of your Board were to come from outlying harbours your attendance would not be satisfactory?—Well, I did not give that evidence. My objection to it was that having members from individual harbours, they would come there and they would be parochial, as I said, or having local interests, and I object to that altogether. There is another point, that if they had to come from a distance of course their attendance would not be so good, even if they were not connected with harbours. We have several times had members who lived far off from Dublin, and, of course, their attendance was very difficult. They had to pay their own railway fares.

5896. Your Board consists of 22 members?—Yes.

Attendance members.

5897. Are you satisfied—whilst it goes without saying that your own attendance and the attendance of a few other gentlemen are more than could be desired; that you seem to have given a wonderful amount of time and trouble to this work of lighthouse administration in Ireland—are you satisfied that the general attendance at your Board is what might be expected from the Board living in Dublin?—I am quite satisfied; though some do not attend so often.

5898. Mr. Cook has given us a return of the attendances, covering a period of some years, and I think he averages it as 9·2 out of a Board of 22 members. I have taken out the attendances myself from the minute book which you have handed in here covering a period of three months, and I make the attendances during that period to be 8.2 out of a Board of 22 members, and I also find that only 18 members of the Board gave any attendance; four members did not appear at all, and furthermore that of the eighteen, nine of them gave attendances at five or under of the thirteen meetings?—We are never short of a sufficient Board, and, as I explained already, the main points are reported on by the Inspection Committee. There is always an ample Board to deal with any questions. I should explain, there are three or four members who find it very difficult to attend.

5899. I do not mean at all to impugn the efficiency of the work done by your Board. I take your own case?—Eight or nine members are quite sufficient.

5900. It should be sufficient to do the work, but I doubt if I should consider an attendance of eight or nine members on a County Council to be an attendance that would satisfy me as Vice-Chairman?—Of course, that is another point; I never was Vice-Chairman of a County Council, so I cannot say.

5901. What I mean is, if you had a Board of twenty-two members, do you consider that an average attendance of nine is or might be considered a full attendance of a Board who are resident in Dublin?—There are five members we have no control over whatever—the ex-officio members—therefore we are reduced to seventeen; therefore we only talk of seventeen.

5902. Of the five members over whom you have no control, they have sometimes given some of these attendances; not many, perhaps, but they have given some attendances?—Sometimes they have attended very well. The Lord Mayor, of course, is ex-officio; the High Sheriff is now always a member of the Corporation, but he is not there as a member of the Corporation; he is there as High Sheriff of the City of Dublin, quite apart from the Corporation; and then the other three are elected annually, and it entirely depends on themselves whether they attend or not. We do not interfere with them; sometimes they attend; we have one of them now. We are always sorry if he is not there—Alderman Cotton—because he is a most efficient man in dealing with these matters.

5903. Yes, I see he has five attendances to his credit?—Yes.

5904. My point is really this, that the work of the Board, the attendance of a few members, seems to be admirable. They frequently attend the meetings, and seem to take the greatest possible interest in their duties, but do you consider it is an advantage to your Board to have a number of gentlemen on it who come very rarely, if at all? Do you consider that a man who only attends one meeting out of ten or twelve can have any proper grasp of the work of the Board with which he is associated?—Who is the man?

5905. I do not refer to individuals, I simply take the broad fact that the average attendance is 8.2 for that period out of a Board consisting of twenty-two members, and I therefore say that the great bulk of the attendances is given by only half that Board?—That is quite true.

5906. If you exclude from your Board as it is constituted seven or eight members, the work done by the remainder of that large Board would certainly not be work of an efficient character?—I do not quite understand that. Why not?

5907. I think you have yourself said; I think you have instanced a case in which a gentleman said that he required five years—a member of your Board—before he had a grasp of the work?—That was his own opinion; he gave it as against the annual election question.

5908. A very proper opinion, I would say, but would you not hold that a gentleman who was a member of this or any other Board, and only gave three or four attendances per annum to his work, was of no practical use to the Board?—It would depend very much who he was. I think there is one man who never attends. I think he is of great value to the Board; his mere name.

5909. (*Chairman.*) In what sense is his name of value to the Board?—He stands very high in every way, and I am sure he would give any attention to anything that was necessary, and, living down in Donegal or in London, it is very hard for him to attend.

5910. (*Sir Frank Adam.*) You mean, if you called upon him for any special work, he would do it?—He would do it, I am sure. But really, I put it more that I think the attendance of these eight or nine is ample. You put it rather in a different position, as to whether the remaining ones who attend badly are much use; I would hardly like to answer that question, but they are when they attend.

5911. (*Mr. Ennis.*) My question rather leads up to this, that if on other grounds it were desirable that representatives of Irish Harbour Authorities should be associated with the work, there is, manifestly from the attendance on your Board, room for them?—I could not answer in that way, because I believe the attendance of representatives from local Harbour Boards would be very irregular, quite apart from whose places they took.

5912. We have your view on that; I do not question that being your view?—I could not answer a question on those grounds.

5913. I mean, undoubtedly a considerable number of the members of your Board are members who might be replaced by others who would give a more active attendance—might possibly do so, presumably?—To get really suitable men is not always easy, and we take a great deal of trouble to do it.

5914. (*Admiral Henderson.*) What you really mean is, that for practical purposes a board of eight or nine is quite sufficient?—Is quite sufficient; I am glad you put it in that way.

5915. Would you put it at a less number than that, supposing you were to reconstitute it as a Board?—Oh, no, I think seventeen is a very good number, because you must have a good number of absentees in an unpaid Board. I am not always there myself, and it is those that Mr. Ennis says give so few attendances. They must be absent, and therefore you must have, you see, the number of the Board. The important things are governed by this Committee, which reports to the Board. I say that an attendance of eight or nine is ample to carry on the work of the Board, without passing any opinion on those who attend, as you say, comparatively seldom.

5916. (*Sir Frank Adam.*) May I ask you if you have a quorum?—Three.

Central [Lighthouse] Authority.

5917. (*Mr. Ennis.*) With regard to a question as to whether a Central Authority or a decentralised system is better, of course, so far as the case of Ireland is concerned, the present system is a centralised system. I mean it is a centralised system of administration?—Yes.

5918. You would be prepared to see that system carried further by, if necessary, abolishing the Irish Lights Board and centralising the work of Ireland, England and Wales, in the Trinity House?—Well, I say, I see no objection to it; as I tell you, we have not made any proposition or put it forward at all.

5919. The incidence of taxation, with regard to the cost of lighting, of course, is very much at the bottom of this inquiry, though we cannot touch it in its financial aspect?—Yes.

5920. But have you ever heard any shipowners raise the question since the year 1899 that the entire lighting of the port of London, in which the centralised authority of the Trinity House is situated, falls upon the General Lighthouse Fund?—Of course, I can give no evidence on that.

5921. Have you been aware of the fact?—I believe it is so, but I cannot give any evidence upon that, because it is outside my knowledge—my personal knowledge.

5922. Therefore, I take it, that your view would be that you would prefer either a continuance of the existing arrangements with regard to the constitution of your Board, that is the personal co-option, or, failing that, a transference of the power altogether to a centralised Authority in London?—Certainly.

5923. You do not believe in anything in the nature of a representative element being introduced on the Board?—No, I think it would be a mistake. Certainly, a representative Board for one part of the kingdom would be a mistake. That would have to be done for all parts of the kingdom, and I think this would be a mistake.

5924. You have referred to the evidence of Captain Boxer. I only just want to ask one question with regard to his evidence. What is the rent of the Dublin Office of the Board?—£400 a year.

Sir W. Watson, D.L., Sir R. S. Ball, LL.D., F.R.S., Mr. H. C. Cook.

15 May 1907.

5925. How would you view the suggestion which was made by Captain Boxer that an economy could be effected by erecting offices on the ground belonging to the Commissioners at Kingstown?—I think it would be quite unworkable; I do not think we would make any gain by it. Our present offices meet the case very well.

5926. You do not consider an economy could be effected?—I do not.

Observation on Captain Boxer's suggestion as to Irish Lights office.

5927. Because £400 a year would provide interest on a very large capital expenditure?—We have no ground belonging to us at Kingstown; it is all Board of Works ground, and you can only erect one-storey buildings there; you could not erect proper offices at Kingstown. I do not know what gave rise to Mr. Boxer's suggestion. We have a very small piece of ground, which is all at present occupied by our stores. We had a good deal of difficulty when we left our former offices in finding a suitable place, and I have no hesitation in saying we were very fortunate in getting our present place, and getting it prepared for us at the rent of £400 a year. Our landlords paid everything.

Lighthouses: Cost of maintenance of,

5928. With regard to the cost of maintenance of various classes of lighthouses, your Board seems to compare favourably in that respect with other Lighthouse Authorities?—I believe so; we sent you in tables.

5929. But in the case of rock lighthouses, fog-signal with keepers, the cost considerably exceeds the cost of the other services, but that seems to be due to the fact that it includes rent, £8, and boat hire £232. Now, arising out of that, there is a question I should like to ask you?—I do not know those figures you are speaking of.

5930. This is the Tuskar; that is the particular rock lighthouse that you compare with the others?—Oh, yes, I understand.

5931. That raises a question that I am anxious to put to you. You will gather that the Commissioners find difficulty in some cases in comparing the cost of the different services, on account of the different methods employed by the different bodies. Now, one of the services that has struck me as desirable to investigate is the question of reliefs to rock lighthouses and lightships. We have it in evidence that the Trinity House relieve their lightships and rock lighthouses monthly; the Northern Lights relieve their rock lighthouses and lightships fortnightly; your Board appear to relieve practically every ten days?—Some fortnightly, some ten days. (*Mr. Cook.*) Lightships are relieved every ten days. At the majority of rock stations we relieve them once every fourteen days, but at some stations, like Tuskar, once a week.

Relief of rock stations.

5932. I take it once every ten days is a fair average to make of the reliefs?—Yes.

5933. I am particularly anxious to get your views on this, because it goes without saying that when we compare the cost of your service with the cost of others, it is only fair to take into account that you do a much more frequent relief than the other services?—(*Sir William Watson.*) Yes.

5934. The Commissioners would like to know whether once a month, once a fortnight, or once every ten days, is the most efficient method?—That is hardly for me. We are passing judgment on other people. We have considered the subject very carefully, and we think our reliefs are right. That is all I can say.

5935. Would you give us your ideas as to the grounds?—We have to go on what we think a fair and reasonable thing in dealing with the men. At some of these places, of course, the circumstances differ, and they are very uncomfortable places to be on, and their families are on shore, and we think it is reasonable to bring them on shore as often as that.

5936. Does the question of the providing of sufficient fresh provisions enter into it?—Yes, that is one of them; of course it does, because they get fresh provisions off by the relief boat. We can only say to that, that we think the times that we relieve are right.

5937. That is, in your opinion, the proper method of relief?—That is, in our opinion, the proper method of relief. That is all I can say.

5938. You would not say, I take it, that if you were

Sir W. Watson, D.L., Sir R. S. Ball, LL.D., F.R.S., Mr. H. G. Cook.

15 May 1907.

to revert to, or if you were to adopt the system of the Trinity House, that you would save anything like two-thirds of the cost; you would make a saving, but it would not be a saving in proportion?—(*Mr. Cook.*) Well, Sir, we found in some cases at rock stations—Eagle Island and Black Rock, Mayo, for instance—the Board of Trade insisted that we should only supply them with provisions once a fortnight, and the boat contractor charged in the case of Eagle Island £5 a trip, that is £10 a month for once a fortnight, and previously we used to get two trips a week for £2, or only £8 a month. When the trips were deducted the local contractor increased the charge to £5. The contractor had to keep the men and the boat there. (*Sir William Watson.*) If it is a shorter relief, he still has the same men to pay, the same boat, and he expects a higher price. (*Mr. Cook.*) I do not think you would save anything; you would lose money by it. (*Sir William Watson.*) We think our system is right; we think it means the fresh provisions and proper relief of the men, and that we would save very little by the change. I suppose that is the best way of putting it.

Cost of stores and fuel for,

5939. Perhaps Mr. Cook might be able to answer this question better, with regard to the cost of stores and fuel in your lighthouses, shore lighthouses and rock lighthouses. I see in all these cases the cost of stores and fuel seems to be less in your service than in the others, which would seem to me to need explanation, looking to the fact that you have to import coal across the Channel, and that the others must necessarily have it at a lower price?—(*Mr. Cook.*) I know the other Lighthouse Boards get their coal at a lower price than we do; I suppose the economy is effected in carefully looking after the other stores that we issue to our stations.

5940. Have you as many siren signals as the people on the other side?—I could not answer.

5941. The fog-signals mean a considerable consumption of coal?—I do not know what happens at the Trinity House. (*Sir William Watson.*) Our price for coal is higher, much higher, than Scotland. (*Mr. Cook.*) We pay 35s. 6d. per ton for the house coal delivered into store at the lighthouses this year.

5942. You gave evidence, Sir William, with regard to the increased intensity which you obtained by the vaporised oil?—(*Sir William Watson.*) Yes.

System of calculating intensity of lights.

5943. I have taken from the Returns already furnished the intensities of the leading lights, and I think there are seven lights of an intensity of upwards of 200,000; the Fastnet, 750,000; Kinsale, 460,000; St. John's Point, 460,000; Bull Rock, 333,500; Galley Head, 315,000; Tory Island, 326,000; the Maidens, 270,000. What I want to know is, are these intensities calculated on the old system of burner, or are they calculated on the new?—The Fastnet, of course, is the new system; Kinsale is the new; St. John's Point is the new. I can answer those straight off. Bull Rock has not been changed; Bull Rock is a different system from any of the others. It is not coal gas, but it is oil gas. It is oil gas made in the gas works in the ordinary way, not incandescent. Galley Head is new, Tory Island is the old ordinary coal gas; Maidens of course is the incandescent oil. With those two exceptions—the Bull and Tory—they are the new.

Submarine bell fog-signals:

5944. Have you considered carefully the question of submarine bells?—Oh, we have had a good deal of consideration on it, but we have done nothing, because the Trinity House brought it forward at the Conference twice, and each time the Advisory Committee opposed it, and the Trinity House withdrew it.

5945. Well, do you consider that that is an instance in which the opposition of the Advisory Committee has tended to deteriorate, or to injuriously affect, an important service?—It is rather a curious case that. I understand the reason they objected was, they say these submarine bells are very useful, but that they ought not to be put on the Lighthouse Fund. Now, considering that there is no other fund at present to do it, that means they should not be put at all.

5946. It has that effect?—My friend, Sir Robert Ball, has just come back from America, and he had some experience on board the "Teutonic" of the wonderful effect, or the wonderful belief that her captain has in their efficiency.

Efficiency of,

5947. Have you seen the report of Colonel Anderson, of the Canadian service, issued in January, 1905, more than two years ago?—The Mersey Docks Board have fitted their lightship with one, and the Submarine Bell Company have fitted one of the City of Dublin Company's Liverpool steamers with the receivers. We are trying experiments, as I said, now on the City of Dublin Steam Packet Company's steamers with them, but our cross-Channel boats are all of light draught, and up to this the results have not been very definite. The Allan line, I think, had all their ships fitted, and they have taken the receivers out of them. I was doing everything I could to get the Kish Lightship established as a test place, and the Submarine Bell Company had undertaken to me personally that they would fix one of our Holyhead and Kingstown mail steamers if the Kish Light should be fitted, but, of course, we would have to go to the Board of Trade and the Advisory Committee for the money to get it fitted, as they would not fit it free as an experiment; and in the face of the Trinity House proposals having been withdrawn, we have not done anything as a Lighthouse Board. That is the way it stands.

5948. But do you consider the net effect of the proceedings which have taken place with regard to submarine bells in this country has been in the direction of making the coast an object lesson for the world?—No, they have done nothing; Trinity House had some very interesting experiments, but they have not followed them up.

5949. But you are aware, I take it, that this question has long since passed through the experimental stage on the other side of the Atlantic?—Yes.

5950. Off Anticosti and on the Lurcher Shoals, in the Bay of Fundy, there are lightships—and they are of the most modern type—lightships fitted with submarine bells, wireless installations, and electric lights?—Oh, I maintain the Trinity House have made a mistake. I do not understand why the Trinity House withdrew their propositions. I would have been inclined, if they were my own propositions, to have fought them and carried them, if I could; but it was a curious position to take, that it was a right thing to do, but not to come on the only Fund which was capable of providing the money.

5951. Still raising the old question?—That is a question on which I must say the Advisory Committee have done all they could to prevent them. Liverpool are putting them up and spending the money on them, but they paid for their installations.

5952. I think, probably, Sir Robert Ball will be able to answer this question better than either Sir William Watson or Mr. Cook. Do you consider the amount of money that has been granted for experimental work in connection with the Irish Lights has been sufficient in the past. Would you desire to have seen a larger allocation of funds for the purpose of carrying out experiments?—(*Sir Robert Ball.*) Well, I am not aware that any particular scheme of experiments that was contemplated has been prevented from being carried out by insufficient funds. *Experiments:*

5953. The cost of experiments for five years, I see, amounted to £928 1s. 4d., and the average per annum £185 12s. 3d.?—(*Sir William Watson.*) Yes.

5954. But have you excluded from that any experiment as to mooring a buoy in 80 fathoms of water, which was a pretty expensive experiment, and does not appear to have been very successful?—Oh, absolutely; that is the Highland Rock buoy, beyond any question particularly successful; that does not come under the head of experiments at all.

5955. It is given in the list of experiments?—It is an experiment of a different class to the other experiments of new forms of lights and things of that kind. That was a test experiment before putting out that particular buoy. It was an experiment in that sense; that was a necessary preliminary to putting out the buoy. The Board of Trade may have put that in because it was experimental, but it was simply to try that particular buoy before we put out an expensive buoy, which has been there now for over two years successfully.

5956. The total expenditure on Ferris Point was some £8,000, I think?—Yes.

5957. You are satisfied that the expenditure was judicious; you have been satisfied with the results of it?—I have no doubt if it.

5958. It included the gas manufacturing stations?—Putting all things together there, and preparing the gas works and the means of supplying the different gas buoys at Tuns Bank, Highland Rock, Hunter's Rock, off Down, and two other places.

Central Lighthouse Authority:

5959. (*Admiral Henderson.*) You stated in answer to a question from the Chairman that you do not consider that a Central Board would be more economical, but I did not understand you distinctly to say whether you thought it would be administratively more efficient; do you think so?—Well, it is rather a difficult question to answer; I am not prepared to answer it. You heard my view, on the Scotch Board it might or might not, but I am not quite clear; it could not be more economical, because it would cost more.

5960. I am not saying it would not?—Yes.

Trinity House Control over Irish Board.

5961. Now do you think it is advisable for the Trinity House to go into financial questions; they have been gradually increasing?—Well, that is rather a difficult question. If a person or a body has a right to decide a question it seems always to me difficult to say they are not entitled to get all the information that they require to enable them to decide the question, therefore we have not hesitated to give them money statistics as well as everything else which used to be done.

5962. But does not the fact of their doing it reduce the work of your Board and reduce your responsibility?—No, I do not think it does, because it is only to enable them to form an opinion.

5936. But it must increase the amount of work and correspondence and circumlocution?—To a certain extent. The estimates have to be prepared before they are sanctioned. The Board of Trade would have to get the estimates in any case. If the Trinity House in former days had refused before the estimate went forward the estimate would have been saved, but there always must be a preliminary estimate prepared before the thing is put forward.

5964. Do you think there is too much circumlocution in the present system?—Well, I would not say that; I do not think there is.

Representation of Shipowners on Lighthouse Authority disapproved.

5965. Do you think that shipowners have a right to special representation on any governing body?—Oh, no, I do not think they have. I do not see where the right comes in.

5966. Although they pay the dues?—Although they pay the dues. I look at the thing from its efficiency only. Well, I feel that I can, and our Board can, look at it in a very independent way, because we have nothing to gain or lose if the Irish Lights Board were disestablished to-morrow, except that we shall be relieved of a lot of responsibility.

Inspectors' duties.

5967. I want to turn to another point; the duties of the inspectors. You have one general inspector of all lights, buoys and beacons?—Yes.

5968. And he has to inspect every light twice a year at least, and report to the Board?—He has constantly to inspect them.

5969. And who has he under him for inspection purposes?—He has an assistant inspector.

5970. That assistant inspector is of comparatively recent origin?—Yes, only last year.

5971. Only appointed last year?—Last year.

5972. Because of the increase of work?—Well, we have been pressing for that for a long time.

5973. You felt the work was increasing?—Yes; in old days we used to have one, and we felt the loss of it in many ways. The Board of Trade persuaded us to have only one inspector years ago. When the inspector is out of the office it is very hard to carry on the work without someone in his place.

5974. The question of the fishing interests has been raised two or three times. I want to know whether you have any fishing steam vessels in Ireland, or any fishing interests in Ireland which you think legitimately should pay a contribution to the General Lighthouse Fund?—There seems a very strong feeling against charging fishing vessels.

5975. Because it has always been a custom?—I do not think there is any charge on fishing vessels in Ireland, but there are on the east coast and the south coast a good many steam trawlers belonging to Waterford and other ports.

5976. Who make use of the sea lights?—Oh, they do, of course.

5977. A question has been asked of the other Boards as well about the Notices to Marines. Do you think there can be any increase of efficiency and economy by having one Authority to distribute Notices to Mariners?—I think the present system works well; each Authority ought to send out their own.

Sir W. Watson, D.L., Sir R. S. Ball, LL.D., F.R.S., Mr. H. G. Cook.

15 May, 1907.

Notices to Mariners.

5978. They ought?—Yes.

5979. Because at the present moment you have each Lighthouse Authority issuing Notices to Mariners, and you have the Admiralty and the Board of Trade doing it as well?—The Board of Trade, do they issue? I am not aware that they issue.

5980. Yes, weekly and monthly, and the Admiralty daily?—If there was any one Authority there would be a saving in that, that is clear.

5981. Do you not think with one Authority there could be some arrangement?—I am not prepared to say there could not be at all.

Local Lights: Maintained by Irish Lights Board.

5982. Have you anything in Ireland which is analogous to the port of London? London, as you know, is lighted entirely by the General Lighthouse Fund in contradistinction to the other ports of the kingdom, have you anything in Ireland which is analogous to that?—Only to a certain extent in certain parts; for instance, take Limerick, the first five lights, including Loop Head, are under our charge altogether. That, I think, is the only case that at all corresponds, up to Rinallan Point and Beeves Rock; there are Loop Head, Kilcradan, Skattery, Tarbert and Rinallan Point. All lights from that up to Limerick Quay are under the Limerick Port and Harbour Board.

5983. It is a small matter comparatively?—Still it is a long distance.

5984. But it is a small matter compared to the port of London?—The lights and buoys up to Beeves are all under our charge.

5985. (*Chairman.*) The lights in Queenstown Harbour, are they not under your charge?—Yes; but that is only up to the Spit Bank, and the whole way up the river is under the Cork Harbour Board.

5986. Spit Bank would come under the same heading?—Yes.

5987. (*Mr. Ennis.*) But in both of these cases, in the case of Limerick and Cork, there are Harbour Boards?—There are.

5988. Who carry out lighting requirements in the harbours. It is only a question of the line of demarcation between you and them, therefore it is not analogous to the port of London?—No; I was only pointing out it was analogous to it in the part over which we have charge.

Lightvessels: Cost of,

5989. (*Admiral Henderson.*) One or two questions I wanted to ask about details of expenditure, and any figures I give are based on the estimates and accounts for 1905-6. I see, on the question of lightvessels the cost of the three Boards for 1905-6 was £73,060, £19,322 and £1,302. Well, if you average those at 52 for the Trinity House, 11 for the Irish Board, and one for the Scotch, it means that the Trinity House average £1,405, and your average is £1,756. Can you give any reason why your average should be greater?—(*Mr. Cook.*) For how many years is that?

5990. A comparison of the cost of a lightvessel—the total cost. The actual expenditure on lightvessels was £73,060 Trinity House, £19,322 Irish Lights Board and £1,302 Northern Lights Commissioners. The Trinity House state they have 52 lightvessels; that is not including the spare ones; you have, not counting the spare ones, 11; that averages £1,405 for the Trinity House and £1,756 for you?—(*Sir William Watson.*) Well, we believe that our actual maintenance per lightvessel compares very favourably, but we have 15, not 11, including spare ones. I cannot answer those figures, because they would want to be dissected. (*Mr. Cook.*) I would want to see them.

5991. You have an item in the estimates of £1,453 for boat hire; is it a reason that you are more costly because you relieve your lightvessels by boats entirely?—Very probably that will be one reason, Sir. (*Sir William Watson.*) That may be one portion.

Relief of.

5992. But you do relieve your lightvessels by boats?—Yes, entirely.

5993. You do not make use of your steamers for that purpose at all?—(*Mr. Cook.*) No. The vessels are so seldom there; we must have a regular system of reliefs

5994. You do not think the number of steamers you have is sufficient to do it properly?—(*Sir William*

Sir W. Watson, D.L., *Sir R. S. Ball*, LL.D., F.R.S., *Mr. H. G. Cook.*

15 May 1907.

Expenditure of Irish Lights Board: Explanation of various items.

Watson.) It would be quite impossible to relieve them with our present steamers in addition to their present works.

5995. Of course, you are able to do it by boats at that rate very much more cheaply than you could by tenders?—It would be quite impossible to relieve them by our present tenders; quite impossible.

5996. As to lighthouses, your total number is 74 and one fog-signal; that is 75. I am comparing you now with the Scotch Board. The Scotch is 80 and 9 minor lights. Your expenditure for 1905-6 was £34,630, as against £34,949; that is, your expenditure is nearly equal. I am speaking of lighthouses, because that is where you can get a comparison. Can you give any reason why, comparatively, the cost of your lighthouses is greater, considering their smaller number, than the Scotch Board?—We have more rock lighthouses, number one; of that I am certain.

5997. The number of rock lighthouses, you have 14 island stations and 39 shore stations, against 22 island stations and 55 shore stations of the Scotch, and 18 rock against their 12; you have rather more rock?—The rock stations are the expensive stations.

5998. And you think that that would account for the considerable difference, considering the difference in numbers?—Yes, because some of the larger stations have 6 keepers, and at practically all other rock stations there are 4 keepers; these are expensive stations to maintain.

5999. In your estimates for oil and lighting stores, I have compared the estimates for 1905-6 of all the three Boards. Where is the item for fog-signal stores shown?—Fog-signal stores; there is a regular heading for fog-signal stores.

6000. It is not to be seen in the estimates. There is for the Trinity House fog-signal stores, £2,750; neither the Scotch nor the Irish have any headings at all?—I cannot understand that; there is a regular heading for fog-signal stores in the summary of Abstract "A" and "B."

6001. In the estimates?—Yes, Sir.

6002. We will look at the estimates afterwards; I have been unable to discover it?—(*Sir William Watson.*) There must be. (*Mr. Cook.*) There must be.

6003. You have got fuel for fog-signals, £1,701?—Fuel for fog-signals; I will explain it to you afterwards.

6004. The total expenditure under the head of stores was Trinity House £9,921, Irish Lights Board £6,740, and Northern Lights Commissioners £5,978. You are ahead again here of the Scotch Board in the stores; that is, for a smaller number of lighthouses?—A lot of the Scotch lights are unwatched lights.

6005. Even with that you have got 80 against 74; 80 fully-manned lighthouses against your 74, if you take it on that line?—A lot of those Scotch lighthouses have got a very small staff; they have only one keeper at some stations.

6006. It is just the same with repairs. Your repairs are £4,583; that is your estimate, and the Scotch are £4,219. I am speaking of lighthouses alone. Have you any reason?—We have the shore dwellings for these extra rock stations.

6007. Is the repair of a rock station more?—The dwellings have to be kept in a state of repair—constantly in repair. A house at a seaside place requires repair annually.

6008. Special repairs, I notice, you had only one item for an alteration or conversion, while the total number of alterations put down for the Trinity House was thirteen; for the Scotch Board, fourteen. I see you did carry out two alterations or conversions under the head of new works. Did you carry out any other conversions that year, and where are they shown?—I could not answer that.

6009. In the special repairs there are fourteen conversions, thirteen conversions to incandescent oil for the Trinity House, and twelve for the Scotch Board, and one alteration of light put down for the Irish Board £100; but are you complete; are all your conversions complete?—Oh, no, Sir; we are most anxious to get them all converted.

6010. Why did you not put down for more conversions, considering you had the wind cut out of your sails by the Trinity House and the Scotch Board?—We have several lights we wish to alter to incandescent, but the engineering staff being occupied with important works at the Fastnet, have not had time.

6011. Would you say the engineering staff, being fully occupied, had no time for anything more?—Yes.

6012. You have plenty of other conversions in contemplation?—Oh, yes, as soon as we can get them done. The Commissioners are most anxious to proceed with the conversions; they would save money by it.

6013. The total cost for repairs, ordinary and special, was £8,028; the Scotch Board £6,782, speaking again of lighthouses. There, again, you are in excess of the Scotch?—You really cannot make any comparison for a single year. It is quite impossible; something may have gone wrong at one of our stations, which would cost £2,000 alone, and thus account for an apparent excess.

6014. For a special repair?—Yes.

6015. You have no big sum at all for special repairs in this year. Now, with your steam tenders, the average, as I make it out, is £4,044 Trinity House, £4,899 Irish Lights Board, and £4,675 Northern Lights Commissioners. Can you give any reason why your average is greater?—Well, our steam tenders are regular ocean going vessels, having crews similar to the "Irene" of the Trinity House, or the "Pharos" of the Northern Lights Commissioners. We have only two. Trinity House have only got six, eight, or ten of standing crew in their smaller vessels, and then they use their liberty lightship men to make up the complete crew to carry out the work, tending on lightships, relieving lighthouse stations and shipping buoys; ours have a full crew of about thirty-five.

6016. The reason, you would say, is that your vessels are rather larger, and they have to do more ocean work?—More ocean work.

6017. Now, your district storehouses; do you do any repairs in the storehouses?—Oh, yes, a large amount of repairs.

6018. Minor repairs; you keep mechanics?—Yes.

6019. That principle is the same as Trinity House in that respect?—I could not say what they do at Trinity House; but I believe it is the same as Trinity House.

6020. The "Tearaght" was under refit from the 25th January to the 10th April—forty-four days. Is not that rather a long time for one of those ships?—(*Sir William Watson.*) I could not say without knowing what the principal works were.

6021. It appears to me, in looking through the logs, they are rather long under refit. As a shipowner, do you keep a good weather eye on them in that respect?—I have had ships under repair longer than that; it depends; a mere survey might take half the time.

6022. Yes, but for small vessels of that sort; you can turn them inside out in less than six weeks?—May I say, without knowing any of these questions I would not undertake to answer, without knowing all the work that was done.

6023. I want to know, do you think there would be any economy at all if the Boards were allowed some sum for contingent expenses instead of having to refer every penny of expenditure to the Board of Trade?—I do not see why it should. Sometimes there is delay in getting sanction, but I do not think it affects it seriously. The other might lead to extravagance, it might lead to extravagance, having the money at hand.

6024. You might want to spend it?—It ought not to be, and I do not say that it would, but it might.

6025. (*Chairman.*) We have only to thank you for the evidence you have given?—I am very much obliged to you for the manner in which you have received us.

6026. Sir Robert Ball, you are Scientific Adviser to the Commissioners of Irish Lights, and were appointed to that post in 1884, I think?—(*Sir Robert Ball.*) Yes, that is so.

6027. Previous to that you had been a Commissioner?—I had been a Commissioner for a short time, yes; a year or two.

6028. In 1892 you were appointed Lowndean Professor of Astronomy and Geometry in the University of Cambridge?—Yes.

6029. But still continue to hold the position of Adviser to the Irish Board?—That is so, yes.

Scientific Adviser to Irish Lights Board: Duties of,

6030. Would you shortly describe to us the duties which you carry out as Scientific Adviser?—Well, the first duty I would mention is to submit a report to the Board whenever the Commissioners ask me for an opinion on any matter relating to lighthouse work, which they think to be within the province of the Scientific Adviser.

6031. I think you are prepared to put in a list of the reports that you have made?—Yes, I have a list at the end of this *précis* of the various matters that I have been asked to report on. Well, then, the second duty; I consider it my duty to witness, and sometimes to conduct, experiments on lighthouse matters, when requested by the Commissioners to do so, and to report to them thereon, and I have given illustrations of that.

Experiments witnessed by

6031a. Perhaps you had better mention the illustrations?—An early illustration is 20 years ago now, with the famous South Foreland experiments, that were conducted by the Trinity House for the purpose of testing the comparative merits of gas, oil, and electricity, as lighthouse illuminants, especially in fogs. That was a very elaborate and extensive inquiry. I paid visits to Dover during the weeks that the experiments lasted, and when I was not there the Commissioners placed an assistant at my disposal, who attended and took careful observations, and reported to me weekly about it. Then other illustrations; after the Bull Rock was first lighted in 1889, I went down with Sir William Watson and other Commissioners. We made many experiments there with the powerful gas apparatus in the Bull Rock lantern, which involved some new problems. On a more recent occasion, in 1901, I reported on our Engineer's (Mr. Scott) important experiments on incandescent lights at Kingstown, which we have had so often mentioned here to-day, and the latest work of this kind was the testing in Kingstown last June of Sir Howard Grubb's beautiful device for an unlighted beacon by the use of three rectangular mirrors, availing himself of a very beautiful optical principle. When a light is sent into these three mirrors at right angles, no matter at what angle it is sent into that corner, which is a rectangular corner of three rectangular mirrors, the light is returned in the same direction, the idea being that it would be useful in the case of an unlighted beacon, because if one of those sets of three mirrors was put up on a rock, anyone throwing a beam in that direction would get a light returned, and so see exactly the spot where it is.

6032. Do you regard that as a useful invention?—The principle of it is beautiful. Practical questions will arise about its applicability, but it certainly was a very beautiful application of a very beautiful optical principle. I also accompany the Commissioners, when requested to do so, as a member of a deputation on matters connected with lighthouse affairs, and in which the Scientific Adviser's presence is deemed useful by the Commissioners. I will give as an illustration —it was a long time ago—when we attended at the Board of Trade about the introduction of hyper-radiant lenses at Tory Island. There are three great points which have entirely revolutionised the modern principles of lighthouse construction. One, of course, is the incandescent lights, of which we have already heard much; the second, earlier, of course, in point of date, is the introduction of these hyper-radiant lenses. The hyper-radiant lenses employed now in the Fastnet are about 5 feet 6 inches in height. That, of course, was a very great advance upon the small size, about 3 feet, which were used before. These hyper-radiant lenses were introduced first into the Tory Island light, and there was a considerable discussion at the time. It involved large additional expense, and we had a deputation to the Board of Trade. I think Lord Stanley of Alderley was President of the Board of Trade at that time.

Duties of,

Important modern Inventions in Lighting Apparatus.

6033. While you are on the subject of the improvements which have of recent years been introduced into lighthouse work, would you mention the third?—The third is flotation of the lenses in mercury.

6034. That was a French invention, was it not?—It was really used by the astronomers first of all for mounting some of the heavy telescopes. They took to floating them in mercury. Then it was adopted by the Lighthouse Authorities, in France, I believe, first, and now we have adopted it here.

6034a. The other two inventions originated in the United Kingdom, I believe, did they not?—I believe the incandescent lights did; the hyper-radiant lenses, I think, were first constructed in France.

6035. In France also?—Yes.

6036. The use of incandescent oil?—The use of incandescent oil; I am afraid I could not say for certain where that originated; I think the Trinity House had it. (*Sir William Watson.*) I think that was in England; the hyper-radiant lenses was in France. (*Sir Robert Ball.*) Those three beautiful inventions have all interlocked, so to speak. They have acted and reacted on each other. The old lamp, which was about 8 or 9 inches in diameter, had a very large flame, whether it was an oil lamp or a gas lamp, and you cannot construct optical apparatus that is perfect except for an illuminated point, so that the lenses that we put round were correct for an absolute point, and the lamp was only approximately correct for the greater part of the flame, so that precision of character could not be given to that light when the flames were very large. Then, of course, one of the great advantages claimed for the electric light was that it brought the light down to a point. Well, the incandescent is a change in the same direction. The incandescent burner, even on the Fastnet, is quite a small thing, about 2 inches in diameter and 3½ inches high, and then this is put with those hyper-radiant lenses, which are much further from it than the old lenses used to be. The light becomes practically a point on the scale of the apparatus, and consequently we get the advantage of having a perfect optical arrangement. When you have added your hyper-radiant arrangement you can make the character of your light what you desire it to be. The third modern improvement in the flotation of the lenses is the floating on mercury. The chief advantage of that is that the friction is reduced to about one-eighteenth part, and this is taken advantage of into two ways. First of all, you can quicken the character, which is one object. We have always been striving for years to get the characters quickened, so that the flashes succeed each other more rapidly, and that can be done. We can now turn the revolving part so much more easily; these large frames and lenses are very weighty. Their weight varies, but it has to be expressed in tons, but now it floats with one-eighteenth of the friction that it used to have, and you can make it go faster. That again is another advantage, because if you increase the speed you can diminish the number of faces, instead of having, as we had in Mew Island, six faces, and in Galley Head eight. That is to say, at Galley Head the whole light was divided into eight parts, so that each flash gets one-eighth of the light; but now, as we can make it go so much quicker, it suffices to put four faces at the Fastnet, and each of these gets one-fourth of the light, so that the various improvements act and react on each other. Those three inventions, taken together, have really quite transformed lighthouse lighting. Then I am sometimes consulted by the Commissioners as to the replies that should be sent to querists who write about various matters. Very often they are of varying degrees of importance, but the last query related to certain phenomena connected with fog-signals in the lightships on the coast of County Down, something connected with those puzzling silent areas which make fog-signals so difficult, and which make us hope so much that these submarine signals which were mentioned just now will remove a good deal of the difficulty attending fog-signals. Then I have held it to be a part of my duty to represent to the Commissioners any improvements that seemed to me desirable in the scientific part of lighthouse work. I have already practically mentioned the chief illustration of it. For 20 years, in common with Lord Kelvin, if I may associate myself with him for the moment, and others interested in lighthouse improvement, I have steadily urged the importance of making the characters of the lights show themselves more rapidly than was the case when I joined the service. We have incessantly urged the shortening of the flashes as far as safely could be done, and also the diminution of the intervals between the flashes. These principles are now generally admitted. The Fastnet, perhaps, is the best illustration of them. We have got four splendid beams of light; the whole system revolves in 20 seconds, so you get a flash every five seconds. The captain of the "Majestic," on which I travelled back a few weeks ago from the United States, told me he had seen the Fastnet 47 miles away —has seen the flashes of the light. I regard that as a high testimony to the efficiency of it.

Scientific Adviser: Duties of,

Sir W. Watson, D.L., *Sir R. S. Ball*, LL.D. F.R.S., *Mr. H. G. Cook.*

15 May 1907.

6037. Then you also, as a general rule, accompany the Commissioners on any of their cruises of inspection?—I have done that for many years. I have accompanied the Commissioners on their annual cruise of inspection. I have rarely failed to join the ship for at least a part of the cruise round Ireland, and I make a complete circuit whenever I can. I can only recall at the present moment one occasion during the last twenty years that I did not join. I think I am correct in saying that I have visited every lighthouse, and probably every lightship under the management of our Board. All the important lights, and, indeed, most of the others, I have visited many times. I may mention, for example, that I have visited at almost every stage of their progress, from commencement to completion, the great new lighthouses built within 20 or 25 years on New Island, Tory Island, and Bull Rock, and the Fastnet. During these trips, as Sir William Watson has described, there is constant work—five or six stations visited every day—and there is incessant discussion on lighthouse affairs, and everything connected with them, and the Scientific Adviser is often called upon for an expression of more or less informal opinions on many questions that arise.

6038. Would it be part of your duty to report upon apparatus—illuminating apparatus—for instance, the lenses supplied by Messrs. Chance?—Yes, it would; I have had to go to Messrs. Chance's works in Birmingham, to examine lenses that were being manufactured for the Board, and I have had to test lenses in their works at Kingstown, and then we had a number of tests of the Tuskar, I remember, when it was put up first. However, that more relates to temperature than anything else; the probable effects of the temperature in the lantern.

Illuminants: Relative advantages of,

6039. (*Mr. Ennis.*) With regard to the comparison between gas, oil and electricity, you have referred to the fact that in fog the electric light is not so effective as the other forms of illuminant, candle-power for candle-power, of the same intensity?—Yes; candle-power for candle-power, that is so.

6040. I take it also that the candle-power obtainable by electric light is so infinitely greater than the candle-power obtainable by any other system that you can in practice erect electric lights capable of carrying a greater distance than any other form?—That is so with the forms we tried on that occasion; there was a very striking illustration of it one night at the South Foreland. They erected three lighthouses there, temporary lighthouses. They had oil in one, gas in the other, and electricity in the third, and then they laid out a course of a mile, and they had posts driven in, so that if fog came on we could feel our way from post to post, and know exactly where we were, and the distance between us and the lights. On two occasions we had very fortunate fogs for the purpose, and we tested it both ways, both starting with the lights and going backwards from them, and then coming along this line of posts through the fog. In each case the electricity was the best; but it is just as you say, candle-power for candle-power the others would have been better; but then the electricity had such enormously greater candle-power as to more than make up for this difference, and consequently the electricity did last the longest.

6041. Is it not true that experiments have been made with a new beam of yellow light, I think, for use with the electric light, which would enable it to carry further through fog? I think we have had evidence on that point?—I could not answer about that. Possibly, what it might do would be to cut off a great deal of the light that was incapable of passing through the fog, and show all the light that was left. A larger percentage might get through the fog, but that really would not amount to an improvement.

6042. But with the rapid increase in the size and speed of ocean-going steamers, electricity would eventually, I should say, be desirable in such a station as the Fastnet?—Well, I do not really know. There have been no comparisons yet made between the efficiency of electricity and incandescent. There was no incandescent at the Foreland, you know.

6043. Of course, electricity is infinitely more expensive?—Yes, infinitely.

6044. But, assuming that economy was not a consideration; that in a certain class of particular circumstances, where it was desirable that the light should carry as far as possible, I assume that nothing yet discovered has been able to compete with electricity?—Well, I really do not know; I could not say whether an electric light on the Fastnet at the present moment would be better than what we have got.

6045. It would carry further?—Well, I do not know; I do not think it would. The Fastnet carries to the horizon quite easily, as we saw it in the series of experiments we made; they are largely recorded in the book. I daresay the book has been sent to this Commission. We found how beautifully it carries to the horizon, and, as I mentioned, the captain of the "Majestic" told me he had seen the Fastnet 47 miles away.

Projection of vertical beam of light.

6046. I am aware that shipmasters have been under the impression that some of the big French electric lights—Grisnez and some of the other lights—had a vertical beam projected upwards from the tower, because of the immense carrying power of the lights, and when hull down the light was seen over the horizon?—To a certain extent that is perhaps little more than an optical illusion. Calais light looks as if the beams were going over your head, but they are intended to shoot parallel with the horizon.

Length of flashes.

6047. You spoke of the subject of the flashes; what is the speed of the flashes at the Fastnet, that is, the length of the flash?—It is about a fifth of a second or a little less.

6048. Because it has been represented to us by nautical witnesses here that flashes of one-tenth of a second, as in some of these big French lights, are too rapid; that it is impossible to get the bearings, by reason of the rapidity of the flash?—I have heard that said, but at the same time the nautical authority that I consulted recently told me that a flash, such as the Fastnet, a fifth of a second, is quite right; they can take a bearing quite well.

6049. Three-eighths of a second; but then the one to which exception was taken was one-tenth?—We have not got any of one-tenth of a second at all.

6050. Nothing so rapid as that?—No.

Fog-signals:

6051. With regard to the fog-signals, Sir William Watson referred to Rockall. I asked some questions on that point myself, because it was represented to us that to carry out experiments in fog-signalling, in sound signals, I mean, at any time except when there was a dense fog was practically a waste of time and money; and if these experiments were carried out in a time of dense fog, they had a tendency to mislead vessels and run vessels ashore. I asked a question, whether Rockall might not be just the place for experimenting with fog-signals, but I was informed that it is to a certain extent in the track of passing ships?—There was a proposal to erect some time ago——(*Sir William Watson.*) That is a very dangerous place to experiment in.

6052. What is your opinion of the Canadian diaphone?—(*Sir Robert Ball.*) I do not know; I am not acquainted with it.

Areas of silence of,

6053. But in any case, I take it that anything in the nature of a sound signal for fog is liable to the area of silence, which is not a constant quantity?—Oh, I think it is.

6054. It depends on temperature of the air, or something else, that will vary; therefore the area of silence to-day may be an area in which the sound may be perfectly heard to-morrow?—Oh, quite so.

6055. There is no scientific method by which that can be overcome?—I believe not, because that is in the atmosphere, which is not under control.

SEVENTEENTH DAY.

Tuesday 18*th June*, 1907.

PRESENT:

The Right Hon. G. W. Balfour (*Chairman*).

Sir Frank Forbes Adam, C.I.E.
Colonel L. J. C. Herbert, C.B., C.M.G., M.P.
Vice-Admiral W. H. Henderson.
Mr. M. A. Ennis.

Captain C. Bigham, C.M.G. (*Secretary*).

Mr. H. Llewellyn Smith, C.B., Permanent Secretary to the Board of Trade, called in; and the Hon. T. H. W. Pelham, C.B., Assistant Secretary (Harbour Department), Board of Trade, recalled; and examined.

6056. (*Chairman.*) Mr. Llewellyn Smith, you are Permanent Secretary to the Board of Trade?—I am.

6057. Have you anything to add to the evidence given on behalf of the Board of Trade by Mr. Pelham and Sir Thomas Blomefield with regard to the existing state of affairs, and the relations between the Board of Trade and the General Lighthouse Authorities?—No, I think not. If there are any additional questions which the Commission would like to put, I should be glad to answer them to the best of my ability, but I think probably you would find it more convenient to get that from Mr. Pelham. I understand that the point on which you desire I should say something is whether the Board of Trade has any views as to the nature and constitution of the Authorities who manage and control the lighting of the coasts of the United Kingdom.

6058. Quite so?—Rather than on the details as to the existing facts. On this I should like to speak with some reserve. Of course, I have not heard the witnesses that have already appeared before you, though I have had the opportunity of glancing generally through some of their evidence, and, moreover, there are financial questions which I understand are not within the scope of this Inquiry, but which must naturally have a considerable bearing upon the question of management and control.

Administration of Lighthouses by Board of Trade: Deprecated.

6059. Several witnesses have suggested to us that the lighthouse administration might best be reformed by sweeping away the existing Authorities altogether, and transferring their duties to the Board of Trade?—Well, of course, if Parliament put the duties upon us, we would do our best to discharge them, but I think the feeling of the Board of Trade is that the ordinary departmental organisation is better suited for the purposes of general control than for the purpose of the detailed management of a large business of this kind. Of course, there would be no great difficulty if desired in constituting some special sub-department or special board under the control of the Board of Trade, which should undertake this work, but the Board of Trade have great doubt as to whether an arrangement of that kind is a desirable one. Whether it would conduce to economy is a matter I should rather leave you to form your own judgment upon. I have already said that financial considerations will naturally be of importance, but the Board of Trade, as you know, is already an overworked Department, on which new duties are continually being thrown by Parliament, and however much we decentralised the administration by the constitution of a special sub-department, the ultimate responsibility would have to be with the heads of the Board of Trade. I think that we should view with something like dismay the prospect of having to add to our very multifarious functions the detailed management of the lighthouse system. It is comparatively easy to set up the necessary machinery, but the real difficulty—which I do not see how we could quite satisfactorily overcome—is the growing congestion at the top of the department. We could not get rid of the ultimate responsibility.

6060. On the whole, therefore, you would deprecate placing the actual management of the lighthouses, and the initiative in constructing new works, on the Board of Trade?—Yes, we should. We think that the controlling powers of the Board of Trade should in any case be preserved, but that they should be mainly directed, as at present, to the more negative task of controlling and checking expenditure. There is one point, and only one, of initiative, that it might be well perhaps to give to the Board of Trade—I shall return to it, if I may, later—and that is, it is for consideration whether the Board of Trade should not be clothed with the power, only to be used in extreme cases, of requiring a Lighthouse Authority to carry out a work which the Board was satisfied was urgently necessary. If I might say something about that later I should be glad, but with that exception we think that the present powers of financial control are those which should be entrusted to the Board.

Mr. H. L. Smith, C.B. *Hon. T. H. W. Pelham*, C.B. — 18 June 1907.

6061. Your objections to placing these duties upon the Board of Trade, I notice, rest principally upon the amount of work which the Board of Trade has to discharge?—Very largely, yes.

Might not promote economy.

6062. On questions of economy, that is to say, whether a Government Department would, on the whole, be more economical or less economical than the existing Authorities, you would prefer not to express an opinion?—It is a somewhat delicate matter upon which to express an opinion, but it must be obvious to the Commission that in a case of this kind, where the potential demands for lighting all round the coast are practically inexhaustible, there being scarcely a part of the coast where some sort of case could not be made out for some advantage resulting from an extension of lighting, it would be difficult always to maintain economy.

6063. Do you consider that difficulty as likely to increase in proportion as the principal needs of the great trade routes have been met, and money is available for lighting those parts of the coast in which the local interests are more concerned than the general interests?—Yes, I think that is so; I think it is a growing difficulty.

Would necessitate sub-departments in Scotland and Ireland.

6064. A Government Department would always be subject to a considerable amount of political pressure by its supporters?—There always is that difficulty, yes. Of course, we should endeavour to resist such pressure, but I do not know how far we should always be successful.

6065. Do you also think that administration by the existing Authorities would, on the whole, be more likely to deal fairly with distant interests, such as those of the coasts of the north of Scotland, than a central authority?—I think you might pay very dearly if you weakened local interest in these matters. I have a word to say about that later. I do think that if the Board of Trade or some other central department were entrusted with this work, we should have somehow to decentralise, we should have to have some local sub-departments in Scotland and Ireland.

6066. The question of who shall pay the cost of lighting the coasts is not before this Commission, but perhaps you would tell us whether, in your opinion, if the administration were transferred to a Government Department, that would not inevitably tend to bring in its train a change in the existing system of levying light dues?—It would certainly be very anomalous for a Public Department to have a direct responsibility to Parliament for efficiently carrying out this service, and be limited to a particular fund. I do not know,

Mr. H. L. Smith, C.B. *Hon. T. H. W. Pelham*, C.B.

18 June 1907.

however, that there is very much in that, because we have power to increase the light dues if we find them insufficient.

6067. Well, then, putting aside the proposal that the management of the lighthouses should be undertaken by a Department of the State, a second possible suggestion would be to entrust it to a single Board, which would take over the lighting functions of the Trinity House, and the Scotch and Irish Boards. Have you remarks to make on that suggestion?—The most usual form in which I have seen that suggestion made, is that the Trinity House should be the Authority for the United Kingdom. Of course, there might be a new Board which should absorb them all. It seems to me that a very strong objection is likely to be raised both in Scotland and Ireland to the abolition of the separate administrations, and, subject to some provision for securing some degree of uniformity, it seems desirable in itself that the actual current administration should be to a greater or less extent decentralised. There might, and probably would be, some economy in having one central staff of officials, but I am not sure that that would not be too dearly bought by the loss of local knowledge and the weakening of local interest. I am quite sure that the proposal would be pretty strongly opposed.

Central Lighthouse Authority: Would be disapproved.

General Lighthouse Authorities: Reconstitution of, considered

6068. A third possible scheme is to maintain the three General Lighthouse Authorities as at present, acting under the control of the Board of Trade, but so far as may seem necessary to reform their constitution?—Yes, that seems, on the whole, to the Board of Trade to be, subject to the evidence that you have heard which we have not, the more hopeful line, to maintain three bodies. Of course, the present constitution of all the three Boards is anomalous, and they differ very widely among themselves. You have the facts of their constitution so very fully before you that I need not labour that point. If we were starting a new system of lighthouse administration, I cannot think that we should dream of constituting any Board quite on the lines on which any of these three Boards is constituted, but if you are satisfied from the evidence that the practical working of those three Boards is satisfactory, the public in this country are not usually disposed to attach very great importance to logical consistency or symmetry of constitution. How far that is the case, how far they are working satisfactorily, is a matter on which you have had a large amount of evidence, and you will form your opinion on that, a much better opinion than I could give. I feel that as regards the reform of constitution, much depends on what your finding is. If you find that any of these Boards is inefficient or extravagant, of course it will be necessary no doubt to suggest the appropriate remedy. If, on the other hand, you find that in practice they have been efficient and business-like and economical, the case is different. On the other hand, of course, the mere fact that for a certain period of time a Board or a public authority has worked well in practice, does not absolutely close the question as to the desirability of improving its constitution. It may be, for example, that it has been fortunate in its officials, or some accident may make a very anomalous Board work well, but there are other questions to which more or less weight must be attached—for example, the confidence which it gives to the public or to the various interests concerned, and how far there is security that the efficiency of the Board will be permanently maintained.

6069. Is there any particular direction in which you would suggest that the constitution of the Boards might be usefully reformed?—I think our opinion is that the absence of nautical experience among the members of the Scottish and Irish Boards is, at all events *primâ facie*, a source of weakness. At present it is remedied more or less by the control which Trinity House exercises over new works. They have the benefit of the nautical experience of Trinity House, but it is worth considering whether some direct representation of persons of practical nautical experience on these Boards is not desirable. Of course, in the Trinity House all the Acting Elder Brethren have nautical experience, but on none of the Boards is there any representation of shipowners as such. I believe there are some shipowners on the Irish Board, but not *qud* shipowners. And there is something to be said for taking steps to secure the presence on each of the Lighthouse Authorities of one or more shipowners. That is the view of the Board of Trade. There is a precedent for that in the case of Trinity House, in the constitution of their Pilotage Committee. There there is a shipowner and a pilot who are elected I believe by the payers of Thames Conservancy dues. I have made some inquiries, and am informed that that is an arrangement which has worked advantageously. Of course, the addition of shipowners to the Trinity House itself or to the Committees which deal with lighthouse matters would be a larger proposition than the addition of a shipowner to the Pilotage Committee, which has comparatively small and local duties, meeting once a week. The lighting duties involve continuous attendance, and the meetings of the Board and of the Committees which deal with lighting are much more frequent in the aggregate than that. There might be some difficulty of attendance. And, moreover, the lighting duties of Trinity House being national and not local, the method adopted of selecting the shipowners would be inapplicable, and there is no quite satisfactory means of selecting shipowners' representatives. If, however, you determined that it was a good thing, I have no doubt that the difficulty could be overcome. I could make a suggestion if it would be of interest.

6070. Yes, I think we should be glad to have any suggestion you care to make?—You know that there are no shipowners' associations—no single shipowners' association—which can be said adequately to represent all classes of shipowners, but it might be possible for some Department, say the Board of Trade, to have the power of nominating some shipowners after consulting the various organisations concerned, in the same way as, Sir Frank Adam will know, we nominate members to represent the commercial community on the Commercial Intelligence Committee, after consulting the Associated Chambers of Commerce. They supply us with a list of names, and we select, and that has worked, I think, very satisfactorily. But in any case, the main object of the appointment would not be to secure the control of the operations of the Lighthouse Authorities in the interests of shipowners; it would rather, I imagine, be to ensure confidence that, in coming to any decision, the point of view of shipowners has been fully considered, and for that purpose the number of the representatives, whether they are in the minority or a majority, is really not a vital matter at all. I am not able of course to say how far the different Lighthouse Authorities themselves would welcome the addition of shipowners. I think I saw in some of the evidence from the Trinity House that they would not oppose it.

6071. I think the Trinity House and the Northern Lights Commissioners both said that if this proposal was pressed by the Commission they would not oppose it, but neither of them thought that it would be an improvement upon the existing arrangements?—No.

6072. The Commissioners of Irish Lights were strongly opposed to it from every point of view?—They were opposed to it? Well, that partly answers the point I raised, but perhaps you could hardly expected a Board to be very enthusiastic about any change in its constitution.

6073. I think their argument was that such an addition to their body would create friction, without putting the case of the shipowners better before the Lighting Authorities than is now done by the Advisory Committee?—I shall have something to say about the Advisory Committee, but really the Advisory Committee, as you know, is a body to advise the Board of Trade. It is not in direct contact with the Lighthouse Authorities. At the annual conference there are representatives of all the Authorities present, but it is really a body that we have called into existence to advise us of the point of view of the shipowners and others, when we are considering sanction to proposals for new works.

6074. But do you think it would be advisable to put a representative of the shipowners on these Boards for the purpose of criticising the ordinary administrative work?—I should rather put it, to invite the assistance of shipowners in carrying out the administrative work. I very much doubt whether they would be purely critical. Perhaps that is a bold attitude to take, considering the fact that they themselves are not pressing for this reform.

6075. As you are aware, we have not had the advantage of any evidence from the Advisory Committee, who declined to accept the invitation we sent to them, but there has been one representative of the

shipping community, Mr. Norman Hill, whose evidence was decidedly adverse to the suggestion that one or two representatives of the shipowners should be placed upon the Lighting Authorities?—Yes, I saw that; I read Mr. Norman Hill's evidence, but the shipowners of course will not look at any of these questions of administration apart from their campaign against the payment of light dues just now. They perhaps can hardly be expected to, and if they thought that this was offered to them, so to speak, in satisfaction of that claim, of course they would not take it, nor perhaps in lieu of the Advisory Committee. If the Commission do not think it an improvement from the administrative point of view, they will probably not recommend it, but it seemed to me that somebody with nautical experience and somebody experienced as a shipowner would be a really advantageous addition to these lighthouse bodies, not as a concession to an interest at all.

6076. I rather think the Northern Lights Commissioners distinctly stated that they would welcome the addition of a nautical representative on the Board, either as a member of the Board or as an assessor?—Yes.

6077. But I presume that if a nautical expert were placed on the Scottish Board it would be necessary to pay him?—Yes, I should think so; I should think probably that would be the case. I rather had in my mind two elements, the nautical—I mean something like a retired ship's captain, such as the people from whom the Elder Brethren are selected—and a shipowner, as representing nautical enterprise from a rather different point of view.

Advisory Committee:

6078. If that proposal were adopted, it would not, I understand, be your suggestion that it should take the place of the existing Advisory Committee, but that it should be additional to it?—Yes, I do not think it would take the place of the Advisory Committee; the Advisory Committee, I think, must be judged separately. It is a body to convey to the Board of Trade the views of shipowners as a whole, and not only shipowners, but also underwriters and merchants, about proposals for new works, and I do not think putting a shipowner or two on the separate Lighthouse Boards would take the place of that. It might, however, improve the working of the Advisory Committee, especially if these representatives were also on the Advisory Committee itself, so that they formed a link and informed the Advisory Committee better than they are always informed now of what are really the reasons for the different proposals. I think that they would be a valuable link.

Trinity House control over Scotch and Irish Boards: Value of, to Board of Trade.

6079. If nautical members were appointed upon the Scottish and Irish Boards do you think it would be desirable to free those Boards from the control at present exercised over them by the Trinity House?—I think it would diminish the necessity for that control, but I think that if such a change were made, if the control of the Trinity House were taken away, the Board of Trade in receiving proposals from the Irish and the Scottish Boards would desire to be free to avail themselves of the nautical experience of Trinity House by consulting them, so that it would not make a very great change, whether the proposals came through the Trinity House to the Board of Trade, or the Board of Trade consulted the Trinity House. I am not sure in those circumstances whether there is a sufficient reason, from an administrative point of view, in making that change, and I do not know how far it has been pressed upon you to make a recommendation of that kind—to abolish the control of Trinity House—by the Scotch and Irish Boards; I rather think by the Scottish and not by the Irish. I think they were divided, if I remember right.

6080. The Irish Board rather welcomed the interference and control of the Trinity House; the Scottish Board are decidedly adverse to it; that is my recollection of the evidence given before us?—Yes; well our view is that we attach importance to having the opinion of the nautical people at Trinity House on these proposals; that if they come to us direct we should desire to be able to refer them to or consult Trinity House. Beyond that I do not know that we have much choice.

6081. It is indifferent to you whether you act as the controlling Authority advised by Trinity House, or whether Trinity House is the controlling Authority with an appeal to the Board of Trade? That is the present arrangement?—Yes, but we can still refuse sanction, even if the Trinity House had given statutory approved. We have the ultimate voice at present, not only in cases of disagreement referred to us on appeal, but in all cases.

Mr. H. L. Smith, C.B. Hon. T. H. W. Pelham, C.B.

18 June 1907.

6082. If an addition were made to the existing Boards by appointing a representative of the shipping community on the Trinity House Board and a representative of the shipping community and a person with nautical knowledge on the other two Boards—what method of appointment would you propose?—For the shipowners I have already suggested that if it was desired, I think the Board of Trade would be prepared to select shipowners, after consulting the principal shipowners' associations. I think direct election would be almost impossible.

6083. And the nautical member?—Well, that is more difficult. I do not know whether the Trinity House themselves might select. I suppose they have a large number of younger Brethren all over the country who have nautical experience, from whom they could pick somebody, or you might trust to co-option by the Scottish and Irish Boards, with the approval of the Board of Trade. Or, again, we might appoint, as with the shipowner, after consulting with the necessary interests. I fear I have not any very definite proposals to make to the Commission.

6084. There is no definite proposal on that subject which you wish to put before us?—No.

Attendance of Members of Scotch and Irish Boards.

6085. The criticism has been made that many members of the Scottish and Irish Boards do not in practice attend the meetings. Would you propose to put forward any suggestion to meet that criticism?—If you are proposing any reconstitution of those Boards, it would seem an opportunity of cutting off some of those that in practice make very irregular attendances, or no attendances at all. No doubt, as I think has been said, there are always sufficient people in continual attendance to do the work effectively, but it is not generally a good principle to have in the background a number of people who do not usually turn up, but who might be whipped up and swamp the others at a crisis. I do not know whether anything of that kind has occurred, but on the face of it it is not a good system.

Superannuation of Elder Brethren.

6086. The representatives of Trinity House informed us that they would welcome any proposal for pensioning off the more aged of the Elder Brethren. Do you think that would be a desirable thing to do?—Yes, we sympathise with that desire that they should have an age limit of superannuation.

6087. Do you think that could be arranged without increasing the present remuneration of the Elder Brethren?—Yes, I should think so. At the present time I understand that the more aged Elder Brethren either do not come, or come very seldom, and draw their pay less the fines for non-attendance. Well, that in a kind of superannuation, and I presume that all that would be necessary to add would be a rule that they should not be allowed to attend. I suppose at present it is at the option of the aged member, who might come and claim his full money.

Advisory Committee: Value of to Board of Trade.

6088. As regards the working of the Advisory Committee, do you think that the Board of Trade have derived advantage from the appointment of that Committee?—Yes, I think we have. My experience of it only goes back really for about a year. I have only really had to do with one meeting, and I cannot speak of it in the earlier stages, but I think it is valuable to us now. I think we do derive value from its advice, and that might be expected to increase. Of course, as I mentioned, there is no doubt the benefit would be greater in some ways if the shipowners did not happen to be so much engrossed with their campaign against the payment of light dues. That colours to some extent the proceedings, but that can scarcely be avoided at present, and I would say decidedly that we do derive benefit from the Advisory Committee.

Board of Trade control over Lighthouse Boards: As to Power of initiative with regard to New Works.

6089. Well, there remains the point to which you have already referred in your evidence, and to which you asked to be allowed to return—namely, should the Board of Trade in the last resort have power to require the Lighthouse Authorities to carry out any works that the Board is satisfied are necessary?—I would desire to say that, in making any suggestion of this kind, I have not in my mind any case which has come before me, in which it would have been desirable to exercise this power. My own experience, of course, only extends over a very limited time. But theoretically, no doubt, there is a possibility of a deadlock occurring, and it might be well that we should have the power in the last

Mr. H. L. Smith, C.B. *Hon. T. H. W. Pelham*, C.B.

18 June 1907.

resort of insisting on our requirements being carried out. But if so—and this is my chief recommendation—I would desire that it should be so guarded that it should be very rarely used, so as not to weaken the authority of the Lighthouse Authorities. They are the bodies who are responsible for the efficient lighting of the coast, and for that purpose I would suggest that there ought to be safeguards; for example, that we should advertise the matter, hear objectors, hear the Lighthouse Authority, and possibly hold a local inquiry before we made an order requiring the works to be carried out. I should not wish it to become an ordinary thing to be used on slight provocation.

6090. Do you not think if you had that power it would open the door to the political pressure of which we have already spoken?—It might, but I do not like from an administrative point of view a state of things in which there is the possibility of a deadlock.

6091. On the other hand, you do not know of any deadlock having actually arisen?—None within my rather limited experience. I do not know whether Mr. Pelham's experience, which goes back further, would enable him to know?—(*Mr. Pelham.*) There have been one or two cases, and it has been rather unsatisfactory; the Lighthouse Authority has said we will do it if you will take the responsibility. We have got no statutory power really to take the responsibility to order the thing to be done; it ought properly to come from them. As a matter of fact it does not come from them, but they agree to do it because we wish it.

6092. That has been a practical way therefore out of any deadlock?—That has been a practical way, but it does not seem to me to be very satisfactory.

6093. On the other hand, it would be impossible for the Board of Trade to disclaim responsibility, as they now do, on the ground that the initiative for new works rested with the Lighthouse Authorities and not with the Board of Trade, if such a power is once given to the Board of Trade?—That is so. (*Mr. Llewellyn Smith.*) I should be very sorry if such a power were given in such a way that this would be the result, because I feel that any sharing of the responsibility with the Lighthouse Authority is a serious matter. I should like any power to be only used in extreme cases, such as those which might justify the Local Government Board in over-riding a local authority.

6094. But cases which would justify the Local Government Board in overriding a local authority are not quite on the same footing. The danger here is that political pressure might be brought to bear upon the Government to carry out on their own initiative, or to insist upon the Lighthouse Authorities carrying out works which the Lighthouse Authorities themselves have not considered necessary?—Yes, I see the force of that very strongly, and I think there ought to be ample safeguards, such as local inquiry, and perhaps a report presented to Parliament stating reasons; I am free to admit that there are considerable objections such as you indicate, but I thought it my duty to intimate that that is a point on which it is conceivable that there might be a deadlock.

6095. I only want to elicit your considered views on the matter?—My views certainly are that the power if conferred must be safeguarded in every possible way; it must not be possible to say that the initiative has been transferred to or shared with the Board of Trade.

Trinity House control over Scotch and Irish Boards: Nature of,

6096. (*Colonel Herbert.*) Has it ever occurred to you as an anomaly that the Trinity House being an administrative body should also be a controlling authority over the other Authorities, from an administrative point of view?—Yes, the whole system is so full of anomalies.

6097. I think it is getting to the root of the anomaly when we take that point; that was my reason for asking?—They only control new works, you know; they do not control the ordinary administration of the other bodies.

6098. Well, it has come out to us in evidence that they have so much practical control of financial expenditure owing to that control over new works that it becomes a very considerable control?—I do not know that we should take the view at the Board of Trade that the Trinity House control really was a financial control at all; we are the financial controllers. It is rather primarily an expert nautical control. They might have to ask for information about the cost of a thing, because of course, whether Trinity House could recommend it or not must to some extent depend on financial considerations. You cannot keep out financial considerations altogether, but they have not the power of the purse.

6099. No, but it amounts to this from what we have been told in evidence, that the Board of Trade has not the means of exercising the technical control, and therefore they are dependent upon the expert knowledge of the Trinity House, which is pretty much the same as putting it in the hands of Trinity House?—Has that been put to you in evidence? The Board of Trade are not destitute of nautical expert officers. We act on the advice of our own nautical adviser, but no doubt we do greatly value the nautical experience of the Trinity House people. I do not know whether you have had evidence from Captain Frederick.

6100. (*Chairman.*) Yes?—You have had our Nautical Chief Adviser before you.

6101. (*Colonel Herbert.*) It was expressly stated here that this was only one of very multifarious duties which he has to perform for the Board of Trade?—Yes, that is so.

6102. And it was that I elicited in examination carefully from Captain Frederick, and continued the same point in the examination of other witnesses. I leave the matter in the hands of the Chairman as to whether I am stating the case absolutely correctly or not, but I have taken a little time to look up the references, and that is the impression on my mind?—Certainly for expert advice, so far as our own staff are concerned, we are practically dependent upon Captain Frederick, and if the Trinity House control over the other Boards was removed we should have probably to strengthen that in some other way, either by adding to our own people or, as I suggested, by consulting the Trinity House people.

6103. (*Chairman.*) All this refers entirely to new works?—Oh, to new works entirely; Colonel Herbert, you know that.

6104. (*Colonel Herbert.*) Oh, yes, I quite understand that; but still, the new works mean the larger part of the expenditure?—Oh, no, I think not; I think the current expenditure is a good deal more; maintenance. (*Mr. Pelham.*) Yes, it is. (*Mr. Llewellyn Smith.*) The proportions between the two would vary from year to year, of course, but it is not the majority. (*Mr. Pelham.*) About £80,000 out of £450,000 for new works.

Central Authority to replace Board of Trade: Views as to,

6105. Following that idea in my mind, which you have been able to follow, whether you agree with it or not, it occurred to me to ask you whether you think a solution might be found by setting up a separate controlling authority in the form of Commissioners controlling all the three Authorities, and consisting of persons selected for their technical qualifications, and not in the haphazard manner which prevails in the selection of Elder Brethren?—(*Mr. Llewellyn Smith.*) Yes, I have had that in my mind, and it is one possible solution of the whole question. It would not be free, of course, from the criticism that it would be centralising, unless you had branches in Scotland and Ireland.

6106. It would naturally lead to a modification of all the Authorities controlling the English, Irish, and the Scottish Lights?—Yes.

6107. That, of course, would have to be another part of the scheme?—Yes, and then you would take over the functions of the Board of Trade with regard to control, I take it; or would you leave anything with us?

6108. My impression is to take it from the Board of Trade, to relieve the Board of Trade?—You would take it all over; then the administration and the control would be in the same hands.

6109. Yes?—I am not sure how that would work. At present, of course, behind every Department there is the Treasury—I mean there is the financial control by another Department. We act as the Treasury to these Lighthouse Authorities; you would make the Treasury and the administrating Department the same. I have rather a doubt about that.

6110. I asked Mr. Pelham a question with regard to the Treasury, how the Treasury came in in this matter, and I understood that practically the Treasury came in less here?—It does not come in at all, because we administer the Fund, and we have to sanction expenditure. What I meant was that I do not know of any

Central Authority to replace Board of Trade: Views as to,

precedent for the financial control and the actual administration being both centralised in the same Office. At the present moment, we at the Board of Trade are, so to speak, the Treasury, and the Trinity House and the other Lighthouse Boards are the Administrative Boards. But if our functions and all the functions of those Boards were centralised in one Board would you not have to still have some financial authority to sanction expenditure?

6111. That I have always thought of as being the Treasury?—That involves, of course, putting an end to the system of light dues. I only pointed it out, that unless that was part of the scheme there would be a difficulty.

6112. There might be an objection, of course, to that, from the fact that the light dues do not constitute any part of the Imperial Revenue?—If the light dues were abolished, and everything were thrown upon the money provided by Parliament, the Treasury would be the natural financial authority.

6113. You have given us your views on several solutions, and this is another solution upon which I think you have not touched?—I am afraid I could not go beyond pointing out that it would involve this much larger financial change, which I understand is not within your scope, and I am not authorised to express an opinion upon.

6114. Exactly; but from the purely administrative point of view and the efficiency of the lighting service, do you think that such a scheme as I have sketched would be possible?—If you come to the conclusion that the present three Boards are not only anomalous, but work badly, and that their constitution should be reformed, then you will have to consider whether you will reform it by having three new Boards and a controlling Authority here, or a centralised body such as you now suggest. In my evidence I rather leaned in the direction of three than one. I understand you are putting to me a scheme now for one rather than three.

6115. Three local ones; also a modification of the existing local administration; but this is a central controlling body in lieu of the mixed control that there is now by the Board of Trade and the Trinity House?—This new body would simply exercise the powers of control that we have, and that, subject to us, the Trinity House have. The Trinity House have not any ultimate powers of control at present; I mean there is always an appeal to us. All I can say is that we do not cling to the powers. If you come to the conclusion that another body would exercise them better, I do not think we have any feeling in favour of retaining them. I did not know that any suggestion had been made of that kind, so I really have not considered it, of abolishing ourselves.

6116. As to the present position, you said, I think, yourself, it is not one that you would choose to set up?—No.

6117. It has grown up?—It has grown up.

6118. And if we are going to modify it—I really throw this out as a suggestion—I should like to have your views as an expert administrator on that subject?—Well, as regards the control I do not see—unless, of course, we have exercised our powers inefficiently, and there would be reason on that ground for transferring them—I do not see that there would be very much gain. If our power of getting expert nautical advice at present is insufficient, we can quite easily appoint more people. Captain Frederick could have a staff. There is no difficulty in it at all from an administrative point of view, and I do not quite know what is expected to be gained by transferring it. This kind of function with regard to the coasts is very much *ejusdem generis* with many of our other functions, with regard to the mercantile marine, harbours, foreshores and wrecks, and so on. I do not know that we could say that it is of a kind so distinct from all these others that it is anomalous that it should be with the Board of Trade; I think we are the natural Department to exercise it. At the same time, we have got so much to do that we certainly do not cling to it.*

6119. Besides the control of the other Lighting Authorities, there are also the local lighting authorities, and it seems to me that a body of Commissioners who would exercise a control over all these Lighting Authorities would be more likely to act—well, shall we say in a logical manner—than the present system, which is a haphazard system?—So far as any authority is exercised over the local Harbour Authorities, it is exercised you know by the Board of Trade at present.

Mr. H. L. Smith, C.B. *Hon. T. H. W. Pelham*, C.B. 18 June 1907.

6120. Yes, that we have heard?—Yes.

6121. But there is also a control vested in the other Lighting Authorities?—In Trinity House.

6122. In Trinity House and in the Irish and Scottish Lights?—Yes.

6123. (*Chairman.*) Inspection?—Yes.

6124. (*Colonel Herbert.*) Inspection; it is a dual administration?—I am afraid I have not considered the matter of the inspection of local lighthouses by the Lighthouse Authorities. If you would like to know how far it has worked well—it has not been a matter about which I expected you would be asking questions, and I have not prepared myself, but I will go into that with pleasure if it is of any interest to you.*

6125. (*Chairman.*) It would be worth while to leave this matter, perhaps, for Mr. Llewellyn Smith's consideration?—I understand your point to be whether it might not be desirable to transfer the powers of control now exercised by the General Lighthouse Authorities over local lights to some central Department or the Board.

6126. (*Colonel Herbert.*) Perhaps I might state the general scheme that is in my mind is that of a body of Commissioners—we will say similar perhaps to the Ecclesiastical Commissioners or the Charity Commissioners—who would assume the general administration and financial control over all Lighting Authorities; that is to say, not only the great Lighting Authorities, but the local lighting authorities as well; the General Boards, such as the Trinity House, the Irish Lights, and the Northern Lights remaining in their present position, but with a modified organisation?—Yes.

6127. (*Chairman.*) That would practically be the substitution of a new organisation for the Board of Trade.

6128. (*Colonel Herbert.*) For the Board of Trade?—And for the controlling powers of the General Lighthouse Authorities.

6129. The Board of Trade would then be relieved; the question that would have to be considered would be the representation of this Authority in Parliament?—Yes.

6130. It would have to be represented in some way?—Yes. I should not like to express an opinion off-hand about that general scheme; you would hardly expect that.

6131. No, this is the result of cogitation; I only throw it out for what it is worth. I should like to have an opinion, because from your point of view possibly things might come out which have not been seen by me?—You have mentioned two Commissions—the Ecclesiastical Commission and the Charity Commission. Of course, the constitution is very different of those two bodies. The Ecclesiastical Commission is open, in theory at all events, to very much the same criticism that has been passed on some of these existing Lighthouse Authorities, of having a large number of eminent and busy people who presumably cannot put in very many attendances.

6132. (*Mr. Ennis.*) Following up what Colonel Herbert has asked you, I should like, if you are giving a reply to the questions which he has put with regard to substituting a body of Commissioners *plus* the Treasury for the present control of the Board of Trade, your opinion as to whether such a proceeding would or would not increase the cost of the administration?—Yes, most certainly.

6133. I would wish that aspect of the question to engage your attention?—And that would depend to some extent as to whether it was put forward as part of a scheme which should include the transference of all the light dues—I mean the abolition of the light dues or not.

6134. Quite so; of course, as you have said, the question of the light dues does not come within the purview of the Commission, but still I gather from your remarks also that you are quite in agreement with our experience, which is that we are brought up against the dead wall of that financial arrangement at every moment in the course of our inquiry?—I have no doubt.

6135. It governs nearly everything with which we have to deal, and so far as I understand your suggestion, it is that the three existing Lighthouse Boards should

* See Memorandum at the end of the evidence.

Mr. H. L. Smith, C.B. *Hon. T. H. W. Pelham*, C.B.

18 June 1907.

continue to exist with the constitution remodelled?—Subject to this, that I said that was only on the assumption that your finding on the point of fact is that they do their work well. Of course, if you find that they do their work badly, you will make much more stringent recommendations.

General Lighthouse Authorities: Views as to Reconstitution of,

6136. But, assuming that we hold that their administration has been tolerably efficient, your view would be that the existing Boards should remain with the constitution altered to bring them up more in line with modern requirements, and furthermore that the Irish and Scottish Boards should be strengthened by the addition of a nautical element?—Yes.

6137. And you are further, I understand, not averse to a suggestion that the Irish and Scotch Boards should be so strengthened with a nautical element nominated by the Board of Trade?—I suggest that merely as one way of getting over the difficulty.

Trinity House control over Scotch and Irish Boards: Value of, to Board of Trade.

6138. If that were so, you would see no objection to a withdrawal of the control exercised at present by the Trinity House over the Irish and Scotch Boards, subject always to the Board of Trade being at liberty to consult the Trinity House on any proposals submitted to them?—I think if you recommend that the control of the Trinity House over the other Boards ought to come to an end, we certainly should wish to be at liberty to consult the Trinity House. I do not think I could go so far on behalf of the Board of Trade as to say that we see no objection to getting rid of the Trinity House control. I do not know whether I gave that impression. So far as we know it has worked well and been a useful body; and I say, if you get rid of it, if there are considerations which have been brought before you which tend to make you think that it ought to be got rid of, then we could supply its place to some extent the other way; but I think the Board of Trade view could hardly be said to be that we think it ought to be swept away.

6139. No, I did not take it that you advocated that it should be swept away, but that you would not consider that it was a proposal which was open to serious objection, especially if the Board of Trade's powers were reinforced with the power you suggest, of insisting upon any one of the Lighting Authorities carrying out the necessary work, that power to be exercised only on rare occasions, and with adequate safeguards in the directions you have indicated, of holding inquiries, and giving an opportunity to local authorities and those interested to appear and be heard on the subject?—Yes.

6140. And though you hold that that power is open to some objection in the nature possibly of political pressure, still you consider that, looking at the matter from both sides of the question, that power would carry with it the balance of advantage?—Yes, I think on the whole that it would. I do not think we could say that we think it would be a balance of advantage to get rid of the Trinity House control. I am speaking solely from our experience; we value their advice on these things.

6141. Then I also understand that your view is that, whilst shipowners should be placed upon the General Authorities, though shipowners do not seem to have any special desire to be placed on those Authorities themselves, still you are of opinion that the Advisory Committee ought to continue in existence?—I think that the continuance of the Advisory Committee should be judged on its merits, quite apart from any proposal of that kind. It would not be a substitute in any way.

Advisory Committee: Value of,

6142. But are you of opinion that the Advisory Committee, since it was called into existence by the Board of Trade, has or has not tended towards a reduction of expenditure on the service of lighthouses, buoys and beacons, of the United Kingdom? I mean, the returns furnished by the Board of Trade to this Commission as to the works objected to by the Advisory Committee and the works recommended by the Advisory Committee are in very sharp contrast, the works recommended by the Advisory Committee being very few in number, and one of them—the only one which would involve any serious expenditure—having been afterwards objected to by the Advisory Committee, the cost being estimated at £25,000. That is the light at Rathlin, an improvement in the light at Rathlin?—My personal experience does not go back to the early days of the Advisory Committee. Mr. Pelham could tell you much more about that than I could, but from what I hear I think that such benefit as we derive from their advice has been more in the late years than in the earlier years. At the only annual meeting at which I have been actually present I think there was an exceedingly useful and valuable discussion, and I think we derived benefit from that.

6143. You are under the impression probably that the Advisory Committee, notwithstanding their desires in the direction of economy, are not so rabidly anxious to cut expenditure as they may have been in the first instance, and furthermore that the Board of Trade in considering the proposals of the Advisory Committee, or the recommendations rather, can weigh for themselves the amount of desire towards economy that the Advisory Committee may entertain?—I think so; we by no means are bound by any advice that they give us. In two or three cases this year we have sanctioned things that they were against, but they have their say.

6144. With regard to the constitution, or the reconstitution rather, of the existing Boards, I did not quite understand your reply to our Chairman with regard to the superannuations of Trinity House, as to the possibility of superannuating the Elder Brethren of Trinity House without imposing an additional cost on the service. The question I should like to put is, do you propose to fill the vacancy created by the retirement at an age limit of members of the Trinity House during the lifetime of the recipient of the superannuation?—No, I have not considered the precise way in which it would be done, but I should have thought it would not be necessary to fill the vacancies, at all events until the number of acting people got down to a certain limit. I think there are thirteen at present, and I should think in the event of two or three of those being superannuated, they could probably get on with the ten. That was what was in my mind. They do at present, of course, manage with the smaller number, because the old men do not, I suppose, take their share of the work.

Superannuation of Elder Brethren

6145. But it would be conceivable theoretically that it might happen, through long life of some of the superannuated members of the Trinity House, that the Board might be depleted to an extent in number that would be undesirable, and would you therefore approve of a suggestion that where a member of the Trinity House would be superannuated that a successor should be appointed drawing a much smaller salary than the normal salary during the lifetime of the superannuated member?—The division of the £7,000 which is allowed for the salaries is made at present entirely at the discretion of the Trinity House. We have nothing to say to it, and therefore I feel some delicacy about making a suggestion as to how it should be distributed.

6146. It arises out of our Chairman's question as to whether it is possible to effect this change as to superannuation without adding to the cost, and it seemed to me it might be possible to carry it out by rather stereotyping the remuneration of the members of the Trinity House, and providing that where a member is superannuated the total cost of the office would be the same, but that the new member appointed to fill the vacancy should only receive the difference between the superannuation and the full remuneration during the lifetime of the superannuated member?—I understand the proposal, but I would rather not give an opinion about it at the moment.

General Lighthouse Authorities: Representation of shipowners on,

6147. Then with regard to the General Authorities in Ireland and Scotland, in Ireland certainly there are no large shipowners' associations?—Yes.

6148. And therefore the nomination of shipowning members on the Irish Authority by the Board of Trade should be made in consultation with some body other than the shipowners' association, which is non-existent—that chambers of commerce, or some other bodies could be utilised for the purpose instead of shipowners' associations?—We should have to take the best means we could as to getting advice as to getting suitable members.

6149. You recognise that suitable shipowners' associations in Ireland would not be available for the purpose?—Yes, I know the difficulty.

6150. And I would also put this aspect of the question, this again is seriously touched upon by the financial question, but in theory all classes of the marine community are entitled to be considered in the provision of the lighting of the coasts, not alone the large oversea trade, but the coasting trade?—Yes.

6151. And so on the coast of Ireland, after you deal with a few leading lights, a few important lights like the Fastnet and the Tuskar, and make them as efficient as may be desirable in the interests of oversea trade, you have still to consider the question of efficient lighting in the interests of the coasting trade; and though they are a class that pay nothing towards the cost and the maintenance of the lights, still you would hold, I take it, that fishermen are entitled to be considered also?—Certainly.

6152. That the fishing industry is an important industry, and whatever eventually may be the arrangement with regard to the payment of light dues, that the fishing industry has a claim to be considered?—Certainly; we do not take the view at the Board of Trade that the only people for whose benefit lighthouses should be put up by the General Lighthouse Authorities are those who pay the dues. We cannot take that view.

6153. Quite so?—Although no doubt they have the first claim.

Representation of Harbour Authorities deprecated.

6154. In considering the question of a reconstituted Authority, in Ireland say, would you consider Harbour Authorities, which are largely composed of shipowners, that is owners of the coasting class of vessel, a desirable authority from which to draw a certain proportion of representation? That is to say, I do not suggest that each Harbour Board in Ireland should be entitled to representation, but that the Harbour Boards of a given area, as a group, should be entitled to representation, so that each section of the coast would have, as it were, some member of the central body who would be more qualified to express valuable opinions on the requirements of that particular stretch of coast than the people who would not be so fully acquainted with it?—I should be a little afraid of introducing sectional interests, I mean local interests, there, because the representatives might feel that they were there mainly to look after the interests of the section of the coast that sent them to the Board.

6155. But would not their local knowledge be valuable, and would not the majority of the Board effectively control any such desire on their part?—They might or might not, but I think it is the difficulty with all composite bodies, and the difficulty that you want always to avoid, that the members should come as delegates for particular districts or interests. In fact that is an argument that might conceivably be urged as to shipowners, that they would come to look after the interests of shipowners, though in that particular case, I think the balance of advantage is in favour of the addition.

6156. But the existing Lights Board in Ireland, the objection might be taken to it, though I do not take any exception to it on any such ground, it would be possible in theory to raise questions, that they represent only, say, the port of Dublin—one port only?—I think the Lord Mayor is *ex officio* a member.

6157. And four members of the Corporation also?—Yes.

6158. I mean that is the difficulty that will arise under almost any circumstances?—Yes.

6159. It must necessarily arise, but assuming that the selection was made judiciously, and made not for individual harbours, but for groups of harbours, representing a considerable section of coast line, you would see no objection to it?—I do not think, on the whole, that it seems to me a desirable line of advance to get people representing particular groups of harbours. It would be one way, of course, of doing it. The people again would live at a distance, and would travel up for the meetings. Of course, the expenses could be provided for travelling, but you could not get the continuous attendance.

6160. The continuous attendance does not seem to be as a matter of fact available at present?—With a good many of the members, no. But then if these Harbour Authorities' representatives were among the non-efficient members who did not turn up, that would not attain the object that you have in view.

6161. That is quite so. Then also the fishery harbours of Ireland are controlled by, at least the fishery harbours are vested in the county councils?—Yes, I am not acquainted with that.

6162. Fishery harbours are vested in county councils, and they are, of course, an important interest from this point of view also. Our Chairman asked you some questions with regard to the attitude of the Commissioners of Irish Lights with regard to the Trinity House, and I thought also the Advisory Committee?—Trinity House, certainly.

6163. But I think—I am stating my recollection of the evidence given by the representatives of the Irish Lights—that they would practically oppose any change of any kind or description?—Yes.

6164. Now, Sir Thomas Blomefield I think referred me with regard to two or three questions to Mr. Pelham, and perhaps I might suggest them to you. In the first instance, you have said that you at present act as the Treasury with regard to the Lights Boards?—Yes.

Lighting of Port of London:

6165. Well, have you considered the result of the change of the law in 1898, when the light dues were collected on the tonnage of the vessels instead of passing light? As to the position of the port of London are you aware that that change, made a few years since, has practically resulted in giving to the port of London an advantage over the rest of the United Kingdom to the extent of £40,000 or £50,000 a year?—I know that the lighting of the port of London is carried out at the expense of the General Lighthouse Fund.

6166. Since that year?—Well, it always was, only before that the revenue of the Fund was derived from dues in respect of lights passed, and I am told that the revenue from the dues on the local lights in the Thames was in excess of the expenditure out of the Fund in respect of the Thames.

6167. But still the result of the change of the law in that respect has been that, if you take, say, the port of Liverpool, at present the Liverpool Harbour Authorities are obliged to maintain their local lights at their own expense?—Yes.

6168. And the shipowners at the port of Liverpool and other ports are obliged to bear not only their own proportion of the cost of local lights, but they also contribute to the General Lighthouse Fund, whereas the shipowners in the port of London have to maintain no local lights?—Oh, the change did produce some anomalies of that kind; that is not the only one.

6169. But it is one of rather a grave character, inasmuch as it involves, so far as witnesses have told us here, £40,000 to £50,000 a year?—Yes, it is so. May I say, you know that there have been proposals made in connection with the Port of London Bill for transferring the powers of Trinity House to a Port Authority. These proposals were in the Commission report and were dropped afterwards, not included in the Bills that have been introduced.

6170. There was another question about the Fastnet, but I think we have had information upon that point since, so I will not trouble you or Mr. Pelham with it; but there was a third question. Mr. Pelham has referred indirectly to that to-day; it is the question of initiative by the Board of Trade in any new works, and it lies at the root to a certain extent of your suggestion that this power should be given to the Board of Trade under exceptional circumstances?—Yes.

Mizen Head: Dispute as to light and fog-signal for,

6171. Now a case that seems to illustrate that somewhat is the case of Mizen Head in Ireland, and in that case of Mizen Head, so far as I have been able to gather from the various witnesses, the position seems to be that the Irish Lights Commissioners objected to the erection of a fog-signal on Mizen Head, but that eventually, as a request, it was put to us, I think, by the Board of Trade, and I suppose you would refer to that, as at the desire of the Board of Trade they included it in their application; but the Irish Lights Commissioners held then, and appear to hold still, that a fog-signal ought to be accompanied by a lighthouse, and that would seem to be one of the things in which the view of the Board of Trade and the view of the General Authorities, and also, so far as I remember, of the Trinity House, seemed to be at variance?—(*Mr. Pelham.*) Yes, that is so.

6172. But the Board of Trade considered that in the interests of navigation it was necessary that this fog-signal should be erected, and at their request, though not given by statutory power, the work was taken up?—It was more at the request of the Advisory Committee.

6173. But of course, so far as the General Authorities are concerned, the Advisory Committee is the Board of Trade?—Yes.

6174. I mean, the Advisory Committee advises the Board of Trade, and therefore, they not having any statutory authority, any request of theirs must come to

Mr. H. E. Smith, C.B. *Hon. T. H. W. Pelham*, C.B. 18 June 1907.

the General Authorities through the Board of Trade?—Yes.

6175. Questions 3014 and 3015 read as follows: "3014. Well, with regard to the fog-signal station at Mizen Head, that you referred to in your evidence, it is true that the Irish Lights Commissioners for many years refused point-blank to establish a fog-signal station at Mizen Head?—(A.) The Irish Lights Commissioners always maintained that they thought it was a mistake to put a siren fog-signal at Mizen Head, and they still hold that opinion. 3015. They still hold that opinion, but you have it in the estimates for this year?—(A.) Yes, because we have been instructed by the Board of Trade, despite our opinion, to put it in. I may say it was in last year's estimates, and it is sanctioned, and the work is in hand—we have commenced it. The Elder Brethren originally backed up the Irish Lights Commissioners—I am speaking from memory—in saying that a fog-signal at Mizen Head would be a mistake. But the shipowners pressed for it so much that first of all Trinity House gave way, and subsequently the Irish Lights Commissioners yielded to the statutory instruction of the Board of Trade, and are placing it there. The Irish Lights Commissioners, when they did agree to this, recommended that, if there was to be a signal there, there should be a powerful light along with it; but the Board of Trade decided that there should not be a light—that there should be a fog-signal only"?—That of course is wrong; there was no statutory instruction.

6176. (*Chairman.*) No statutory instruction would be possible. The Board of Trade have no such right, have they?—No. (*Mr. Llewellyn Smith.*) No.

6177. (*Mr. Ennis.*) There was one question I do not know whether I should put to you or not. Possibly it may not be a proper question to address to you, but rather to the Engineer, but you may perhaps be aware whether you have ever obtained from foreign countries lists of their lighthouses, and the character of their lights, for the purposes of comparison. I was anxious to ascertain if possible the number of flashlights on the French coast?—I suppose we could supply that. We either have that or we could get it, and will communicate with your Secretary.

Number of French flashlights.

6178. I had asked Captain Bigham in the morning. My reason for putting the question is that possibly you might have the information?—From my own knowledge I have not; we have it probably in the Department; I will look that up and see.*

Form of Accounts and Estimates of General Lighthouse Authorities:

6179. (*Admiral Henderson.*) Do you think that the financial control, as at present existing, could be simplified? We have seen specimens of the estimates and accounts, in neither are they on the same forms, and it has been very difficult to get any accurate comparison at all?—Well, I was making some inquiries about that recently, because certainly, so far as any powers of ours could be exercised to promote uniformity of accounts, I think they ought to be. I am having that looked into. Of course, as you will readily understand, the difference of basis which makes comparisons so difficult is not only or chiefly due to a difference in the form of account, but a difference in the real circumstances. For example, services which are done, say, by the Trinity House by their own steamers—I am talking about the relieving work, for example—and which will therefore be charged to their steamers, might by other Authorities be done by hired boats, and would appear under a different heading.

6180. I think they appear under the same heading; I mean to say they appear under the heading of the cost of the service for which it is rendered?—I am speaking from memory; no doubt you are right; you have the figures more in your mind. Perhaps I took a bad example; one illustration will be as good as another. So far as any kind of uniformity can be promoted by altering the forms of account which we prescribe (we prescribe the returns—we have power to modify), without, of course, sacrificing more important things, we certainly should endeavour to promote it.

6181. It appears to me that the accounts and estimates should be put in exactly in the same forms, and discrepancies and differences of system would appear then on the face of it?—Yes, I think we do prescribe the same form.†

6182. I do not think they are quite; I cannot say, of course, that I had time to go into them very, very closely, but they are not really on the same forms?—There is no absolute uniformity of system as to what items shall be put under the different headings, but I think the headings are the same.

6183. And there are many things, it appears to me, that might be amended in that sort of way?—Yes, perhaps.

Board of Trade control over Lighthouse Authorities: Amount of work involved by,

6184. In discussing the point about the Advisory Committee and the responsibility of the various Boards and the Board of Trade, is there not a good deal more correspondence and work involved than there is really any occasion for, considering the small amount of the details concerned?—Well, if any suggestion could be made for lessening it, I think it would be very valuable. I am not prepared to say that I think it is excessive, but I should be very glad if we could see our way to simplify it.

6185. The Advisory Committee alone must cause a good deal of increase of work of that sort?—No doubt it does; I am not able to say from the purely Departmental point of view how far that is appreciable. That would not be with your Department, Mr. Pelham, so much as Sir Thomas Blomefield's?—(*Mr. Pelham.*) Not quite so much, but it does involve a good deal both in Harbour and Financial Departments.

6186. It has not been possible to arrive at any understanding what the work of the Lighthouse Department of the Board of Trade in its detail involves, what its cost to the Board of Trade is, and what is the actual work involved; I mean to say, what is the actual work involved by the Board of Trade control?—(*Mr. Llewellyn Smith.*) I imagine an estimate could be made for that.

6187. It seems to me—two or three times I have asked the question—it is part of somebody's work?—Oh, exactly; there would be apportionments of a difficult kind to make; but if the Commission attach importance to getting anything of that kind, I presume a very rough estimate could be framed. For example, supposing Colonel Herbert's suggestion of transferring all the work to another Board were carried out, how much should we save a year, how much would be set free? I could not answer it off-hand, and any figures would have to be very rough, but it is not impossible to apportion the time in some way, provided it be understood that it is mere approximation.

6188. (*Sir Frank Adam.*) Would not the amount of saving greatly depend on the number of Commissioners and their remuneration?—I am speaking of the Board of Trade, simply of the time taken up by the Board of Trade.

6188a. But you referred to Colonel Herbert's question as to the saving that would be effected if the work were handed over to Commissioners?—I am only referring to how much of Mr. Pelham's time, and how much of his principal clerk's time, and of Captain Frederick's time, and so on, would be taken up. That is what you mean?

6189. (*Admiral Henderson.*) What do you consider would be the actual cost and the time of the work you do for the Lighthouse Authorities?—The cost would be very difficult. How much of the time of the President should be assigned? That would be very difficult.

6190. You mentioned in the beginning of your evidence that the Board of Trade is congested, and you would be very glad to get rid of it?—The President and the Permanent Secretary would be saved a certain amount of work, but you would not dock our salaries, I presume, so that no saving would be effected in that way.

6191. If it were taken away from you, you would be released for other work which is probably more important?—I only put that as a case, whether we are to put anything into the estimate of cost for the amount of time of the higher officials, and the Parliamentary people, which is undoubtedly taken up by the work,

---

* *Note*—The Board of Trade subsequently furnished a list of French flashlights as follows, viz.:—Electric lights, 13; oil or gas lights, 79.

† *Note.*—With reference to the question of uniformity of accounts, Mr. Llewellyn Smith subsequently wrote stating, "The forms of accounts prescribed for the different Lighthouse Authorities are identical, but owing to the difference in the system of administration adopted by the three Boards, there are a few variations in the allocations of the charges under the different headings. As indicated in the evidence, the Board of Trade intend that the system of accounts should be as uniform as is possible without sacrificing matters of more importance."

and the equivalent of which would have to be provided in the new Board. You would have to have Commissioners who would do that work, and have to be paid for it, but you would not release any funds by so doing.

6192. No. You admit that the object is to get responsibility on the several Lighthouse Authorities themselves, and that they should not place the responsibility on the Board of Trade for what is their own particular duty?—I think that is very important.

6193. Well, do you not think, so far as we have pursued the evidence, that there seems to be a tendency in that sort of way, that the tendency is to throw every responsibility on the Board of Trade, because it all comes home in the extreme minuteness of the financial control?—The financial control, of course, is with the Board of Trade; that is where it is, and where I presume it should be, and that has to be detailed. I am not prepared to say that I think it is excessively detailed, and I think, from what I have seen by glancing through the evidence, that you have not had any complaints of it.

6194. In regard to this—it really refers to the previous question, I think—I notice in some of the accounts that the name of every lighthouse-keeper was sent up. Well, that is a point where I think a cash account would have done instead of the enumeration, and a cash account in some cases supported by vouchers would have been sufficient?—Well, if there is any possibility of saving——

6195. That, of course, is entirely a matter for technical examination; it is impossible for me to be able to indicate directly all the points; but I think it is one that wants looking into.

6196. (*Chairman.*) Do not the wages of the lighthouse keepers rise automatically with length of service?

6197. (*Admiral Henderson.*) According to their promotion, according to their class I think they do; when the estimates are sent forward so many are voted for; the Authorities cannot add to that list, and therefore the returns might perfectly well be in the gross. They must have so many first class and so many second class, which is approved as far as the estimates are concerned. The several Boards should not be able perhaps to add to the list, unless it is on the opening of a new lighthouse, and then they get statutory authority. But it appears to me that there was a great deal of clerical work which might be saved?—Well, I will have that particular illustration that you have mentioned looked into, and I could say quite genuinely that I should personally welcome very much any suggestions that could be made, informally or formally, which would have the effect of lessening the clerical work without diminishing the real effectiveness of the control. I think sometimes these things do tend to become too minute.*

6198. The tendency of the Lighthouse Authorities and I may even say for all Government Departments, is that, having once got into a system, they stick to it through thick and thin, and are very loth to improve it. That is my experience?—That is so; I do not deny it. That is a weak point of Government Departments, no doubt, and Local Authorities.

6199. I do not know whether I did put it exactly in speaking just now, but has not the tendency of the Board of Trade been to increase the control?—Mr. Pelham, perhaps, would be able to answer that question more directly than you?—(*Mr. Pelham.*) I do not think so.

6200. You think it has been the same throughout for a period of ten or a dozen years?—Since I have been there, the last ten years, it has been very much the same. We have simplified matters a little, and prevented some things going from one department of the Board of Trade to another. That is the only change we have made. (*Mr. Llewellyn Smith.*) If we could get any suggestions, they would be very valuable to us. (*Mr. Pelham.*) All the accounts have to go before the Comptroller and Auditor; they have to come to us, and go on to him; he probably has to see every name.

Nature of.

6201. No the Board of Trade really, as a matter of fact, do control the administration. You deny that you control the administration, but as a matter of fact I think the tendency of these Boards is more and more to put administrative control into your hands, so far as is shown by the evidence. I mean to say that the financial control practically puts it there?—(*Mr. Llewellyn Smith.*) Not more than the financial control of the Treasury over the Board of Trade puts our administration in their hands; it does, of course, affect administration. If we want to do things involving the spending of money, we have to make out a case.

6202. Will you not get more efficiency by putting responsibility on a Local Authority as much as you can?—Certainly.

6203. Because their tendency is always to lean on the higher authority?—Yes.

Underwriters: Representation of, on Lighthouse Authority not advocated.

6204. And then the question I wanted to come to is the question, would you propose to add—you have suggested shipowners being added to these Boards or to any Central Board that may be established—would you propose to add underwriters?—No, I do not think so. They are on the Advisory Committee, and I do not know that their particular experience would be very helpful in the current work of administration. At all events, I had not thought of it.

6205. On the one hand, the shipowners do not want to be too extravagant, and the underwriters naturally want to secure their property?—That is so.

6206. They are personally interested in that sense?—Yes. May I say on that that I do not personally believe that we shall get administrative efficiency on the Lighthouse Boards by having a balance of competitive interests. My hope of the shipowners would be that they would be there to help forward the work, and not merely to represent their class.

Constitution of General Lighthouse Authorities.

6207. Now, is it not the case that the necessity for the nautical element on these Boards has been rather exaggerated? The duties of the Boards are only to a certain portion of their extent nautical. Very great portions of their work are administrative, and except so far as some portion of the executive work is nautical—and as to the position of new works nautical men probably would be the first who would be able to say what was necessary—has not on the whole rather too much prominence been given to the necessity for nautical men?—I think it is quite likely that it has been; some people always attach an undue importance to administration by experts as opposed to administration by good people who could suck the brains of experts.

6208. You have on the one hand the Trinity House, entirely composed of nautical experts, and the Scotch Board which has not one. I want to know—there is a complaint that there is no nautical representation on the Scotch Board—whether there is not over-nautical representation at Trinity House?—But, on the other hand, you must remember that the defect of nautical authority, if there is any on the Scotch Board, is partly supplemented by the fact that there is a nautical control of the Trinity House over them in new works.

Remuneration of Elder Brethren.

6209. And also their Engineer; they have a good deal of nautical knowledge there. I wanted to ask whether the £7,000—we did ask Sir George Vyvyan a question about it—that is paid to the Elder Brethren is inalienable, or is it alienable in any reforms which take place?—I am afraid that is a legal question of some difficulty. I should not care to give a firm opinion about it. Our idea has been that it was a commutation of certain sources of income, the Elder Turns, that were taken away from the Trinity House.

6210. For performing certain duties. Well, but were they for performing these duties?—(*Mr. Pelham.*) I think so, but there are a great many other duties besides. (*Mr. Llewellyn Smith.*) Other duties besides. I know that is the Trinity House view, and I should not care to express a legal view myself. It certainly should not be assumed that you could get the money.

6211. No, it could not be assumed; but the question in any reconstitution is, is that sum alienable or inalienable?—Counsel's opinion might have to be taken upon that.

6212. You have stated just now, that the principal cause of the discontent among the shipowners was the incidence of the light dues; but also is not one of the causes of their discontent, as they advance it, that

*Note.—Mr. Llewellyn Smith subsequently wrote that "With reference to the savings possible for clerical labour in regard to the particulars (*e.g.*, the names of the light-keepers) set out in the existing form of accounts, it is necessary to have this detailed information for the purpose of auditing the accounts."

Mr. H. L. Smith, C.B. *Hon. T. H. W. Pelham*, C.B.
18 June 1907.

they know nothing about the administration?—I think they complain of that.

6213. And that therefore if they were represented, it would at least no longer give them reason for feeling that they were not able to overhaul the administration?—It would. Of course, they do not ask for representation at present.

Advisory Committee: Value of,

6214. (*Sir Frank Adam.*) I only wanted to ask one question. Supposing that the three Boards were reconstituted, each one having representatives of the shipowners and men of nautical experience, and supposing the representatives of the shipowners on each of those Boards formed together a central committee, could that in your opinion take the place of the Advisory Committee?—No, I think hardly. In the first place the strength of the Advisory Committee from our point of view is that it is appointed, constituted really, by the shipowners and underwriters themselves. We have nothing to say to its constitution I think in any way, and it conveys to the Board of Trade the views of shipoweners as a whole, and it also has underwriters and merchants on it.

6215. It is not confined to one class?—It is their organ, framed to suit themselves, to bring to bear upon these proposals the views of the shipowners and underwriters as a whole. I cannot conceive that any system of simply bringing together the shipowners' representatives on the three Boards could quite take the place of that, though I do think it would be very desirable, if it were found practicable, that these members, or some of them, should be on the Advisory Committee.

6216. I understand from what you have said that at any rate whatever little friction or differences may have arisen in the initial stages of the Advisory Committee, latterly you have found them very useful in consultation?—I can only speak of them in the last year, and I think they are useful in consultation.

6217. And arising out of what Admiral Henderson has said, of course, representatives of shipowners, although they do not ask for representation directly, yet complain that the present administrations are extravagant and inefficient; but they cannot give specific instances in evidence because the accounts are not open to them in the form to give them the necessary details?—Yes.

6218. Is there anything important in that complaint, may I ask, in your opinion?—The form of complaint that I remember most was the lateness at which they got the returns, not the amount of detail; that they got them so late that they were no use to them. (*Mr. Pelham.*) They also complained that they had not been able to go into establishment expenses and pensions, and things of that sort; that we thought quite outside the original reference to them, and would be mischievous. If they were to critise them no object would be gained, as they have no special knowledge on the subject.

Constitution of Trinity House.

6219. (*Mr. Ennis.*) With regard to the Trinity House constitution, the Trinity House at present, in addition to their duties in connection with the general lighthouse administration, perform various other duties in connection with pilotage and things of that kind?—(*Mr. Llewellyn Smith.*) Yes.

6220. Is it your suggestion in the reconstitution that the same body—the reconstituted body—should continue to perform those duties, which are alien to lighthouse administration, as well as the duties which would be thrown upon them in regard to lighthouse work?—No; I do not contemplate any transference, unless you mean in connection with what you may call Colonel Herbert's plan. What I rather suggested was the addition of other elements to the Trinity House.

6221. Quite so; but then you still contemplated that the Board of Trinity House which performs other duties, and which, as far as I am aware, receives other emoluments outside the Lighthouse Fund, should not have those duties taken from them; that they should continue to carry out the same work as is at present carried out by the Trinity House?—Yes, that is so. I did not contemplate otherwise. I have not really gone into the question.

With reference to Questions 6103-6133, Mr. Llewellyn Smith subsequently sent in the following memorandum:—

NOTE on a proposal by COLONEL HERBERT for the formation of a Separate Body to Control the General and Local Lighthouse Authorities.

Central Lighthouse Authority to replace Board of Trade: Views as to,

The proposal, as I understand it, is to constitute a Board of Commissioners to take over the work of supervision and financial control of the General Lighthouse Authorities from the Board of Trade, and the work of supervision of local lights from the General Lighthouse Authorities. The new Board is to have no duties of actual management, the aim being to separate the work of management and control.

The proposal is likely to be a costly one. If a body of Commissioners were set up they would no doubt have to be well paid, while if their duties were confined to supervision and general control there would not be sufficient work, or anything like sufficient work, to keep them fully and continuously occupied throughout the year. It would, moreover, be necessary that the Commissioners should have an experienced nautical adviser to do the work now done as a part of his duties by the professional officer of the Harbour Department of the Board of Trade, and a special staff, some with considerable salaries, would also be required.

At present the work of supervision is distributed among members of the staff of the Harbour and Finance Departments of the Board of Trade as part of their ordinary duties, and the cost of such supervision is borne out of public funds. The transfer of the duties would not enable the Board of Trade to dispense with the services of any of their higher officials, and probably would not save the salaries of more than one or two clerks, though it would of course give some relief to the higher staff.

The new body would also probably have to have a special vessel for the purpose of inspecting the local lights, and this vessel would not be required during a considerable part of the year.

Even if hired vessels were found sufficient, the cost would be much greater than at present, when the inspection of local lights is usually carried out by the General Lighthouse Authorities at the same time as the inspection of their own lights. This seems the most natural and economical method of inspecting local lights, and any other system is bound to involve duplicate steamboat journeys.

The cost of the new establishment would therefore be very much greater than any saving to the Board of Trade and the General Lighthouse Authorities, and the question arises on whom is the additional expense to fall. Any proposal to saddle the General Lighthouse Fund with it would be certainly resisted by the payers of light dues. If the cost is to be provided out of public money, it will be a question whether the practical benefits which are expected from the change are worth the cost.

The new Board would, of course, require to be represented in Parliament, and such representation would probably be weaker than at present, for the representative of the Commissioners could hardly be expected to have the standing of a Cabinet Minister such as the President of the Board of Trade.

The Board of Trade have no desire whatever to retain the control of the General Lighthouse Authorities if it be thought that any other body could discharge the duty more effectively. But the task seems essentially of a kind which can be better and more economically carried out as part of the ordinary work of a department or authority having other duties of a somewhat kindred nature than as the sole duty of a special Board which is likely to be relatively both weak and costly.

APPENDICES.

APPENDICES.

TABLE OF CONTENTS.

APPENDIX A.

RETURNS PREPARED BY THE BOARD OF TRADE.

Number.	Subject.	Page.
I.	New Lighthouse Works objected to by the Advisory Committee, 1900–1906. (*The Hon. T. H. W. Pelham.*)	267
II.	New Lighthouse Works recommended by the Advisory Committee, 1901–1906. (*The Hon. T. H. W. Pelham.*)	273
III.	Statement showing the amounts proposed, sanctioned and expended on New Works by the General Lighthouse Authorities from 1880–81 to 1906–7. (*The Hon. T. H. W. Pelham.*)	275
IV.	Instances of Unsatisfactory Methods of the Irish Lighthouse Commissioners, 1904–1906. (*The Hon. T. H. W. Pelham.*)	277
V.	Statement of the Annual Expenditure of the General Lighthouse Authorities for the seven years 1899–1906. (*Sir T. W. P. Blomefield, Table A.*)	281
VI.	Table showing the relative proportions of the Detailed Expenditure of the General Lighthouse Authorities. (*Sir T. W. P. Blomefield, Table B.*)	285
VII.	Table showing the Number and Character of the Lighthouses, &c., maintained by the General Lighthouse Authorities in December, 1906. (*Sir T. W. P. Blomefield, Table C.*)	287
VIII.	Table giving the Details of Expenditure of the General Lighthouse Fund for the two periods 1892–99 and 1899–1906. (*Sir T. W. P. Blomefield, Table D.*)	291
IX.	Comparison of the Average Annual Expenditure of the General Lighthouse Fund for the seven years 1899–1906, with the Average Annual Expenditure for the previous seven years. (*Sir T. W P. Blomefield, Table E.*)	305

APPENDIX B.

RETURNS PREPARED BY THE THREE GENERAL LIGHTHOUSE AUTHORITIES.

Number.	Subject.	Page.
I.	Return of the Names, Ages, Occupations and Dates of Appointment of the present Acting Members of the Corporation of Trinity House of Deptford Strond, November 1906. (*Mr. A. Owen.*)	311
II.	Comparison of the Average Cost of Annual Maintenance of Various Classes of Lighthouses by the Three General Lighthouse Authorities. (*Mr. A. Owen, Mr. C. Dick Peddie and Mr. H. G. Cook.*)	313
III.	Comparison of the Average Cost of Annual Maintenance of a Lightvessel by the Three General Lighthouse Authorities. (*Mr. A. Owen Mr. C. Dick Peddie, and Mr. H. G. Cook.*)	315

APPENDIX B.—*continued.*

NUMBER.	SUBJECT.	PAGE.
IV.	Comparison of the Average Cost of Annual Maintenance of Two Steamvessels by the Three General Lighthouse Authorities. (*Mr. A. Owen, Mr. C. Dick Peddie, and Mr. H. G. Cook.*)	317
V.	Nature and Cost of Experiments carried out during the years 1901–1906 by the Three General Lighthouse Authorities. (*Mr. A. Owen, Mr. C. Dick Peddie, and Mr. H. G. Cook.*)	319
VI.	Names and Descriptions of all Lighthouses maintained out of the General Lighthouse Fund and charged to Abstract A. of the Accounts of the Three General Lighthouse Authorities, 1907. (*Mr. A. Owen, Mr. C. Dick Peddie, and Mr. H. G. Cook.*)	321

APPENDIX C.

MISCELLANEOUS PAPERS.

NUMBER.	SUBJECT.	PAGE.
I.	Table showing the Expenditure of the Lighthouse Boards during the six years 1900–1905; the Average Annual Expenditure during these years; and the Average Annual Expenditure during the preceding six years. (*Mr. A. Norman Hill, Secretary to the Liverpool Steam Shipowners' Association.*)	339
II.	Summary showing the Expenditure of the Lighthouse Boards in each of the six years 1900–1905: (1) Expenditure other than on New Works, and (2) Expenditure on New Works, as compared with the Average Annual Expenditure during the preceding six years. (*Mr. A. Norman Hill, Secretary to the Liverpool Steam Shipowners Association.*)	343
III.	Analysis prepared by Vice-Admiral W. H. Henderson of Appendix B.—VI., together with Comparison of Expenditure on Maintenance of Lighthouses by the Three General Lighthouse Authorities.	345

Note.—The papers here given are a selection from over 100 Returns furnished to the Commission.

APPENDIX A.

RETURNS PREPARED BY THE BOARD OF TRADE.

APPENDIX A.

I.

Mr. Pelham.

NEW LIGHTHOUSE WORKS

OBJECTED TO BY THE

ADVISORY COMMITTEE.

1900—1906.

APPENDIX A.—I.

Mr. Pelham.

NEW LIGHTHOUSE WORKS objected to by the ADVISORY COMMITTEE.

YEAR.	WORK.	OBJECTIONS.	RESULT.
1900. Trinity House -	New Coal Hulk at Blackwall —£3,500.	Not necessary. Coal can be put on board by contractors direct.	T.H. withdrew this proposal, but asked for sanction to the expenditure of £300 on repairs to the old Hulk. This was sanctioned as maintenance.
	Lightships. Cost of construction.	Committee are of opinion that the cost is much too great. T.H. should take outside advice with a view to adopting a less expensive type.	The Board were satisfied that the build of a lightship cannot be compared with that of ordinary vessels, having regard to the weather to which the former are exposed and the time spent on the station.
Commissioners of Irish Lights.	Skelligs and Inishtearaght. Dwellings for keepers.	£1,000 per keeper is too much to spend.	Sanctioned, after consulting the Lighthouse Authorities.
	New Steamer to replace "Princess Alexandra"—£32,000.	Committee think that the old vessel should be surveyed and repaired, and the question of a new vessel postponed.	Postponed for survey. (See 1901.)
1901. Trinity House -	Skerries. Improvement of light—£5,700.	No complaints had been received. Light is considered satisfactory, consequently there is no necessity for spending this money.	Deferred for the present year. (See 1902.)
	Dungeness. New high and low light with new fog signal—£22,700.	Should be postponed until the works at Beachy Head are completed, as there is no urgency.	Sanctioned.
	Lizard. Conversion of eastern light to flashing and abolition of western light—£3,000.	Money might be saved, as the Committee are advised that the change proposed would result in danger to vessels.	Sanctioned.
	St. Anthony. Intensifying upper and subsidiary lights and extending eastern limit of visibility —£1,000.	Do not consider this expenditure necessary.	Postponed.
	Longstone. New fog-signal —£2,700.	Should be postponed until contemplated experiments with fog horns have been carried out.	Deferred till after experiments.
Trinity House -	Holyhead Store. New crane and tramway—£800.	Committee not satisfied as to the necessity for this work.	Sanctioned.
	Portland. New lighthouse —£8,500.	No necessity for this expenditure at the present time.	Deferred. (See 1902.
	Whitby Lighthouse. Fog siren—£6,500.	Should wait for experiments with fog horns.	Deferred till after experiments.
Commissioners of Northern Lighthouses.	Stromness. Pier and store and gasworks—£7,759.	A heavy expenditure for such a remote locality, of which the Committee do not approve, as they are not acquainted with any facts which would justify it.	Sanctioned.

New Lighthouse Works objected to by the Advisory Committee—*continued.*

Year.	Work.	Objections.	Result.
1901. Commissioners of Northern Lighthouses—*contd.*	Hyskeir. New lighthouse—£1,300.	Committee think that a light on Neist Point would be more useful and would cost less.	Sanctioned. Neist Point would only be useful for navigation of the Little Minch.
	Rhinns of Islay. Fog signal—£5,500.	Not pressing; might be postponed.	Sanctioned.
Commissioners of Irish Lights.	Slyne Head. Shore dwellings – £4,000.	Consider dwellings too expensive and ask Board of Trade support in this view.	Sanctioned.
	New vessel to replace steamship "Princess Alexandra"—£26,500.	Committee are of opinion that the old vessel will serve for a few years longer if properly repaired.	Sanctioned. The Board decided that this case should not be regarded as one coming within the scope of the Committee's duties.
1902. Trinity House -	Portland. New lighthouse—£8,500.	Should not be sanctioned, as it is not required by vessels going up and down Channel.	Sanctioned.
	Skerries. Improvement of light—£5,700.	Should not be sanctioned. Present light quite satisfactory.	Postponed for further inquiry. (See 1903.)
Commissioners of Northern Lighthouses.	Shetland East Coast. Four beacon lights—£2,200.	Only of benefit to local traffic.	Sanctioned.
	Cape Wrath. Fog siren—£5,500.	Urge adoption of explosive signal. More economical and efficient.	Siren sanctioned.
	Inverness Firth. Four gas-buoys and one beacon—£2,000.	Should be postponed.	Postponed. (See 1903.)
1903. Trinity House -	Skerries. Improvement of light—£5,700.	Not necessary. No complaints have been received.	Sanctioned.
	Portland. Dwellings—£2,500.	They oppose this as they did the improvement of the light brought forward in 1901. The light is not an important one.	Sanctioned.
Commissioners of Northern Lighthouses.	Inverness Firth. Four gas-buoys and one beacon—£2,000.	Not urgent.	Sanctioned.
	Loch Linnhe. Two gas-buoys and one beacon—£1,330.	No pressing need for these.	Sanctioned.
	Isles of the Sea. Beacon light—£530.	Perhaps no harm in postponing.	Sanctioned.
	Butt of Lewis. Improvement of light—£2,000.	No complaint has been made. Expenditure can at least be very well postponed.	Sanctioned.
	Strathie Point. Lighthouse—£8,850.	A lighthouse may be wanted in this locality, but expenditure is heavy. Ask whether Whiten Head would not be a better site.	Postponed. (See 1904.)
	Sumburgh Head. Fog signal—£5,500.	No need for this expenditure.	Postponed. (See 1904.)
Commissioners of Irish Lights.	Burford Bank, Dublin. Gas-buoys—£2,600.	No pressing need for this. Might be postponed.	Sanctioned.
1904. Trinity House -	St. Govans Shoal. Light-vessel—£12,000.	Committee consider this quite unnecessary.	Decided at the Conference not to sanction. Postponed. (See 1906.)
Commissioners of Northern Lighthouses.	Cruden, Aberdeenshire. Lighthouse and fog-signal—£9,350.	Not necessary. This is being proposed before the effect of Buchan Ness fog-signal can be known.	Refused.

New Lighthouse Works objected to by the Advisory Committee—*continued.*

Year.	Work.	Objections.	Result.
1904. Commissioners of Northern Lighthouses—*contd.*	Oban. Pier and stores—£12,250.	This work should not be sanctioned. C.N.L. ought to try and make more economical arrangements. The Committee communicated with the local railway company and the Oban Town Council as to the terms they were willing to give to the C.N.L. with regard to the use of a pier.	Sanctioned. The President wrote to the Chairman of the Committee objecting to the action taken by them. It was decided that the Committee had no authority to interfere and no special knowledge which would assist.
	Orkneys. Lighting four buoys and one beacon—£2,965.	Committee do not think that any pressing necessity is made out for this expenditure. May safely be postponed.	Sanctioned.
	Strathie Point. Lighthouse—£8,850.	Should not be sanctioned.	Refused. (See 1905.)
	Sumburgh Head Fog-signal—£5,500.	No accident is complained of. Expenditure on this is unnecessary.	Sanctioned.
1905. Trinity House -	Strumble Head. Lighthouse and fog-signal—£12,000.	Committee think that this light would benefit the Great Western Railway Company only, and strongly object to expenditure.	Sanctioned. The B.T. obtained a promise from the G.W. Rly. Co. that they would contribute £2,000 to the first cost of the work. Evidence was obtained that the light would benefit a large coasting trade.
Commissioners of Northern Lighthouses.	Strathie Point. Lighthouse—£8,850.	No need for this work. Expenditure should not be entered upon at the present time.	Postponed.
	Nun Rock. Unmanned gas lightship with bell—£4,000.	Would not benefit British shipping. Traffic at this point consists of foreign vessels which do not call at British ports, and therefore do not pay light dues.	Postponed.
	Mull of Kintyre. Improvement of light—£2,900.	Not urgent, and may be postponed. If sanctioned, should perhaps remain a fixed light.	Sanctioned. Light to be flashing. An important improvement.
	Whitestone Bank. Gas bell buoy—£1,000.	Not sufficient evidence to show the necessity for the work. Should be postponed.	Sanctioned.
	Spare Gas Lightvessel—£4,000.	Should not be sanctioned.	Sanctioned as being absolutely necessary.
Commissioners of Irish Lights.	Rockabill and Beeves. Rockshore dwellings for keepers—£3,500 each station.	Committee are not satisfied about the cost. The President at the Conference stated that he did not regard this as a special part of the Committee's work.	Sanctioned. Inquiry was made into the cost of shore dwellings. It was found that the three L.H. Boards spent about the same amount.
1906. Trinity House -	Smalls. Improvement of light from occulting fixed to flashing with a great increase of power—£4,000.	No complaints of present light. In view of the large amount of the Estimates this work ought not to be undertaken.	Sanctioned. This improvement is part of a general scheme of Trinity House to improve old fashioned lights. Smalls is an important light to mariners.
	Submarine signalling—£1,000.	Should not be paid for out of light dues.	T.H. withdrew the proposal.

New Lighthouse Works objected to by the Advisory Committee—*continued.*

Year.	Work.	Objections.	Result.
1906. Commissioners of Northern Light-houses.	Bass Rock. Fog-signal—£4,810.	No urgent need for this. In any case the signal would be better on Fidra Head.	Sanctioned. Fidra Head considered but not approved.
	Neist Point. New Light-house—£11,650.	Should be held over.	Postponed.
Commissioners of Irish Lights.	Skelligs. Re-erection of lighthouse—£13,500.	Should be deferred in order that the matter may be thoroughly gone into.	Postponed.
	Rosslare. Lighting approach to harbour—£7,500.	Would benefit only the Great Western Railway steamboats. The Company should pay.	Not sanctioned.

APPENDIX A.

II.

Mr. Pelham.

NEW LIGHTHOUSE WORKS

RECOMMENDED BY THE

ADVISORY COMMITTEE.

1901—1906.

APPENDIX A.—II.

Mr. Pelham.

Works recommended by the Advisory Committee.

Year.	Work.	Result.
1901.		
Trinity House	Lighting of Monkstone Beacon, Bristol Channel.	Sanctioned.
	Lightship on the Manacles	Trinity House objected chiefly on the ground of cost. The Committee then proposed a lighted and sounding buoy. This was sanctioned.
	Bristol Channel. Nash point fog-signal	Sanctioned.
Commissioners of Northern Light Houses	Holy Island, Arran. Light and fog-signal on East side.	Sanctioned.
Commissioners of Irish Lights	Lucifer Shoal. Alteration of light	Suggestions conveyed to C.I.L. Sanctioned.
	Inishtrahull. Fog-signal—£5,500	Suggestions conveyed to C.I.L. Sanctioned.
	Rathlin. Improvement of light	In 1903 the C.I.L. submitted an estimate of £25,000 for a new light and fog-signal. Advisory Committee considered this too large. The suggestion was therefore dropped.
	Mizen Head or Three Castles Head. Fog-signal.	Consideration might be postponed. (See 1903.)
1902.		
Commissioners of Irish Lights.	Tuns Bank Buoy. Automatic sounding gas lighted—£1,500.	Sanctioned.
1903.		
Commissioners of Irish Lights.	Mizen Head. Fog-signal	Postponed for further consideration. The C.I.L. did not think that Mizen Head was a suitable place. The Committee promised to wait in order that the effect of the new Fastnet Light might be considered. (See 1906.)
1906.		
Trinity House	Flatholm. Fog-signal—£6,700	Sanctioned.
Commissioners of Irish Lights.	Mizen Head. Fog-signal—£7,850	Sanctioned.
	St. John's Point. Improvement of light—£4,600.	Sanctioned.

APPENDIX A.
IV.

Mr. Pelham.

INSTANCES OF UNSATISFACTORY METHODS

OF THE

IRISH LIGHTHOUSE COMMISSIONERS.

1904—1906.

APPENDIX A.—IV.

Mr. Pelham.

Instances of Unsatisfactory Methods of the Irish Lighthouse Commissioners, 1904–1906.

(1)—S.S. "IERNE."

This vessel was built specially for the work of constructing the Fastnet Lighthouse. When the work had been completed the Commissioners of Irish Lights asked for sanction to the retention of the vessel for the general work of the Lighthouse Service and to the sale of the S.S. "Moya." The "Moya" was built in 1893 and the "Ierne" in 1898. The Commissioners stated that the "Ierne" was superior to the other vessel in sea-going qualities and strength of build. This proposal was sanctioned by the Board on the 15th November, 1904.

There was no suggestion that the "Ierne" would require any alteration until in October, 1905, the Commissioners asked for sanction to the insertion of a sum of £1,000 in the Estimates for 1906-7 to meet the expense of extensive alterations.

It was proposed to extend the engine room and spare sleeping cabin deck-house, and to fit up an additional cabin and mess-room, to make alterations rendering the vessel less likely to take water over the forecastle, and to alter the position of the windlass engine.

In explanation of these proposals the Commissioners stated that they did not anticipate any alterations, but experience at sea in all weathers had shown that the "Ierne," which hitherto had been on fine weather work at the Fastnet, required these improvements to make her serviceable.

They added that had the "Moya" remained in the service she would have required an expenditure of about £2,000 or perhaps £3,000 to make her fit for sea.

This sum of £1,000 was sanctioned on the 20th January, 1906, H. 229/06.

In July, 1906, the Commissioners forwarded tenders for this additional work. The lowest was £1,094, and there were other items viz., compass, £17; lodging allowances for the crew, £110. In addition to these items a schedule of rates of wages was submitted in case there were any additional expenses in the matter.

(2)—New Steamer for the Irish Lights Service to replace "Princess Alexandra."

The new vessel, which was named the "Alexandra," was completed in August, 1904.

In the following December the Commissioners of Irish Lights asked for sanction to the supply of certain extras, which included a donkey boiler for the stokehold, costing £660, circulating valves on boilers £87, and other important items, the whole amounting to £805.

We called the attention of the Commissioners to the fact that these items should have been included in the specification of the vessel. As the additions were stated to be absolutely essential, they were sanctioned by the Board of Trade. The mistake was apparently made by the Commissioners' Engineer.

The vessel had to go back to the builders, and was consequently not ready till May, 1905. Some defects had to be made good by the builders to enable the vessel to fulfil speed conditions.

The following additions have since been submitted for sanction:—

Ash ejector pump	£130	Sanctioned	H.13896/05.
Lagging Bulkheads	£ 80		
Chain-cutting shears,	£45 10s.	do.	H.16067/05.
Lodging allowances to Crew	£333	do.	H.10268/06.
Drawings, etc.	£ 75		
Sundries	£ 40		

Repairs and Alterations, £319.—The Board queried these items as they were undertaken while the vessel was in the builders' hands and the final instalment unpaid. The Commissioners furnished explanations which were not satisfactory. The Board, however sanctioned all except a sum of £68, which they were of opinion should be borne by the Contractors.

(3)—Accounts presented to Commissioners of Irish Lights for Repair of Nautical Instruments, &c.

Mr. Moore, who supplies charts to and repairs the instruments of the Commissioners, omitted to present accounts for work done during the period 1894 to 1901. His business was placed in the hands of chartered accountants for the purpose of realising outstanding accounts, and a claim was made on the Commissioners for a sum of £96 19s. 8d. in full settlement.

The Board wrote to the Commissioners, pointing out that such a state of affairs should not have been allowed to exist, and asking what steps the Commissioners have now adopted in order to prevent the recurrence of cases of this kind.

They replied that every possible effort was made by them to obtain an account from Mr. Moore, but until his affairs were placed in the hands of the accountants all efforts were fruitless and remonstrance unavailing. They stated that contractors and other creditors are written to from time to time requesting them to furnish all outstanding accounts, and on more than one occasion firms causing trouble in this way have been struck off the list of contractors. At the conclusion of each financial year all persons having claims against the Commissioners are requested to furnish them or to sign a certificate of discharge.

The payment of the accounts was sanctioned by the Board on the 10th August, 1906.

(4)—Oyster Island—Disused lighthouse tower removed without Board of Trade sanction.

A new lighthouse was being erected at this place, and in July, 1891, the Commissioners of Irish Lights ordered the old tower to be demolished and the materials to be used in the construction of the new buildings.

The work of demolition was commenced in December, 1892, and four days later the Commissioners applied for sanction to the expenditure involved, amounting to £40.

We were advised that the old tower would be useful as a guide to navigators, and informed the Commissioners that we proposed to withhold sanction. They then stated (January, 1893) that the tower had already been taken down.

There was no option but to sanction the expenditure, but the Commissioners were warned that in future they must apply for sanction before any work is commenced.

It was stated that the new work could not be finished without utilising some of the materials of the old tower, and that sanction was anticipated as regards the expenditure in order that the workmen should not be delayed.

(5)—Purchase of Clocks for timing fog-signals in the Irish Lights Service.

In June, 1904, the Commissioners of Irish Lights asked for sanction to the purchase of clocks from a Dublin firm at £11 each. They stated that their engineer had reported that the clocks in use were unsatisfactory, and that he had persuaded the firm in question to construct an experimental clock which had proved satisfactory.

We asked the Trinity House for their observations on this letter, and for information as to the clocks used by them.

The Elder Brethren stated that their clocks, which were obtained from a firm in London, were quite efficient and cost only £3 5s. each.

We then suggested to the Commissioners the advisability of purchasing clocks similar to those used by Trinity House, and after repeated applications for sanction to the original proposal, the Commissioners accepted the situation. Apparently they again consulted the Dublin firm, who submitted a tender for clocks, presumably of the Trinity House pattern at a cost of £3 3s. each. This proposal was sanctioned by the Board on 13th March, 1905.

(6)—Claims made by Keepers of the Skelligs and Inishtearaght Lighthouses, for lodging allowance owing to the new dwellings at Valentia not being ready for occupation.

It appeared that the keepers had to provide lodgings for their families during varying periods in 1901.

The Board asked for the reasons for the delay of three years in asking for sanction to the payment, and were informed that the late Accountant and Cashier had the subject under consideration, but through some accident the matter was lost sight of until the keepers brought the claims to the notice of the Inspecting Committee during the tour of inspection in 1904.

The amounts were : 2 keepers, £5 7s. 4d. ; 2 keepers, £5 8s. 6d. ; 2 keepers, 19s. 10d. ; 1 keeper, £3 18s. 2d. ; and 1 keeper, £1 6s. 10d.

The expenditure was sanctioned on the 16th February, 1905.

---

(7)—Transfer of T. Byrne, Light Keeper, from Clare Island to Eagle Island.

The Commissioners of Irish Lights asked for sanction to the payment of a gratuity of £6 10s. as compensation for his sudden removal.

The Commissioners stated that Byrne, who expected to remain at Clare Island for about three years in the ordinary course, had made arrangements accordingly, and when the order for removal came he had to sell his stock, etc., at a great disadvantage.

This happened a few months after his appointment to Clare Island, and the keeper estimated his losses at £12 19s.

The Commissioners were asked for the reason for the sudden transfer. They rather curtly replied that "a keeper was suddenly required at a neighbouring station and this man was sent."

---

(8)—Light at Oyster Island, Sligo.—Inaccurate description in Admiralty List of Lights.

This description was furnished to the Admiralty by the Commissioners of Irish Lights.

The white light is actually visible over an arc of 8 degrees (S. 29° E. to S. 21° E.), but was described as showing from S. 29° E. through E to S. 21° E., which would be 352 degrees.

Mr. C. M'Arthur, M.P., put a question in the House of Commons as to this error, and we asked the Commissioners for an explanation. They replied that "it is obvious to anyone reading the information given in the descriptive paragraph of the Admiralty List of Lights about Oyster Island Light, for which the Commissioners are responsible that the white light is visible over an arc of 8 degrees and not 352 degrees."

We replied that we were advised to the contrary and asked for further observations.

The Commissioners then stated that it escaped their attention when this light was established that the Notice to Mariners conveyed the impression that the white arc was visible over 352 degrees instead of 8 degrees.

The correction was accordingly conveyed to the Admiralty.

---

(9)—Proposed Lighthouse and Fog-Signal at Mizen Head.

Before giving their statutory sanction to this work the Trinity House required certain information which necessitated a survey of the locality by the Irish Lights Commissioners.

The Irish Lights Commissioners estimated the cost of this survey at £100, and the expenditure of this amount was sanctioned by the Board of Trade in May, 1905 (H.6757/05).

The original estimate of the cost of the light and fog signal was £7,550 (£4,000 for the light), but was subsequently increased to £14,500 (with a more powerful light than at first proposed).

The Irish Lights Commissioners explained (H.16793) that the original estimates "were merely rough approximations," and that the survey had shown them to be "totally inadequate."

The cost of the survey was £121 3s. 3d., and the Irish Lights Commissioners explained the increase over the estimate of £100 by stating that when the estimate was forwarded "they were unaware that Mizen Head was practically an island, and that boats would be required to enable the surveyor to carry out his work."

---

(10)—Works at Kingstown on land leased from the Board of Works.

In October, 1905, the Irish Lights Commissioners submitted an estimate of £500 for certain works at the Kingstown Stores.

In 1873 the Commissioners leased certain ground at Kingstown from the Board of Works, and in 1899 applied for sanction to lease further adjoining land from the Board of Works. The Board of Trade made inquiries whether any further expenditure beyond the yearly rental of £6 13s. 4d. was contemplated, and were informed that no further expenditure would be incurred during that year, but that about £15 would be spent in the following year. On the strength of that information the Board of Trade sanctioned the lease.

But in 1904 the Irish Lights Commissioners entered into a further Agreement with the Board of Works by which they bound themselves to carry out certain work, and as this did not involve any immediate expenditure, they did not bring it to the notice of the Board of Trade.

The 1873 lease was terminable by the Board of Works at 12 months' notice, and the 1904 lease at three months' notice.

In 1905, therefore, the Board of Trade had no option but to sanction the proposed expenditure, but before doing so obtained an assurance from the Board of Works that the land is not likely to be required for other purposes.

---

(11)—Cost of Manual Reed Foghorns in the Irish Lights Service.

The Commissioners of Irish Lights proposed to establish these foghorns on seven lightships and asked for our sanction to the purchase of seven from Messrs. Chance Brothers and Company at a cost of £88 each. It was stated that these fog horns were of a similar type to those used in the Trinity House Service.

The Board having ascertained that the Elder Brethren made these instruments in their Blackwall Workshops at a cost of £45 each, asked the Commissioners of Irish Lights whether they would get the Elder Brethren to supply them for the Irish Lights Service.

The Commissioners stated that on a previous occasion two foghorns were purchased from the Elder Brethren, and that in addition to the quoted price of £45 each there were charges of £5 15s. 9d. each for departmental expenses and £2 8s. 9d. each for carriage while necessary alterations cost from £6 to £10, bringing the cost of each horn to about £60. Messrs. Chance had reduced their price to £70 each, and the Commissioners were of opinion that more satisfactory results would be obtained by accepting this offer as, when obtaining goods from a contractor, they can insist upon the exact fulfilment of their requirements.

The Board then sanctioned the purchase from Messrs. Chance at the reduced price of £70 each.

---

(12)—Fog Bell at Barr Point, Larne.

In 1902 the Commissioners of Irish Lights brought forward a proposal to place a fog bell on Barr Point, the cost to be £80 (not including cost of land).

This proposal was not objected to by the Advisory Committee and was sanctioned by the Board on the 29th March, 1902.

In the next year's estimates this proposal appeared under the heading of New Works sanctioned but not yet commenced, and the cost was given as £730.

The Commissioners explained that the additional £650* was for land and machinery.

The President decided that the matter should again be submitted to the Advisory Committee in view of the large increase of the estimate. H. 17709.

This was done and the work finally sanctioned.

---

* A tender for electrical apparatus at a cost of over £300 was sanctioned by the Board.

VII.

Sir T. W. P. Blomefield.

TABLE SHOWING THE NUMBER AND CHARACTER OF THE LIGHTHOUSES, ETC., MAINTAINED BY THE GENERAL LIGHTHOUSE AUTHORITIES IN DECEMBER, 1906.

SIR THOMAS BLOMEFIELD'S TABLE C.

APPENDIX A.—VII.

Sir T. W. P. Blomefield : Table C.

Table showing the Number and Character of the Lighthouses, etc., Maintained by the General Lighthouse Authorities in December 1906.

LIGHTHOUSES.

——	Trinity House.	Irish Lights Commissioners.	Northern Lighthouse Commissioners.
Number of Lighthouses	85*	75	91
Island Stations	7	14	23
Shore „	55	39	56
Rock „	23	22	12
Fitted with Siren	17	9	30†
„ „ Explosive Charge	11	8	5
„ „ Rocket	1	–	
„ „ Reed Horn	4	–	1
„ „ Bell	10	5	–
„ „ Gun	–	1	–
Separate Station—Gun and Explosive	1	–	–
Ditto Reed Horn	1	–	–
Number of Staff :			
Staff of 7	–	–	1
„ 6	1	3(e)	–
„ 5	5(a)	–	–
„ 4	13(b)	18(c)	12
„ 3	23(c)	8	27
„ 2	29(a)	16	31
„ 1	–	29(f)	9
Attendants only	14(d)	1	11

(a) One of these is a double station.

(b) Two of these are double stations.

(c) Three of these are double stations.

(d) Includes seven River Lights.

(e) Lloyd's pay for the maintenance of one Keeper at Fastnet.

(f) Stations at which female Assistant Keepers are employed.

* This total is made up as follows :—

82 Lighthouse Stations (11 of which are regarded as Double Stations and 14 of which are unwatched lights).
1 Lighthouse at Gibraltar.

2 Separate Stations at which Fog-signals are only maintained.

† Four under construction.

LIGHTVESSELS.

	Trinity House.	Irish Light Commissioners.	Northern Lighthouse Commissioners.
Number of Lightvessels	52*	11	1
Fitted with Steam Siren	7	–	
„ „ Siren	13	2	1
„ „ Reed Horn	8	–	
„ „ Gun		2	–
„ „ Explosive Charges		2	
Number of Crew :			
Crew of 12		3	–
„ 11	42	8	1
„ 9	6	–	
„ 8	2	–	
„ 6	2	–	

BUOYS AND BEACONS.

Number of Buoys and Beacons	659†	174	210
Ordinary Buoys	517	97	98
Gas or Gas Bell Buoys	56	4	31
Bell or Whistling Buoys	22	5	2
Gas and Whistling Buoys	–	3	1
Ordinary Beacons	64	63	55
Gas Beacons	–	2	23

* This includes "Dover Pier Works" and "Warner" Lightships maintained for Admiralty.

† This includes navigational buoys, maintained for other authorities, but is exclusive of two ballast buoys and one sewer buoy at Lowestoft.

APPENDIX A.

VIII.

Sir T. W. P. Blomefield.

GENERAL LIGHTHOUSE FUND.

TABLE GIVING DETAILS OF EXPENDITURE FOR THE TWO PERIODS, 1892-1899 AND 1899-1906.

APPENDIX B.

RETURNS PREPARED BY THE THREE GENERAL LIGHTHOUSE AUTHORITIES.

APPENDIX B.

I.

Mr. A. Owen (Trinity House).

RETURN OF THE NAMES, AGES, OCCUPATIONS AND DATES OF APPOINTMENT OF THE PRESENT ACTING MEMBERS OF THE CORPORATION OF TRINITY HOUSE OF DEPTFORD STROND IN NOVEMBER 1906.

APPENDIX B.—I.

RETURN of the Names, Ages, Occupations and Dates of Appointment of the present Acting Members of the Corporation of Trinity House of Deptford Strond in November, 1906, distinguishing those who have been in Command of Vessels in the Royal Navy or Merchant Service, and the Dates when they retired from those Services, and showing also the Committees of the Corporation to which they are attached for General Lighthouse Fund purposes.

Name.	Age in November, 1906.	Occupation when Elected.	Date of Election.	Year of Retirement from Sea Service.	Committee of the Corporation to which attached in November, 1906.
Captain Sir George Rawlinson Vyvyan, K.C.M.G. (Deputy Master).	68	A retired Commander in the Merchant Service, and recently a Nautical Surveyor under the Board of Trade.	12th June, 1883.	1877	Chairman of the Board and of all the Committees.
Admiral Sir Francis Leopold M'Clintock, K.C.B., F.R.S.	87	Admiral in the Royal Navy.	13th February, 1884.	1884	Warden.
Captain Arthur Edward Barlow.	71	A Commander in the Merchant Service	7th October, 1884.	1884	Warden.
Rear-Admiral Hector Brabazon Stewart.	64	A Captain in the Royal Navy; Inspector of Warlike Stores from 1888 to 1890.	15th July, 1890.	1888	Warden, also Audit Committee.
Captain Adolphus Edmund Bell.	56	A Commander in the Merchant Service.	7th May, 1895.	1895	Light Committee.
Captain Anthony Standidge Thomson, C.B.	55	A Commander in the Merchant Service, and Navigating Officer in the Telegraph Service.	15th November, 1898.	1898	Examining Committeee.
Captain Arthur Wellesley Clarke.	49	A Commander in the Merchant Service.	13th December, 1898.	1899	Examining Committee.
Captain Robert Hoare -	52	A Commander in the Merchant Service.	6th June, 1899.	1899	Light Committee.
Captain Herbert Acton Blake.	49	A Commander in the Merchant Service.	2nd January, 1900.	1900	Light Committee.
Captain Laurence Hugh Crawford, C.B.	50	A retired Commander in the Merchant Service, and Nautical Inspector of the Peninsular and Oriental S.N. Coy.	16th February, 1904.	1900	Examining Committee.
Captain Oswald Percival Marshall.	49	A Commander in the Merchant Service.	2nd May, 1905.	1905	Examining Committee and Audit Committee.
Captain Thomas Golding	46	A Commander in the Merchant Service.	17th October, 1905.	1905	Light Committee and Audit Committee.

One Vacancy, *vice* Captain John Fenwick (died 8th October, 1906).

APPENDIX B.

II.

Mr. A. Owen, Mr. C. Dick Peddie and Mr. H. G. Cook.

COMPARISON OF THE AVERAGE COST OF ANNUAL MAINTENANCE OF VARIOUS CLASSES OF LIGHTHOUSES.

APPENDIX B.—II.

COMPARISON OF THE AVERAGE COST OF ANNUAL MAINTENANCE OF VARIOUS CLASSES OF LIGHTHOUSES.

Returns put in by the Three General Lighthouse Authorities.

	Wages and Allowances.	Stores and Fuel.	Repairs and Maintenance.	Incidentals.	Total.
	£	£	£	£	£
Shore Lighthouse, with 2 Keepers :—					
Trinity House	152	87	31	12	282
Northern Lights	160	54	38	25	277
Irish Lights	143	72	22	17	254
Shore Lighthouse, with Siren Fog Signal and 3 Keepers :—					
Trinity House	215	141	97	35	488
Northern Lights	238	103	63	40	444
Irish Lights	220	86	26	68	400
Rock Lighthouse, with Explosive Fog Signal and 4 Keepers (3 always at Lighthouse) :—					
Trinity House	452	202*	58	38	750
Northern Lights	400	260*	45	37	742
Irish Lights	374	132*	39	253†	79
Electric Light Station, with Siren Fog Signal, having Engineer in charge and 4 Keepers :—					
Trinity House	456	413	173	31	1,073
Northern Lights	530	440	110	51	1,131
Irish Lights	—	Have no Electric Light Station.			—

* Including explosives for fog-signals.
† Including rent, £8, and boat-hire. £232
§ The Northern Lighthouse Board has six keepers at its one electric light station. The fact of its being an island station greatly increases the cost of maintenance.

APPENDIX B.

III.

Mr. A. Owen, Mr. C. Dick Peddie and Mr. H. G. Cook.

COMPARISON OF THE AVERAGE COST OF ANNUAL MAINTENANCE OF A LIGHTVESSEL.

APPENDIX B.—III.

COMPARISON OF THE AVERAGE COST OF ANNUAL MAINTENANCE OF A LIGHTVESSEL.

Returns put in by the Three General Lighthouse Authorities.

	Trinity House.	Northern Lights.	Irish Lights.
	£	£	£
Wages and Allowances	1,020	966	990
Coal, Oil and Stores	205	103	160
General Maintenance	93	146	193
TOTAL*	1,318	1,215	1,343

* The cost of the periodical overhaul is not included in the case of any of the Boards.

APPENDIX B.

IV.

Mr. A. Owen, Mr. C. Dick Peddie and Mr. H. G. Cook.

COMPARISON OF THE AVERAGE COST OF ANNUAL MAINTENANCE OF TWO STEAM VESSELS.

APPENDIX B.—IV.

COMPARISON OF THE AVERAGE COST OF ANNUAL MAINTENANCE OF TWO STEAM VESSELS.

Returns put in by the Three General Lighthouse Authorities.

	Trinity House.		Northern Lights.		Irish Lights.

APPENDIX B.

V.

Mr. A. Owen, Mr. C. Dick Peddie and Mr. H. G. Cook.

NATURE AND COST OF EXPERIMENTS CARRIED OUT DURING THE YEARS 1901–1906 BY THE THREE GENERAL LIGHT-HOUSE AUTHORITIES.

APPENDIX B.—V.

NATURE and COST of EXPERIMENTS carried out during the Years 1901-1906 by the THREE GENERAL LIGHTHOUSE AUTHORITIES.

Year.	Trinity House.†		Northern Lighthouse Board.†		Irish Lights Board.	
	Nature.	Cost.	Nature.	Cost.	Nature.	Cost.
		£		£		£
1901-2	Wigham Oil Buoy (purchase of). Oil and Gas Burners Experimental installation of Incandescent Oil Burner at Lowestoft.	923			Experiment House at Kingstown. (Continued 1903-4)	31
					Incandescent Oil and Gas Burners, and Oil Gas Apparatus at Kingstown and Howth Bailey. (Continued 1903-4).	268
	An exhaustive series of experiments with various descriptions of Fog-signalling Apparatus at St. Catherine's.	1,750	Testing the efficiency of various forms of fog-signals at St. Catherine's	176	Experiments to ascertain whether a buoy could be maintained in 80 fathoms of water off Highland Rock, including loss of moorings and salvage of buoy. (Continued in the following year.)	387
1902-3	Fog-signal Experiments at Nash. Oil and Gas Burners Sirens and Motors for same	640	Testing the relative efficiency of the Siren and the Diaphone at Girdleness.	*	Experiments with Fog-signals on Rathlin Island in order to find best site for Signal.	99
			Testing different makes of incandescent oil burners.	* 10		
			Ascertaining loss of light from incandescent and ordinary oil burners, shining through red glass.			
1903-4	Fog-signal Experiments at Skerries. Gas Buoy Lanterns Oil and Gas Burners	247	Testing Reavell's Air Compressor for Fog-signal purposes.	—	Siren Experiment on "Seagull" Lightship.	52
			Devising a fusible safety plug for preventing damage by fire at unwatched lights.	10		
1904-5	Fog-signal Experiments at Flatholm. Fog-signal Experiments at Strumble Head. Oil and Gas Burners	266	Testing various oils for unwatched lights.	*	Experiments on methods of welding buoys by J. Thompson.	22
			Lieut. Lee's application of Marconi's Wireless Telegraphy to signalling over defined arc during fog.	52		
			Silenium apparatus for automatically turning up and down the light on unattended Gas Beacons and Buoys.	*		
			Applying Air Motors to the automatic winding of the clockwork of revolving optical apparatus.	*		
			Heliographic signalling from and to Rock Lighthouses.	5		
1905-6	Submarine Signalling Rolled Steel Weldless Chain (purchase of). Gunpowder and Aluminium Charges for use at North Stack. Oil and Gas Burners	426	Submarine sound signalling by means of a Bell.	—	Experiments with Grubb Reflectors.	66
			Testing Dissolved Acetylene Apparatus for lighting Buoys and Beacons.	*		
			Regulating Air Supply in Incandescent Oil Burners.	—		

† In addition to these experiments shown, minor experiments in connection with the lights and fog signals are constantly in progress.

* Denotes that the experiments have been conducted wholly or in part at the expense of the inventor or maker of the apparatus. Where the cost is left blank, the experiments have been conducted by the Commissioners' own staff, and the expenses not allocated.

APPENDIX B.

VI.

Mr. A. Owen, Mr. C. Dick Peddie and Mr. H. G. Cook.

NAMES AND DESCRIPTIONS OF ALL LIGHTHOUSES MAINTAINED OUT OF THE GENERAL LIGHTHOUSE FUND AND CHARGED TO ABSTRACT A OF THE ACCOUNTS OF THE THREE GENERAL LIGHTHOUSE AUTHORITIES, 1907.

APPENDIX B.—VI.

NAMES AND DESCRIPTIONS OF ALL LIGHTHOUSES MAINTAINED OUT OF GENERAL LIGHTHOUSE FUND, AND CHARGED TO ABSTRACT A OF THE ACCOUNTS OF THE THREE GENERAL LIGHTHOUSE AUTHORITIES, 1907.

ABSTRACT.

Rock Lighthouses	23 (of which one unwatched).
Island „	7
Shore „	53 (of which 11 minor lights and 2 unwatched lights).
Stations for Fog-signals only	2
TOTAL STATIONS	85
Fog-signals	45 (including the 2 separate fog-signals mentioned above).

Note.—The difference between the number of keepers shown in this return (215) and that given on page 8 of the Report (237) is due to the fact that the latter number includes supernumerary keepers and keepers lent for Admiralty lights.

NAMES AND DESCRIPTIONS OF ALL LIGHTHOUSES MAINTAINED
OUT OF GENERAL LIGHTHOUSE FUND AND CHARGED TO ABSTRACT A OF THE ACCOUNTS, 1907

NORTHERN LIGHTHOUSES.

NOTE.—At *Rock* Stations the Lightkeepers are relieved periodically in turn, their families living on shore or elsewhere.
Island Stations are situated on islands on which there are no or few other inhabitants than the Lightkeepers and their families, special attendance being necessary by Lighthouse tender or boat.
Shore Stations include all stations which are not Rock or Island, whether situated on the mainland or not.

III.

ANALYSIS PREPARED BY VICE-ADMIRAL W. H. HENDERSON OF APPENDIX B.—VI.

APPENDIX C.—III.

ANALYSIS prepared by *Vice-Admiral W. H. Henderson* of Appendix B.—VI., together with Comparison of Expenditure on Maintenance of Lighthouses by the Three General Lighthouse Authorities.

UNWATCHED Lights are omitted, and the Minor Lights with attendants are shown under a separate heading.

The Subsidiary Lights of the Trinity House and Irish Lights Board, which are contained within the main Lighthouses, are omitted (except as to candle power and cost, the former of which is only 141¼ and 27 1/10 respectively), they do not affect the main comparison.

	Trinity House.	Northern Lighthouses	Irish Lights.

TOTAL CANDLE POWER OF ALL LIGHTS taking the maximum of each (in units of 1,000 candles):—			
Electric	Not stated	Not stated.	
Main Lights	$7{,}790\frac{1}{4}$	$10{,}207\frac{1}{4}$	$6{,}233\frac{1}{10}$
Subsidiary Lights	$141\frac{1}{4}$	—	$27\frac{1}{10}$
Minor Lights	20	$5\frac{1}{10}$	—
Total	$7{,}951\frac{1}{2}$	$10{,}212\frac{7}{10}$	6,261

ABSTRACT prepared by Vice-Admiral W. H. Henderson of Appendix B. VI.—*continued.*

	Trinity House.	Northern Lighthouses.	Irish Lights.
DESCRIPTIONS OF CANDLE POWER :—			
2,500 and under	3	9	33
	11 (minor)	11 (minor)	—
2,500 to 10,000	12	19	12
10,000 to 50,000	34	14	7
50,000 to 100,000	3	8	4
100,000 to 200,000	9	15	9
Above 200,000	19	17	8
Total	91	93	73

Comparison of Average Candle-power of Main Lights (exclusive of electric lights):—

T. H., 76 ; N. L., 81 ; I. L., 73	105,000	126,000	86,000

POINTS OF DIFFERENCE.

The Trinity House have three electric light stations in excess of the Northern Lights and four in excess of the ish Lights, the latter having none. The Northern Lights have nine more stations than the Trinity House and seventeen more than the Irish Lights, one and nineteen more fog-signals attached to stations, with a much larger number of sirens, although fewer explosive signals, their number of keepers and attendants is slightly in excess, their tenders carry out a greater number of reliefs in much shorter periods of time than those of the other oards, and, excluding electric lights, their lights exhibit considerably greater candle power.

COMPARISON OF EXPENDITURE ON MAINTENANCE OF LIGHTHOUSES.

For 1905–6 (the latest return available) the cost for Maintenance of Lighthouses is :—

Trinity House.	Northern Lighthouses.	Irish Lights.
£	£	£
45,342	34,949	34,630

The difference between the cost of an electric light station and a first-class shore station may be taken at £585 App. B. II.). Deducting £1,755 and £2,340 respectively from the Trinity House expenditure the comparison becomes :— .

	£	£
Trinity House expenditure	45,342	45,342
Deduct for electric light stations	1,755	2,340
	43,587	43,002
Northern Lights and Irish Lights totals	34,949	34,630
Excess of Trinity House over Northern Lighthouses and Irish Lights after making allowance for the greater cost of electric light stations.	8,638	8,372

Appendix A. VIII. shows that this difference is practically normal.

The expenditure under this head by the Scottish and Irish Boards is approximately equal.

Hydrographical Department :

Fog-signal instructions, reference *A. Owen* 532
Issues all original documents connected with navigation *Capt. T. H. Tizard* 3561
Responsible for survey work *A. Owen* – 347
Submarine bell, favourable report on experiments *Capt. T. H. Tizard* 3509, 3516

Trinity House :

Advice of, asked as regards seamarks *A. Owen, T. Matthews* 320–2, 2153
Constant communication with, *Sir G. Vyvyan* – – – – 5148–50

Light List :

Corrected and adjusted by lighthouse engineers *D. A. Stevenson* – – 2483
Fog-signal instructions quoted in, *A. Owen* 532
Includes all lights in British Isles *A. Owen* 642

is Local Lighthouse Authority for naval ports *Hon. T. H. W. Pelham* – – – 231–2
Method of testing chain cables *T. Matthews* 2122
New works undertaken by Trinity House *T. Matthews* – – – – – 2154
No jurisdiction over Lighthouse Authorities *Hon. T. H. W. Pelham, Capt. T. H. Tizard* 78–9, 3482

Notices to Mariners :

Issue by Admiralty only, advocated *Capt. T. H. Tizard* – – – – 3548–9
Issued for Royal Navy only *Comdr. G. C. Frederick, Sir G. Vyvyan* – 4366–7, 5415
Lighthouse Authorities' notices re-issued *A. Owen, Capt. T. H. Tizard* 598–603, 3481–3
Various sources of information *Capt. T. H. Tizard* – – – – – 3490–3

Obtains information from Lloyd's *Capt. E. F. Inglefield* – – – – – – 3603–4
Opposed to use of lighthouses as signal stations *A. N. Hill, Sir W. Watson* 1978, 5756

Admiralty—*continued.*

Plans of coastguard cottages erected by Lloyd's approved *D. A. Stevenson* – – – 2590–1
Responsible for Queenstown Harbour Lights *Sir W. Watson* – – – – – 5773–4
References *A. Owen, Sir W. Watson* – 313, 5754

ADMIRALTY COURT :

Attendance of Elder Brethren at, *Sir G. Vyvyan* 4965–6

ADVISORY COMMITTEE OF THE SHIPOWNERS OF THE UNITED KINGDOM :

Abolition advocated *S. Lawther* – – 4583–4
Abolition not necessitated by representation of shipowners on Lighthouse Boards *H. Llewellyn Smith* – – – – 6078, 6141
Actuated by parochial spirit *Sir W. Watson* 5688, 5692–4
Annual conference at Board of Trade to discuss new works *C. Dick Peddie, Sir T. Blomefield, Comdr. G. C. Frederick* – – 1693, 3269, 4168–71

Appointment :

Circumstances leading to, *Hon. T. H. W. Pelham* – – – – – 10–11, 45
by Shipowners *H. Llewellyn Smith* 6214–5
Consider cottages of Northern Lighthouse Board too costly *D. A. Stevenson* – 2577
Consider Strumble Head Light should be paid for by Great Western Railway *Hon. T. H. W. Pelham* – – – – – – – – 54

Constitution : *Hon. T. H. W. Pelham* – 11–12

Irish Members elected by Chamber of Shipping *Hon. T. H. W. Pelham* – – 105
Representation of shipowners *Hon. T. H. W. Pelham* – – – – – – 48
Representation of Underwriters *H. Llewellyn Smith* – – – – 6204
Scotch and Irish shipowners not truly representative *Hon. T. H. W. Pelham* – 223

Enables shipowners to obtain insight into system of lighthouse management *A. N. Hill* – 1788

Functions :

Advise Board of Trade *H. Llewellyn Smith* 6073, 6078
Consider proposals made by Lighthouse Boards *Hon. T. H. W. Pelham, T. Matthews* – – – 14a–15, 2078, 2199
Have power to make suggestions *Sir T. Blomefield* – – – – – 3357
Improvements occasionally considered by, *T. Matthews* – – 2077, 2197, 2199
Limitation of, to consideration of new works *Hon. T. H. W. Pelham, A. N. Hill, T. Matthews, R. C. Rundell,* 12–13, 1933–4, 2074–5, 2196–7, 3968

Urgent new works :

Not always laid before, *Hon. T. H. W. Pelham* – – – – – 18
Proposals for, dealt with by correspondence *Hon. T. H. W. Pelham*– 106–7

General Lighthouse Fund :

Complaints as to delay in publishing accounts of, *Hon. T. H. W. Pelham* – – 37
Travelling expenses paid by, *Hon. T. H. W. Pelham* – – – – – – 13
Unaudited accounts of, supplied to, *Hon. T. H. W. Pelham*– – – – 38, 150
Views as to expenditure of, *Hon. T. H. W. Pelham* – – – – – 54, 118–9

Advisory Committee of the Shipowners of the United Kingdom—*cont.*

Has not "starved" the service *Sir W. Watson* 5841–2
Influence of light dues on views of, *Comdr. G. C. Frederick* – – – – – 4353
Legislation desirable with regard to, *Hon. T. H. W. Pelham* – – – 102, 139–140
Nature of, *Hon. T. H. W. Pelham* – – 100–1

New Works:

Objected to:

Gas buoys for Rosslare *Hon. T. H. W. Pelham, A. Owen* – – – 54, 724
Installment of submarine bell *Capt. W. S. Wade, Sir G. Vyvyan, Sir W. Watson* – – – 3835, 5039, 5170, 5181, 5944–51
Observation on particular cases *Capt. W. S. Wade, Sir W. Watson* 3785, 3798, 3802–3, 3835, 5821, 5828–9, 5831–40
Reason for objections *Capt. W. S. Wade, Comdr. G. C. Frederick* 3696, 3764–5, 3794, 3798, 3802–3, 3924, 4293–4, 4352–3
Skerries Light *Sir W. Watson* – 5688–90
Strathie Point Light *Comdr. G. C. Frederick* – – – – 4162–3
Table of, *Hon. T. H. W. Pelham* 16 and Appendix A, I.

Recommended:

Barr Point fog-signal *H. G. Cook* 5787
for County Down coast *S. Lawther* 4516–8
Crockantirrive light proposal afterwards withdrawn *Sir W. Watson* 5732–3
Erection of, never refused *A. N. Hill* 1982–4
Mizen Head fog-signal *Comdr. G. C. Frederick, Sir G. Vyvyan, Sir W. Watson Hon. T. H. W. Pelham* 4200–1, 5207, 5750, 6172
Rathlin light proposal afterwards withdrawn *Sir W. Watson* – 5824–30
St. John's Point, improvement of light *S. Lawther* – – – – 4567
Table of, *Hon. T. H. W. Pelham* 16 and Appendix A, II.

Opinions overruled by Board of Trade *Comdr. G. C. Frederick* – – – 4295
Position of, is unsatisfactory *Hon. T. H. W. Pelham* – – – – – – 45, 184
Postponement of expenditure on experiments advised *Hon. T. H. W. Pelham* – – – 242

Qualifications:

Do not fit them to advise as to coast lighting *S. Lawther* – – – – 4557
Great technical knowledge *Capt. W. S. Wade* – – – – – – 3925–7

Reed fog-signal advocated by, *Lord Rayleigh* 4098
Replacement by representation on Lighthouse Boards deprecated *Sir G. Vyvyan* – 4948
Retention of, if State administers seamarks, advocated *A. N. Hill* – – – – 2013–5
no Secretary *A. N. Hill* – – – – 1933
Supercession by Harbour Boards advocated *S. Lawther* – – – – – – 4530

Value of:

in Assisting Board of Trade *Hon. T. H. W. Pelham, Comdr. G. C. Frederick, H. Llewellyn Smith* – – – – 15, 4261, 4352, 6088, 6142–3, 6126
Encourages economy rather than efficiency *Capt. W. S. Wade, Comdr. G. C. Frederick, Sir G. Vyvyan, D. Crawford, Sir W. Watson* – – – 3696, 3764–5, 3794, 3798, 3802–3, 3924, 4196, 4948, 5588, 5688–90, 5693–4
in General *Hon. T. H. W. Pelham, Comdr. G. C. Frederick, Sir G. Vyvyan, H. Llewellyn Smith* – – – – 15, 4194, 4261, 4352, 4948, 5163–4, 6142–3
is Satisfactory *Sir W. Watson* – 5688–92, 5795, 5843
is Unsatisfactory *D. Crawford, J. A. Fleming* – – 5448 51, 5552–3, 5565, 5593

Advisory Committee of the Shipowners of the United Kingdom—*cont.*

References *Hon. T. H. W. Pelham, A. Owen, C. W. Scott, Capt. E. F. Inglefield, Capt. W. S. Wade, Comdr. G. C. Frederick, T. N. Redington, Sir G. Vyvyan, Sir W. Watson, H. Llewellyn Smith* – – 153, 370, 2900, 3588, 3682, 4193, 4224, 4345, 4910–1, 4992, 5112, 5710, 5730, 5866–8, 6212

ALDERLEY, LORD STANLEY OF, *see* STANLEY, LORD, OF ALDERLEY.

ALLAN STEAMSHIP COMPANY:

Submarine bell fittings removed from vessels *Comdr. G. C. Frederick, Sir G. Vyvyan, Sir W. Watson* – – 4224, 4297–8, 5174, 5947

ALUMINIUM:

Use of, for explosive fog-signals *Lord Rayleigh* 4090

AMERICA, *see* CANADA *and* UNITED STATES OF AMERICA.

ANCHORS, type used on lightvessels *T. Matthews* 2292

ATKINS, CAPTAIN, *the late*:

Elder Brother of Trinity House *A. Owen* 425, 445

ARDROSSAN, stores for West Scotch lighthouses distributed from, *C. Dick Peddie* – – 1468, 1476

ARGYLL, Sheriff of, is member of Northern Lighthouse Board *C. Dick Peddie* – – 1296, 1

ARMSTRONG, MR.:

Late secretary to Irish Lights Board *H. G. Cook* – – – – – – – 5783

ASSOCIATION OF UNDERWRITERS AND INSURANCE BROKERS IN GLASGOW, *see under* GLASGOW.

AYR, Sheriff of, is member of Northern Lighthouse Board *C. Dick Peddie, D. Crawford* 1309, 5452

AZEMAR, MR., proposed directing beams of light upward in fog *Lord Rayleigh* – – – 4091

BAHAMA ISLANDS LIGHTHOUSES:

Difficulty of obtaining earlier returns from, *Hon. T. H. W. Pelham* – – – – – 141
Engineering work is done by Trinity House *Sir G. Vyvyan* – – – – – 5375
Maintained by General Lighthouse Fund *Hon. T. H. W. Pelham* – – – – 38, 145
Not controlled by Trinity House *Sir G. Vyvyan* – – – – – – 5374–9

BALL, SIR ROBERT S., LL.D., F.R.S., Scientific Adviser to the Irish Lights Board 5952–6055

Advantages of electricity – – – 6040
Appointments held by, – – – – 6026–9
Duties as Scientific Adviser to Irish Lights Board *H. G. Cook* – – 1114, 6026, 6030–8
Experiments witnessed by, – – 6031a–6032
Fastnet Light, efficiency of, – – 6036, 6044–5

BALLAST BOARD:

Amount of money handed over to Mercantile Marine Fund by, *Sir W. Watson* – – 5736
Former title of Commissioners of Irish Lights *H. G. Cook* – – – – – – 751
Lighting Powers vested in, 1810 *H. G. Cook* – 737
Lights taken over from, by Irish Lights Board *H. G. Cook, C. W. Scott, Sir W. Watson* 1163, 2818–9, 5736, 5743

BALLINA, small local light is not sufficient for, *Sir W. Watson* – – – – – 5863

BALLY QUINTON POINT:

Anglia wrecked on, *S. Lawther* – – 4504
Danger of coast at, *Comdr. G. C. Frederick* 4214

BALLYLIN FERBANE, member of Irish Lights Board lives at, *H. G. Cook* – – – – – 1195

BANTRY BAY, reference *Capt. W. S. Wade* – 3778

BARLOW, CAPTAIN ARTHUR EDWARD, member of Wardens Committee, Trinity House *A. Owen* – 445

BARNSNESS, difficulty in conveying building materials to, *D. A. Stevenson* – – – 2579

BARR POINT, *see under* IRELAND, *under* FOG-SIGNALS.

BARROW:

"Ierne" built at, *Sir W. Watson* – – 5765
Trinity House outport, *A. N. Hill* – –1854, 2005

BASSES LIGHTS:
Balance in hand belonging to, *Sir T. Blomefield* – – – – – – – 3423
Difficulty of obtaining early returns from, *Hon. T. H. W. Pelham* – – – – 141
Dues cover expenditure on upkeep *Hon. T. H. W. Pelham* – – – – 145, 151
Financed by General Lighthouse Fund *Hon. T. H. W. Pelham* – – – – 38, 145
Maintained by Trinity House *Sir G. Vyvyan* 5132

BEACONS:
Cost of, *D. A. Stevenson* – – – 2501, 2503
in England:
Administered at Trinity House by Lights Committee *A. Owen* – – – – 278
Annual inspection by Lights Committee of Trinity House *A. Owen* – – – 583
Cause of excess of cost over Scotch and Irish *Capt. A. W. Clarke* – – 5285–91
District superintendents responsible for position of, *A. Owen* – – – – 577
Gas for, made at Blackwall *T. Matthews* 2146
Grubb reflector suggested for unlighted, *Sir R. Ball* – – – – – 6031a–6032
in Ireland:
Chaine Tower, reference *C. W. Scott* 2820–1
Improvements during last 25 years *H. G. Cook* – – – – – – – – 908
Number of, *H. G. Cook* – – – – 872
Rinalan Point, reference *C. W. Scott* 2820–1
Superintendence vested in Port of Dublin Corporation *H. G. Cook* – – – 741
in Scotland:
Maintained by masters of steam vessels *C. Dick Peddie* – – – – 1433
Number of, *C. Dick Peddie* – – 1516

BEEVES ROCK, limit of jurisdiction of Limerick Harbour Authority *Sir W. Watson* – – 5757

BELFAST:
Local Lights:
Inspection by Irish Lights Board *Sir W. Watson* – – – – – 5748
Maintained by Harbour Board *Sir W. Watson* – – – – – 5757
Moore's firm transferred to, *H. G. Cook* – 5776
Reed fog-signal found satisfactory at, *Lord Rayleigh* – – – – – – 4098
Representation received by Lloyd's from, *re* lighting of Down, *Capt. E. F. Inglefield* – 3656
Represented on Irish Lights Board *H. G. Cook* 1195, 1197–8
See also under HARBOUR BOARDS, IRELAND.

BELFAST LOUGH:
Danger of tides in neighbourhood of, *S. Lawther* 4526
Lights in, *Capt. W. S. Wade, Sir W. Watson* 3803, 5710
South Briggs Reef:
Gas buoy established at, *Comdr. G. C. Frederick* – – – – – 4211
Wrecks at, due to insufficient lighting *Comdr. G. C. Frederick* – – – 4211

BELGIUM, *see* ZEBRUGGE.

BELL, CAPTAIN ADOLPHUS EDMUND, member of Lights Committee, Trinity House, *A. Owen* – – – – – – – – – 445

BELL, SUBMARINE, *see* SUBMARINE BELL, *under* FOG-SIGNALS.

BELLS for vessels, asked for by Admiralty *Hon. T. H. W. Pelham* – – – – – – – 240

BEREHAVEN, station for steam tender of Irish Lights Board *Sir T. Blomefield* – – 3229a

BERRY HEAD:
Gas for light purchased from Great Western Railway *T. Matthews* – – – 2173, 2351
Unwatched gas light recently established at, *T. Matthews* – – – – – 2173

BIDEFORD SEAMARKS:
Improvement of, *Sir G. Vyvyan* – – – 5112
Maintained by Trinity House *Capt. A. W. Clarke* – – – – – – 5119

BIDSTON, Lloyd's signal station removed from, *Capt. E. F. Inglefield* – – – – – 3574

BIRMINGHAM, Optical apparatus made at, *Lord Rayleigh, Sir R. Ball* – – – 4120, 6038

BLACK DEEP, Buoys at, maintained by Trinity House for London County Council *A. Owen* – – 314

BLACK HEAD:
Establishment of light at, *S. Lawther* 4478–9, 4530, 4569
Four steamers wrecked at, in one night *S. Lawther* – – – – – – 4475–8
Reference *S. Lawther* – – – 4498, 4625

BLACKWALL WORKSHOPS:
Accommodation at, *T. Matthews* – 2435, 2443
Accounts:
Cost is distributed under various heads of expenditure *A. Owen, Sir T. Blomefield* 3378–9, 4997–8
System of Keeping:
Different from head office system *Sir T. Blomefield* – – – 3295
Recent change *A. Owen* – – 5125–31
Effect an economy in lighthouse service *T. Matthews* – – – – – – 2139–42
Must be extended *T. Matthews* – 2172, 2432
Proposal for new power plant laid before Board of Trade *T. Matthews* – – – – 2172
Removal of, to Harwich considered and rejected *T. Matthews* – – – – – 2446
Staff:
Carpenters not employed on new buildings *T. Matthews* – – – – 2242–3
Cost of, *T. Matthews* – – – 2143
Could not undertake extra duties *T. Matthews* – – – – – 2172
List of trades of, *T. Matthews* – – 2395–9
Mechanics:
Are erecting fog-signal machinery at South Bishop *T. Matthews* – 2245
Not entitled to superannuation *Sir T. Blomefield* – – – – 3277–9
Number of, *T. Matthews* – – 2298, 2338, 2440–3
Official, *T. Matthews* – – – 2146
Tenders for materials and stores invited quarterly *T. Matthews* – – – 2142
Under control of Engineering Department of Trinity House *T. Matthews* – 2032, 2145
Work done at:
Annual output *T. Matthews* – 2144, 2391
Cables, materials, &c., tested *A. Owen, T. Matthews* – – 309, 640–1, 2122, 2146
Charge for, to Indian and Colonial Governments *Sir G. Vyvyan* – – – 5138
Cheaper than by contract *T. Matthews, Sir T. Blomefield* – – – 2442, 3230
Gas:
Made at, for district from Ramsgate to Harwich *T. Matthews* – 2146, 2351
Suction, to be introduced as power plant *T. Matthews* – – – 2317–9
Lighting apparatus manufactured *T. Matthews* – – – – – 2393–4
Mechanical work of maintenance of lighthouse service *T. Matthews* – – 2138
New works seldom undertaken *T. Matthews* – – – – – 2139–40
Repairs from distant stations not undertaken *T. Matthews* – – 2342–3, 2366
Steam vessel repairs *T. Matthews* 2138, 2146

Blackwater Bank, dangerous to shipping, *Capt. W. S. Wade* – – – – – – 3792–3

Blake, Captain Herbert Acton:
Member of Lights Committee, Trinity House *A. Owen* – – – – – – – 445
Skelligs Lighthouse inspected by, *Sir W. Watson* – – – – – – – 5837

Blomefield, Sir Thomas, Bart., C.B.,
Assistant Secretary (Finance Department) Board of Trade – – – – 3223–3467
Advisory Committee have power to make suggestions – – – – – – 3359

Blackwall Workshops:
Cost of, is apportioned among the various heads of expenditure – – – 3378–9
Mechanics at, not entitled to superannuation 3277–9

Board of Trade:
Control over Lighthouse Authorities:
Detailed instructions as to classification of accounts not issued – – 3414–5
Extent of, 3321–6, 3349–52, 3438–40, 3450–5
Inquiry never held into their various systems – – – – – 3365–71
Inspection of books seldom necessary 3346–8
Powers conferred by Merchant Shipping Act, 1894 – – – – 3265–8
Sanction required for special repairs 3270
Secures economy – – 3272, 3359–62
Tenders submitted for approval – 3439–44
Does not inquire as to expenditure of foreign Lighthouse Authorities – – – 3342–3
Has no power of initiative respecting light-house works – – – – – 3327–8
Nautical Adviser not consulted on financial questions – – – – – 3456–61

General Lighthouse Authorities:
Administration:
Decentralised system of Trinity House not advisable for Scotland and Ireland – – – – – 3298
Different systems necessitated by circumstances of countries – – 3232–4
Different systems of paying engineers – – – – – 3281–3
Irish Lights Board the least satisfactory – – – – – 3436–7
Comparisons of systems and expenditure can only be approximate owing to different conditions of countries – 3228–31, 3275, 3302, 3311–20, 3366–8, 3375–6, 3383, 3397, 3435

Expenditure:
Amount spent on steam vessels, 1901 is due to repairs – – – – 3399
Difficult to obtain exact cost of light-house maintenance – – 3410
Maintenance and head office expenses approximately the same for each Board – – – – 3236–3243
Relief of stations by hired boats is charged to maintenance of light-houses – – – – – – 3387
Statements of, – – – 3225–7, 3246–7, and Appendices A, VIII. and IX.
Responsible for lighting and marking of coast – – – – – – – 3321–6
Scotch Board have only one lightvessel 3385

Superannuation:
Age for, is same as Civil Service – 3306–9
Allowances of Trinity House less in proportion than those of Scotch Board – – – – – – 3284
Details of expenses – – – 3256–9
Granted to crews of Scotch steamers and lightvessel – – – 3286
Cause for increase in Irish Board 3249–55

General Lighthouse Fund:
Accounts:
No depreciation account – – 3445a–7

Blomefield, Sir Thomas Bart., C.B.—*cont.*
General Lighthouse Fund—*cont.*
Accounts—*cont.*
Publication of, in greater detail would necessitate an increase of staff – 3373
Regulations for examination and audit of, – – – – – – – 3271
System of keeping, is satisfactory 3287–96

Amount of balance in hand – – 3418–23
as to Annual variations in expenditure under various heads – – 3389–3406
Total receipts for 1905–6 – – – 3424–7

Light dues, remissions granted from time to time – – – – – – – – 3432

New Works:
New steam vessels are charged to, – 3401
Procedure for sanction – 3269–3270, 3341

Observations on Statements of:
re Administration of Irish Lights Board *Sir W. Watson* – – – 5749, 5753
re Expenditure of Trinity House (3395–3406) *A. Owen* – – – 4997–5000
re Increase of pay and allowances *C. Dick Peddie* – – – – – 5499–5501
re Relief of rock stations (3386 *et seq.*) *Capt. A. W. Clarke, A. Owen* – – – 5001–2

Refutation of statement that Merchant Shipping Act of 1898 removed incentive to economy 3462–4

Regulations for collection of, *Hon. T. H. W. Pelham* – – – 36
Remitted to Paymaster-General *A. Owen* – – – – – 300
Money recovered from Congested Districts Board, *C. Dick Peddie* 1457

Control over Lighthouse Authorities:
Administrative power not effaced by, *Hon. T. H. W. Pelham* – – – 243, 247, 252
as to Amount of work involved by, *Hon. T. H. W. Pelham, H. Llewellyn Smith* – 164, 6186–6200
Appeals by Scotch and Irish Boards from decision of Trinity House allowed *Hon. T. H. W. Pelham, A. Owen, H. G. Cook, C. Dick Peddie, T. Matthews, Comdr. G. C. Frederick, D. Crawford* – 69, 476, 482–4, 1193–4, 1603, 2469–72, 4318–20, 5463
Applications from Scotch and Irish Boards received through Trinity House *H. G. Cook* – – – – – – – 1191

Contracts:
Efficiency of control over, *Hon. T. H. W. Pelham* – – – – 21–2
Leads to uniformity *Hon. T. H. W. Pelham* – – – – – 95–6
Sanction required for, *Hon. T. H. W. Pelham, C. Dick Peddie, A. N. Hill,* 21, 251–2, 1737–9, 1888–9
Tenders for, submitted for approval *Hon. T. H. W. Pelham, H. G. Cook, Sir T. Blomefield* – 21, 986, 3439–44

is Desirable *C. Dick Peddie, D. Crawford, J. A. Fleming, H. Llewellyn Smith* 1728–34, 5463, 5636–9, 6060
Disputes as to removal of wrecks referred to, *A. Owen* – – – – – 5108
is Efficient *Comdr. G. C. Frederick, D. Crawford, J. A. Fleming* – – 4347, 5463, 5540–5, 5636–9
Established 1853 *D. Crawford* – 5463, 5538
Extent of, *see* NATURE AND EXTENT OF, *below.*

Financial:
Accounts:
Audit of, *C. Dick Peddie* – 1339
Forms for, issued to Lighthouse Boards *Sir T. Blomefield* – 3414
Submitted quarterly *Hon. T. H. W. Pelham, A. Owen* – 37, 679
System of keeping, gives means of judging efficiency of administration *Sir T. Blomefield* – 3359–64
System of submitting, *H. G. Cook* 1138–1140
Allowance to Irish Lights Board *H. G. Cook* – – – – – 1151
Amount set down annually for experiments *A. Owen* – – – 524
Books seldom inspected *Sir T. Blomefield* – – – – – 3346–8
Comparison of the Three Boards' expenditure sometimes made *Hon. T. H. W. Pelham* – – – 227–9
Detailed statements of expenditure submitted to, *T. Matthews* – 2307–8
Efficiency of, *A. Owen, Sir T. Blomefield, D. Crawford, Sir W. Watson* 676, 3438–40, 5442, 5797–5803
Establishment expenses are fixed *Hon T. H. W. Pelham, A. Owen* – 23, 287
Form of sanction to expenditure, *A. Owen* – – – – – – 627
Funds remitted to Lighthouse Authorities by imprest *Hon. T. H. W. Pelham, H. G. Cook* – – 36, 1093

Board of Trade—*cont.*
Control over Lighthouse Authorities—*cont.*
Financial—*cont.*
Nature of, *C. Dick Peddie, Sir T. Blomefield* – – – 1314, 3349–52
over Northern Lighthouse Board began 1853, *C. Dick Peddie* – 1315
is Power of audit but not of control *A. N. Hill* – – 1864, 1885, 1999

Refusal to sanction expenditure:
on Experiments *Hon. T. H. W. Pelham, C. W. Scott, J. A Fleming* 240–2, 2864–6, 3007, 5624
on New works *Capt. W. S. Wade* 369, 3722
Trinity House hampered by, *Capt. A. Wood* – – – – 3187–8

Responsibility of Boards not destroyed by, *A. Owen* – – – – – 729
Sanction required for all expenditure *Hon. T. H. W. Pelham, H. G. Cook, Sir T. Blomefield, Capt. W. S. Wade, Comdr. G. C. Frederick, Sir W. Watson* – 14, 19, 181–2, 961, 3265, 3910, 4256, 5701
Secures economy *C. Dick Peddie, Sir T. Blomefield* – – – 1733, 3272
Superannuation regulations *Hon. T. H. W. Pelham* – – – – 24
System of exercising, *Sir T. Blomefield* 3267–3271
Transferred from Trinity House to Board of Trade 1854, *A. Owen* – 255
is Inefficient, *A. N. Hill* – – – 1863–7
Limited by lack of expert opinion *Comdr. G. C. Frederick* – – – – 4325–8
Nature and extent of, *Hon. T. H. W. Pelham, C. Dick Peddie, A. N. Hill, Sir T. Blomefield, Comdr. G. C. Frederick, Sir G. Vyvyan* – 7–9, 25, 160–9, 177–82, 246–53, 1320–3, 1878, 3321–6, 3349–52, 3438–40, 3450–5, 4340–6, 4354–8, 5080

New Works:
Administrative work not hampered by, *A. Owen* – – – – – 728
Building of Lundy lighthouses by Trinity House staff sanctioned *T. Matthews* – – – – 2054
Disagreements as to, *A. N. Hill, Hon. T. H. W. Pelham* – – 1871–3, 6091–2
Gas buoys for Rosslare not sanctioned *Hon. T. H. W. Pelham, A. Owen* 56, 724
Maidens Lights, intervention in case of, *S. Lawther* – – – 4482

Mizen Head:
Intervention in case of, *C. W. Scott* – – – – 3015–6
Sanction refused to light for, *Capt. A. W. Clarke* – – – 5208
Mr. Matthews' illuminant sanctioned *T. Matthews* – – – – 2076
No power of initiation *Hon. T. H. W. Pelham, Sir T. Blomefield, Comdr. G. C. Frederick* – – – 20, 73, 75, 3327–8, 4255, 6176
Power of compulsion in extreme cases advocated *H. Llewellyn Smith* 6060, 6089–95, 6170

Power to Initiate:
Advocated *A. N. Hill* – 1880–3
Not desired *Hon. T. H. W. Pelham* – – – – – 57

Procedure for Sanction:
in Ordinary cases *Sir T. Blomefield* – – – – 3269–70
in Urgent cases *Hon. T. H. W. Pelham* – – – 18–19, 106

Sanction required for all proposals *Hon. T. H. W. Pelham, A. N. Hill, C. W. Scott, H. G. Cook* – – 7–9, 20, 1262, 1864, 2902–3, 5784
Sanction sometimes refused *H. G. Cook, Capt. W. S. Wade* – – 1271–2, 3692 3722

Board of Trade—*cont.*
Control over Lighthouse Authorities—*cont.*
No special enquiry held to compare systems of the Three Boards *Sir T. Blomefield* 3365–71
as to Possibility of replacement by a body of Commissioners *H. Llewellyn Smith* 6105–6133
Power of appointing pilots and shipowners to the Pilotage Committee of Trinity House *Hon. T. H. W. Pelham* – – 47
Power to give directions with regard to lighthouse management advocated *A. N. Hill* – – – – – – 1999
Powers conferred by Merchant Shipping Act, 1894 *Hon. T. H. W. Pelham, A. N. Hill* – – – – – 23–26, 2004
Powers of inspection *Hon. T. H. W. Pelham, C. Dick Peddie* – – – 25, 193, 1311
Reports of inspections of local lights submitted to, *Hon. T. H. W. Pelham, C. Dick Peddie, Sir W. Watson* – 26–7, 1341, 5743, 5748
Sanction Required :
for Appointment of officials *A. Owen* 286–7
to Compel Local Authorities to act *C. Dick Peddie* – – – – 1593–4
for Expenditure *see that title above.*
for New works *see that title above.*
for Special repairs *Sir T. Blomefield* 3270
Scheme for new system of paying engineer of Northern Lighthouses under consideration *Hon. T. H. W. Pelham* – – – 52
Supervision of overhaul of Scotch Lightvessel *C. Dick Peddie* – – 1514, 1741
Correspondence with Mr. S. Lawther, reference *Comdr. G. C. Frederick* – – 4208
Deputation to, resulting in appointment of Advisory Committee *Hon T. H. W. Pelham* 10–11
is Direct representative of payers of light dues *A. N. Hill* – – – – – 1880, 1882
Evidence on behalf of, *see* BLOMEFIELD, SIR T. W. P., BART., C.B. ; FREDERICK, COMMANDER G. C., R.N. ; LLEWELLYN SMITH, HUBERT, C.B., *and* PELHAM, THE HON. T. H. W., C.B.
Finance Department :
Advised on technical matters by Nautical Adviser *Hon. T. H. W. Pelham* – – 165
Controls expenditure of Lighthouse Authorities *Hon. T. H. W. Pelham* 164, 187–9
Considers estimates of Lighthouse Authorities *Hon. T. H. W. Pelham* – – – 187
Evidence on behalf of, *see* BLOMEFIELD, SIR T. W. P., BART., C.B.
Inspects books of Lighthouse Authorities *Hon. T. H. W. Pelham* – – – – 195
Harbour Department :
Evidence on behalf of, *see* PELHAM, THE HON. T. H. W., C.B.
Questions of expenditure referred to Finance Department by, *Hon. T. H. W. Pelham* – – – – – – 164
Ultimate authority for all lighthouse works *Hon. T. H. W. Pelham* – – – – 174
Letters to :
from Irish Lights Board *re* fog-bell at Barr Point *H. G. Cook* – – – 5787
from Trinity House, *re* lighting of Thames and local seamarks *A. Owen* – – 5112
Local Lights :
Change of attitude regarding provision of, *Sir G. Vyvyan* – – – – 5112–3
Marine Department :
Administration of seamarks by, advocated *R. C. Rundell* – – – – 4002–3
Wreck charts are prepared by, *Comdr. G. C. Frederick* – – – – 4209
Nautical Adviser :
Advice of, asked by Northern Lighthouse Board *Hon. T. H. W. Pelham* – – 41
Advises on lighthouse questions *Sir T. Blomefield, H. Llewellyn Smith* 3456–61, 6099–6102
Board of Trade—*cont.*
Nautical Adviser—*cont.*
Commander G. C. Frederick, appointed 1900 *Comdr. G. C. Frederick* – 4156, 4192
Duties :
Consideration of proposals for new works *Hon. T. H. W. Pelham* – – 9
Consideration of recommendations and objections of Advisory Committee *Comdr. G. C. Frederick* – – 4350–1
re Experiments *Comdr. G. C. Frederick* 4178–81
re Financial questions *Hon. T. H. W. Pelham, Comdr. G. C. Frederick* – 165, 228, 4207, 4231
re Inspection *Hon. T. H. W. Pelham* 26, 190
re New works *Hon. T. H. W. Pelham, Comdr. G. C. Frederick* – – 9, 14a, 4159–65, 4157–65, 4170–2, 4273–4, 4286–8
re Maintenance of seamarks *Comdr. G. C. Frederick* – – – 4175–7
Not all connected with lighthouse work *Hon. T. H. W. Pelham, Comdr. G. C. Frederick* – – 164, 4316–7
re Scientific questions *Comdr. G. C. Frederick* – – – – 4230
Suggestions not initiated by, *Comdr. G. C. Frederick* – – – 4182–3
Suggestion as to lights for Rosslare *Hon. T. H. W. Pelham* – – – – 54
Time devoted by, to lighthouse duties *Comdr. C. C. Frederick* – – 4250–1
is Ultimate authority on nautical questions referring to lighthouses *Hon. T. H. W. Pelham, Comdr. G. C. Frederick* 170–5, 4229
References *Hon. T. H. W. Pelham* 134, 245

  - Number :
    - Analysis of, *Comdr. G. C. Frederick* 4209–11
    - Total, in ten years, *S. Lawther* 4504, 4558

Down, County—*cont.*
- Wrecks—*cont.*
  - "Partridge" *S. Lawther* – – 4498
  - Proportion that would have been prevented by wreck chart *S. Lawther* – – 4560–2
  - Small proportion is due to inefficient lighting *S. Lawther* – – – 4507–8
- *See also* Place names.

Drogheda, appointment of Harbour Board as Advisory Committee to Irish Lights Board advocated *M. Lynch* – – – – – 4718

Dublin :
- "Act for promoting the Trade of, by rendering its Port and Harbour more commodious," incorporated the Commissioners of Irish Lights *H. G. Cook* – – – 732–3, 1141–2
- Corporation for Preserving and Improving the Port of, *see that title.*
- is Lighted by Port and Docks Board *Sir W. Watson* – – – – – – 5760
- Lord Mayor, High Sheriff and three Aldermen of, are *ex-officio* members of Irish Lights Board *Hon. T. H. W. Pelham, H. G. Cook, S. Lawther, Sir W. Watson, H. Llewellyn Smith* 29, 752, 4581, 5902, 6156–7
- Municipal Corporation nominates three Aldermen as members of Irish Lights Board *H. G. Cook* – – – – – – – – 752
- Port and Docks Board :
  - Appointment of, as Advisory Committee to Irish Lights Board advocated *M. Lynch* 4718
  - Formerly identical with Irish Lights Board *Hon. T. H. W. Pelham* – – – 112–6
  - is Harbour Board for Dublin *H. J. Forde* 4842
  - Nomination of members by Irish Lights Board till 1898 *H. G. Cook* – – – 756
  - Origin of, *H. G. Cook* – – – – 750
  - Representation of, on Irish Lights Board advocated *T. F. Cooke* – – 4756
  - Separated from Lights Board 1867 *Sir W. Watson* – – – – 5759, 5762a
- Removal of Irish Lights office from, advocated *Capt. A. F. Boxer* – – – 4409
- References *H. G. Cook, Capt. A. F. Boxer* – 949 969, 1180, 1195, 4392

Dumfries and Galloway, Sheriff of, is member of Northern Lighthouse Board *C. Dick Peddie, D. Crawford* – – – – – 1309, 5438

Duncannon, is limit of jurisdiction of Waterford Harbour Board *H. J. Forde* – – – 4770–1

Dundalk, appointment of Harbour Board as Advisory Committee to Irish Lights Board advocated *M. Lynch* – – – – – 4718

Dundee :
- Lord Provost :
  - Member of Northern Lighthouse Board since 1854 *C. Dick Peddie* – 1309, 1576
  - Seldom attends Board meetings *C. Dick Peddie, D. Crawford* – – 1360, 5452
- Messrs. D. and C. Stevenson are engineers to Harbour Trustees *D. A. Stevenson* – 2478

Dundrum Bay, strong currents in, are dangerous *S. Lawther* – – – – – – 4504, 4526

Dune Point, suggestion for harbour light made in 1862 *R. C. Rundell* – – – – – 3949

Dungeness, electric light found unsatisfactory and removed from, *Capt. T. H. Tizard* – – – 3537

Dunmanus, reference *Capt. W. S. Wade* – – 3778

Dunmore :
- Lighthouse controlled by Board of Works till 1810 *H. G. Cook* – – – – – 739
- a Royal Harbour *H. G. Cook, C. W. Scott, Capt. W. S. Wade, Sir W. Watson* – 1166, 2813, 3872–3, 5875–8

Dunnet Head :
- Cost of coastguard cottages erected by Lloyd's *D. A. Stevenson* – – – – – 2590
- Lighthouse is difficult of access *D. A. Stevenson* 2579

ECCLESIASTICAL COMMISSIONERS, reference *H. Llewellyn Smith* – – – – – 6131

EDINBURGH :
Cost of a cottage in, *D. A. Stevenson* – 2582
Eldest Bailie of, is member of Northern Lighthouse Board *Hon. T. H. W. Pelham, C. Dick Peddie* – – – – – 29, 1296, 1309
Headquarters of Northern Lighthouse Board *C. Dick Peddie* – – – – 1351, 1392
Lord Provost of, is member of Northern Lighthouse Board *Hon. T. H. W. Pelham, C. Dick Peddie* – – – – – 29, 1296, 1309
Sheriff of, is member of Northern Lighthouse Board *C. Dick Peddie* – – – 1296
Sheriffs all reside in, *D. Crawford* – – 5453
References *C. Dick Peddie, D. A. Stevenson, D. Crawford* – – 1425–6, 2568, 2579, 5442

EDUCATION GRANT, definition of, *A. Owen* – 5010

EIREBOLL, LOCH, light belongs to Congested Districts Board *C. Dick Peddie* – – – 1742

ELDER BRETHREN, *see under* TRINITY HOUSE.

ELDER TURNS :
Abolished by Act of Parliament 1822 *A. Owen, Sir G. Vyvyan* – – – 538–41, 4951, 4959
Definition of, *Sir G. Vyvyan* – – – 4951
Formed part of revenue of Trinity House till 1822 *Sir G. Vyvyan, H. Llewellyn Smith* 4951, 4954–61, 6209
No longer collected *A. Owen* – – – – 538
Origin of, unknown *Sir G. Vyvyan* 4951, 4954–5

ENGLAND, dangers of coast of, *Sir G. Vyvyan* 5095–7, 5101
See also TRINITY HOUSE.

ENGLISH CHANNEL changes in seamarks communicated to France *A. Owen* – – – – – 327

EUROPA POINT, *see under* GIBRALTAR.

"EXCELLENT," H.M.S., Trinity House divers trained in, *A. Owen* – – – – – – 700

EXE, buoys are maintained by Trinity House *A. Owen* – – – – – – – – 5119

EXETER, gas purchased from, for Berry Head light *T. Matthews* – – – – – – 2173

EXMOUTH, seamarks at, are maintained by Trinity House *Capt. A. W. Clarke* – – – 5119

EXPERIMENTS :
Board of Trade controls expenditure on, *Hon. T. H. W. Pelham* – – – – 240–2
Bull Rock, 1889, reference *Sir R. Ball* – 6031a
Communication between Lighthouse Boards with regard to, *C. Dick Peddie, T. Matthews, C. W. Scott* – – 1723–5, 2359–60, 2880–1
Descriptions of, appear in engineering papers *T. Matthews* – – – – – 2192
Expenditure on, postponement advised by Advisory Committee *Hon. T. H. W. Pelham* 242
Sanction refused to, by Board of Trade *Hon. T. H. W. Pelham, C. W. Scott, J. A. Fleming* – – – 240–2, 2864–6, 3007, 5624
Included under new works, if extensive *Comdr. G. C. Frederick* – – – – 4178, 4181
at Kingstown *see that title.*
at St. Catherine's *see that title.*
at South Foreland *see that title.*
See also EXPERIMENTS *under* IRISH LIGHTS BOARD, NORTHERN LIGHTHOUSE BOARD, TRINITY HOUSE.

FALKLAND ISLANDS :
Difficulty in obtaining early Returns from, *Hon. T. H. W. Pelham* – – – – – 141
Lighthouses are maintained by General Lighthouse Fund *Hon. T. H. W. Pelham* – 38, 145

Trinity House :
Advice of, asked as regards lights *Sir G. Vyvyan* – – – – – – 5132
Does not control lights *Sir G. Vyvyan* 5371–9
Engineering work done by, *Sir G. Vyvyan, A. Owen* – – 5375–7, 5380

FARNE ISLANDS reference *Capt. A. Wood* – 3170

FARRER :
Sir John, *see* FARRER, THE LORD, *below.*
The Lord :
Accompanied Inspecting Committee of Irish Lights Board *Sir W. Watson* 5816

FENWICK, CAPTAIN JOHN, *the late* :
Member of Wardens' Committee, Trinity House *A. Owen* – – – – – – – 445
References *A. Owen, Sir G. Vyvyan* – 425, 5191

FIFE :
Lightship is moored near East Neuk of, *C. Dick Peddie* – – – – – – 1505
Sheriff of, is member of Northern Lighthouse Board *C. Dick Peddie* – – – 1309

FISHERIES :
Alteration in character of vessels *D. Crawford* 5513, 5516–7
Importance of, *Capt. A. F. Boxer* – – 4443–4
Insufficiently provided with seamarks *Capt. A. F. Boxer* – – – – – – 4443
Light dues not paid by, *Hon. T. H. W. Pelham, A. Owen, Sir W. Watson* – – – 53, 122, 221, 706, 5974–6
Willing to pay light dues if local lights are provided *D. Crawford* – – – 5515

FISHERY BOARD :
Provision of local lights by, *Sir W. Watson* – 5869
Work done for, by Messrs. D. and C. Stevenson *D. A. Stevenson* – – – – – 2490

FISHGUARD, references *Hon. T. H. W. Pelham, A. Owen, T. Mathews* – – 134, 137, 722, 2038

FITZGERALD, FRANK :
Director of the British and Irish Steam Packet Company *Sir W. Watson* – – – – 5761
Member of Irish Lights Board and its Committees *H. G. Cook, Sir W. Watson* – 754, 771, 5749
Reference *H. G. Cook* – – – – – 774

FLAMBOROUGH HEAD, *see under* ENGLAND *under* FOG-SIGNALS.

FLANNAN ISLANDS :
Proposal to establish wireless telegraphy *J. A. Fleming* – – – – – – 5599
References *D. A. Stevenson* – – 2495, 2572

FLATHOLM :
Rayleigh Horn siren is being established at, *T. Matthews* – – – – – – – 2114
Work at, done by contract *T. Matthews* – 2044

FLEETWOOD :
Establishment of gas buoy *Sir G. Vyvyan* 5112
a Trinity House outport *A. N. Hill* – 1854

FLEMING, JAMES A., K.C., Sheriff of Dumfries and Galloway – – – – 5443–5680
Advisory Committee's position is anomolous 5552–3
Board of Trade control over Lighthouse Authorities is effective and desirable – 5636–9
Congested Districts Board, provision of lights by, – – – – – – – 5607–10
Fog-signals, as to best form for Scotland – 5626–31
Light Dues, abolition of distinction between local and general lights – – – 5522

Lighthouse Authorities :
Northern Lighthouse Board :
Local lights erected by, – – 5577
Number of lights controlled by, – 5533–4
Statutory powers of co-option – 5456–7
Trinity House control over, deprecated 5466–70, 5552–3
One Central would not effect economy as regards stores – – – – 5443
The Three General :
Comparison of cost of seamarks – 5620, and Appendices B, II. and III.
Difficulty in comparing expenditure 5554–9

Fleming, James A., K.C.—*cont.*
Lighthouses :
Provision of spare burner apparatus – 5653–4
Short flashes disapproved – – – 5621–3
as to Lighting of Forth and Clyde – – 5611–20
Light-keepers, relief of rock stations and light-vessels – – – – 5594–5606
Notices to Mariners, observations on Captain Tizard's statement (3477) – – – 5665–73
Scotch coast not yet efficiently lighted 5641, 5674
Unwatched lightvessels have proved satisfactory 5675–7

Fog-signals :
Areas of silence :
All forms of signals subject to, *C. W. Scott* 2840–1
Attention of Trinity House directed to, by case of the "Montagu" *T. Matthews* 2268
Black Head not always audible *S. Lawther* 4499–4504
Causes :
Condition of atmosphere *Lord Rayleigh* – – – – – 4101
Configuration of land *T. Matthews, Capt. W. S. Wade* – – 2115–7, 3831–2
Importance of discovering, *D. A. Stevenson* – – – – 2646–8
Not known *T. Matthews* – 2267, 2270
Temperature of air and water *D. A. Stevenson, Lord Rayleigh* 2559, 4126
Defect eradicated at Stroma *D. A. Stevenson* – – – – – 2558
Development of signals handicapped by, *Lord Rayleigh* – – – – 4153
Experiments with :
at St. Catherine's *see that title.*
at the Skerries *T. Matthews* – 2115
at Lundy Island, examined by Elder Brethren *Sir G. Vyvyan* – – 5065
Submarine bell may decrease *Lord Rayleigh* – – – – – – 4126
Unavoidable at present *T. Matthews, Capt. T. H. Tizard, Lord Rayleigh* 2271–3, 3507–8, 4153
are Variable *T. Matthews, Capt. E. F. Inglefield, Capt. W. S. Wade* – – 2115–7, 2268–9, 3664, 3829–33
References *Comdr. G. C. Frederick, Sir R. Ball* – – – – – 4226, 6036, 6053–5
Bells on unattended lightvessels should be raised high *D. A. Stevenson* – – 2639–40
Cost of, *D. A. Stevenson* – – – – 2501
Diaphone :
Comparison of, with siren, *D. A. Stevenson, Lord Rayleigh* – – 2557, 4103–6
Experiments :
Contemplated *C. W. Scott, Lord Rayleigh, J. A. Fleming* – 2841, 4104–5, 5631
at Girdleness *D. A. Stevenson* – 2557
Now being tried *T. Matthews* – 2474–5
at St. Catherine's, were successful *Lord Rayleigh* – – – 4085, 4103
In use in Canada, *Lord Rayleigh* – 4124–5
Employment of more than one note deprecated, *C. W. Scott* – – – – 2828–2830
in England :
Flamborough Head :
Alteration
Necessity for, *T. Matthews* – 2297
Petitions received as to, *T. Matthews* – – 2108, 2195
Will be laid before Advisory Committee *T. Matthews* – 2199
Annual cost of, *T. Matthews* – 2108
Establishment of siren proposed *T. Matthews* – – – – 2110
Not always audible *A. Owen* – – 530
One explosion every five minutes *T. Matthews* – – – 2108, 2110

Fog-signals—*cont.*
England—*cont.*
Number under Trinity House *Sir G. Vyvyan* – – – – – 5123
Skerries, cost of, is unduly great *Capt. W. S. Wade* – – – – – – 3689
Three kinds in use *T. Matthews* – 2105
Experiments :
Cannot be tried during fog *Lord Rayleigh* 4133–5
Diaphone, *see that title above.*
Importance of, *T. Matthews* – 2274–5
St. Catherine's, *see that title.*
Skerries, 1904 :
Rayleigh horn tried *Lord Rayleigh* 4093
Silent area discovered during, *Lord Rayleigh* – – – – 4093
Explosive :
Flash is helpful to vessels *Lord Rayleigh* 4091
Gunpowder and aluminium mixed charges tried *Lord Rayleigh* – – – 4091–2
Irish Board have more than English or Scotch *C. W. Scott* – – – 2833
Number in Scotland *D. A. Stevenson* 2548
Objections to, *T. Matthews, D. A. Stevenson, C. W. Scott* – 2107–8, 2296, 2547, 2839, 2998
Preferred by Irish Board *C. W. Scott* 2834–8
Fog-gongs :
Inefficiency of, *Capt. E. F. Inglefield, Capt. W. S. Wade, Comdr. G. C. Frederick* 3664, 3789–91, 4216
Supersession of, by reed signals, *Sir W. Watson* – – – – 5756, 5892
Instructions as to, are published in Admiralty Light List *A. Owen* – – – – – 532
in Ireland :
Additions of last 25 years *H. G. Cook* – 908
Barr Point :
Audibility varies considerably *S. Lawther* – – – – 4488–90
Cost of, *H. G. Cook* – – – 5787–90
Description of, *C. W. Scott* – 2847
Explanation of alteration in scheme for, *H. G. Cook* – – 1135–6, 5787–91
Letter as to, from Irish Lights to Board of Trade *H. G. Cook* – – 5787
Recommended by Advisory Committee *H. G. Cook* – – – – 5787
Removal to Skernaghan Point advocated *S. Lawther* – 4487–8, 4494, 4498
Rung by electricity from Ferris Point, Larne *H. G. Cook; C. W. Scott* 1135, 2821, 2847
Saving effected by electric bell *C. W. Scott* – – – – – 3021–2
Black Head :
Established after repeated applications *S. Lawther* – – – 4479
Not always audible *S. Lawther* 4499–4503
Reference *Sir W. Watson* – – 5710
Lough Strangford, establishment at, advocated *Comdr. G. C. Frederick* – 4214
Mizen Head, *see that title*
Names and descriptions :
First class signals *C. W. Scott* – 2844
Second class signals *C. W. Scott* – 2847
Old Head of Kinsale, improvement of, *H. G. Cook* – – – – 1186, 1246
Tuskar to Codling :
Better signals desirable *Capt. A. F. Boxer* – – – – – 4432–5
No complaints received of, *Comdr. G. C. Frederick* – – – 4217
Reavell Compressor tried and adopted in Scotland *D. A. Stevenson* – – – – 2560
Recently improved, but still far from perfect *C. W. Scott* – – – – 2832, 3005

Fog-signals—*cont.*
Reed :
Advocated by Advisory Committee *Lord Rayleigh* – – – – – 4098
Cost of, *H. G. Cook* – – – – 5784–6
Description of, *T. Matthews* – – 2105–6
Explanation of estimate for, sent in by Irish Lights Board *H. G. Cook* – 5784–6
One in Scotland at Pladda *D. A. Stevenson* – – – – – – – 2549
Replacing gongs on lightvessels *C. W. Scott, Sir W. Watson* – 2845, 5756, 5892
Satisfactory for less important positions *T. Matthews, C. W. Scott, Lord Rayleigh* – – – – 2111, 2846–7, 4098
in Scotland :
Bressay, difference between Trinity House and Northern Lighthouse Board as to, *J. A. Fleming* – – – – 5467
Cost of maintenance *C. Dick Peddie* 1458–60, 1463 and Appendix
Isle of May signal is a siren *C. Dick Peddie* – – – – – – 1451
Killantringan, heard at Mew Island and Larne *C. W. Scott* – – – 2831
Number of, *C. Dick Peddie* – – 1453–4
Siren :
Air motor for driving, adopted in Scotland *D. A. Stevenson* – – – – 2555
Arc recorded by, *T. Matthews* – – 2112
Comparison of, with diaphone *Lord Rayleigh* – – – – – 4103–6
Considered the most satisfactory form of signal *T. Matthews, D. A. Stevenson, J. A. Fleming* – – 2111–2, 2545, 5630
Disadvantages *Lord Rayleigh* – – 4105–6
Horns for :
Double horn, advantages of, *T. Matthews* – – – – 2112–3
Rayleigh Horn (eliptical) :
Adopted since St. Catherine's experiments *Lord Rayleigh* 4099
Experiments leading to introduction of, *Lord Rayleigh* – 4117–9
Gives best form of siren signal *T. Matthews* – – – 2114
Tried at Skerries *Lord Rayleigh* 4093
More powerful than reed signal *Lord Rayleigh* – – – – – 4098–9
Scotch pattern is better than English and Irish *D. A. Stevenson* – – – 2707
Supercession by submarine signals unlikely at shore stations *T. Matthews* – 2120
is Worked by oil engines *D. A. Stevenson* 2546
Submarine bell :
Advantages :
to Certain classes of shipping *Sir G. Vyvyan* – – – – – 5176–9
Shipping community disagree as to, *Comdr. G. C. Frederick* – – 4224
Advocated *D. A. Stevenson, Comdr. G. C. Frederick* – – – 2651, 4225, 4296
Allan Company have removed fittings of, from their ships *Comdr. G. C. Frederick, Sir G. Vyvyan, Sir W. Watson* – 4224, 4297–8, 5174, 5947
Canada and United States have already installed, *Lord Rayleigh, Comdr. G. C. Frederick* – – – – 4124–5, 4221
Communication as to, between Trinity House and United States *A. Owen* – 330
Experiments :
Further, desirable *Lord Rayleigh* 4111
Satisfactorily tried at North Goodwin lightvessel *A. Owen, T. Matthews, Capt. T. H. Tizard, Lord Rayleigh, Sir G. Vyvyan* – 533, 2118–9, 3509, 3516, 4107–10, 5039
can be Heard inside ships not specially fitted *Lord Rayleigh* – – – 4129
Installed by Mersey Docks and Harbour Board *Capt. W. S. Wade, Sir W. Watson* 3812–4, 5947
Fog-signals—*cont.*
Submarine bell—*cont.*
Instalment opposed by Advisory Committee *Capt. W. S. Wade, Sir G. Vyvyan, Sir W. Watson* 3835, 5039, 5170, 5181, 5944–51
Introduction must be gradual *Comdr. G. C. Frederick* – – – – – 4312–5
the Most efficient form of signal *Capt. E. F. Inglefield* – – – – 3664
Possible remedy for silent areas *Sir R. Ball* – – – – – – 6036
Propagation of sound more regular than with other signals *Lord Rayleigh* – 4126
Sandbanks may interrupt sound of, *Capt. T. H. Tizard, Lord Rayleigh* 3536, 4131–2
Supersession of siren by, unlikely at shore stations *T. Matthews* – – – 2120
Trinity House :
Proposal for, withdrawn by, *Sir W. Watson* – – – – – 5944–50
Provision for, in 1907–8 Estimates *T. Matthews, Sir G. Vyvyan* 2118, 5039
Use of, for code for submarine boats, under consideration *Capt. T. H. Tizard* – 3559
Vessels must be fitted to receive, *T. Matthews, D. A. Stevenson, Lord Rayleigh* – – 2121, 2252–3, 4129–4130a
Would be useless in Scotland *J. A. Fleming* – – – – – 5627–8
Zeeland Company's offer to instal, on Tongue Lightship refused *Sir G. Vyvyan* – – – – 5039, 5169–71
Zones of silence, *see* AREAS OF SILENCE, *above.*
FORDE, H. J., member of Waterford Harbour Board : – – – – 4694–4713, 4761–75, 4831–66, 4923, 4925, 4931
Concurs in evidence given by Mr. T. F. Cooke 4696
Harbour Boards, Ireland :
Appointment of, as local Advisory Committees advocated – – – 4701
Representation of, on Irish Lights Board advocated – – – – 4696–4700
Irish Lights Board :
Administration is satisfactory – – 4709
Reconstitution advocated – 4701–6, 4761–9, 4832–44
Rosslare light should not be provided by General Lighthouse Fund – 4710–2, 4857–60
FORFAR, Sheriff of, is member of Northern Lighthouse Board *C. Dick Peddie* – – – 1309
FORTH, FIRTH OF :
Lighthouses :
Maintained by General Lighthouse Fund *J. A. Fleming* – – – – 5611
Number and cost of, *J. A. Fleming* – 5619–20
Water is conveyed to, *C. Dick Peddie* 1502
North Carr Lightvessel is in, *C. Dick Peddie, J. A. Fleming* – – – – 1505, 5605
References *C. Dick Peddie* – 1350, 1518, 1528
FOYLE, LOUGH :
Barges fitted with storeholders kept at, by Irish Lights Board *C. W. Scott* – – 2858
Buoy at entrance should be moved *T. F. Cooke* – – – – – – 4678
Reference *T. F. Cooke* – – – – 4813
FOZE ROCK, reference *C. W. Scott* – – 3038
FRANCE :
Efficiency of coast lighting as compared with that of United Kingdom :
is Inferior *Capt. W. S. Wade* – 2820, 3867
is Not superior *A. N. Hill, T. Matthews* 2020, 2150
is Superior *C. W. Scott, Capt. A. Wood* 3034, 3186, 3205, 3216
Electric Light :
is being Abandoned for lighthouse purposes *D. A. Stevenson, Comdr. G. C. Frederick* – – – – 2621–6, 422
System of calculating intensity differs from English *T. Matthews* – – 2208, 2216–7

France—*cont.*
Length of coast-line as compared with England *T. Matthews* – – – 2218–9, 2278

Lighthouse Authorities:
Administration of, is more efficient than that of British Authorities *S. Lawther, M. Lynch* – – – – 4588, 4718

Communication with Trinity House:
is Constant between the engineers *T. Matthews* – – – 2101–2, 2152
Interchange of information *A. Owen, T. Matthews* – 327–8, 2151–2, 2188, 2194
Control local lighting *T. Matthews* – 2278
Exhibited largely at Milan *T. Matthews* 2188

Expenditure:
Annual amount of, *Sir G. Vyvyan* 5095
Difficulty of comparing, with that of Trinity House *A. Owen Sir G. Vyvyan* – – 323, 521, 5095–7
on Experiments, is more liberal than that of United Kingdom *T. Matthews, Lord Rayleigh* – 2150, 2277, 4122
Greater than that of United Kingdom *Sir W. Watson* – – 5735, 5820
Impossible to ascertain first cost of new works *T. Matthews* – 2431

Experiments:
Expenditure on, *see that title above.*
Larger staff employed for, than in United Kingdom *T. Matthews* 2277
More systematic than in United Kingdom *C. W. Scott* – – 3011
Length of flash approved by, *C. W. Scott* 2986–7
Photometric method of measuring lights not adopted by, *D. A. Stevenson* – 2633
Publish complete records of lighthouse works *C. W. Scott* – – 2876, 3008

Lighthouses:
Calais, visible further than Foreland light *Capt. A. Wood* – – – – 3208
Engineer's staff do not construct, *T. Matthews* – – – – – 2149
Grisnez, visible further than Foreland light *Capt. A. Wood* – – – – 3207–9
Introduction of incandescent oil system *T. Matthews* – – – – 2095
Number of electric lights *T. Matthews, D. A. Stevenson* – – –2095, 2223, 2620
Number of flash lights *H. Llewellyn Smith* 6177–8
Powerful lights not always advantageous *Lord Rayleigh* – – – – 4146
Vertical beam not projected upwards by, *T. Matthews* – – – – 2235–8

Lighting Apparatus:
Dioptric, made by several firms *D. A. Stevenson* – – – – – 2568
Mercury floats invented by lighthouse engineer *T. Matthews, C. W. Scott, Sir R. Ball* – – – 2100, 2997, 6034

FREDERICK, COMMANDER GEORGE C., R.N., Nautical Adviser to Board of Trade 4156–4376

Advisory Committee:
Encourage economy rather than efficiency 4196
Grounds on which new works are opposed by, – – – – – – 4291–5
Value and importance of,– 4194, 4261, 4352–3
American system of lighthouse administration not advisable for United Kingdom – 4307–9
Appointments and qualifications – 4156, 4192

Board of Trade:
Control over Lighthouse Authorities:
is Efficient – – – – – 4347
Limited by lack of expert knowledge – – – – – 4325–6, 4339–42
Proposals for maintenance of seamarks submitted in detail– – – 4175–7

Frederick, Commander G. C., R.N.—*cont.*
Board of Trade—*cont.*
Nautical Adviser:
Duties – – – 4157–83, 4182–3 4207, 4316–7, 4350–1
Time spent on lighthouse duties – 4250–1
Coast lighting of United Kingdom is efficient 4189–90, 4195

County Down:
Analysis of number and causes of wrecks 4209–11
Applications received by Board of Trade *re* lighting of coast of, – – – 4208
as to Efficiency of lighting and marking of coast of, – – – – 4208–11, 4214
Suggestions of Mr. S. Lawther *re* charts 4211

Fog-gongs no longer fitted on lightvessels – 4216

Illuminants:
Incandescent oil effects great economy 4191
Relative advantages of electric light and oil – – – – – – – 4223

Lighthouse Authorities:
One Central:
Administrative expenses would not necessarily be reduced by, – 4268–70
as to Advantages of, – – 4252–4, 4305

The Three General:
Administration:
Advantage of three different methods – – – – 4258–60
is Efficient – – – – 4184
is Reasonably economical – 4185–8
Relative efficiency of the Boards 4240–7
Representation of shipping community unnecessary – – – – 4262–5
Trinity House control over Scotch and Irish Boards:
Advantage of, – – 4301–4, 4321–4
Restricted to new works – 4329–37

Lighthouses:
Beachy Head was economically constructed – – – – – 4279–80
Skelligs, reduction of expenditure on, advised – – – – – 4273
Strathie Point, erection of, opposed – 4159–64, 4199
Type of light used in United Kingdom is efficient – – – – – 4228

Lightkeeper's dwellings are constructed with reasonable economy – – – – 4276–7

Local Lights:
Collection of local dues for, – – 4362–3
Complaints are dealt with by General Authorities – – – – – – 4354–8
Inconsistency of present system of control – – – – – – 4360–4

Mizen Head:
Fog-signal proposed by Advisory Committee – – – – – – 4200
Light and fog-signal disapproved – – 4205–6

New works:
Discussed at conference with Advisory Committee – – – – – 4168–71
Extensive experiments are classed as, 4178–81

Notices to Mariners:
Information contained in Board of Trade notices – – – – – 4376
Present system of issuing, works well 4365–7

Observations on statement of, *re* inspection of buoys (4245–4247), *Sir G. Vyvyan* – – 5067–70
Removal of wrecks, difficulties arising between local and General authorities as to, – 4369–75
Seamarks, constant necessity for improvement of, entails heavy expenditure – – – 4189–91

Submarine Bell:
Advocated – – – – – 4225, 4296
Merits disputed among shipping community – – – – – – 4224

Frederick, Commander G. C., R.N.—*cont.*
Submarine Bell—*cont.*

GENERAL LIGHTHOUSE AUTHORITIES:
See THE THREE GENERAL *under* LIGHTHOUSE AUTHORITIES, *see also* IRISH LIGHTS BOARD, NORTHERN LIGHTHOUSE BOARD, TRINITY HOUSE.

GENERAL LIGHTHOUSE FUND:
Accounts:
Annually laid before Parliament *Hon. T. H. W. Pelham* – – – – – – 37
Delay in publishing:
Complained of by Advisory Committee *Hon. T. H. W. Pelham* – – – 37
is Unavoidable *Hon. T. H. W. Pelham* – – – – – – 38
Form is settled by the Treasury *Sir T. Blomefield* – – – – – 3292–3
No depreciation account *Sir T. Blomefield* 3445a–3447
Published in February *A. N. Hill* – 1799
Separation of United Kingdom accounts from those of foreign possessions:
is Desirable *Hon. T. H. W. Pelham* 149
Difficulty in arranging for, *Hon. T. H. W. Pelham* – – – – 141–5
System of keeping, is satisfactory *Sir T. Blomefield* – – – – 3287–3296
Unaudited, are supplied to Advisory Committee *Hon. T. H. W. Pelham* 38, 150
Administered by Board of Trade *H. Llewellyn Smith* – – – – – – 6109–10
Colonial lights may not be erected by, *Hon. T. H. W. Pelham* – – – – – – – 151
Controlled solely by Board of Trade *Hon. T. H. W Pelham, A. Owen, D. Crawford*– – 77, 181–2, 672, 5442
Expenditure:
Annual:
Comparison of, for seven years *Sir T. Blomefield* 3247, and Appendix A, IX.
Details for seven years *Sir T. Blomefield* 3246, and Appendix A, VIII.
is Likely to decrease *Sir G. Vyvyan* 5223–30
Statement of, for seven years *Sir T. Blomefield* – 3225, and Appendix A, V.
Applied only to wants of general navigation *A. Owen, D. Crawford, Sir W. Watson* – – – – 705, 5503, 5860
is Decreasing *Hon. T. H. W. Pelham* 217–19
Estimate suggested for new works to Lord Courtney's Committee is always exceeded *A. N. Hill* – – – – – 1802
Extra, caused by wireless telegraphy signalling *Sir W. Watson* – – 5754
Items included under miscellaneous expenses *Sir T. Blomefield* – – 3245
Maintenance and head-office expenses of the three Boards are approximately the same *Sir T. Blomefield* – – – 3236–43
No apportionment between the three Lighthouse Boards *D. Crawford* – – 5590–1
Port of London is lighted by, *H. Llewellyn Smith* – – – – – – 6165–9
Procedure as to, *Hon. T. H. W. Pelham* – 19
Salaries of head office officials are paid by, *A. Owen* – – – – 381–3

GENERAL LIGHTHOUSE FUND—*cont.*
Expenditure—*cont.*
Sanction of Board of Trade required for, *Hon. T. H. W. Pelham*– – – 8–9, 14
Travelling expenses of Advisory Committee *Hon. T. H. W. Pelham* – – – – 13
See also EXPENDITURE *under* IRISH LIGHTS BOARD, NORTHERN LIGHTHOUSE BOARD, TRINITY HOUSE.
Lights maintained by:
All to which England in any way contributes *Hon. T. H. W. Pelham* – 38, 145
Gibraltar lights *A. Owen* – – – – 537
Trinity House outports *A. N. Hill* 1849, 1853–4
Maintenance of large ports by, deprecated *A. N. Hill* – – – – – – – 1993–4
Pilotage and Estates Departments of Trinity House not chargeable to, *A. Owen* – – 296
Provision of local lights by:
Advocated *Sir G. Vyvyan, D. Crawford* 4993–4, 5507, 5522, 5585–7
Deprecated *Hon. T. H. W. Pelham, H. J. Forde, Sir W. Watson* 119, 4857–60, 5736–9
Revenue:
Arrangements for collection of, *Hon. T. H. W. Pelham* – – – 34–6
Balance in hand:
Belonging to Basses Lights *Sir T. Blomefield* – – – – 3423
is in Hands of Board of Trade *A. Owen* – – – – – – 674
Interest received for, *A. Owen* – – 675
is Large *Sir T. Blomefield* – 3418–21
Derived partly from Thames seamarks prior to 1898 *A. Owen* – – – 5115
Fishermen do not contribute to, *Hon. T. H. W. Pelham, A. Owen. Sir W. Watson* – – 53, 122, 221, 706, 5974–6
is Increasing *Hon. T. H. W. Pelham* – 198
Light dues *see that title.*
Repayment for work done for Colonial Governments *Capt. A. W. Clarke* – 5360–4
Total receipts for 1905–6 *Sir T. Blomefield* – – – – – – 3424–7
is Source of revenue of Lighthouse Authorities *H. G. Cook*– – – – – – 1092–4
Superseded Mercantile Marine Fund, 1898 *Hon. T. H. W. Pelham, H. G. Cook* – – 35, 1095
Treasury control abolished, 1898 *Hon. T. H. W. Pelham* – – – – – – – – 77
See also MERCANTILE MARINE FUND.

GERMANY:
Communication between Lighthouse Authorities and Trinity House *T. Matthews* 2103, 2194
Had monopoly of welded buoys formerly *C. W. Scott* – – – – – – 2858
No communication with Irish Lights Board *C. W. Scott*– – – – – – 2877
Reference *Lord Rayleigh* – – – 4091

GIBRALTAR:
Light dues:
Abolished, 1898 *A. Owen* – – – 536a
Collection of, *A. Owen* – – – – 536
Lighthouses:
Cost:
Borne by General Lighthouse Fund *A. Owen* – – – – – – 537
Shown in Trinity House accounts *Sir T. Blomefield, A. Owen* 3380, 5011
Europa Point light belongs to Trinity House *A. Owen* – – – – 534–5
In charge of superintendent *Sir G. Vyvyan* – – – – – 5236
under Jurisdiction of Trinity House *Hon. T. H. W. Pelham, A. Owen, Capt. A. W. Clarke* – – – 4, 255, 534–5, 5381
Moles lights erected by Trinity House for Admiralty *A. Owen* – – – – 320
New Works:
Economy effected by execution of, by Trinity House staff *T. Matthews* – – 2056
Executed by Trinity House for Admiralty *A. Owen, T. Matthews* – – – 320, 2154

Gibraltar—*cont.*
Time spent at, annually by Trinity House Engineer *Sir G. Vyvyan* – – – 5234–7

Girdleness, diaphone experiments tried at, *D. A. Stevenson* – – – – – – – 2557

Glasgow :
Association of Underwriters and Insurance Brokers :
Advice of, asked by Northern Lighthouse Board *R. C. Rundell* – – – 3948–9
Constitution of, *R. C. Rundell* – – 3937–9
Evidence on behalf of, *see* Rundell, R. Cooper.
Have direct interest in powers granted for removal of wrecks *R. C. Rundell* – 3950
Object of, *R. C. Rundell* – – – 3940
Representations of, to Lighthouse Boards generally successful *R. C. Rundell* 3942–7
Cost of a cottage at, *D. A. Stevenson* – – 2579, 2582, 2656
Eldest Bailie :
Attendance at Lighthouse Board meetings *C. Dick Peddie, D. Crawford* – 1359, 5452
Member of Northern Lighthouse Board *Hon. T. H. W. Pelham, C. Dick Peddie* 29, 1296, 1309
Lord Provost :
Member of Northern Lighthouse Board *Hon. T. H. W. Pelham, C. Dick Peddie* 29, 1296, 1309
Reference *D. Crawford* – – – 5452
Salvage Association is connected with Underwriters' Association *R. C. Rundell* – 3950
Shipowners' Association communicate with Liverpool Steamship Owners' Association *A. N. Hill* – – – – – 2008
References *D. A. Stevenson, C. Dick Peddie* 2568, 5500

Golding, Captain Thomas, is member of Lights Committee, Trinity House *A. Owen* – – – – 445

Goodwin Sands :
Dangers of navigation *Sir G. Vyvyan* – 5101
Reference *Capt. E. F. Inglefield* – – 3574

Goulding, Sir William J., Bart. :
has Firm in Cork and Dublin *H. G. Cook* 1195
Member of Irish Lights Board and its Committees *H. G. Cook* – – – 771, 754, 774

Government :
Administration of Seamarks by :
Advocated *A. N. Hill, Capt. W. S. Wade, R. C. Rundell, S. Lawther, T. N. Redington* – – 1869, 1909, 2013, 3709–11, 3715–6, 3771–2, 3890, 3963–78, 4026, 4054, 4540–1, 4586, 4590–3, 4600–2, 4623, 4649, 4891, 4915, 4922
Deprecated *Sir W. Watson, H. Llewellyn Smith* – – – 5700–1, 6059–64

Granton :
Distributing Store :
Cost of, *C. Dick Peddie* – – – 1530
Includes buoy yard *C. Dick Peddie* 1531, 1709
Lightship's crew work at, *C. Dick Peddie* – – – – – 1507–8
Stores distributed to all Scotch light stations from, *C. Dick Peddie* – 1474–6, 1525–7, 1532
Work of Bass lightkeepers when on shore *C. Dick Peddie* – – – – 1445
References *C. Dick Peddie, Sir T. Blomefield* – – – – – 1468, 3229a
Gas for seamarks made at, *C. Dick Peddie* 1518
Salary of gas man *C. Dick Peddie* – – 1519
Steam vessels station *C. Dick Peddie* – 1520

Great Orme's Head, Lloyd's signal station removed from, *Capt. E. F. Inglefield* – – 3574

Great Western Railway :
Light erected by, at Rosslare *Sir W. Watson* 5739
Strumble Head :
Contribution towards light at, *Hon. T. H. W. Pelham, Sir W. Watson* 54, 5829
Have temporary light at, *T. Matthews* 2240–1

Greenock, Provost of :
Member of Northern Lighthouse Board, *C. Dick Peddie* – – – – 1309, 1576
Seldom attends meetings *C. Dick Peddie, D. Crawford* – – – – – 1360, 5452

Grisnez, Cape :
an Electric light station *T. Matthews* 2096, 2223
Intensity of light *T. Matthews, Capt. A. Wood* – – – – – 2211, 3207–9

Grubb, Sir Howard, J.P., F.R.S. :
Member of Irish Lights Board and its Committees *H. G. Cook, Sir W. Watson* – 754, 771, 774, 5749
Reflector invented by, for unlighted buoys and beacons :
Description of, *Sir R. Ball* – – 6031a–32
Experiments with, are now in process *H. G. Cook, C. W. Scott* – – 1245, 3131

Guthrie Smith, *see* Smith.

Harbour Boards, Ireland :
Appointment of, as local Advisory Committees to Irish Lights Board advocated *S. Lawther, H. J. Forde, M. Lynch, T. N. Redington* – 4530, 4609, 4644–8, 4701, 4718, 4777–9, 4882–3, 4921
Belfast :
Jurisdiction extends to Carrick Buoy *Sir W. Watson* – – – – – 5757
Power vested in, by Act of Parliament *Capt. A. Boxer* – – – – 4392
References *H. G. Cook, M. Lynch, T. F. Cooke* – – – – 1277, 4718, 4756

HÈVE, CAP DE LA, intensity of light *T. Matthews* 2210

HILL, ARTHUR NORMAN, Secretary to Liverpool Steamship Owners' Association 1781–2020
Admiralty object to use of lighthouses as reporting stations – – – – – – 1978
Advisory Committee:
Appointment with statutory powers now under consideration – – – 2017
Limitation of powers of, – – – 1933–4
Board of Trade:
Control over Lighthouse Authorities:
Exercises powers given by Merchant Shipping Acts – – – 2004
Has power of audit but not of control 1864, 1885, 1999
Limitation of, – – – 1872, 1878
More complete, advocated – – 1999
Power to initiate new works advocated 1883
is Direct representative of payers of light dues – – – – – 1880, 1882
Coasts of United Kingdom are efficiently lighted 2019–20

Hill, Arthur Norman—*cont.*
General Lighthouse Authorities:
Constitution and organisation are unsatisfactory – – – 1860–2, 1970, 1988–9
Expenditure:
Effective check removed by Act of 1898 1835, 1969
"Extraordinary pressure" formerly exercised by Treasury to reduce, 1847–8 2000
is Extravagant 1819–33, 1884, 1899, 1939–40
Impossible to submit estimates with suggestions for, – – – 1957
Increase since 1899 – 1789, 1795–6, 1800, 1808, 1832, and Appendix C, I.
Superannuation should be borne by salary – – – – – 1958–60
Irish Lights Board, *see that title below.*
Northern Lighthouse Board, *see that title below.*
Not effectively controlled by State – 1863–4, 1866, 1870–4
Representation of shipowners on existing Boards not desirable – – – 1937–8
Trinity House, *see that title below.*
General Lighthouse Fund:
Accounts are published in February – 1799
London seamarks maintained by, 1849, 1853
Maintenance of large ports by, deprecated 1995
see also LIGHT DUES *and* MERCANTILE MARINE FUND, *below.*
Irish Lights Board:
Refusal to carry out new works advised by Board of Trade – – – – 1871–3, 1972–4, 1976–1976a
Unrepresentative nature of, deprecated 1895–8
Light Dues:
Amount Collected:
from British ships – – – 1785
During 1882–1899 – – – 1841
from Foreign ships – – – 1785
from Liverpool Steamship Owners' Association – – – 1784–5, 1949
Applied solely to lighthouse maintenance since 1899 – – – – 1790–1, 1836
Bill for Abolition of, introduced by Mr. C. McArthur – – – – 2009
Increased after abolition of shipping fees – – – – 1836, 1964, 1966
Local lights should not be maintained by, – – – – – 1849, 1858
Paid into Mercantile Marine Fund till 1899 – – – – – – 1836
Proportions paid by steam and sailing vessels are fair – – – 1927, 1929
Reduction is due to increased tonnage of vessels – – – – – 1942–3
Surplus went in general relief of taxation till 1898 – – 1835–46, 1961–2, 1968
Total amount per ton leviable on vessels – – – – – – 1921–4
Lighthouse Administration:
Change of system advocated 1912–3, 2010–5
by State, advocated – – 1869, 1909, 2013–7
Lighthouses held by private individuals under patents from Crown till 1822 – – 1856
Lightships, local circumstances render comparison difficult – – – – – 199
Liverpool Steamship Owners' Association:
Amount of shipping owned by, 1783, 1786, 1914
Light dues paid by:
General – – – – 1784–5, 1949
Local – – – – 1947–8, 1950–2
Not instrumental in obtaining Barrels Lightship – – – – 1985–6
Shipowners' associations which are in constant correspondence with, 2007–9
Local Lighthouse Authorities:
Limit of jurisdiction difficult to define 1930
Might administer an extended district 1998

Hill, Arthur Norman—*cont.*
Local lights are paid for by local funds – 1902–6
Marine Boards lately deprived of control over Mercantile Marine Offices – – – 1891
Mercantile Marine Fund :
Annual sum paid to, by Parliament, after 1882 – – – – – – 1837–8
Borrowed in open market – – 1839–40
Various charges on, – – – – 1836
see also General Lighthouse Fund *above.*
Mersey :
Conservancy account, total expenditure 1900–1905 – – – – – 1815
Docks and Harbour Board :
Accounts are published annually 1817
Annual expenditure on local seamarks 1850, 1997
Limit of jurisdiction – – – 1997
New Works :
Lord Courtney's Committee
Increase in expenditure since, – 1802–7
Recommended no fixed allowance for, 1990
Recommendations of Advisory Committee as to, not refused by Lighthouse Authorities – – – – 1982
Total expenditure on, 1899–1905 – 1991–2
Northern Lighthouse Board, objection to constitution of, – – – – – 1894–5
Observations on statements made by :
re Expenditure of Lighthouse Authorities *A. Owen, D. Crawford, C. Dick Peddie, Sir W. Watson* – – – 4974, 5474–5, 5477–96, 5500, 5705–31
re Lack of practical qualifications of Irish Lights Board *Sir W. Watson* – 5749
re Wireless telegraphy at Fastnet *Sir W. Watson* – – – – – 5754–6
Port of London :
Cost of lighting, – – – – 1945
Origin of provision of lights out of General Lighthouse Fund – – – – 1851
Seamarks maintained by Liverpool – – 1850
Shipping fees abolished, 1882 – – 1836, 1963
Ships now report by wireless telegraphy – 1979
Three Castles Head :
is Dangerous to shipping – – – 1972
Fog-signal :
Establishment of, – – 1873, 1975
Necessity for, admitted – – 1974
Total tonnage of British vessels – – 1915–6
Trinity House :
Control of seamarks vested in, 1822 – 1856
a Local as well as National Lighthouse Authority – – – – 1851
Outports :
Names of, – – – 1854, 2005
Seamarks of, are maintained by Trinity House – – – – – 1902–8
Reconstitution of, impossible – 1892–3, 1987

Hoare, Captain Robert, is member of Lights Committee, Trinity House *A. Owen* – – – 445

Holy Island, *see under* Scotland, *under* Lighthouses.

Holyhead :
Experiments on explosive fog-signals tried at North Stack *Lord Rayleigh* – – 4090
Skerries Light, *see under* England, *under* Lighthouses.
a Trinity House outport *A. N. Hill* – 1854
"Triton" is stationed at, *T. Matthews, A. Owen* – – – – – – 2146, 5320

Howth :
Lighthouse controlled by Board of Works till 1810 *H. G. Cook* – – – – – 739
is a Royal Harbour, *Sir W. Watson* – 5875–8

Howth Bailey :
Oil-gas factory of Irish Lights Board is at, *H. G. Cook, C. W. Scott* – – – 871, 2858

Hozier, Sir Henry :
Member of Advisory Committee *Capt. E. F. Inglefield* – – – – – – 3588
Formerly Secretary of Lloyd's *Capt. E. F. Inglefield* – – – – – – 3588

Hull :
Chamber of Shipping, references *A. N. Hill, Capt. W. S. Wade* – – – 2008, 3672
Trinity House at, controls lighting of Humber *Comdr. G. C. Frederick* – – – 4354

Idle, shipwright to Irish Lights Board :
"Ierne" built under supervision of, *Sir W. Watson* – – – – – – 5764

Illuminants :
Acetylene :
Adopted by Clyde Lighthouse Trustees and Northern Lighthouse Commissioners *D. A. Stevenson* – – – – 2557
Advocated for unwatched lights *D. A. Stevenson, C. W. Scott* – 2634, 3096
Dissolved, shortly to be tried by Northern Lighthouse Commissioners *D. A. Stevenson* – – – – – – 2560
Not used by Trinity House or Irish Board *D. A. Stevenson* – – – – 2705–6
Used successfully in four Scotch beacons *D. A. Stevenson* – – – – 2532a–4
Atmospheric conditions affect powers of, *Capt. T. H. Tizard* – – – – – 3556
Electric Light :
Advantages proved at South Foreland experiments *Sir R. Ball* – – 6040
Best illuminant for lighthouses, except for cost *D. A. Stevenson* – – 2516, 2612–5
Board of Trade requested Northern Lighthouse Board to try, *D. A. Stevenson* 2515–6
Cost :
More expensive than oil *T. Matthews* 2091
Prevents general adoption for lighthouse purposes *T. Matthews, D. A. Stevenson* 2091, 2097, 2100, 2510–2, 2613
Deprecated :
Except for stations at high level *Capt. T. H. Tizard, Comdr. G. C. Frederick* 3537, 4223
For all coast lighting *Capt. W. S. Wade* 3820–3, 3867
On account of cost *D. A. Stevenson* 2510–2, 2613
Employment of :
Extension unlikely *T. Matthews, D. A. Stevenson* – 2091, 2097, 2100, 2613
Extent of, in United Kingdom *T. Matthews, D. A. Stevenson* – 2088–9, 2220–2, 2616–20
Flame Carbons :
Improvement expected from use of, *T. Matthews* – – 2092, 2099, 2206
In experimental stage still *T. Matthews* – – – – 2213–4
Introduction :
at Calais *T. Matthews* – – 2152
at South Foreland and Souter Point *T. Matthews* – – 2092
French Lights :
Do not project vertical beam upwards *T. Matthews* – – – – – 2235–8
Less strong than English lights *T. Matthews* – – – – 2211
Intensity :
Fog-penetrating power is less than oil light *T. Matthews, D. A. Stevenson, Capt. A. Wood, Capt. W. S. Wade* 2098, 2517, 3211–4, 3820–3
Gives an advantage over other illuminants even in fog *T. Matthews* 2099–2200

Illuminants—*cont.*
Electric Light—*cont.*
Intensity—*cont.*
Great power only advantageous in certain positions *Lord Rayleigh* 4146–7
Greater than any other illuminant *T. Matthews* – – – 2200, 2207
Isle of May is the only Scottish lighthouse illuminated by, *D. A. Stevenson* – 2509–10
Machinery and Apparatus :
Accumulator batteries not used in lighthouses *T. Matthews* – – 2227–31
Cornish Boilers used at South Foreland *T. Matthews* – – – 2225
Duplicate, is kept at light stations *T. Matthews* – – – – 2233–4
Engines:
Horse power of, at Lizard *T. Matthews* – – – 2226
Robey system used at St. Catherine's *T. Matthews* – 2225
Magneto Machines:
De Meriten's used at Lizard *T. Matthews* – – – – 228
Holmes' used at South Foreland *T. Matthews* – – – – 225
Motive power at English lighthouses *T. Matthews* – – – – – 2224–5
Short flash deprecated *Capt. T. H. Tizard* 3539–3540
Gas :
Acetylene, *see that title above.*
Oil, *see* Oil Gas *below.*
Purchased from railway companies in certain places *T. Matthews* – 2173, 2349–51
in Scotland :
Cost of, *C. Dick Peddie* – – 1518
Delivered to seamarks by steam tenders *C. Dick Peddie* – – – 1518
Made at three gas works *C. Dick Peddie* – – – – – 1518
Number of lights *C. Dick Peddie* 1448
Payment of gas men *C. Dick Peddie* 1519
Recent increase of use of, *C. Dick Peddie* – – – – 1515, 1518
Used in smaller lighthouses *D. A. Stevenson* – – – – 2529
Wigham Lights introduced first in Ireland *C. W. Scott* – – – – – 2821
Intensity :
Calculated on different systems in England and France *T. Matthews* – 2208–9, 2216–7
Great penetrating powers only an advantage when marking a danger, *Capt. T. H. Tizard* – – – – – 3538, 3541–5
Oil :
Advocated for lightvessels *Comdr. G. C. Frederick* – – – – – 4223
Incandescent :
Economy effected by, *C. W. Scott, Comdr. G. C. Frederick* – 2800, 2808, 2823–4, 4191
Improved greatly recently *T. Matthews* 2205
Increases power of light about four times *C. W. Scott* – – – 2826
Used for all new Irish lights *C. W. Scott* – – – – – 2798
Method of testing, *C. W. Scott* – – 2925–6
Oil Gas :
Economy of, *C. Dick Peddie* – – 1447
Pintsch's compressed, used in Scotch buoys and beacons, *D. A. Stevenson* – 2527–8
Relative values of, *Capt. T. H. Tizard, Comdr. G. C. Frederick, Lord Rayleigh* 3537–8, 4223, 4138–40
Inchkeith, French oil burner tried at, *D. A. Stevenson* – – – – – – – – 2521
India :
Lighthouse Authorities have consulted Messrs. D. and C. Stevenson *D. A. Stevenson* – 2478
Stores supplied by Trinity House to, *Sir G. Vyvyan* – – – – – – – 5132
India Office :
Constant communication with Trinity House *T. Matthews, Capt. Clarke* 2032, 2153, 5351
Method of paying Trinity House for work done for *T. Matthews*– – – – – 2156
Reference *A. Owen* – – – – – 297
INGLEFIELD, CAPTAIN EDWARD F., R.N., Secretary to Lloyd's – – – 3573–3934
Coast Lighting of United Kingdom :
Cost :
Falls ultimately on consumer of goods 3626–7
Should be borne by taxpayer – 3630
as to Efficiency of, – – – – 3656–7
Fog-signals :
Conveyance of sound in fog is uncertain 3664
Submarine bell advocated – – 3664
Light dues, possibility of altering system of levying, – – – – – – 3643
Lighthouse Authorities, no suggestion for reconstitution of, – – – – 3589, 3655
Lloyd's :
Admiralty obtains information from, – 3603
Functions which bring them into touch with Lighthouse Authorities – – 3574
Incorporation, object of, – – – 3591–4
Representation of :
on Advisory Committee – 3588, 3608
on Lighthouse Authority advocated 3590, 3608, 3640, 3644
Representations received by, as to lighting of coast of Down – – – 3656, 3662
Represents the underwriters and insurance brokers of the Kingdom – – 3611–2
Signal Stations :
Established at certain lighthouses by courtesy of Lighthouse Authorities 3581–3, 3585, 3609, 3646
Establishment on North Sea lightvessels desirable – – – 3654
Increasing speed of vessels necessitates changes of, – – – – 3574–5
Lightkeepers are paid by Lloyd's for working signals – – – 3631
No signals are received from foreign light stations – – – – 3659–60
Statistics of reports received for Lloyd's at light stations – – – 3648–9
Two-fold benefit conferred on shipping trade by, – – – – – – – 3621–2
Marine insurance, national importance of, 3592–8, 3615–20
Maritime Intelligence :
Cost of obtaining, will probably increase 3634
Legal right to obtain, from light stations advocated – 3574, 3577–8, 3582, 3601, 3608
Liability for errors should not be incurred by Lighthouse Authorities – 3634a–3637
System of, a necessary precaution against fraud – – – 3586, 3593, 3600a, 3620
Unsatisfactory for Lloyd's to be dependent for, on courtesy of Lighthouse Boards 3574–8, 3582, 3601, 3608–10
Shipping casualties are reported by lightkeepers by arrangement with Trinity House – 3586–7
Shipowners are more directly interested than Lloyd's in lighting of coast – – – 3641
Statement that signalling costs the Lighthouse Authorities nothing, contradicted *Sir W. Watson* – – – – – – – 5754
Value of export and import trade of Great Britain – – – – – – 3613–5

Inglefield, Captain E. F., R.N.—*cont.*
Wireless Telegraphy :
Light stations fitted with, are unlikely to be destroyed in time of war – – 3579–80, 3638–9, 3650–3
See also SIGNAL STATIONS *under* LLOYD'S *above*

INISHTRAHULL :
Lloyd's signal station established at, *Capt. E. F. Inglefield* – – – – – – 3574
Siren for, tested at Kingstown *C. W. Scott* 2866

INVERNESS :
Provost :
is Member of Northern Lighthouse Board *Hon. T. H. W. Pelham, C. Dick Peddie, D. Crawford, J. A. Fleming* – – 29, 1296, 1309, 5452, 5457
Seldom attends Board meetings *C. Dick Peddie* – – – – – 1360
Sheriff of, is member of Northern Lighthouse Board *C. Dick Peddie* – – – 1296, 1309

IRELAND :
Coast is efficiently lighted *Hon. T. H. W. Pelham, C. W. Scott, T. N. Redington* – – 130, 2981, 3031–3, 4897
Has no shipping companies *Hon. T. H. W. Pelham* – – – – – – – 104
Lord Lieutenant approves candidates nominated for Irish Lights Board *H. G. Cook* – – 752
Members of Advisory Committee representing, are chosen by Chamber of Shipping *Hon. T. H. W. Pelham* – – – – – 105
No one Lighting Authority before 1810 *H. G. Cook* – – – – – – – – 739
Privy Council approves candidates nominated for Irish Lights Board *H. G. Cook* – – 752
See also IRISH LIGHTS BOARD.

IRISH CHANNEL, names of Lloyd's signal stations in, *Capt. E. F. Inglefield* – – – – 3574

IRISH LIGHTS BOARD :
Administration :
Change of system advocated *S. Lawther* 4529–30
Complaints of want of business capacity *Hon. T. H. W. Pelham, Sir T. Blomefield* – – – – – 44, 194, 3436–7
See also UNSATISFACTORY METHODS, *below.*
is Efficient *R. C. Rundell, H. J. Forde, T. F. Cooke* – – – 3954–7, 4759, 4924
Less efficient than the other two Boards *Hon. T. H. W. Pelham, Sir T. Blomefield, Comdr. C. C. Frederick* – 43–4, 3346–7, 4241
Not controlled by Trinity House *Hon. T. H. W. Pelham* – – – 66–8, 178
Observations on Sir T. Blomefield's statements as to, *Sir W. Watson* – 5749, 5753
Unsatisfactory methods :
List of cases of, *Hon. T. H. W. Pelham* 43–4 and Appendix A, IV.
Observations on Mr. Pelham's statement (43–4) *Sir W. Watson, H. G. Cook* – – – – 5743–8, 5775–91
Agenda and minutes of Board and Committee meetings for six months *H. G. Cook* – 826
Agreement with Board of Works as to land leased at Kingstown *H. G. Cook* – – 5783

Alterations and Repairs :
Conversion of gas lights to incandescent oil *C. W. Scott* – – – – 2801, 2806–7
Old Head of Kinsale, improvement of light at, *H. G. Cook* – – – – 1183–6
Special, need special sanction of Board of Trade *C. W. Scott* – – – – 2779
Cables, testing of, *H. G. Cook* – – 1220–4

Commissioners :
Allowances *H. G. Cook* – – 1160–5, 1209

Irish Lights Board—*cont.*
Commissioners—*cont.*
Attendance :
Average *H. G. Cook* – – – – 763
Penalty for non-attendance *H. G. Cook* 1158–60
is Satisfactory *Sir W. Watson* 5897–5910, 5915–6
Attitude with regard to lighting coast of Down *Comdr. G. C. Frederick, S. Lawther* – – 4214, 4475, 4495–8, 4514–6
Ex-officio members *Hon. T. H. W. Pelham, H. G. Cook, S. Lawther, Sir W. Watson, H. Llewellyn Smith* – – 29, 752, 4581, 5902, 6156–7
Members representing places other than Dublin *H. G. Cook* – – – 1195
Names, ages, dates of appointment and qualifications *H. G. Cook* – – – 754
No age limit *H. G. Cook* – – – 1145

Committees :
Deal only with matters referred to them from Board *H. G. Cook* – – 766, 768

Finance :
Attendance of members *H. G. Cook, Sir W. Watson* – – – 772–4, 778, 786, 822, 5723
Discussion as to payment of Messrs. F. M. Moore and Co.'s bill *H. G. Cook* 5775
Divided into three sections *H. G. Cook* 774–7
Duties *H. G. Cook* – – – 761, 768, 772–3, 812, 822, 917–9
Names of members *H. G. Cook* 771, 774
is the Only standing committee *H. G. Cook* – – – – – – 769

Inspecting :
Annual Inspection :
Description of, *H. G. Cook, C. W. Scott* – – 287–803, 1128, 2911–2
Engineer accompanies Commissioners *C. W. Scott* – – 2753–5
Method of inspecting *Sir W. Watson* – – – – 5864
Value of, *C. W. Scott* – 3097–3100
Attendance of members *H. G. Cook* 788, 822
Duties *H. G. Cook, Sir W. Watson* 788–91, 801–6, 822, 852, 1187, 5898
Efficiency of work of, *Sir W. Watson* 5749, 5814–6
Estimates are submitted to, *H. G. Cook* 976–7, 1129–30
Extent of responsibility *H. G. Cook* 1132–3
Lodging allowance granted to keepers by, *H. G. Cook* – – – 5777
Members :
Names and qualifications of, *Sir W. Watson* – – – – – 5749
Number of, *H. G. Cook* – – 770, 787, 822
Proposed sites for lighthouses visited by, *H. G. Cook* – – – 1187
References *H. G. Cook, C. W. Scott* 1108a, 2900

Office and House :
Duties *H. G. Cook* – – – 761, 811, 819–20, 822, 1025
Members *H. G. Cook* – – – 814

Removal :
Duties *H. G. Cook* – – 761, 815, 822
Members *H. G. Cook* – – – 816

Stores and steamers :
Duties *H. G. Cook* – 761, 818–19, 832
Members *H. G. Cook* – – – 834

Constitution :
Appointment of original members *Hon. T. H. W. Pelham, H. G. Cook* 112–3, 1141–3
Composition of Board *Hon. T. H. W. Pelham, H. G. Cook* – – 29, 110–5, 752–3
Co-option of members *Hon. T. H. W. Pelham, H. G. Cook, Capt. A. F. Boxer* – 42, 110, 1144, 1196, 4385
Established 1867 *A. N. Hill* – – 1895–7

Irish Lights Board—*cont.*
Constitution—*cont.*
is an Honorary Board *Hon. T. H. W. Pelham, H. G. Cook, Comdr. G. C. Frederick* – – – – 42, 1149, 4269
Incorporated 1786 by Act of Parliament *H. G. Cook* – – – – – 732–5
No change is suggested by Board *Sir W. Watson* – – – – 5695, 5893
does Not represent Dublin interests *Sir W. Watson* – – – – – 5759–62a

Objections to:
Commissioners are not practical men *A. N. Hill, Capt. A. Wood* – 1860–2 1970, 3150, 3179
Co-option of members *Hon. T. H. W. Pelham, Capt. A. F. Boxer* – – 42, 4385, 4406a–4407
Dublin only is represented *Hon. T. H. W. Pelham* – – – – 42

Lack:
of Local knowledge *T. F. Cooke* 4744–8
of Nautical knowledge *S. Lawther, H. Llewellyn Smith* 4469, 6069
of Technical knowledge *Capt. W. S. Wade* – – – 3725–6

Unrepresentative:
of Payers of dues, or of State *A. N. Hill* – – – 1895
of Shipping interest *R. C. Rundell* – – 3953, 3983–6, 4066–9

Powers date from 1810 *A. N. Hill* – 1898
no Qualification required for membership *H. G. Cook, A. N. Hill* – – 1146–8, 1895
Quorum for meetings *H. G. Cook* – 1168–72
Shipping interest is not represented on, *H. G. Cook* – – – – – – 1197–8
Two nautical members only *Comdr. G. C. Frederick* – – – – – 4301
See also RECONSTITUTION *below.*

Contracts:
Allocation of, *H. G. Cook* – 921–3, 980–9
Irish firms preferred *Hon. T. H. W. Pelham* – – – – – – 252
Special repairs are not done by, *C. W. Scott* – – – – – – 2773–5

Tenders:
are Advertised for *H. G. Cook* 923, 980–2
Opened in presence of the Board *H. G. Cook* – – – – – – 761

Dual control over, is satisfactory *Sir W. Watson* 5798–5803, 5865–7
Evidence on behalf of, *see* BALL, SIR ROBERT S.; COOK, H. G.; SCOTT, C. W.; WATSON, SIR WILLIAM.

Expenditure:
Accounts:
Examined weekly by Finance Committee *H. G. Cook* – – – 822
Method of checking, *H. G. Cook* 1208, 2891–4
Submitted quarterly to Board of Trade, *H. G. Cook* – – – – – 822

Annual:
Has no fixed limit *H. G. Cook* – 1173
Total for ten years *H. G. Cook* 1174–6

on Buoys *C. W. Scott* – – 2855, 2860
Charges included under Travelling Expenses *H. G. Cook* – – – 5731
Cheques are signed by three members of the Board *H. G. Cook* – – – – 822
on Clocks *H. G. Cook* – – 1180–2, 5776
Comparison of, with expenditure on Mersey seamarks *Sir W. Watson* – – 5705–9
Detailed statement of, *H. G. Cook* – 900–5

Irish Lights Board—*cont.*
Expenditure—*cont.*
Economy effected by recent improvements *C. W. Scott, Sir W. Watson* 2821–7, 5713–5
Establishment expenses are extravagant *Capt. A. F. Boxer* – – – 4409

Estimates:
Compilation of, *H. G. Cook* 961, 969–77
Submitted to Inspecting Committee *H. G. Cook* – – – – 976–7
System of submitting, to Board of Trade *H. G. Cook* – – 1138–40

on Experiments:
Average and total for five years *Sir W. Watson* – – – – 5953
Grant of definite annual sum for, advocated *C. W. Scott* – – – 2868–9
Reluctance of Board of Trade to sanction *C. W. Scott* – – – 2864–6
is Small *H. G. Cook* – – – 1243

Explanations:
of Cost of reed fog-horns *H. G. Cook* 5784–6
of Increase, 1900–6 *Sir W. Watson* 5710–9, 5729–31
of Points arising from accounts and estimates, 1905–6 *Sir W. Watson* 5989–6016
on Fastnet Lighthouse *Sir W. Watson* 5710

Increase since 1899:
Excluding new works *C. Dick Peddie* 5488
Total *A. N. Hill* – – – 1796

on Lighting and fog-signal stores *H. G. Cook* – – – 1018–22, and Appendix
Lodging allowance paid to keepers *H. G. Cook* – – – – – – 5777–80
Market carts *H. G. Cook* – – 1087
New apparatus *C. W. Scott* – – 2976–80

on New Works:
Amount spent in 1896 *A. N. Hill* 1802, 1805
Average for ten years *C. W. Scott* 2780, 2962–4
Charges for, not made out in detailed subdivisions *C. W. Scott* – 2770
is Decreasing *Hon. T. H. W. Pelham* 219
Possibility of decrease *Sir W. Watson* 5732–5
Relief of stations by hired boats is charged to maintenance of lighthouses *Sir T. Blomefield* – – – – – 3387
Rent of office *Sir W. Watson* – – 5924
Rockabill light, conversion from gas to incandescent oil *C. W. Scott* – – 2802–4
Sligo, six new lights at, *C. W. Scott* – 2820
on Special repairs *C. W. Scott* – – 2965
on Steam vessels and district stores *H. G. Cook* – – – – – 1071–8, 1091

Superannuation: *see* that title below.

Experiments:
Automatic bell-buoys being tried *C. W. Scott* – – – – – 2832, 2865
are Carried out by Engineer *C. W. Scott* 2822
on Dioptric apparatus cost nothing *C. W. Scott* – – – – – – 2861–2
Expenditure on, *see that title above.*
Facilities for trying, are given to inventors *C. W. Scott* – – – – – 2867
Grubb reflector, *see under* GRUBB, SIR HOWARD.

Incandescent oil burners:
at Bull Rock, now being tried *C. W. Scott* – – – – – 2809
Tried in 1900 and since adopted *C. W. Scott* – – – – 2794–5, 2821

Irish Lights Board—*cont.*
Experiments—*contd.*
At Kingstown:
Grubb reflector and incandescent burners tested *Sir R. Ball* – 6031a
Sirens tested *C. W. Scott* – – 2866
are Not prevented by lack of funds *Sir R. Ball* – – – – – – 5952
Scientific Adviser witnesses and reports on, *Sir R. Ball* – – – – 6031–6031a
Functions:
Charge of all lights on Irish coast, with few exceptions *H. G. Cook* – – – 741, 750
Control of light dues ceased in 1880 *H. G. Cook* – – – – – – 1096
Control over Local Lights:
Certain lights maintained by, *C. W. Scott, Sir W. Watson* – – 2812–3 2818–9, 5873–8, 5982–6
Inspection of, *see under* INSPECTION OF SEAMARKS *below.*
Sanction required for new works or alterations *H. G. Cook, Sir W. Watson* – – – 1282, 5871
Inspection of Seamarks:
by Inspecting Committee *H. G. Cook, Sir W. Watson* – – 789–803, 5729
by Inspector and his assistant *H. G. Cook* – – – – – – 804
Local Lights:
is Inefficiently performed *Hon. T. H. W. Pelham* – – – 194
Reports of, are submitted to Parliament *H. G. Cook* – 805–9
is Neither efficiently nor economically performed *Capt. A. F. Boxer* 4449–50
Lighting of coast not included till 1810 *H. G. Cook* – – – – – 736, 740
Nominated seven members for Port and Docks Board till 1898 *H. G. Cook* – 756
Removal of wrecks *A. Owen* – – – 342
Head Office Establishment:
Admission of clerks *H. G. Cook* 1023–8, 1034

Collection:
at Colombo, Suez, and Straits Settlements *Hon. T. H. W. Pelham* – – – – 146
by Customs *A. Owen, C. Dick Peddie, R. C. Rundell* – – 391–7, 629–32, 1646, 4046
by Northern Lighthouse Board till 1883 *C. Dick Peddie* – – – – 1330–4
Trinity House is responsible for, *A. Owen* – 340 5346–9
Cost of, falls ultimately on consumer of goods *Capt. E. F. Inglefield* – – – – 3626–7
Credited to General Lighthouse Fund *A. Owen* 392
Distinction between local and general, abolished *J. A. Fleming* – – – – – 5522
Exemption of fishing vessels from payment of, *Hon. T. H. W. Pelham, A. Owen* 53, 122, 221, 706
Foreign countries, except Turkey, do not levy, *Capt. W. S. Wade* – – – – 3931–2
Increased after abolition of shipping fees *A. N. Hill* – – – – – – 1836, 1964–6
Influence of, on decisions of Advisory Committee *Comdr. G. C. Frederick* – – 4353
Levying:
Administrative arrangements for, *Hon. T. H. W. Pelham, A. Owen, J. A. Fleming* 36, 208, 232, 300, 5575–6
Decision as to liability of ships rests with Trinity House *Hon. T. H. W. Pelham* 209–211
Local, formerly exceeded passing dues *J. A. Fleming, D. Crawford* – – 5522, 5572–4
Paid into Mercantile Marine Fund between 1853 and 1899 *C. Dick Peddie, A. N. Hill* 1330, 1836
Reduction:
Amount of recent, *Hon. T. H. W. Pelham, A. Owen, Sir W. Watson* 198, 201, 673, 5831–2
Due to increase of tonnage *A. N. Hill* 1942–3
Granted when balance becomes large *Sir T. Blomefield* – – – – – 3432
Regulated by Merchant Shipping Act, 1898 *D. Crawford* – – – – – 5507
Representation of payers of, on Lighthouse Boards advocated *Capt. W. S. Wade* – 3697, 3705, 3715, 3744, 3761, 3889
References *Capt. E. F. Inglefield, Capt. W. S. Wade* – – – 3589, 3643, 3692, 3770

Lighthouse Authorities:
Local:
Admiralty, for naval ports *Hon. T. H. W Pelham* – – – – – 231–2
Best appreciate local needs *Sir G. Vyvyan* – – – – 5145, 5151–2
Constitution of, *Hon. T. H. W. Pelham, H. G. Cook* – – 6, 63–4, 233–4, 1279–81

Lighthouse Authorities—*cont.*
Local—*cont.*
Control exercised over, by General Authorities:
as to Appeals from, *Comdr. G. C. Frederick* – – – – 4355–6
Conferred by Act of Parliament *Hon. T. H. W. Pelham, A. Owen, Comdr. G. C. Frederick* – – 26, 517, 4355–7
Extent of, *Hon. T. H. W. Pelham, A. Owen, H. G. Cook, C. Dick Peddie, T. Matthews, Comdr. G. C. Frederick* – – – 59, 470, 1282, 1539, 2300–1, 4357
Inspection of, *A. Owen, H. G. Cook* 339, 805–9
Reference *Hon. T H. W. Pelham, H. Llewellyn Smith* – – 156, 6119–24,
Controlled by Board of Trade *H. Llewellyn Smith* – – – – – – 6119
Humber Conservancy, reference *Comdr. G. C. Frederick* – – – – 4354
Inconsistency of present system of control *Comdr. G. C. Frederick* – – 4360–4
Jurisdiction:
Extension:
Advocated *A. N. Hill* – 1998
Deprecated *A. Owen* – – 517–20
Not desired *C. Dick Peddie*– 1748
Extent of, *Hon. T. H. W. Pelham* – 6
Hiatus between, and that of General Authorities *Hon. T. H. W. Pelham* 136
Limits of, difficult to define *Hon. T. H. W. Pelham, A. Owen, A. N. Hill* 236–7, 708, 1930
Scotch lights all controlled by, prior to 1786 *C. Dick Peddie* – – 1298
Wrecks *Hon. T. H. W. Pelham, Sir G. Vyvyan* – – 31–2, 5107
Lights maintained by, are paid for by local funds *Hon. T. H. W. Pelham, C. Dick Peddie, Comdr. G. C. Frederick* – 63, 1542, 4362–3
Mersey Docks and Harbour Board, *see that title.*
Number in Scotland *D. A. Stevenson* 2483
see also HARBOUR BOARDS, IRELAND.
One Central:
Advocated *Hon. T. H. W. Pelham, Capt. A. Wood, Capt. W. S. Wade, R. C. Rundell, Capt. A. F. Boxer, S. Lawther, T. N. Redington* – 51, 87, 3137–40, 3144–7, 3178, 3181–2, 3709–10, 3719–20, 3730, 3803, 3862–4, 3890, 3963–83, 4026, 4438–43, 4452–5, 4534–45, 4549, 4582, 4609–20, 4908
Branches in Scotland and Ireland would be necessary *Sir G. Vyvyan, D. Crawford* – – – – – 4947, 5442
Colonel Herbert's suggestion of, to replace Board of Trade, views as to, *H. Llewellyn Smith* – 6105–33, and Memorandum, p. 260,
Deprecated *T. F. Cooke, Sir W. Watson, H. Llewellyn Smith* – 4820–1, 5821, 6067
as to Desirability of, *Comdr. G. C. Frederick* – – – – 4254, 4305–11
Economy would be effected by, *T. Matthews, S. Lawther, Sir G. Vyvyan* – 2419, 2422, 2464–5, 4609–11, 4947, 5140–3
Economy would not be effected by, *C. W. Scott, Comdr. G. C. Frederick, D. Crawford, Sir W. Watson* – 3082–7, 4268–72, 5442–4, 5560, 5685–7, 5696, 5704, 5959
would Necessitate local inspectors *Comdr. G. C. Frederick* – – – – 4253
One engineer would be sufficient *T. Matthews, C. W. Scott* – – 2420, 3088–9
Small committee to carry out administrative work suggested *R. C. Rundell* 4057
System of controlling expenditure must depend on incidence of light dues *Capt. W. S. Wade*– – – – – 3912
Trinity House advocated as, *Capt. W. S. Wade, Sir W. Watson* – 3709, 3720, 3730, 3890, 5699–5700, 5805–8
Uniformity of stores, etc., an advantage *T. Matthews* – – – 2425
Lighthouse Authorities—*cont.*
Summary of, *Hon. T. H. W. Pelham* – 156–163
The Three General:
Abolition advocated *S. Lawther* 4530–1, 4541, 4571, 4575, 4609–20, 4670
Accounts of, audited by Comptroller and Auditor-General *Hon. T. H. W. Pelham, Sir G. Vyvyan* – – – – 37, 5080
Administration:
Advantage of three different methods *Comdr. G. C. Frederick* – 4258–60
Differences are due to different conditions of the countries *Sir T. Blomefield* – – – – – 3232–4
is Economical and efficient *Comdr. G. C. Frederick* – – – – 4184–8
No official interchange of ideas regarding, *H. G. Cook* – – 1199–1205
is Not economical *Capt. W. S. Wade, R. C. Rundell* – 3677–91, 3694–6, 3723, 3895–8, 4056–60,
is Not efficient *Capt. W. S. Wade* 3677–91, 3694–6, 3723, 3895–8
Relative efficiency of, *Comdr. G. C. Frederick* – – – – 4240–7
Admiralty has no jurisdiction over, *Hon. T. H. W. Pelham, Capt. T. H. Tizard* 78–9, 3482
Apparatus of all three equally good *D. A. Stevenson* – – – – – 2692–3
Attend two annual Conferences at Board of Trade to discuss new works *Hon. T. H. W. Pelham, C. Dick Peddie, Sir T. Blomefield* – – 9, 14, 1693, 3269, 3338–40
Communication between:
Conferences sometimes held *Sir G. Vyvyan*– – – – – – 5017
is Constant *C. Dick Peddie, T. Matthews, D. A. Stevenson* – 1715–7, 2103, 2520
Unite for important experiments *C. W. Scott* – – – – 2870–1
Comparison of systems and expenditure can only be approximate, owing to varying circumstances of the countries *Sir T. Blomefield* – – – 3228–31, 3275, 3302, 3311–20, 3366–8, 3375–6, 3383, 3397, 3435
Competent to judge the necessity of new works *Comdr. G. C. Frederick* – 4157–8
Constitution:
Objections to, *Hon. T. H. W. Pelham, A. N. Hill* – 41–51, 121–2, 1860–2, 1970, 1988–9
Representation of shipping community deprecated *Comdr. G. C. Frederick* – – – – 4262–5
Control of Board of Trade over, *see* CONTROL OVER LIGHTHOUSE AUTHORITIES *under* BOARD OF TRADE.
Establishments have been altered recently *Sir T. Blomefield* – – – – – 3344–5
Expenditure:
Accounts:
Audited by Comptroller and AuditorGeneral *Hon. T. H. W. Pelham* – – – – – 37
Laid before Parliament annually *Sir T. Blomefield* – – 3271
Submitted quarterly to Board of Trade *Hon. T. H. W. Pelham* – 37
Uniformity in system of accounting advocated *H. Llewellyn Smith* – – – – 6179–83
Comparison of, is difficult to obtain *Hon. T. H. W. Pelham, Sir T. Blomefield, Sir G. Vyvyan, J. A. Fleming, Sir W. Watson* 229, 3228–31, 3302, 3311–20, 3383, 3397, 5014, 5554–9, 5850–1
Controlled by Board of Trade *Hon. T. H. W. Pelham, Sir G. Vyvyan, D. Crawford* – – 248–53, 5080, 5442
Enormous increase since 1899 *A. N. Hill, Capt. W. S. Wade* 1835–48, 3681–2

Lighthouse Authorities—*cont.*
The Three General—*cont.*
Expenditure—*cont.*
is Extravagant *A. N. Hill* – – 1789, 1795–1834, 1884, 1899–1901
Instances of extravagance *Capt. W. S. Wade* – 3678, 3683, 3686 3691, 3895–7
Observations on statement of Mr. N. Hill *re* increase of, (1796–1834) *D. Crawford, C. Dick Peddie* – 5474–5, 5477–96, 5500
Regulations for payment of establishment expenses, salaries and pensions *Hon. T. H. W. Pelham* – – 23–24
Superannuation should be borne by salaries *A. N. Hill* – – 1958–60
Functions :
Control over local authorities *Hon. T. H. W. Pelham, Comdr. G. C. Frederick* – – – – 26, 4357
Entire responsibility for lighting of the coast *Sir T. Blomefield, Sir G. Vyvyan, H. Llewellyn Smith* – 3321–6, 5080, 6089–93, 6192
Issue of Notices to Mariners :
Disadvantages of, *Capt. T. H. Tizard* – – – – 3476–8
of Impending alterations in seamarks *Capt. T. H. Tizard* 3484–7
No duties with regard to transmission of signals *Capt. E. F. Inglefield* 3574
No jurisdiction where local authority exists *Hon. T. H. W. Pelham* – – 6
No power over General Lighthouse Fund *Hon. T. H. W. Pelham* – 206–7
Levying of light dues *Hon. T. H. W. Pelham* – – – – – – 36
Removal of wrecks which are not within harbours *Hon. T. H. W. Pelham, R. C. Rundell* – – – 31, 3950
No effective State control over, *A. N. Hill* – – – – – – 1863–7
Reconstitution :
Advocated *Hon. T. H. W. Pelham, Capt. W. S. Wade, R. C. Rundell, H. Llewellyn Smith* – 99, 3697–3722, 3766, 3911–7, 3952–62, 4037, 6114, 6135–7
Representation :
of Harbour Boards deprecated *Sir W. Watson* – – – 5694
of Shipping Community :
Advocated *Hon. T. H. W. Pelham, R. C. Rundell, Capt. A. F. Boxer, H. Llewellyn Smith* – 45, 3958–61, 4420–4, 6069–70, 6074–7, 6082
Deprecated *Sir W. Watson* 5694, 5843-4, 5923, 5965–6
Difficulty in arranging for, *Hon. T. H. W. Pelham* – 46
of Underwriters deprecated *H. Llewellyn Smith* – – 6204–6
Suggested by deputation to Board of Trade, 1899 *Hon. T. H. W. Pelham* 10
Suggestions for, *H. Llewellyn Smith* 6070–87
Relations to each other and to Board of Trade *Hon. T. H. W. Pelham* – – 7–9
Revenue is obtained from General Lighthouse Fund *Hon. T. H. W. Pelham* – 35
Superannuation age is same as Civil Service *Sir T. Blomefield* – – 3306–9
Systems of executing repairs differ *Sir. T. Blomefield* – – – – – 3230
Views as to expenditure of General Lighthouse Fund on local lights *Hon. T. H. W. Pelham* – – – – 53–4, 118–9
See also Irish Lights Board, Northern Lighthouse Board, Trinity House.
Lighthouse Powers, definition *Hon. T. H. W Pelham* – – – – – – – – 72, 179
Lighthouses :
Change in opinion as to best sites for, *H. G. Cook* – – – – – – – 1188
Classification of, *C. Dick Peddie* – – 1440–2
Control of, by elected body unless light dues are altered, advocated *A. N. Hill* – – 1912–3
Distinctive character, importance of, *Capt. W. S. Wade, Sir R. Ball* – – – 3908, 6036
in England :
Barberyn, constructed by Sir James Douglass and Mr. Matthews *T. Matthews* – – – – – 2029
Bardsey, improvement contemplated *Sir G. Vyvyan* – – – – – 4992
Beachy Head :
Construction :
Cost of, *A. Owen, Sir G. Vyvyan* – – – 4974, 4992
Economically carried out *Comdr. G. C. Frederick* – – 4279–80
Extravagantly carried out *Capt. W. S. Wade* – – – 3678–80
Justification of expenditure on, *Sir G. Vyvyan* – – 5428–30
Saving effected by refusing tenders for, *T. Matthews, Comdr. G. C. Frederick, Sir G. Vyvyan* 2031, 2045, 2056, 2260–5, 2382, 4279–80, 5430
Not exposed to heavy seas *Capt. W. S. Wade* – – – 3839
Position altered recently *Hon. T. H. W. Pelham* – – – – – – 220
Berry Head was constructed by Mr. Matthews *T. Matthews* – – 2031
Bishop Rock, Scilly :
Intensity of light *T. Matthews* – 2216
Reconstruction :
was Necessarily costly *A. Owen* 4974
by Sir J. Douglass and Mr. Matthews *T. Matthews* – 2029
Reduction in consumption of oil due to incandescent burners, *T. Matthews* 2251
Brilliancy of lights greater than in any other country *T. Matthews* – – 2193
Caldy Island :
Light is built too high *Capt. W. S. Wade* – – – – – 3903
Observation on Capt. Wade's objection to, *Capt A. W. Clarke* – – 5425–6
Dondra Head constructed by Sir J. Douglass and Mr. T. Matthews *T. Matthews* – – – – – 2029
Double Stations :
Definition of, *A. Owen* – – 5019
Number of keepers employed at, *Capt. A. W. Clarke* – – – 5024–5
St. Anne's and Nash are only, remaining *A. Owen* – – – – 5020–5
Dovercourt, is near the town *T. Matthews* 2249
Dungeness :
Constructed by Mr. Matthews *T. Matthews* – – – – 2031
Cost of erection *A. Owen, Sir G. Vyvyan* – – – – 4974, 4992
Eddystone :
Constructed by Sir James Douglass and Mr. Matthews *T. Matthews* 2029
References *Capt. W. S. Wade, A. Owen* – – – – 3849, 4974
Flamborough Head :
Light and fog-signal need improvement *Capt. A. Wood* – 3165, 3177
See also under Fog-signals.
Foreland (Bristol Channel) :
Extravagantly constructed *Capt. W. S. Wade* – – – – – 3898
Observations on objection of Captain Wade *Sir G. Vyvyan* – – 5422-4

Lighthouses—*cont.*
in England—*cont.*
Generally some distance from a town *T. Matthews* – – – – – 2248–9
Hartland, improvement contemplated *Sir G. Vyvyan* – – – – – 4992
Improvements made under Mr. Matthews *T. Matthews* – – – – 2031
Inspection of by Committees of Trinity House *A. Owen* – – 278, 456–63, 583–90
Little Basses:
Constructed by Sir James Douglass and Mr. Matthews *T. Matthews* 2029
Rock is being undermined *T. Matthews* 2430
List of those constructed since Mr. Matthews became Engineer-in-Chief *T. Matthews* 2030–1
Lizard:
Electric light is used at, *T. Matthews* 2088–9, 2222
Flash every three seconds *T. Matthews* – – – – 2237
Improvement at, *T. Matthews* 2031, 2087
Intensity of light *T. Matthews*, *Lord Rayleigh* – 2092–4, 2201, 2212, 4147
Machinery:
Horse power of engines *T. Matthews* – – – 2226
Magneto machine is wearing well *T. Matthews* – – – 2228
Motive power is partly caloric, partly oil engines *T. Matthews* 2224–5
Number of keepers at, *Capt. A. W. Clarke* – – – – – 5022
Siren fog-signal is worked by two horns *T. Matthews* – – 2225
References *T. Matthews*, *Comdr. G. C. Frederick* – – 2100, 2120, 4228
Longships, men relieved by boat from Sennen *A. Owen* – – – – – 512
Lundy, North and South:
Construction:
Extravagantly carried out *Capt. W. S. Wade* – – – 3895–6
Observations on objections of Captain Wade *Sir G. Vyvyan* 5419–21
Tenders not invited for, *T. Matthews* – – 2049–50, 2052
by Trinity House staff *T. Matthews* – 2031, 2048, 2054
Trinity House tenders used to convey materials to, *T. Matthews* 2051
Fog-signal is deficient in sea area *A. Owen*, *T. Matthews*, *Sir G. Vyvyan* – – – 527, 2268, 5065
Management of, handed over to Trinity House, 1822 *A. N. Hill* – – 1856
Maplin is an iron pile lighthouse *Sir G. Vyvyan* – – – – – – 5429
Nash:
Constructed by Mr. Matthews *T. Matthews* – – – – 2031
Extensive improvements and additions to, *T. Matthews* – – – 2077
Rayleigh horn siren recently established at, *T. Matthews* – – 2114
Substitution of one light for two advocated *Capt. W. S. Wade* – 3903–6
North Foreland, reference *Sir G. Vyvyan* 5097
North Stack, experiments on explosive fog-signals tried at, *Lord Rayleigh* – 4090
Number of, under Trinity House *A. Owen*, *Capt. A. W. Clarke* – – 302, 5026–33
Pendeen, construction of:
Cost of, *A. Owen* – – – 4974
by Trinity House staff *T. Matthews* 2031
Penlee, cost of construction *A. Owen* 4974
Lighthouses—*cont.*
in England—*cont.*
Portland, construction of:
Cost of, *A. Owen*, *Sir G. Vyvyan* 4974, 4992
by Trinity House staff *T. Matthews* 2031
Rock stations:
Number under Trinity House *A. Owen* 633
Provisioning of, *A. Owen* – – 511–2
Relief of, *A. Owen*, *C. Dick Peddie* 651–2, 1673, 5001–2
Work in connection with, done more cheaply by Trinity House than by contract *T. Matthews* – – 2045
Round Island, Scilly, intensity would be increased if changed from red to white *T. Matthews* – – – – 2216
St. Anne's Head, Milford:
Improvement contemplated *Sir G. Vyvyan* – – – – 4992
Observations on objections of Capt. Wade *Sir G. Vyvyan* – – 5424–7
Two lights objected to *Capt. W. S. Wade* – – – – – 3903–6
St. Catherine's:
Electric light used at, *T. Matthews* 2089, 2222
Intensity of light *T. Matthews*, *Lord Rayleigh* – 2092–3, 2201, 2212, 4147
Motive power for light worked on Robey system *T. Matthews* – 2225
Number of keepers at, *Capt. A. W. Clarke* – – – – – 5022
Reference *T. Matthews* – – 2097
St. Mary's Island:
Constructed by Trinity House staff *T. Matthews* – – – – 2031
Fog-signal needed at, *Capt. A. Wood* 3169
Skerries:
Fog-signal:
Cost of, unduly great *Capt. W. S. Wade* – – – – 3689–91
Experiments as to, 1904, *Lord Rayleigh* – – – 4091–3
Importance of, *Sir W. Watson* – 5855–6
Improvement:
Light changed from fixed to flashing *Sir G. Vyvyan* – – 4948
Opposed by Advisory Committee *Sir W. Watson* 5688–90, 5831–3
References *C. W. Scott*, *Capt. W. S. Wade* – – – – 2900, 3826, 3831
Smalls:
Improvement of, opposed by Advisory Committee *Sir G. Vyvyan* – 4948
Lloyd's signal station established at, *Capt. E. F. Inglefield* – – 3574, 3581, 3585, 3647a
New works, excepting dioptric apparatus, are being done at Blackwall *T. Matthews* – – – – 2139
Souter Point:
Electric light used at *T. Matthews* 2089, 2222
Engines are wearing well *T. Matthews* 2097
Improvement effected by flame carbons *T. Matthews* – – – – 2092
Number of keepers employed at, *Capt. A. W. Clarke* – – – 5022
South Bishop:
is Eight miles from land *T. Matthews* 2044
Fog-signal is in process of construction by Trinity House staff *T. Matthews* 2044, 2114, 2245
Improvement of, contemplated *Sir G. Vyvyan* – – – – 4992
Resident superintendent is in charge of work at, *T. Matthews* – – 2245
Tenders not invited for building, *T. Matthews* – – – – 2055

Lighthouses—*cont.*
in England—*cont.*
South Foreland:
Constructed by Trinity House staff *T. Matthews* – – – – 2031
Electric light used at, *T. Matthews* 2089, 2222
Engines are wearing well *T. Matthews* 2097
Improvements at, *T. Matthews* 2087, 2092
Motive power for light *T. Matthews* 2225
Number of keepers at, *Capt. A. W. Clarke* – – – – – 5022
Position of, is too high *Capt. A. Wood, Capt. W. S. Wade* – – 3208–9, 3897
Visible from Grisnez in clear weather *Capt. A. Wood* – – – 3207
References *Capt. T. H. Tizard, Sir G. Vyvyan* – – – – 3537, 5097
South Stack, fog-signal at:
Liable to area of silence *Capt. W. S. Wade* – – – – – 3831
Reed signal satisfactory *Sir W. Watson* 5757
Southwold, is near the town *T. Matthews* 2249
Spurn, constructed by Trinity House staff *T. Matthews* – – – – 2031
Strumble Head:
Cost of, *Sir G. Vyvyan* – – 4992
Great Western Railway Company:
Present light belongs to, *T. Matthews* – – – 2240–1
Sum contributed by, *Sir W. Watson* – – – – 5829
In course of construction *T. Matthews, Sir G. Vyvyan* – – – 2031, 2239, 2250, 2374, 5227–9
Objected to by Advisory Committee *Hon. T. H. W. Pelham, Sir W. Watson* – – – – 54, 5828–9
Procedure resulting in establishment of, *T. Matthews* – – – 2038
Trevose, improvement contemplated *Sir G. Vyvyan* – – – – – 4992
Withernsea:
Constructed by Mr. Matthews *T. Matthews* – – – – 2031
is Near the town *T. Matthews* – 2246
Wolf:
Saving effected at, by using Mr. Matthews' illuminant *T. Matthews* 2076
Reference *Capt. W. S. Wade* – 3840
Europa Point (Gibraltar) maintained by Trinity House *A. Owen* – – – – – 534–5
Held under patents from Crown by private individuals till 1822 *A. N. Hill* – – 1856
in Ireland:
Alterations executed partly by Engineer, partly by contract *C. W. Scott* – 2775
Aran Islands:
Fees for medical attendance *H. G. Cook* – – – – – 1058
North Island has first-class oil light *C. W. Scott* – – 2787–7a, 2793
South Island light needs improvement *C. W. Scott* – – – – 2799, 2809
Aranmore:
Needs improvement *C. W. Scott* 2799, 2809
Taken over from Dublin Port Board *H. G. Cook* – – – – 1163
Ardglass was taken over from Ballast Board *H. G. Cook, C. W. Scott, Sir W. Watson* – – – 1163, 2818, 5736
Astral Island, position wrongly stated in former Notices to Mariners *Sir W. Watson* – – – – – 5753–4
Balbriggan taken over from Ballast Board *H. G. Gook, C. W. Scott* – 1163, 2818
Ballycottin:
Description of fog-signal *C. W. Scott* 2847
is First-class incandescent oil light *C. W. Scott* – – 2787–2787a, 2793
Lighthouses—*cont.*
in Ireland—*cont.*
Beeves Rock is maintained by Irish Lights Board *Sir W. Watson* – – – 5982
Black Head:
is First-class incandescent oil light *C. W. Scott* – – – 2787–7a, 2793
Fog-signal:
Cost of, *C. W. Scott* – – 3000
Description of, *C. W. Scott* – 2844
Light and fog-signal established after repeated applications, *S. Lawther* 4475–9
Similarity of light to Black Head, Mull of Galloway is a danger to vessels *Capt. W. S. Wade* – – – 3803
Black Rock, Mayo:
Cost of steam tending, *H. G. Cook* 1072
Difficult of access in bad weather *H. G. Cook* – – – – – 791
is First-class incandescent oil light *C. W. Scott* – – – 2787–7a, 2793
Relief of, *H. G. Cook* – – 5938
Black Rock, Sligo, needs modernising *C. W. Scott* – – – – – – 2809
Blacksod Point needs modernising *C. W. Scott* – – – – – – 2809
Broadhaven needs modernising *C. W. Scott* – – – – – – 2809
Bull Rock:
Attended by "Ierne" *H. G. Cook, Sir W. Watson* – – – 899, 5722, 5764
Description of fog-signal *C. W. Scott* 2844, 3003
Height renders light invisible in fog, *Capt. W. S. Wade* – – – 3780
Needs improvement *C. W. Scott* 2799, 2809
Relief of keepers *H. G. Cook* – 1054
Type of burner used at, *Sir W. Watson* 5943
References *Sir W. Watson, Sir R. Ball* – – – – 5750, 6037
Buncrana:
Salary of light-keepers *H. G. Cook* 1006
References *H. G. Cook, Sir W. Watson* 968, 5879
Burners for, are manufactured by Irish Lights staff *C. W. Scott* – – 3078
Carlingford Lough local lights erected by Irish Lights Board *Sir W. Watson* 5736
Charlesfort, reference *H. G. Cook* – 1163
Clare Island:
Needs modernising *C. W. Scott* 2809 2819, 2981, 3113
Taken over from Ballast Board *H. G. Cook* – – – – – 1163
Control:
by Harbour Boards advocated *Capt. A. F. Boxer* – – – – 4382–3, 4410–3, 4442
by Various bodies till 1810 *H. G. Cook* 739, 1162
Vested in "Port of Dublin Corporation," 1854 *H. G. Cook* – – – 741
Copeland Island:
Taken over from Ballast Board *H. G. Cook* – – – – – 1163
Wigham's giant lenses used at, *Capt. W. S. Wade* – – – – 3823
Cranfield Point taken over from Ballast Board *H. G. Cook* – – – 1163
Duncannon Fort taken over from Ballast Board *H. G. Cook* – – – 1163
Dundalk:
Description of fog-signal *C. W. Scott* 2847
Has been modernised *C. W. Scott* 2809
Eagle Island:
Cost of shore dwellings built by Engineer's staff *C. W. Scott* – 2904–5, 2938
Difficult of access in bad weather *H. G. Cook* – – – – 791

Lighthouses—*cont.*
in Ireland—*cont.*
Eagle Island—*cont.*
Improvement needed *C. W. Scott* 2799, 2809
Relief of, *H. G. Cook* – – 5938
Reference *Sir W. Watson* – – 5863

Efficiency of Lights :
Additions and improvements during last 25 years *H. G. Cook* – – 903
Classification of stations according to, *C. W. Scott* – – 2787–92, 2799, 2809
is Satisfactory *H. G. Cook, Comdr. G. C. Frederick* – – 1274, 4228

Explanation of cost of, *Sir W. Watson* 5996–8
Fixed lights are being abolished *H. G. Cook* – – – – – – 1228
Fanad Point, Lough Swilly, needs modernising *C. W. Scott* – – – – 2809

Fastnet :
Additional work and expense caused by wireless telegraphy *Sir W. Watson* – – – – – 5754
Attended by "Ierne" *Sir W. Watson* – – – – 5722, 5764
Cost of, *C. W. Scott, Sir W. Watson* 2968, 3000, 5710, 5848
Description of, *C. W. Scott, Sir W. Watson, Sir R. Ball* – 2787–8, 2793, 5943, 6047
Efficiency of, *Sir R. Ball* 6036, 6044–5
has Electrical communication with shore *C. W. Scott* – – – 3124–9
is First landfall from America *C. W. Scott* – – – – – 2971

Fog-signal :
Cost of, *C. W. Scott* – – 3000
Description of, *C. W. Scott* – 2844

Lloyd's signal station established at, *Capt. E. F. Inglefield* – 3574, 3581, 3585, 3647a
Refusal of Irish Lights Board to establish communication with mainland *A. N. Hill* – – 1871–3, 1976–8a
Relief of keepers *H. G. Cook* – 1054
References *H. G. Cook, A. N. Hill, C. W. Scott, Capt. W. S. Wade, Capt. A. F. Boxer, A. Owen, Sir W. Watson, Sir R. Ball* – 897, 899, 1270, 1573, 1979, 2834, 2883, 2885, 2984, 2986, 3013, 3780, 4430, 4974, 5750, 6010, 6037

Ferris Point, Larne :
Barr Point fog-signal is rung from, *H. G. Cook, C. W. Scott* – 5787, 3021
Cost of, *Sir W. Watson* – – 5956–8
Reference *C. W. Scott* – – 3063

Galley Head :
Description of, *C. W. Scott, Sir W. Watson, Sir R. Ball* – – 2787–8a, 2793, 5943, 6036
Installation of incandescent burner *Sir W. Watson* – – – – 5713
Wigham's giant lenses used at, *Capt. W. S. Wade* – – – – 3823

Haulbowline, Carlingford :
Description of fog-signal *C. W. Scott* 2844
Needs modernising *C. W. Scott* 2809

Hook Tower :
Description of fog-signal *C. W. Scott* 2844
is Fixed gas light *C. W. Scott* – 2800
Taken over from Ballast Board *H. G. Cook* – – – – – – 1163

Howth Bailey :
Description of fog-signal *C. W. Scott* 2844
is First-class incandescent gas light *C. W. Scott* – – 2787–7a, 2793, 2796
Taken over from Ballast Board *H. G. Cook, C. W. Scott* – – 1163, 2818
Reference *Sir W. Watson* – – 5891

System of provisioning *C. Dick Peddie* – – – – – 1672
Scotch oil used in, *C. D. Peddie* – 1684–5
Sule Skerry is forty miles from Orkney *C. Dick Peddie* – – – – 1534
Sumburgh Head, reference *D. A. Stevenson* 2579
Thirteen catadioptric and several fixed dioptric lights still remain *D. A. Stevenson* – – – – – 2686
Tod Head:
Cost of lightkeepers' dwellings *D. A. Stevenson* – – – 2579, 2581
Details of scheme for, asked for by Trinity House *J. A. Fleming* – 5466
Sketches of, supplied to mariners are an aid to navigation *Capt. T. H. Tizard* – – 3567–71
State administration advocated *A. N. Hill* 1869, 1909
Telephonic communication with Harbour Authorities desirable *S. Lawther, T. F. Cooke* – – – – – 4624–34, 4686
Use of, as Lloyd's signal stations:
Advocated *Capt E. F. Inglefield* – 3574, 3577–8, 3608
Opposed by Admiralty *A. N. Hill, Sir W Watson* – – – – 1978, 5756
Lighthouses—*cont.*
Value of projecting beam of light upward *Lord Rayleigh* – – – – – – 4136–7
Wireless telegraphy no danger in war time *Capt. E. F. Inglefield* 3579–80, 3638–9, 3650–3
See also LIGHTING APPARATUS.
LIGHTING APPARATUS:
Biform, advantages of, *C. W. Scott* – 2821
Catoptric, still in use in Scotland *D. Crawford* 5503
Cost of, *C. W. Scott* – – – – 2978–9
Dioptric:
Installation in lightvessels contemplated *Sir G. Vyvyan* – – – – 5230
Mercury Floats:
Effect great increase of intensity *T. Matthews* – – – – 2100
Form now in use *C. W. Scott* – 2996–7
Introduction of, *T. Matthews, Sir G. Vyvyan, Sir R. Ball* 2100, 5232, 6033–6
Use of, *C. W. Scott* – – – 2821
Might be obtained cheaper by contract from France *D. A. Stevenson* – 2567–8
for Scotch lighthouses, obtained from Messrs. Chance *D. A. Stevenson* – 2563–4
Undesirable to be dependent on foreign countries for, *D. A. Stevenson* – 2566
Important modern inventions *Sir R. Ball* 6032–6
Incandescent Oil Burners:
Chance's:
Candle power of, *D. A. Stevenson* 2523
is Used in Scotch lighthouses *D. A. Stevenson, C. W. Scott. J. A. Fleming* – 2521–3, 2557, 2992, 5659
Cost of Introduction:
in England *T. Matthews* – – 2084
Explanation of difference of, in England and Scotland *A. Owen* – 5005
Description of, *Sir W. Watson* – – 5715
Economy effected by, *T. Matthews, D. A. Stevenson, Comdr. G. C. Frederick* 2076, 2084, 2251–4, 2525, 2634, 4191
Experiments now in progress:
for Introduction into lightships *T. Matthews* – – – 2087
for Tinting mantles *T. Matthews* 2099, 2147
French Pattern:
Not very satisfactory *D. A. Stevenson* 2521
Tried in Scotland *D. A. Stevenson* 2557
Importance of introduction of, *Sir R. Ball* – – – – – – 6032–6
Increase of intensity effected by, *T. Matthews, D. A. Stevenson* 2203, 2524–5, 2632
Installation in Irish lighthouses *C. W. Scott, Sir W. Watson* – – 2821, 5713
Introduced by Trinity House *T. Matthews* – – – – 2255, 2309
Irish:
Designed by the Engineer *C. W. Scott* – – – – – 2989
Efficiency of, *C. W. Scott* – – 2821
Kitson burner tried by Northern Lighthouse Board *D. A. Stevenson* – 2521
Lent to foreign countries for experiments *T. Matthews* – – – – 2103
Matthews':
Adopted, with modifications, by Scotch and Irish Boards *T. Matthews* 2086, 2310
Invented by Engineer of Trinity House *T. Matthews* – – 2076, 2085, 2087
More complicated than Chance's and Irish burners *C. W. Scott* – 2994–5
Tried in Scotland *D. A. Stevenson* 2557
Used by Trinity House *J. A. Fleming* 5659
Recommended by Trinity House for Little Basses, etc. *T. Matthews* – – 2430
Inspected by Scientific Advisers *Lord Rayleigh, Sir R. Ball* – – – – 4078, 6038

Lighting Apparatus—*cont.*
Lenses:
Hyper-radiant, introduction of, *Sir R. Ball* – – – – – 6032, 6034–6
Rotating, give greater brilliancy than fixed, *T. Matthews* – – – – – 2288
Testing of, *C. W. Scott, Sir R. Ball* 2861, 6038
Wigham's Giant:
Best light for coast lighting is secured by, *Capt. W. S. Wade* – 3823, 3828
Introduced first in Ireland *C. W. Scott* 2821
Sanction of Trinity House refused to installation of, *H. J. Forde* – 4850
Manufactured at Blackwall *T. Matthews* 2393–4
Provision of spare, *J. A. Fleming, C. Dick Peddie* – – – – – 5653–4, 5655–9
Short Flash:
Approved *Capt. W. S. Wade* – – 3824–7
Disapproved *Capt. T. H. Tizard, D. Crawford, J. A. Fleming* – – 3539–40, 5546, 5621–3
The three General Authorities do not use identical, *C. W. Scott, J. A. Fleming* 2878, 5647
Ventilation of lanterns brought to great perfection *C. W. Scott* – – – – 2821

Lightkeepers:
Appointment of, *A. Owen, C. Dick Peddie* 278, 1483
Dwellings:
Construction of roof *D. A. Stevenson* 2578, 2657–8
Cost of, *D. A. Stevenson, C. W. Scott* 2579–81, 2582–7, 2656, 2661–2, 2939–52
Cause of large expenditure *C. Dick Peddie, D. A. Stevenson, Sir W. Watson* – – – 1668–71, 2579, 5839
Compares favourably with other cottages similarly placed *D. A. Stevenson* – – – – 2588–91
is Extravagant *Capt. W. S. Wade* 3686–8
is Reasonably economical *Comdr. G. C. Frederick* – – – – 4275–7
of Repairs *D. A. Stevenson* – – 2578
Description of, *H. G. Cook, D. A. Stevenson* 1267–9, 2578–9, 2655
Erected by contract where possible *T. Matthews, H. G. Cook* – – 1270, 2246–7
Method of measuring cubic contents *D. A. Stevenson* – – – – – 2663
Employment of rock keepers when on shore *A. Owen, C. Dick Peddie* – – 658–9, 1445–6
Library system, *H. G. Cook* – – – 1236–7
Medical attendance for, *H. G. Cook, C. Dick Peddie* – – – – 1055–70, 1664–5
Number:
at Each station *C. Dick Peddie, Capt. A. W. Clarke* – – – 1443, 5024–5
in Scotland *D. Crawford* – – – 5528–31
Occasional:
Scale of pay in Scotland *C. Dick Peddie* 1498–9
Systems employed by the three Lighthouse Boards *C. Dick Peddie* – – – 1500
Trained in case of emergency *C. Dick Peddie* – – – – 1498, 1528–9
Pay and allowances of, *A. Owen, C. Dick Peddie, Capt. E. F. Inglefield, D. Crawford, H. G. Cook* – 712–4, 1477–8, 1485–95, 1666–7, 1671–4, 3631, 5445, 5777
Relief of, at rock stations *A. Owen, C. Dick Peddie, H. G. Cook, J. A. Fleming, Sir W. Watson* – – 651–2, 1444, 1673, 1054, 5594, 5599–5600, 5931–8
Repairs done by, *C. Dick Peddie* – – 1477–8
Superannuation of, *A. Owen, H. G. Cook, C. Dick Peddie, Sir W. Watson* – 278, 1003–15, 1496, 5718–9
Transfer of Mr. T. Byrne from Clare Island to Eagle Island *H. G. Cook* – – – 5781–2
See also Lightkeepers *under* Irish Lights Board, Northern Lighthouse Board, Trinity House.

Lightvessels:
Cables:
Diameter of, *C. W. Scott* – – – 3118
Importance of strength of, *T. Matthews* 2122, 2127
Occasional cases of parting of, *T. Matthews* 2129, 2137
Comparison:
Difficulty of making, *A. N. Hill* – 1996
of English, Scotch and Irish *T. Matthews, Sir G. Vyvyan* – – 2284–6, 5215–22 and Appendix B. 2
Cost:
Influenced by local circumstances *A. N. Hill* – – – – – – 1996
Initial, is unduly heavy *Capt. W. S. Wade* – – – – – – 3683–5
in England:
Bahama Bank:
Relief of, *A. Owen* – 5320, 5325 (*Note*)
Repaired at Neyland *T. Matthews* 2370
Barrels, reference *A. N. Hill* – – 1985–6
Carnarvon Bay, reference *A. Owen* – 5004
Cost:
Cause of fluctuation on maintenance *Sir T. Blomefield, A Owen* 3403, 4998–9
Explanation of apparent extravagance *Sir G. Vyvyan* – – – 5433
of New vessels *Sir G. Vyvyan* – 4992
Crews:
Employment while on shore *A. Owen* – – – – – 658–9
Maintenance is included in wages *A. Owen* – – – – – – 715
Provisioning of, *A. Owen, Capt. Clarke* – – – – 511–2, 5221
Relief of, *A. Owen, Sir G. Vyvyan* 620, 5215, 5280–3
Salaries of, *A. Owen* – – – – 712
Time spent on shore *A. Owen* – – 654
Cross Sand, has wireless telegraphic communication with shore *A. Owen* – – 639
East Goodwin, has wireless telegraphic communication with shore *A. Owen* – 669
Fairway (Liverpool), submarine bell established at, *Capt. W. S. Wade* – 3813
Fixed lanterns adopted *C. W. Scott* 2810–1
Gull, has wireless telegraphic communication with shore, *A. Owen* – – – 669
Hasborough, has telegraphic communication with shore *A. Owen* – – – – 661
Inspection by Committees of Trinity House *A. Owen* – – – 278, 280, 456–63, 583
Installation of dioptric apparatus contemplated *Sir G. Vyvyan* – – –5230
Kentish Knock, has telegraphic communication with shore *A. Owen* – – – 661
Method of supplying oil to, *Capt. A. W. Clarke* – – – – – 5326–31
North Goodwin:
Submarine bell experiments tried at, *A. Owen* – – – – – 533
has Telegraphic communication with shore *A. Owen* – – – – 661
North West (Liverpool), submarine bell established at, *Capt. W. S. Wade* – 3812–4
St. Govan's Shoal:
Cost per ton *Sir G. Vyvyan* – 5433
Establishment:
Opposed by Advisory Committee *Capt. W. S. Wade* – – 3802
Sanctioned *Capt. W. S. Wade* 3919
Reference *Capt. W. S. Wade* – 3898
Selker:
Driven ashore through parting of cable *T. Matthews* – – – – 2133–4
Relief of, *A. Owen* – – – 5320
Repaired at Neyland *T. Matthews* 2370
Seven Stones, reference *T. Matthews* 2127
Shipwash, has telegraphic communication with shore *A. Owen* – – – 661

Lightvessels—*cont.*
in England—*cont.*
South Goodwin, has wireless telegraphic communication with shore *A. Owen* – 669
Sunk, has wireless telegraphic communication with shore *A. Owen* – – – 669
Swin Middle :
Description of, *T. Matthews* – 2283
Intensity of light *T. Matthews* – 2216
Position of, *T. Matthews* – 2214, 2216
Tongue :
Offer of Zeeland Steamship Company to instal submarine signal on, refused *Sir G. Vyvyan* – – 5039, 5169–71
has Wireless telegraphic communication with shore *A. Owen* – – 669
Warner, is maintained by Trinity House for Admiralty *A. Owen* – – – – 313
Introduction of submarine signalling bell proposed, *T. Matthews* – – – – 2118
in Ireland :
Barrels Rock :
Description of fog-signal *C. W. Scott* 2847
Has prevented wrecks *Capt. A. F. Boxer* – – – – – 4437
Blackwater :
Description of fog-signal *C. W. Scott* 2847
Improvement of light *C. W. Scott* 2810
Codling :
Description of fog-signal *C. W. Scott*, *Sir W. Watson* – – 2844, 5757
Reference *H. G. Cook* – – 1045
Conningbeg :
Description of fog-signal *C. W. Scott* 2844
Reference *H. G. Cook* – – 1054
Cost :
Remarks as to, *Sir W. Watson* – 5989–91
System of maintenance is extravagant *Capt. A. F. Boxer* – – 4402–03
Crews :
Employment while on shore, *H. G. Cook* – – – – – 1047–8
Number of, *H. G. Cook* – – 1045–6
Relief of, *H. G. Cook*, *Sir W. Watson* 888, 1049–53, 5931–2, 5938, 5933–8, 5991–5
Daunts Rock :
Cause of sinking of, *T. Matthews* 2293–4
Description of fog-signal *C. W. Scott* 2844
References *Capt. W. S. Wade*, *Sir W. Watson* – – – – 3842, 5759
Efficiency of, *H. G. Cook* – – – 1225
Establishment of, contemplated outside Strangford Bar *S. Lawther* – – 4514
Improvement :
During last 25 years *H. G. Cook* – 908
Fixed lanterns adopted *H. G. Cook*, *C. W. Scott* – – – 1225–7, 2810–1
Replacement of fog-gongs by reed fog-signals *Sir W. Watson* – 5756, 5892
Kish :
Description of fog-signal *C. W. Scott* *Sir W. Watson* – – 2844, 5757
References *Sir W. Watson* – 5891, 5947
Lucifer, description of fog-signal *C. W. Scott* – – – – – – 2847
North Arklow, description of fog-signal *C. W. Scott* – – – – – 2847
Number of, *H. G. Cook* – – – – 869
Repairs are done by tender *C. W. Scott* 3068
Skulmartin :
Description of fog-signal *C. W. Scott* 2844
Has prevented wrecks off coast of Down *Capt. A. F. Boxer* – – 4436
Reference *C. W. Scott* – – 2810
South Arklow, description of fog-signal *C. W. Scott* – – – – – – 2847
Lightvessels—*cont.*
in Ireland—*cont*
South Rock :
Description of fog-signal *C. W. Scott* 2844
Wrecks near, are not due to insufficient lighting *Capt. G. C. Frederick* 4214
Reference *Capt. W. S. Wade* – 3804
are Tested annually *H. G. Cook* – – 887
Two-wick concentric burner used in, *T. Matthews* – – – – – – 2311
Oil advocated, as best illuminant for, *Comdr. G. C. Frederick* – – – – – – 4223
in Scotland (North Carr) :
Cost of maintenance *C. Dick Peddie* 1509–11, 1680–2
Crew :
Number of, *C. Dick Peddie* – 1506
Relieved fortnightly *J. A. Fleming* 5594, 5604–6
Work while on shore *C. Dick Peddie* – – – – – 1507–8
Established 1887 *C. Dick Peddie* – 1505
is in Firth of Forth *C. Dick Peddie* – 1505
Lighted by dioptic apparatus with oil burners *T. Matthews* – – 2280, 2311
is the Only Scotch lightvessel *C. Dick Peddie*, *T. Matthews* *C. W. Scott*, *Sir T. Blomefield*, *J. A. Fleming* – 1439, 1505, 2280, 2311, 2812, 3385, 5601
Repairs :
Arranged for by district superintendents *C. Dick Peddie* – 1477, 1480–1
Executed by lightkeepers *C. Dick Peddie* – – – – – 1477–8
Overhauled once in seven years *C. Dick Peddie* – – – – 1509, 1514
System of provisioning, *C. Dick Peddie* 1672
Telegraphic Communication with Shore :
is of Little value *A. Owen* – – 663–5
Vessels on which established *A. Owen* – 661
Wireless :
Danger of, in war time *Capt. T. H. Tizard* – – – – – 3525–9
Danger of, in war time denied *Capt. E. F. Inglefield* 3579–80, 3638–9, 3650–3
is No navigational use *Capt. T. H. Tizard* – – – 3530–5, 3557–8
Type of anchor used for, *T. Matthews* – 2292
Unattended :
Advocated for area between jurisdiction of General and Harbour Authorities *D. A. Stevenson* – – – – – – 2641
a Bell is the only fog-signal possible on, *D. A. Stevenson* – – 2544–5, 2638, 2704
Cost of, *D. A. Stevenson* – – 2539–42, 2644
Give better light than buoys *D. A. Stevenson* – – – – – – 2538
Have no advantage over lighted buoys *T. Matthews*, *C. W. Scott* – 2291, 3123
None belonging to Trinity House or Irish Board *T. Matthews*, *D. A. Stevenson* 2283, 2703
Otter, reference *J. A. Fleming* – 5675
are Satisfactory *D. A. Stevenson*, *J. A. Fleming* – – – 2535–7, 2553, 5675
Skerrinoe, reference *J. A. Fleming* – 5675
Use of, as Lloyd's signal stations advocated *Capt. E. F. Inglefield* – – 3574, 3577–8, 3608
Limerick :
Certain lights maintained by Irish Lights Board *Sir W. Watson* – – – 5982–4
References *S. Lawther*, *M. Lynch* – 4543, 4635, 4718

Malacca Straits, advised by Trinity House *Sir G. Vyvyan* – – – – – – – 5132

Malin Head, Lloyd's signal station established at, *Capt E. F. Inglefield* – – – – 3574

Malta, contemplated improvement of lights at, *T. Matthews* – – – – – – – – 2154

Man, Calf of, reference *S. Lawther* – – 4526

Man, Isle of:
Under jurisdiction of Northern Lighthouse Board *Hon. T. H. W. Pelham, C. Dick Peddie* – – – – – 4, 1301, 1304–5
References *C. Dick Peddie, T. Matthews, D. A. Stevenson, S. Lawther* – 1435, 2370, 2581, 4526

Manders, Herbert H., Assistant Inspector, Irish Lights Board, reference *H. G. Cook* – – 1100

Maplin Sands:
Buoys maintained by Trinity House for Admiralty *A. Owen* – – – – – 304
Lights from London to, are all unwatched *T. Matthews* – – – – – – 2304

Marine Insurance:
All companies subscribe to Lloyd's for maritime intelligence *Capt. E. F. Inglefield* – 3615
Importance of, to the Empire *Capt. E. F. Inglefield* – – – – 3592–8, 3615–22

Mariners, Notices to, *see* Notices to Mariners.

Maritime Intelligence:
is Collected and published by Lloyd's *Capt. E. F. Inglefield* – – – – – 3574
Cost:
is Borne by funds of Lloyd's *Capt. E. F. Inglefield* – – – – – 3616
Increase probable *Capt. E. F. Inglefield* 3634
Dependence for, on courtesy of Lighthouse Authorities, unsatisfactory to Lloyd's *Capt. E. F. Inglefield* – 3574–8, 3582, 3601, 3608–10
Liability for errors of lightkeepers should not be incurred by Lighthouse Authorities *Capt. E. F. Inglefield* – – – – – 3634a–7
System of, necessary to prevent fraud *Capt. E. F. Inglefield* – 3586, 3593, 3600a, 3620

Margaretta Shoal, reference *Sir W. Watson* 5764

Marshall, Captain, is member of Examining Committee, Trinity House *A. Owen* – – – 445

Martin, Charles E., J.P., D.L.:
Advised payment of account of Messrs. F. M. Moore and Co. *H. G. Cook* – – – 5775
is Member of Irish Lights Board and its Committees *H. G. Cook* – – – 754, 771, 814
is a Shipowner *Sir W. Watson* – 5761, 5794
Reference *H. G. Cook* – – – – – 774

Maryport, reference *S. Lawther* – – – 4522

MATTHEWS, THOMAS, Engineer-in-Chief to Trinity House: – – – – 2021–2475
Advisory Committee of Shipowners:
Cases affecting shipping interest submitted to, – – – – – – 2199
Deals only with new works – – 2196–8
Appointments held by, at Trinity House 2021–7
Blackwall Workshops:
Accommodation at, – – – 2432–5, 2443
Annual output – – – 2391, 2144
Apparatus is manufactured at, – – 2393–4
Cost:
of Staff – – – – – 2143
Travelling expenses of mechanics 2326–9, 2333–4
Effect economy in lighthouse service 2139–42
Employees:
Carpenters not employed on new works – – – – – 2242–3
List of trades of – – – 2395–9
Number of, – – 2298, 2338, 2440–1
Gas for buoys and beacons made at, – 2146
Materials used in service tested at proving-house – – – – – – 2146
New works seldom done at, – – 2139
Object of, – – – – – 2138
Official staff – – – – – 2146

Matthews, Thomas—*cont.*
Blackwall Workshops—*cont.*
Removal of works to Harwich considered and abandoned – – – – 2446
Staff is erecting fog-signal machinery at South Bishop – – – – 2245
Suction gas to be introduced as power plant at, – – – – – 2317–9
Tenders for materials invited quarterly 2142
are Under Engineer's Department of Trinity House – – – – 2145
Chain Cables:
Approximate cost of, – – – 2122
Method of testing, – – – – 2122
Occasional cases of parting of, – – 2129–37
Samples seldom fail to pass the test – 2128
Tenders for, invited from selected firms 2122–4
Comparative length of English and French coast lines – – – – – – 2218–9
Contracts:
Allocation of, – – – – 2044, 2437–9
Saving effected by not entering into, 2045–57, 2260–6
Efficiency of lighting of United Kingdom 2150, 2193
Experiments:
Co-operation of three Lighthouse Boards 2359–60
Descriptions of, appear in engineering papers – – – – – 2192
Expenditure on, – – – – 2148
Extension of work impossible with present staff – – – – – – – 2149
Fog-signals:
Areas of silence investigated – 2115–7
Diaphone and siren tried – – 2474–5
Submarine bells successfully tried 2118–9, 2474
Incandescent Burner:
for Catoptric lights and acetylene 2147, 2474
for Introduction into lightvessels 2087
Tinting of mantles for, – 2099, 2147
Now in process – – – 2147, 2474–5
Fog-signals:
Areas of Silence:
Attention directed to, by case of H.M.S. "Montagu" – – 2268
Cause not known – – – 2270–3
are Variable – – – 2115–7, 2268–9
Experiments with, *see that title above.*
Explosive, unsatisfactory on account of expense – – – – – 2107–8
Flamborough Head:
Change from explosive to siren proposed – – – – – 2110
Cost of. – – – – – 2108–9
Necessity for change – – – 2297
Importance of experimenting on, – 2274–5
Reed:
Designed by Mr. Matthews – 2105
Satisfactory for less important positions – – – – – 2111
Siren:
Form in use at English stations – 2114
Most satisfactory signal for important positions – – – – 2111–2
With two horns covers angle of 240 degrees – – – – – 2112
Submarine Bell:
Proposed by Trinity House for certain lightvessels – – – – 2118
Supersession of siren by, at shore stations improbable – – 2120
Vessels must be fitted to receive signals from, – – – – 2121
Three kinds in use in England – – 2105
France:
Coast line is longer than English – 2278
Engineer in constant communication with Trinity House – – – 2101–2, 2188
Matthews, Thomas—*cont.*
France—*cont.*
Engineer's Department does not build lighthouses – – – – – – 2149
Expenditure on experiments greater than in England – – – – 2150, 2276
Intensity of lights at Cap de la Hève and Grisnez – – – – – 2210–1
Illuminants:
Introduction of incandescent oil system – – – – – 2095
Number of electric lights – 2095, 2223
Lighthouse Engineer wrote papers for Milan and St. Louis Congresses – 2188–9
Lighthouses do not project a vertical beam of light upwards – – – – 2235–8
Gas buoys hold enough gas for 2½ or 3 months 2320–3
Illuminants:
Electric Light:
Discussion as to method of measuring, 2094
Duplicate machinery for, kept at lighthouses – – – – – 2233
Extension of use improbable on account of cost – – – 2091, 2097, 2100
Flame Carbons:
in Experimental stage still 2213–4
Improvements effected by, – 2092, 2099, 2206
Introduced at Calais – – 2152
Intensity:
Greater than other illuminants even in fog – 2099, 2200, 2207
of Lizard and St. Catherine's, greater than French lights 2211–2
Relatively less fog-penetrating power than oil – – 2098–9, 2200
Motive power – – – 2224–2234
Used at four English lighthouses 2088–9, 2220–2
Gas:
Cheaper for Trinity House to make, than to buy – – – – 2172
Purchased from Railway Companies in certain places – – 2173, 2349–51
Incandescent oil was developed by Trinity House Engineer – – – – 2076
Intensity calculated on different systems in England and France – 2208–9, 2216–7
Improvements:
Extensive, are laid before the Advisory Committee – – – – 2077–8, 2197
Lizard and South Foreland – – 2087
Made under Mr. Matthews – – 2031
Nash, laid specially before Board of Trade 2077
Not classed as new works – 2073–4, 2076
as to International exchange of information regarding seamarks – – – – 2103–4, 2151–2, 2181–94, 2431
Lighthouses:
Berry Head, unwatched light established at, – – – – – – – 2173
Bishop Rock is strongest English oil light 2216
Importance of position in determining character of light – – – – 2201–2
Lizard and St. Catherine's, intensity of light – – – – – 2092–3, 2201
Lundy built by Trinity House staff – 2048–54
Round Island, intensity of light at, – 2216
Site and character chosen by Elder Brethren 2204
South Bishop built by Trinity House staff – – – – – 2044, 2055
Strumble Head:
Bridge built from island to mainland – – – – – – 2258–9
is In course of construction 2239, 2250
Temporary light belongs to Great Western Railway Company – 2240–1
Lighting Apparatus:
Gas engines used where possible – 2315–6

Matthews, Thomas—*cont.*
Lighting Apparatus—*cont.*
Incandescent Oil Burner :
Cost of introduction of, – – 2084
Economy effected by, – 2084, 2251–4
Form used on Irish lightvessels – 2311
Improvement effected by, – – 2203–5
Introduced by Trinity House Engineer 2085–7, 2255, 2309
Recommended for Little Basses – 2430
Mercury Floats for Dioptric Apparatus :
Increase of intensity effected by, 2100
Introduced by France – – 2100
Revolving Lenses :
Give greater brilliancy than fixed lenses – – – – – 2288
Undesirable for unwatched lights 2288
Lightkeepers dwellings are built by contract 2247
Lightvessels :
Comparison of English and Irish, – 2284–6 and Appendix B. III.
Scotch Board has only one, 2280, 2311, 2330
Swin Middle :
Description of, – – – – 2283
Intensity of light – – – 2216
Type of anchor used for, – – – 2292
Unwatched, advantage of, is slight – 2291
is Member of Institute of Civil Engineers 2028
Milan Exhibition visited by one of Elder Brethren – – – – – – 2436
New Works :
Cost of, shown separately from renewals and repairs – – – – – 2414
Detailed statement of, – – – 2079–82
Executed for Admiralty by Trinity House 2154
Initiated frequently by petitions from shipowners – – – – – 2195
of Local authorities require Trinity House sanction – – – – – 2300
Now in process or contemplated – 2374–6
Selection of sites for lighthouses 2038–2040
Oil, method of conveying, to light stations 2076
One Central Lighthouse Authority :
Economy would result from, 2419, 2422, 2464–5
One engineer could do the work – 2420
Port of London is lighted by Trinity House 2302–5
Steam Vessels :
Building material conveyed by, to Lundy 2051
Engineers of, send weekly reports to Engineer-in-Chief – – – 2177–9
Improvement in system of maintenance 2166
List of stations of, – – – – 2417–8
Logs all sent to Trinity House – – 2166–7
Not always in use – – – – 2459
One, added during last 10 years – 2452–3
Personnel controlled by Lights Committee 2176
Repaired at Blackwall – – 2138, 2146
Work of :
Decreased by diminution in consumption of oil – – – – 2454
Increased by extension of gas-buoy system – – – – – 2256
Trinity House :
Control over Scotch and Irish Boards :
Appeal allowed to Board of Trade 2469–72
Sanction required for all proposals 2467–8
Engineer :
Duties – – 2032–42, 2246, 2429–30
Mr. J. Walker, 1858–1863 – – 2059–62
Payment for work done for Government Departments – – – 2159–60
Sir J. Douglass was first to be paid on present system – – – 2063–4
System of payment till 1863 – 2060–1
Matthews, Thomas—*cont.*
Trinity House—*cont.*
Engineer's Department :
Cost of, – – – – 2065–8, 2377
Duties :
Allocation of, – – 2166–9, 2179
Possibility of extension of, 2171, 2447–9
Established 1863 – – – 2059
Staff is interchangeable – – 2175
Superannuation – – – 2162–5
Expenditure :
Annual cost of new works and repairs – – – – – 2069–72
Departmental charges not charged to particular new works – – 2380–7
Saving Effected :
by Not going to contract – 2045–57, 2260–6
by Use of incandescent oil 2076, 2084
Submitted in detail to Board of Trade – – – – – 2307–8
Plant lent to Scotch and Irish Boards 2354–8
Repairs, system adopted for, – – 2339–47, 2366–72, 2408–13
Work undertaken for Government Departments – – – – 2153–6
Works carried out by, – – 2029–31, 2046, 2057
Wrote paper for St. Louis Congress, 1905 2189

NEIST POINT, difference of opinion between Lighthouse Authorities as to proposed light for, *J. A. Fleming* – – – – – – 5467

NEW LIGHTHOUSE WORKS:
Additions in Ireland during last 25 years *H. G. Cook* – – – – – – 908
Advisory Committee on, *see* ADVISORY COMMITTEE OF THE SHIPOWNERS OF THE UNITED KINGDOM.

Board of Trade:
Advised as to, by Nautical Adviser *Comdr. G. C. Frederick* – – – – 4157–65
Sanction of, required for, *Hon. T. H. W. Pelham, H. G. Cook, A. N. Hill, C. W. Scott* – 7–9, 20, 1262, 1864, 2902–3, 5784
Delays caused by, *H. G. Cook* – – 1271–3
Disagreements between, and Lighthouse Authorities as to, *Hon. T. H. W. Pelham* – – – – – – 6091–2
Details for 1900–5 in Scotland, *C. Dick Peddie* 5483

Execution:
in England:
by Engineer's staff *T. Matthews* – 2046–58
Procedure for, *T. Matthews* – 2037–45
in Ireland:
by Contract *C. W. Scott* – 2763–72, 2775–8, 2786
by Engineer's staff *C. W. Scott* 2762–71, 2936
in Scotland, contract preferred for, *D. A. Stevenson* – – – – 2487, 2563

Expenditure:
Average Annual:
in England *T. Matthews* – – 2069–71
in Ireland *C. W. Scott* – – 2962–73
in Scotland *C. Dick Peddie* – 2607–11

Decrease:
Improbable at present *D. Crawford* – – – – – 5503–6
Probable in the future *Sir G. Vyvyan, Sir W. Watson* 4992, 5223–6 5732–5

New Lighthouse Work—*cont.*
Expenditure—*cont.*
Endeavour to reduce, *Hon. T. H. W. Pelham* – – – – – – 9
on Fastnet Lighthouse *C. W. Scott* – 2966–74
For 1906–7 *Sir G. Vyvyan* – – 5230
Increase since 1895 *A. N. Hill* – 1802
Limit suggested by Lord Courtney's Committee *Hon. T. H. W. Pelham, C. Dick Peddie* – – – 17, 1610, 1612, 2602–6
Proportion of, to total expenditure *A. N. Hill, Hon. T. H. W. Pelham* – 1788, 6104
Sanction refused by Board of Trade *H. G. Cook, Capt. W. S. Wade* 1271–2, 3692, 3722
Total, 1899–1905 *A. N. Hill* – – 1991
General Authorities are competent to judge of necessity for, *Comdr. G. C. Frederick* – 4157–8
Initiation :
Advice of shipowners sometimes asked as to, *C. Dick Peddie* – – 1776, 1779–80
Board of Trade have no power of, *Hon. T. H. W. Pelham* – – – – 84, 6176
Consideration of proposals :
by Irish Lights Board *H. G. Cook* 1258–64
by Northern Lighthouse Board *C. Dick Peddie* – – – – 1380–8
Procedure for, *A. Owen, H. G. Cook, C. W. Scott* – – – – 648–9, 845–56, 2900
Rests with General Lighthouse Authorities *Hon. T. H. W. Pelham* – – 152, 244
Suggestions from outside sources *H. G. Cook, C. Dick Peddie, T. Matthews* 850, 1258, 1382, 1770–2, 2195
Inspections in connection with, *A. Owen* – – 481
Mizen Head, *see that title.*
Opposed by Advisory Committee, *see under* Advisory Committee of the Shipowners of the United Kingdom.
Outlook as to future needs :
in England *Sir G. Vyvyan* – – 4992
in Ireland *Sir W. Watson* – – 5732–5
in Scotland *D. Crawford* – – 5503–6
Procedure for sanction of, *Hon. T. H. W. Pelham, H. G. Cook, C. Dick Peddie, Sir T. Blomefield* – – 9, 14, 73–5, 81–4, 1189a–94, 1320–1, 3269–70
Recommendations of Advisory Committee not refused *A. N. Hill* – – – – 1982–4
Recommended by Advisory Committee, *see under* Advisory Committee of the Shipowners of the United Kingdom.
Urgent :
None at present in Ireland *C. W. Scott* 3035–40
Statement of works of pressing necessity in Scotland *D. A. Stevenson* – 2679–84
Procedure for sanction of, *Hon. T. H. W. Pelham* – – – – – 18–19, 106–7
Works regarded as, *T. Matthews, D. A. Stevenson, C. W. Scott, Comdr. G. C. Frederick* 2073–82, 2498, 2688–90, 2803–5, 2852–4, 4178–81

Newcastle :
North of England Shipowners' Association is at, *A. N. Hill* – – – – – 2008
is Represented on Trinity House Board *Sir G. Vyvyan* – – – – – – – 5044

Newfoundland Lighthouse Authorities have consulted Messrs. D. and C. Stevenson *D. A. Stevenson* – – – – – – – – 2078

Neyland :
Repairs to lighthouses executed at, *T. Matthews* 2242, 2366, 2368, 2370
References *T. Matthews* – – – 2044, 2388

North of England Shipowners' Association, reference *A. N. Hill* – – – – – 2008

North Sea :
Establishment of Lloyd's signal stations on lightvessels advisable *Capt. E. F. Inglefield* 3654
Wreck work of Northern Lighthouse Board in, *C. Dick Peddie* – – – – – 1348

Northern Lighthouse Board :
Abolition of, is undesirable *Sir W. Watson* 5699
Administration :
is Centred in the whole Board, *C. Dick Peddie* – – – – – 1551–3
Division of coast into districts *C. Dick Peddie* – – – – – – 1423
Efficiency of, *C. Dick Peddie, R. C. Rundell, Comdr. G. C. Frederick, S. Lawther, J. A. Fleming* – 1726, 3954–7, 4241–3, 4550, 4572, 4576, 3640–2
Questions of, referred direct to Board of Trade *Hon. T. H. W. Pelham* – 66–8
Selection of an Acting Board from among members would be no advantage *D. Crawford* – – – – – 5458–62
System not based on Trinity House system *C. Dick Peddie* – – – – 1714
Advice of Glasgow underwriters asked by, *R. C. Rundell* – – – – – 3948–9
Annual report of, *C. Dick Peddie* – – 1361–2
Board of Trade Control over. *see* Control over Lighthouse Authorities *under* Board of Trade.
Boats :
Attendance on light stations by, *C. Dick Peddie* – – – – – 1502–5
Payment of boatmen *C. Dick Peddie* 1503–4, 1678–9
Relief work done by, under contract *Sir T. Blomefield* – – – – 3230, 3319
Commissioners :
All *ex-officio* members *C. Dick Peddie* 1560–1
Allowances *C. Dick Peddie* – – 1638–43
Attendance of, *C. Dick Peddie, D. Crawford* – – 1359–61, 1377, 1581–3, 5452, 5563
are Not practical men *Capt. A. Wood* 3150, 3179
Number of, *D. Crawford* – – 5458–62
Original members *C. Dick Peddie* – 1296
Present members *C. Dick Peddie* – 1309
Qualifications for membership *A. N. Hill, D. Crawford* – – – 1894, 5453
Tenure of office *C. Dick Peddie* 1562–9, 1580
Thoroughly qualified to administer lighthouses *C. Dick Peddie* – – – 1658
Committees :
Finance :
is an Advisory Committee *C. Dick Peddie* – – – – – 1352
Personnel *C. Dick Peddie* – 1357, 1364
Powers in emergencies *C. Dick Peddie* 1364–6
Report to Board on tenders for store contracts *C. Dick Peddie* – 1467, 1470, 1473
New Works :
is an Advisory Committee *C. Dick Peddie* – – – – – 135
Considers improvements of existing lights *C. Dick Peddie* – – 1389–90
Proposals considered by, *C. Dick Peddie* – – – – – 1380
is Sub-committee of Finance *C. Dick Peddie* – – – – – 1357
Number of meetings held annually *C. Dick Peddie* – – – – 1355, 1362–3

Northern Lighthouse Board—*cont.*
Committees—*cont.*
Occasional:
are all Advisory, *C. Dick Peddie* 1352
Appointment and duties of, *C. Dick Peddie* – – – – – 1368–9
Inspection:
Duties *C. Dick Peddie* – 1636, 1370–71
Personnel *C. Dick Peddie* – 1374
Use the "Pharos" *C. Dick Peddie* 1521
in Constant communication with other Lighthouse Boards *C. Dick Peddie* – – 1715–7
Constitution:
Appointment of Chairman *C. Dick Peddie, D. Crawford* – – – 1375, 5452
Dates from 1798 *A. N. Hill* – – 1894
Description of, *Hon. T. H. W. Pelham, C. Dick Peddie, D. Crawford* – – 29, 1296, 1299, 1301–8, 5452
Election of members:
by Co-option *C. Dick Peddie, D. Crawford* 1299–1300, 1306–7, 5452, 5563
Power to assume new Commissioners *C. Dick Peddie* – – – 1299
is Fixed by Act of Parliament, 1786 *C. Dick Peddie* – – 1296, 1546, 1653
Members are unpaid *Hon. T. H. W. Pelham, Comdr. G. C. Frederick* 41, 4269
Objections to:
Lack of technical knowledge *Capt. W. S. Wade* – – – – 3725–6
Want of nautical element *Hon. T. H. W. Pelham, R. C. Rundell, H. Llewellyn Smith* – – – 41, 3953, 3983–6, 4066–9, 6069
Powers accorded by Acts of 1854 and 1894 *J. A. Fleming* – – – – 5456
Quorum for meetings *C. Dick Peddie* 1296, 1648, 1653
Representation:
of Large maritime towns desirable *C. Dick Peddie* – – – – 1576
of Various interests impracticable *C. Dick Peddie* – – – – 1547–50
is Representative of all localities *C. Dick Peddie* – – – – – 1310, 1575
Sheriffs:
Appointment of, almost exhausted *C. Dick Peddie* – – – 1570–1
are Co-opted as officials not as individuals *C. Dick Peddie, D. Crawford, J. A. Fleming* – 1300–1, 5455–7
are Practically life members *C. Dick Peddie* – – – – – 1568–9
See also RECONSTITUTION *below.*
Contracts:
Allocation of, *D. A. Stevenson* – 2563, 2568–76
Coal delivered by contractor at lighthouses *C. Dick Peddie* – – – – 1470–1
Lanterns and machinery obtained by, from Edinburgh or Glasgow firms *D. A. Stevenson* – – – – – 2568–70
Lowest accepted, unless for some special reason *D. A. Stevenson, D. Crawford* 2576, 2579, 5443
New works, except dioptric apparatus, executed by, *D. A. Stevenson* 2563, 2572, 2579
Oil:
Delivery of, to steam vessels *C. Dick Peddie* – – – – – 1468–9
Obtained from Scotch firms *C. Dick Peddie* – – – – – 1466–7
Reported on by Engineer *D. A. Stevenson* 2483
Stores obtained by, *C. Dick Peddie* – 1473–5
Submitted to Board of Trade for approval *C. Dick Peddie* – – – – 1737–9
Difficulty in discriminating between local and general lights *C. Dick Peddie* 1316–7, 1751–2
Engineer:
Attends annual meeting at Board of Trade *Sir T. Blomefield* – – – – 3338
Northern Lighthouse Board—*cont.*
Engineer—*cont.*
Duties *C. Dick Peddie, D. A. Stevenson* 1341, 1390, 1403, 1407–9, 1466, 1480–2, 1516, 2483–8, 2571
Has nautical knowledge *D. Crawford* 5471
Has no connection with administration of Board *D. A. Stevenson* – – – 2664–5
Payment:
Average total, *D. A. Stevenson* – 2491–2
Includes whole of engineering staff *D. A. Stevenson* – – – 2592–3
Not entitled to superannuation *Sir T. Blomefield* – – – – 3281
Objection to method of payment by fees *Hon. T. H. W. Pelham, Sir T. Blomefield* – – – 51–2, 3282
System of, *Hon. T. H. W. Pelham, C. Dick Peddie, D. A. Stevenson* – 51–2, 1403–6, 2483–5
Travelling allowance *D. A. Stevenson* 2489–90
is Scientific Adviser also *C. Dick Peddie* 1403
Uses one of Board's steamers for visiting lighthouses *D. A. Stevenson* – – 2594
Engineering workshops undesirable *C. Dick Peddie* – – – – – – 1700–4
Evidence on behalf of, *see* CRAWFORD, DONALD, K.C.; PEDDIE, COVENTRY DICK; FLEMING, JAMES ALEXANDER, K.C.
Expenditure:
Accounts:
Change in method of accounting made in 1900 *C. Dick Peddie* – – 5500
Inspection of books by Board of Trade *C. Dick Peddie* – – – 1339
Submitted quarterly to Board of Trade *C. Dick Peddie* – – – 1339
Allowance to Commissioners *C. Dick Peddie* – – – – – 1638–43
on Alterations *D. A. Stevenson* 2500, 2530–2
is Checked by Secretary *C. Dick Peddie* 1394
Controlled by Board of Trade *C. Dick Peddie* – – – – – 1739
on Distribution of stores *C. Dick Peddie* 1530
District Superintendents charged to Head Office *J. A. Fleming* – – – 5554–6
Economy strictly enforced *D. Crawford* 5442
on Experiments, 1901–6 *C. Dick Peddie* 1412–3 and Appendix B. V.
Head Office expenses *D. Crawford* – 5442
Increase since 1899 *A. N. Hill, C. Dick Peddie* – – – – 1796, 5479–83
on Lighted buoys and beacons and fog-signals *D. A. Stevenson* – – 2501–4

Average amount spent annually *D. A. Stevenson, A. N. Hill* – – 2493–5, 2607–11, 1802
Limit suggested to Lord Courtney's Committee repudiated by Board *A. N. Hill, D. A. Stevenson* 1803–5, 2605
Observations on statement of Sir T. Blomefield, *re* increase in pay and allowances *C. Dick Peddie* – – – 5499–5501
on Oil *J. A. Fleming* – – – 5648–50
on Ordinary repairs, 1906–7 *C. Dick Peddie* 1478
Relief of stations by hired boats charged to maintenance of lighthouses *Sir T. Blomefield* – – – – – 3387
Remuneration of Engineer, *see under* ENGINEER *above.*
Salaries and Wages:
Boatmen *C. Dick Peddie* – – 1678–9
Establishment officials *C. Dick Peddie* 1434, 5501
Lightkeepers' pay and allowances *C. Dick Peddie* – – – – 1485–95
Storekeepers at Granton *C. Dick Peddie* – – – – – 1528

Northern Lighthouse Board—*cont.*
Expenditure—*cont.*
Superannuation :
Details under various headings *Sir T. Blomefield* – – – – 3259
Extended to crews of steamers and lightvessel *Sir T. Blomefield* – 3286
Lightkeepers *C. Dick Peddie* – 1496
on Wreck work *C. Dick Peddie* – 1349

Experiments :
Acetylene gas adopted after being tried by Clyde Lighthouse Trustees *D. A. Stevenson* – – – – – 2557
Air motor for driving sirens tried and adopted *D. A. Stevenson* – – 2555
Board of Trade sanction refused to, *J. A. Fleming* – – – – – 5624
Diaphone tried at Girdleness *D. A. Stevenson* – – – – – 2557
Difficulty in obtaining funds for, *C. Dick Peddie* – – – – – 1410–1
Dissolved acetylene shortly to be tried *D. A. Stevenson* – – – – 2560
Expenditure on, *see that title above.*
Fusible plug for burners of unwatched lights tried and adopted *D. A. Stevenson* – – – – – 2560
Reavell compressor for fog-signals found satisfactory *D. A. Stevenson* – 2560
Various oil burners tried *D. A. Stevenson* 2557
Wireless telegraphy, substitution of, for sound fog-signals tried *D. A. Stevenson* 2560

Functions :
Construction of lighthouses, etc. *C. Dick Peddie* – – – – 1299, 1316
Control of local authorities since 1836 *C. Dick Peddie* – – 1341, 1586–8, 1591–5
Hydrographic notices issued by, *C. Dick Peddie* – – – – – – 1760–5
Initiation of new works for Scotland *Hon. T. H. W. Pelham* – – – – 152

Inspection :
of General seamarks *C. Dick Peddie, D. A. Stevenson* – – 1466, 2595
of Local lights *Hon. T. H. W. Pelham* 194
Light access to harbours of refuge *C. Dick Peddie* – – – – – 1544
Limitations regarding local lights *C. Dick Peddie* – – – – – 1544–6
Maintenance of lights for Congested Districts Board *C. Dick Peddie* – 1455–7, 1543, 1628–9
No control over light dues *C. Dick Peddie* 1745
Removal of wrecks *A. Owen* – – – 342
Responsible for collection of light dues in Scotland *C. Dick Peddie* – 1336–8, 1644–5

Head Office Establishment :
Accountant's duties *C. Dick Peddie* – 1415
Assistant Superintendent's duties *C. Dick Peddie* – – – – – – 1418–21
Candidates for higher clerical posts examined by Civil Service Commissioners, *C. Dick Peddie* – – – – 1663
Clerks, distribution of, *C. Dick Peddie* 1415–7

District Superintendents :
Assisted by hired mechanics *C. Dick Peddie* – – – – – 1423
Duties *C. Dick Peddie* 1423–32, 1477, 1480–1
Reference *C. Dick Peddie* – – 1698
Examiner of Accounts is clerk to the Accountant *C. Dick Peddie* – – 1416
House officer acts as messenger *C. Dick Peddie* – – – – – 1538
Officials are appointed by Board *C. Dick Peddie* – – – – – 1661
Salaries, *see under* EXPENDITURE *above.*

Secretary :
Accompanies Inspection Committee *C. Dick Peddie* – 1372–3, 1622, 1635
Attends annual conference at Board of Trade *Sir T. Blomefield* – 3338

Northern Lighthouse Board—*cont.*
Head Office Establishment—*cont.*
Secretary—*cont.*
Duties *C. Dick Peddie* – 1394–9, 1401
Responsibility of, *C. D. Peddie* – 1554–5
Staff employed *C. Dick Peddie* – 1392

Superintendent :
Duties *C. Dick Peddie* 1418–21, 1466, 1473–5
is Qualified to act as Secretary in emergency *C. Dick Peddie* – 1556–7
Headquarters are in Edinburgh *C. Dick Peddie* 1351

Jurisdiction :
Extent of, *Hon. T. H. W. Pelham, C. Dick Peddie* – – – – – 4, 1311
over Isle of Man *C. Dick Peddie* 1301, 1304–5
Length of coast line controlled *C. Dick Peddie* – – – – – 1435–7
over Local authorities *C. Dick Peddie* 1539

Lighthouses :
Number and power of, *D. A. Stevenson, D. Crawford, J. A. Fleming, C. Dick Peddie* – 2506–8, 5532–4 and Appendix B. VI.
One electric station only *T. Matthews* 2220
Relief of rock stations *J. A. Fleming* 5594
Short flashes disapproved *D. Crawford, J. A. Fleming* – – – 5546, 5621–3
Smaller burners used than at English and Irish stations *D. A. Stevenson* – 2525

Lightkeepers :
High standard of discipline *C. Dick Peddie* – – – – – 1497
Library system *C. Dick Peddie* – 1766
Number of, *D. Crawford* – – – 5528–31

Lightvessel (North Carr) :
Relief of, *J. A. Fleming* – – – 5594
is The only one in Scotland, *T. Matthews, C. W. Scott, Sir T. Blomefield* 2279–80, 2311, 2330, 2812, 3385
Meets fortnightly *C. Dick Peddie* – – 1353
Notices to Mariners issued by, are not clear *Capt. T. H. Tizard* – – – – 3477
Number of communications in 1905–6 with Board of Trade *D. Crawford* – – 5526–7
Policy of, as to lighting of coast *D. A. Stevenson* 2493–5

Reconstitution :
Advocated :
by Appointment of Nautical Adviser *D. Crawford, H. Llewellyn Smith* 5471, 6076–7, 6083, 6136–7
by Dismissal of non-attending members *H. Llewellyn Smith* – – 6085
by Representation of shipowners and shipmasters *Capt. W. S. Wade* 3698, 3707–8, 3728–9, 3845
Introduction of nautical element not opposed by Board *C. Dick Peddie, D. Crawford* – 1659, 5450–1, 5561–2, 5566–7
Not desired by Board *D. Crawford* 5452, 5561
Representation of shipowners difficult to arrange *Hon. T. H. W. Pelham* 85, 216, 222
Representation of, at annual conferences at Board of Trade *C. Dick Peddie* – – 1694–6

Revenue :
Prior to 1853 annual account presented to Parliament *C. Dick Peddie* – – 1330
Source of, *C. Dick Peddie* – 1330–1, 1336

Scientific Adviser, *see* ENGINEER *above.*
Seamarks, number controlled by, *D. A. Stevenson* – – – – – – – – 2483

Steam Tenders :
Addition of one in 1900 *C. Dick Peddie* 5499–5501
Amount of time spent in inspection work *D. A. Stevenson* – – – 2597–2601
are Economically used *J. A. Fleming* 5662

"Hesperus" :
Description of, *C. Dick Peddie* – 1520
Reference *D. Crawford* – – 5471

Northern Lighthouse Board—*cont.*

Traffic on North-west of Scotland is increasing 1618
Reference *Sir W. Watson* – – – 5743

PELHAM, THE HON. THOMAS HENRY WILLIAM, C.B., Assistant Secretary (Harbour Department) Board of Trade 1–253, 6091–6218

Admiralty :
Has no control over seamarks – – 78–9
is Local Lighting Authority for naval ports 231–2

Advisory Committee of the Shipowners of the United Kingdom :
Appointment and constitution of, – 10–13
Desirability of legalising – – 102, 139–140
Election of Irish members – – 103–5
Nature of, – – – – – 100–1
Procedure for urgent new works – 106–7
Unsatisfactory position of, – – – 184
Value of, – – – – – – 15
Works objected to, and works suggested by, 16 and Appendices A. II. and III.

Board of Trade :
Control General Lighthouse Fund – 76–7 181–2, 204–7

Control over Lighthouse Authorities :
Inspection :
of Books – – – – 195–6
of Seamarks – – 25, 27, 190–3
Nature and extent of, – 20–1, 160–3 177–82, 243–53, 6091
Sanction required :
for Expenditure – 9, 187–9, 227–9,
for New Works – – – 20, 161
Has no power of initiation as regards lighthouses – – – – 20, 57, 84, 6091
Power of initiation not desired by, – – 57
Power of Nautical Adviser – – 170–6
Staff employed for lighthouse work – 164–9
Conflicting interests of shipowners and fishermen – – – – – – – – 120
Congested Districts Board erect some local lights in Scotland and Ireland – – – 127
Difficulty of defining limit of jurisdiction of Local Authorities – – – 31, 136, 236–7
as to Disagreement *re* necessity for Mizen Head light and fog-signal – – – – 6171–6
Documents put in by, – 14a, 16, 17, 39, 44, 185

Efficiency of coast lighting :
English and Irish coasts better lighted than Scottish – – – – – 130–1
National importance of, – – – 97–8

Pelham, The Hon. Thomas Henry William, C.B.—*cont.*
General Lighthouse Fund :
Arrangement with Treasury for support of foreign lights – – – – – 145
Collection of revenue – – – 34–6
Condition of, is satisfactory – – 198–9
Controlled solely by Board of Trade 76–7, 181–2, 204–7
Provides only "passing" lights – 53, 119

Light dues :
Basses and Monoquy, cover expenditure on their upkeep – – – – – 151
Exemption of fishing vessels – – – 221
Maximum is fixed by Statute – – 200–2
Questions as to liability of ships – 209–11
Reduction of, – – – – – 198, 201
System of levying – – – – 36, 208

Lighthouse administration, change in, desirable – – – – – – – – 99

Lighthouse Authorities :
Local :
Generally is harbour authority – – 64
Jurisdiction of, – – – – – 6
Source of funds – – – 63–4
Summary of, – – – – – 156–163

The Three General :
Accounts :
Examination of, by shipowners deprecated – – – 6218
Separation of, from those of foreign possessions not possible 143–5
System of control and audit 37–9

Constitution :
Description of, – – 28–9, 108–16
as to Desirability of representation of interests – 121–7, 132
Objections sometimes raised to, 49–52

Representation of shipowners :
is Advisable – – – 85
Difficult to provide for on Scotch and Irish Boards – 46, 85, 216, 222

Contracts :
Board of Trade control leads to uniformity – – – 95–6
Require Board of Trade sanction 21–2

Expenditure :
is Decreasing – – – 217–9
Establishment expenses and pensions are fixed by Order in Council – – – – 23–4
on Experiments refused by Board of Trade – – – 240–2

New Works :
Cost of, – – – – 220
Proportion to total expenditure – – – – 6104
Procedure as to, – – – 17–19

Functions :
as regards Local Lights – 53–6, 194
as regards Wrecks – – 29–30
Irish Lights Board's administration is unsatisfactory, 43 and Appendix A, IV.
Jurisdiction of, – – – – – 3–6
Northern Lighthouse Board, efficiency of, – – – – – – – 41
Relations to each other and to Board of Trade – – – – – 7–9

Trinity House :
Control :
over Local Authorities – 59–60
over Scotch and Irish Boards 65–73, 224–6, 238
Efficiency and responsibility of, 40, 212–4
Functions of, – – 61–2, 238–9
Unfounded objections made as to, 51–2

Pelham, The Hon. Thomas Henry William, C.B. —*cont.*
Lighthouse powers, definition – – – – 179
New Works:
Initiation of, – – – 20, 57, 84, 152, 6091
Procedure for, – – – 14–20, 73–5, 81–3
Observations on Statements of:
as to "Ierne," *Sir W. Watson* – – 5764
as to Inspection of local lights in Ireland, *Sir W. Watson* – – – – 5743–9
as to Unsatisfactory methods of Irish Lights Board, *H. G. Cook* – – 5775–5791

Queenstown:
Camden Fort, reference *Sir W. Watson* – 5773
Carlisle Fort, reference *Sir W. Watson* – 5773
is Lighted by Admiralty and Cork Harbour Board *Sir W. Watson* – – – 5771–4
is Limit of jurisdiction of Cork Harbour Board *Sir W. Watson* – – – – – – 5758

Ramsgate steam tenders are repaired at Blackwall *T. Matthews* – – – – – – – 2146

Rathlin:
Light desirable at, *Sir W. Watson* – – 5827
Proposal for light withdrawn by Advisory Committee *Sir W. Watson* – – – 5824–30
Reference *Sir W. Watson* – – – 5732

RAYLEIGH, THE RT. HON. THE LORD, O.M.: 4078–4155
Assisted at experiments on zones of silence of fog-signals *T. Matthews* – – – 2115
Considers it unnecessary to measure exact intensity of electric light *T. Matthews* – 2034
Duties as Scientific Adviser of Trinity House 4078, 4120–1
Experiments:
Experimental establishment under Trinity House advocated – – – – 4152
on Fog-signals:
Cannot be tried during fog – 4133–5
Leading to adoption of elliptical siren horn – – – – – 4117–9
at St. Catherine's, 1902:
Description of, – – 4096–4103
Diaphone tried at, – – 4085
at Skerries in 1904 – – – 4093–5
Fog-horn designed by, *T. Matthews* – 2114
Fog-signals:
Areas of Silence:
Impossible to overcome – – 4153
Vary according to condition of weather 4100–2
Experiments on, *see under* Experiments *above.*
Explosive, addition of aluminium charge gives brighter flash – – – 4090–1
Relative merits of siren and diaphone 4103–6
Submarine Bell:
Advantages of, – – – – 4126
Experiments tried successfully on Goodwin Lightship – – 4107–19
Lighthouses:
Powerful lights not always advantageous 4146–7
Projection of Beam of Light Upward:
Proposed by Mr. Azemar – – 4091
Value of, – – – – – 4136–7
Relative values of illuminants for, – 4138–40
List of reports made by, for Trinity House 4081–9
Wireless telegraphy, as to possibility of gauging distance of signals – – – 4141–3
Reference *A. Owen* – – – 287

REDINGTON, T. N., Secretary to Galway Harbour Board and to Conference of Harbour Authorities in Ireland: 4741–3, 4890–4922, 4935–41
Government administration of seamarks advocated – – – – – – – 4890–4922
One Central Lighthouse Authority approved 4908
as to Remuneration of Lighthouse Authority 4935–41

Removal of Wrecks, *see* Removal *under* Wrecks.

Renfrew, Sheriff of, is member of Northern Lighthouse Board *C. Dick Peddie* – – 1296, 1309

Rhu Rhea, difference of opinion between Trinity House and Scotch Board as to necessity for light *J. A. Fleming* – – – – – – 5468–9

RIALL, COMMANDER ARTHUR G. :
is Member of Irish Lights Board and its Committees *H. G. Cook, Sir W. Watson* 754, 771, 816, 834, 5749
References *H. G. Cook* – – 774, 793, 795, 855

RIBIÈRE, MONSIEUR :
Disapproves of electricity for coast lighting purposes on account of cost *D. A. Stevenson* 2623
is French Lighthouse Engineer *T. Matthews* 2102
is In constant communication with Trinity House Engineer *T. Matthews* – – 2152
Wrote papers for Milan and St. Louis Conferences *T. Matthews* – – – – 2188–9
Reference *T. Matthews* – – – – 2238

RITCHIE, THE RIGHT HON. CHARLES THOMSON, P.C., *see* RITCHIE, THE LORD.

RITCHIE, THE LORD, *The late* :
Brought in an Act providing that light dues should be applied only to lighthouse maintenance *A. N. Hill* – – – – 1836
Inspected Scotch seamarks *D. A. Stevenson* 2676
was President of Board of Trade *Hon. T. H. W. Pelham* – – – – – – 10
References *Hon. T. H. W. Pelham, A. N. Hill, S. Lawther, Sir G. Vyvyan* – – 140, 1841, 4493, 4948

ROCHES POINT, buoy depôt in course of construction at, *H. G. Cook, C. W. Scott* – – 1216, 2850

ROCHFORD, Mechanical Engineer to Irish Lights Board, reference *Sir W. Watson* – 5764, 5767

ROCKALL :
Light at, desirable *Sir W. Watson* – 5768
References *Capt. E. F. Ingleſield, Sir W. Watson* – – – – – 3645–7, 6051

Ross, Sheriff of, is member of Northern Lighthouse Board *C. Dick Peddie* – – – 1296, 1309

ROSSES POINT, reference *C. W. Scott* – – 2820

OSSLARE :
Buoy for, lent by Trinity House to Irish Lights Board *T. Matthews* – – 2356

Gas Buoys :
Objected to by Advisory Committee *Hon. T. H. W. Pelham, A. Owen* – 54, 724
Sanction refused by Board of Trade *Hon. T. H. W. Pelham, A. Owen* – 56, 724
Light erected at, by Great Western Railway *Sir W. Watson* – – – – – 5739
Lights at, should not be provided out of General Lighthouse Fund *H. J. Forde* 4710–2, 4857–60
References *Hon. T. H. W. Pelham, A. Owen, H. J. Forde* – – 137, 722, 831, 4710–2

ROXBURGH, Sheriff of, is member of Northern Lighthouse Board *C. Dick Peddie* – – 1309

ROYAL COMMISSIONS AND DEPARTMENTAL COMMITTEES :
Highlands and Islands Commission, 1891, recommended certain additional lights *C. Dick Peddie* – – – – – – – 1455
Lighthouse Commission, 1861, recommended that local lights should not be paid for by Mercantile Marine Fund *Sir G. Vyvyan* 5112

Lord Courtney's Committee (Mercantile Marine Fund) :
Comparison of English and French lighthouse services considered *A. Owen, Sir G. Vyvyan* – – – – – – 323, 5095

Limit suggested for Expenditure on New Works :
Has been greatly exceeded *A. N. Hill* – – – – – 1802
Not agreed to by Irish Lights Board *Sir W. Watson* – – – 5710
Statement of, *Hon. T. H. W. Pelham, C. Dick Peddie, A. N. Hill, D. A. Stevenson* (?) – 17, 1610–2, 1803–6, 2602–3

Royal Commissions and Departmental Committees —*cont.*
Lord Courtney's Committee (Mercantile Marine Fund)—*cont.*
No fixed allowance for new works recommended by, *A. N. Hill* – – 1990
References *Hon. T. H. W. Pelham, H. G. Cook, C. Dick Peddie, A. N. Hill, Capt. W. S. Wade, D. Crawford* – – 217, 859, 1319, 1341, 1847, 3692, 5480, 5507
Port of London, reference *A. N. Hill* – 1908

RUNDELL, R. COOPER, Secretary to Association of Underwriters and Insurance Brokers, Glasgow – – – – – 3935–4077

Glasgow Underwriters' Association :
Advice of, asked by Northern Lighthouse Board – – – – – – 3948–9
Constitution of, – – – – 3937–40
Representations of, to Lighthouse Authorities receive consideration – – 3942–7

Lighthouse Authorities :
One Central, advocated – – 3966, 3982

The Three General :
Constitution is unsatisfactory – 4066–8

Reconstitution :
Advocated – – – 3952–62, 4037
Representation of shipowners and underwriters advocated – 3953, 3958–60, 3982–6, 4069–74

Lighting and Marking of Coast of United Kingdom :
Administration by Government advocated 3963–78, 4000–1, 4026, 4046–7
is Efficient – – – – – 4063
Shipowners and underwriters are in unison as regards, – – – – – 4017
Removal of wrecks is carried out by contractors 4031–4
Salvage Association is connected with Glasgow Underwriters' Association – – – 3950

RYAN, LOCH :
is a Gas light *C. Dick Peddie* – – 1448
Reference *D. Crawford* – – – – 5507

ST. ABB'S HEAD, cost of coastguard cottages erected by Lloyd's *D. A. Stevenson* – – – 2590

ST. CATHERINE'S :
Fog-signal Experiments :
1901–2 :
Air motor for siren tried *D. A. Stevenson* – – – – 2556
Areas of silence observed *T. Matthews, Lord Rayleigh* – 2117, 4100–2
Co-operation of General Lighthouse Authorities *C. Dick Peddie, T. Matthews, D. A Stevenson, C. W. Scott* 1722, 2360, 2711, 2713, 2832, 2873
Description of, *Lord Rayleigh* 4096–4103

Diaphone :
Found efficient but not economical *Lord Rayleigh* – 4085, 4103
Not found more satisfactory than other signals *Capt. T. H. Tizard* 3521–2
Different forms tested *Lord Rayleigh* 4098
Importance of, *Lord Rayleigh* – 4096–7
Reed signals not found efficient *J. A. Fleming* – – – – – 5467
Siren pronounced the most efficient signal *T. Matthews, Lord Rayleigh* 2112, 4096–9
Witnessed by Scotch and Irish Engineers *T. Matthews* – – 2360
References *D. A. Stevenson, Lord Rayleigh* 2561, 4119

St. Catherine's—*cont.*
Fog-signal Experiments—*cont.*
1906:
Diaphone tried *Lord Rayleigh* – 4085–6
Irish Board represented at, but not Scottish *Sir G. Vyvyan* – – 5065
Lighthouse:
See under ENGLAND *under* LIGHTHOUSES.
is Unsatisfactory station for fog-signal experiments *Lord Rayleigh* – – – – 4152

ST. GEORGE'S CHANNEL:
Improvement of lights contemplated *T. Matthews, Sir G. Vyvyan* – – 2376, 4992
Reference *Sir G. Vyvyan* – – – 5157

ST. LOUIS CONGRESS, English and French Lighthouse Authorities exhibited at, *T. Matthews* 2188

SCILLY ISLES, references *T. Matthews* – 2216, 2251

SCOTLAND:
Coast is not yet efficiently lighted *Hon. T. H. W. Pelham, C. Dick Peddie, J. A. Fleming* 130–1, 219, 1614–6, 3641, 5674
Frequency of fogs *J. A. Fleming* – – 5629
Lighthouse Authority, *see* NORTHERN LIGHTHOUSE BOARD.
Necessity for separate Lighthouse Board for, *Sir W. Watson* – – – – – 5809

SCOTT, C. W., Engineer-in-Chief to Irish Lights Board: – – – – – 2730–3222
Appointments and qualifications – – 2730–4
Board of Trade Control over Lighthouse Authorities:
is Advantageous – – – – 3092
over New works – – – – 2902–3
Buoys:
Cost of, *see under* EXPENDITURE *under* IRISH LIGHTS BOARD *below.*
Description of, – – – – 2857–8, 2860
System of attending to, and replacing, in Ireland – – – – 2850, 3061–3
Trinity House object to, for South Shear 2859
Whistling, are very satisfactory – – 2849
Conducted experiments on incandescent lights at Kingstown *Sir R. Ball* – – – 6031a
Experiments:
are Carried out by Engineer – – 2822
Difficulties in carrying out fog-signal, 3006
on Dioptric apparatus cost nothing – 2861–2
Facilities for trying, given to inventors 2867
French Lighthouse Authorities do more, than British – – – – 3011
Grant of definite annual sum for, advocated 2868–9
Grubb reflector is being tried for unlighted buoys and beacons – – – 3131
Impossible to communicate every step to other Boards – – – – 2880–2
Incandescent oil burners tried 1900 and since adopted – – – – 2794–5
Reluctance of Board of Trade to sanction expenditure on, – – – 2864–6, 3007
Sirens tried at Kingstown – – 2866
Three Lighthouse Boards unite only for important, – – – – 2832, 2870–3
Fog-signals:
All, are liable to areas of silence – 2840–1
Barr Point electric signal, is economical 3021–2
Employment of more than one note for, is unsatisfactory – – – – 2828–31
Explosive:
Cost of, – – – – 2998–3001
is Most efficient form of signal – 2834–9
Imperfection of, – – – – 2832, 3005
Mizen Head, disapproved by Irish Lights Board – – – – – – 3014–7
Names and description of Irish, – 2844, 2847–8, 3003–4

Scott, C. W.—*cont.*
French coast more efficiently lighted than that of United Kingdom – – – – 3034
Has no knowledge of dispute between Board of Trade and Irish Lights Board as to Fastnet Lighthouse – – – – – 3124–31
Illuminants:
Acetylene gas advocated for unwatched lights – – – – – – 3096
Incandescent oil, economy and efficiency of, 2798, 2824–7
Irish coast is efficiently lighted – 2981, 3031–3
Irish Lights Board:
Administration is economical – – 3023–4
Expenditure:
Accounts are checked by check clerk 2891–4
on Buoys – – – 2855–6, 2860
on Lighting apparatus – – 2976–80
on Lightkeepers' dwellings – 2939–52
on New Works:
Average – – – – 2962–4
For ten years – 2763–73, 2775–8, 2780, 2786
on Special repairs – – – 2965
Head Office Establishment:
Engineer's duties – 2742, 2753–60, 2822, 2889–91, 2900, 2907–9, 2916, 2921–2, 2927–8
Engineering Staff:
Duties – – – – 2781–2
Personnel – – – – 2735–46
Salaries – – 2783–4, 2953–61
System of employing temporary draughtsmen is satisfactory 2895–9
Inspector's duties – – 2742, 2927–8
Inspection Committee makes an annual tour 2911–2, 3097–3100
Lights never handed over by, to local authorities – – – – – 3105–6
Recent improvements conducing to economy – – – – – 2821
Steam Vessels:
Effect economy – – – – 3111–2
Secretary and Inspector responsible for maintenance of, – – 2742, 2927–8
Work of, – – – – – 3074–7
Work of, often delayed by Trinity House or Board of Trade – – – 3012–3

Kingstown Workshops:
Description of work done at, 2886–8, 3041–57
are Under superintendent – 2747–9, 2934

Lighthouses:
Alterations:
are Carried out by Engineer or by contract – – – – 2773
as to Necessity for, – – – 2973–5
Oyster Island, two lights replaced by one – – – – – 3115
Constancy of candle-power is first necessity for, – – – – – – – 2796
Efficiency of Irish Lighthouses, in detail 2787–2810
Fastnet:
Account of, is published – – 2883–4
Cost of, – – – – 2968
Efficiency of, – – – – 2788–91
Electrical communication with shore 3124–9
Gas is being replaced by incandescent oil 2801–4
as to Length of flash desirable – 2985–7
Local lights maintained by Irish Lights Board – – – 2813–8, 2818–9, 3119–20
Obsolete methods of distinguishing stations 2983–4

Scott, C. W.—*cont.*
Lighting Apparatus :
Advantages of biform, – – – 2821
Burners only are manufactured by Irish Lights Board – – – – 3078–80
Cost of, *see under* EXPENDITURE, *under* IRISH LIGHTS BOARD *above.*
Incandescent Oil Burner :
Forms used by English and Scotch Authorities – – – – 2992–5
Pattern adopted in Irish Lighthouses was designed by the Lighthouse Engineer – – – – 2989
Mercury floats, form now in use – 2996–7
Policy of Irish Lights Board with regard to, – – – – – – 2821–7
Wigham gas lights introduced first in Ireland – – – – – 2821
Lightvessels :
All, in Ireland have revolving or flashing light – – – – – – 2810
Diameter of mooring chains for, – 3118
Fixed lanterns have improved lights in, 2810–1
Northern Lighthouse Board have only one 2812
Responsibility for, in Ireland shared by Inspector and Engineer – – 3067–9
New Works :
Change of lighting apparatus and illuminant regarded as, – – – – 2805
Cost of, *see under* EXPENDITURE *under* IRISH LIGHTS BOARD *above.*
Departmental charges not included in cost of, – – – – – – 3070–3
More done by Engineer's staff than by contract – – – – – 2762, 2936
None urgently required in Ireland except conversion of lights – – – 3035–40
Procedure for initiation of, – – 2900–3
Statement showing works done by contract and their cost – – 2763–73, 2775–8, 2786
Notices to Mariners are prepared by the Inspector – – – – – – 3093–4
Objection of Trinity House to biform apparatus at St. John's Point – – – – 2900
Observations on Statements of :
as to Detailed examination by Trinity House of schemes of other Boards *Sir G. Vyvyan* – – – – – 5086–7
as to Local lights *Sir W. Watson* – 5875–8
Oil, methods of testing, – – – – 2925–6
One Central Lighthouse Authority :
One Engineer would be sufficient – 3088–9
Would not be more economical than present system – – – – – 3082–7
Special Repairs :
Cost of, *see under* EXPENDITURE *under* IRISH LIGHTS BOARD *above.*
Executed by Engineer's staff – – 2773
Need special sanction – – – 2779
Unwatched Lights :
Six to be erected at Sligo – – 2820
Names of Irish – – – – 2820
References *D. A. Stevenson, Sir W. Watson, H. G. Cook* – – 2486, 5767, 2784, 2786–7

SHIPMASTERS:
Association of, *see* BRITISH SHIPMASTERS' AND OFFICERS' PROTECTION SOCIETY.
Representation of on Lighthouse Boards:
Advocated *Capt. A. Wood, Capt. W. S. Wade, R. C. Rundell* 3154–7, 3190, 3728–9, 3797, 3960
Deprecated *Comdr. G. C. Frederick* – 4262–5

SHIPOWNERS:
Administration of seamarks by, advocated *A. N. Hill* – – – – – – – 2011–2
Advisory Committee of, *see that title.*
Advocate one Central Lighthouse Authority in place of the three existing Boards *Hon. T. H. W. Pelham* – – – – – – 51
Amount of light dues paid by, *A. N. Hill* 1785
Associations of, *A. N. Hill, Capt. W. S. Wade* – – – – – 2006–9, 3753–6
Desire that Lighthouse Accounts should be published in greater detail *Sir T. Blomefield* 3372–4
Different classes of, not antagonistic to each other *Capt. W. S. Wade* – – – 3749–52
Difficulty in forming satisfactory register of, *Hon. T. H. W. Pelham* – – – 46–7
are Directly interested in lighting of coast *Capt. E. F. Inglefield* – – – 3641
Dissatisfied with limitation of duties of Advisory Committee *Hon. T. H. W. Pelham* – 12
Establishment of new lights not obstructed by, *R. C. Rundell* – – – – 4017
Examination of detailed Lighthouse Accounts by, deprecated *Hon. T. H. W. Pelham* – 6218
Interests of, are opposed to those of fishermen *Hon. T. H. W. Pelham* – – – – – 120
New works frequently initiated by petitions from, *T. Matthews* – – – – 2195
No companies of, exist in Ireland *Hon. T. H. W. Pelham* – – – – – – – 104
Notices relating to seamarks sent to, by Trinity House *A. Owen* – – – – – – 604
Opinions of, occasionally asked by Lighthouse Authorities *A. Owen, C. Dick Peddie* 370–1, 1654
Representation:
on Advisory Committee *Hon. T. H. W. Pelham* – – – – – 10–11, 48
on Committees of Trinity House *Hon. T. H. W. Pelham, A. Owen* – – 47, 281
on Lighthouse Boards:
Advocated *Hon. T. H. W. Pelham, Capt. W. S. Wade, R. C. Rundell, H. J. Forde, H. Llewellyn Smith* – 45, 85, 3697–9, 3705–7, 3751, 3761, 3796, 3801, 3958, 4055, 4848–9, 6069–70, 6074–7, 6082
Deprecated *A. N. Hill, Comdr. G. C. Frederick, Sir G. Vyvyan, Sir W. Watson* – – 1937–8, 4262–5, 4948, 5694, 5793–5, 5843–4, 5923, 5965–6
Difficulty of providing for, on Scottish and Irish Boards *Hon. T. H. W. Pelham* – – – – 216, 222
Legislation would be necessary to provide for, *Hon. T. H. W. Pelham* 215
Not desired by themselves *H. Llewellyn Smith* – – – 6213
Would not necessitate abolition of Advisory Committee *H. Llewellyn Smith* – – – – 6078, 6141

Shipowners—*cont.*
Should not bear cost of lighting of coasts *Capt. E. F. Inglefield* – – – – – 3630
Transmit orders to vessels through Lloyd's *Capt. E. F. Inglefield* – – – – 3574, 3622
Very few, in Dublin *Hon. T. H. W. Pelham* – 46
Views of, represented to Lighthouse Authorities, through Advisory Committee *Comdr. G. C. Frederick* – – – – – – 4261

SHIPPING:
Casualties:
Importance of immediate reporting of, to Lloyd's *Capt. E. F. Inglefield* – 3586
Reported to Lloyd's by lightkeepers *Capt. E. F. Inglefield* – – – – 3586–7
Fees, abolished 1882 *A. N. Hill* – 1836, 1963
Importance of insurance of, *Capt. E. F. Inglefield* – – – – – – – 3621–2
Increase in size and speed of vessels necessitates increase in power of lights *S. Lawther* 4464–73
Total tonnage of British vessels *A. N. Hill* 1915–6

SHIPPING FEDERATION:
Deputation to Board of Trade as to reconstruction of Lighthouse Boards *Hon. T. H. W. Pelham* – – – – – – 10–11
Represented to Board of Trade necessity for light and fog-signal at Mizen Head *Capt. A. Wood* – – – – – 3160, 3177
Reference *Capt. W. S. Wade* – – – 3692

"SHIPPING GAZETTE," Notices to Mariners advertised in, *Sir G. Vyvyan* – – – – 5415

SIGNAL STATIONS, *see under* LLOYD'S.

SKERNAGHAN POINT:
Barr Point fog-signal should be removed to, *S. Lawther* – – – – – – 4488
Reference *S. Lawther* – – – – 4504

SKERRIES:
Experiments regarding areas of silence of fog-signals tried at, *T. Matthews* – – 2115
Lighthouse, *see under* ENGLAND, *under* LIGHTHOUSES.
Unsuitable position for fog-signal experiments *Lord Rayleigh* – – – – – 4152

SKYE, references *C. Dick Peddie, D. A. Stevenson* 2483

SLIGO, references *C. W. Scott, H. J. Forde, T. F. Cooke, Sir W. Watson* 3115, 4700, 4813, 5752, 5863

SLYNE HEAD, reference *H. G. Cook* – – 1016

SMITH, SHERIFF GUTHRIE, statement of, before Lord Courtney's Committee as to cost of new works repudiated by Northern Lighthouse Board *D. A. Stevenson* – – – – – 2602–6

SMITH, HUBERT LLEWELLYN, C.B., Permanent Secretary to the Board of Trade: 6056–6221
Advisory Committee:
Abolition not necessitated by representation of shipowners on Lighthouse Boards 6078, 6141
Constitution of, – – – – 6214–5
Value of, – – – 6088, 6142–3, 6216
Board of Trade:
Control over Lighthouse Authorities:
as to Amount of work involved – 6186–91
Financial control only advocated 6060
Power of compelling Authorities to carry out new works advocated 6060, 6089–95, 6170
Claim of fishing industry to consideration 6150–3
Lighthouse Authorities:
One Central:
Colonel Herbert's suggestion of, to replace Board of Trade, views as to, 6105–33 and Memorandum, page 260
Deprecated – – – – 6067
Would necessitate sub-departments in Scotland and Ireland – – 6065

Smith, Hubert Llewellyn, C.B.—*cont.*
Lighthouse Authorities—*cont.*
The Three General:
Constitution:
Nautical adviser for Scotch and Irish Boards advocated 6076–7, 6083, 6136–7
Representation of shipowners advocated – 6069–70, 6074, 6082
Control of Trinity House over Scotch and Irish Boards:
is Limited to new works – 6096–6104
as to the Necessity for, 6079, 6138–40
Irish Lights Board:
Representation of Harbour Boards deprecated – – – 6154–60
Reconstitution, suggestions for,– 6069–85
Retention with remodelled constitution advocated – – – 6114, 6135–7
Trinity House:
Superannuation of Elder Brethren advocated – – 6086–7, 6144
Value to Board of Trade of advice of, on Scotch and Irish questions 6079–80, 6099–6102, 6138–40
Uniformity in system of accounting is desirable – – – – 6179–83
Lighthouse Administration:
by Board of Trade, deprecated – – 6059–64
Retention of three Authorities, with reformed constitution, advocated – 6067–87
London seamarks are maintained by General Lighthouse Fund – – – – 6165–9
Shipowners, representation of, on present Lighthouse Boards not desired by themselves 6213
Underwriters, representation of:
on Advisory Committee – – – 6204
on Lighthouse Boards, deprecated – 6204–6

Solent, gas buoys in, maintained by Trinity House for Admiralty *A. Owen* – – – – – 314

Solicitor-General for Scotland:
is Member of Northern Lighthouse Board *C. Dick Peddie, D. Crawford* – 1296, 1309, 5452
is a Political appointment *C. Dick Peddie* 1562, 1565

Sombrero lighthouses are maintained by General Lighthouse Fund *Hon. T. H. W. Pelham* – – 38

South Briggs Reef, *see under* Belfast Lough.

South Foreland:
Experiments:
on Fog-signals, co-operation of the Lighthouse Authorities *D. A. Stevenson* 2711
on Illuminants, 1893:
Co-operation of the Lighthouse Authorities *D. A. Stevenson* – 2552–3
Electricity, advantages of, proved *Sir R. Ball* – – – – 6040
Importance of, *Sir R. Ball* – 6031a
Incandescent light not tried *Sir R. Ball* – – – – – 6042
Introduction of Wigham Gas Lights in Ireland gave rise to, *C. W. Scott* 2821
Photometric method of measuring power of lights established *D. A. Stevenson* – – – – 2633
References *T. Matthews, D. A. Stevenson, C. W. Scott* – – – 2095, 2561, 2821
Lighthouse, *see under* England *under* Lighthouses.

South Shear, lighted buoy for, proposed by Irish Lights Commissioners *A. Owen*– – – – 726

South Stack, Lloyd's signal station removed from, *Capt. E. F. Inglefield* – – – – 3574

Southampton:
is Not lighted by Trinity House *Capt. A. W. Clarke, A. Owen* – – – – 5122
is Represented on Trinity House Board *Sir G. Vyvyan* – – – – – – 5044
is a Trinity House Outport *A. N. Hill* 1854, 2005

Smiley, Sir Hugh, yacht belonging to, nearly wrecked off Skernaghan Point *S. Lawther* – 4294

Spitbank is limit of jurisdiction of Irish Lights Board in Cork Harbour *Sir W. Watson* – 5757

Spurn:
is Northern limit of English lightships *T. Matthews* – – – – – – 2367
Reference *Sir G. Vyvyan* – – – 5097

Stanley, Lord, of Alderley, reference *Sir R. Ball* – – – – – – – 6032

Steam Vessels:
"Anglia" wrecked on Bally Quinton Point *S. Lawther* – – – – 4504, 4508–13, 4562
"Copeland," Blackhead fog-signal not heard by, *S. Lawther* – – – – – 4498
Increasing speed of, necessitates changes in Lloyd's signal stations *Capt. E. F. Inglefield* 3574–5
"Majestic," reference *Sir R. Ball* – 6036, 6045
"Montagu," H.M.S., loss of, directed attention of Trinity House to areas of silence of fog-signals *A. Owen, T. Matthews, Sir G. Vyvyan* 527, 2268, 5065
"Teutonic," reference *Sir W. Watson* – 5946
See also Steam Tenders *under* Irish Lights Board, Northern Lighthouse Board, Trinity House.

Stevenson, David, *Senior, the late*, formerly Engineer to Northern Lighthouse Board *D. A. Stevenson* – – – – – – 2477

STEVENSON, DAVID A., Engineer to Northern Lighthouse Board: – – – 2476–2729
is Acquainted with administrative systems of three Lighthouse Authorities – 2666–9, 2729
Appointments and qualifications of, *C. Dick Peddie* – – 1403, 1585, 1656, 2476–82, 2490
Contracts:
Allocation of, – – – – 2576, 2579
Buildings always constructed by, 2563, 2572, 2579
Lanterns and machinery obtained by, 2568–70
Cost of coastguard cottages erected by Lloyd's 2590–1
Experiments:
Co-operation of General Authorities at St. Catherine's and South Foreland – 2553–4 2557, 2711
Expenditure on, is sufficient – – 2561–2
Summary of, tried by Northern Lighthouse Board – – – – – – 2551–60
Fog-signals:
Areas of Silence:
Cause of, – – – – 2559, 2646–8
Eradicated partially at Stroma – 2558
Bell on unattended lightvessels carries further if raised high – – – 2639–40
Explosive, objections to, – – – 2547
Reavell Compressor tried and adopted 2560
Siren:
is Most satisfactory form of signal 2545, 2555
Rayleigh horn not used in Scotland 2708
Scotch, is better than English or Irish 2707
Submarine bell advocated, *D. A. Stevenson* 2651
Illuminants:
Acetylene:
Not used by English or Irish Lighthouse Authorities – – – 2705 6
is Preferable to oil for unattended lights 2634
Used in four Scotch beacons – 2532a–4

Stevenson, David A.—*cont.*
Illuminants—*cont.*
Electric Light:
Advantages – – – – 2612–5
Disadvantages:
Cost – – 2510–2, 2518, 2613
Lack of fog-penetrating power 2517
Installed at Isle of May at request of Board of Trade – – – 2515–6
Use of:
in England – – – 2616–20
in France – – – 2621–3, 2626
Gas:
is Economical at small stations – 2529–32
Pintsche's oil, used for Scotch buoys and beacons – – – – 2527–8
Incandescent oil was introduced at same time by the three Lighthouse Boards – – – – – 2699
Photometric method of measuring, not employed in France – – – 2633
Lighthouses (Scotland):
Efficiency of, – – – – – – 2505
as to Inspection by Board of Trade and Trinity House – – – – 2676–9
Isle of May:
Established 1886 – – – 2513
is The only electric station – – – 2509–10
Kinnaird Head is the most powerful oil light – – – – – 2526, 2628
Number and cost of Clyde lights – 2671–3
Number and power of, – – – 2506–8
Lighting Apparatus:
Cost of converting catoptric light to dioptric – – – – – 2500
Dioptric:
Has replaced all other apparatus 2499–2500
Improvements all introduced by Stevenson firm – – – 2519
Obtained from Messrs. Chance of Birmingham – – – – 2563–70
Incandescent Oil Burner:
Chance's, is used in Scotch lighthouses 2521–3
are Efficient and economical 2524, 2632
Small burners used in Scotland – 2525
Old types still remaining – – – 2686
Lightkeepers' Dwellings:
Construction of roofs – – – 2657–8
Cost of, – – – 2577, 2579–87, 2656–62
Cause of high price – – – 2579
on Repairs is small – – – 2578
Stations where cost has been heavy 2579
Description of, – – – – – 2578–9
Method of measuring cubic contents 2663
Lightvessels, unattended:
Advocated for area between jurisdiction of General and Local Authorities – 2641
Bell is the only fog-signal possible on, 2542–4, 2638, 2704
Cost of, – – – – – 2539–42, 2644
Give better light than buoys – – 2535–8
New Works:
Executed by contract in Scotland – 2563
Statement of urgent, – – 2679–2684
Works included under, – – 2498, 2688–91
Northern Lighthouse Board:
Engineer:
Duties – – 2483–6, 2571, 2664–5
Remuneration – – 2483–5, 2489–93
Expenditure:
on Fog-signals, lighted buoys, and beacons – – – – – 2501–4
on New work – – 2602–11

Stevenson, David A.—*cont.*
Northern Lighthouse Board—*cont.*
General policy of, – – – – 2493–5
No advantage in making its own machinery 2714–5
Three General Lighthouse Authorities:
Constant correspondence between Engineers of, – – – – – – – 2520
No rivalry between, – – – – 2697
References *C. Dick Peddie*, *T. Matthews*, *C. W. Scott*, *J. A. Fleming* – – 1405, 1406, 1408, 1409, 2062, 2094, 2992, 5631
Stevenson:
Robert, *The late*, Engineer to Northern Lighthouse Board *C. Dick Peddie* – – 1301
Thomas, *The late*, joint Engineer to Northern Lighthouse Board *D. A. Stevenson* – 2477
Stewart, Admiral, member of Wardens Committee, Trinity House *A. Owen* – – – 444–5
Stewart, Captain Edward P.:
is member of Irish Lights Board and Finance Committee *H. G. Cook* – – – 754, 771
Reference *H. G. Cook* – – – – – 774
Stirling, Sheriff of, is not member of Northern Lighthouse Board *C. Dick Peddie* – – 1572

Canada and United States are ahead of United Kingdom in invention – – – – 3819
Coast of County Down inefficiently lighted 3804
Different classes of shipowners are not antagonistic to each other – – – – 3749–52
Difficulty in obtaining sanction to lighthouse improvements before 1898 – – – 3692
Difficulty of lighting areas between jurisdiction of General and Local Authorities – – 3872–4

Fog-signals:
Areas of silence are due to configuration of land – – – – – 3829–33
Fog-gong is inefficient – – – 3789–90
Inefficiency of, from Tuskar to Codling 3791–3

Submarine Bell:
Established in North-west and Fairway lightships – – – 3812–3
is Provided for in Trinity House estimates – – – 3815–6, 3834

General Lighthouse Fund, suggestions for administration of, – – – – 3910–7

Light Dues:
Not levied by foreign countries – – 3931–2
Present system of levying, approved – 3765

Wade, Captain Wentworth S.—*cont.*
Lighthouse Authorities:
One Central advocated – 3709–10, 3719–20, 3730, 3803, 3862–4, 3890
The Three General:
Administration:
Instances of extravagance 3678, 3683, 3686–91, 3895–7
is Neither efficient nor economical 3677–91, 3694–6, 3846–8
Reconstitution:
Representation of Lloyd's would be unnecessary – – 3865
by Representation of shipowners and shipmasters advocated 3697–3708, 3715–6, 3728–9, 3801, 3845
Suggestions for, – – 3697–3766, 3845, 3889–94
Trinity House:
Abolition deprecated – 3857, 3868
as to Efficiency of, – 3727, 3854–6
Expenditure is extravagant 3846–8

Lighting of Coasts of United Kingdom:
Efficiency:
is Greater than that of French coast 3820, 3867
More important than economy – 3762–3
Not yet attained – – 3773, 3805
National importance of, – – 3771, 3806–7

Mercantile Marine Service Association:
Community represented by, – – 3671–2a
Representations made by, asking for new seamarks – – – – – 3919–22

Mersey Docks and Harbour Board, efficiency of administration – – – – – 3875–6
Mizen Head lighthouse and fog-signal urgently needed – – – – – – 3775–84
Observations on objections of, to certain lighthouses *Sir G. Vyvyan* – – – – 5419–30
Qualifications – – – – – 3674–6

Seamarks:
Advantageous changes in positions of lights 3902
Government control of, advocated – 3716–9, 3771–2
Importance of distinctive character of lights 3803, 3906–9
Lighthouses and fog-signals should be established together – – – 3828
Lights which need alteration – – 3903–6
Oil and gas superior to electric light for coast lighting – – – 3820–3, 3867
Rapid flashlights are satisfactory – 3824–7
Wigham's giant lenses give best lights for coast lighting – – – – – 3823

WALKER:
Captain Alexander A.:
is Member of Irish Lights Board and of Inspecting Committee *H. G. Cook, Sir W. Watson* – – – – 754, 5749
Reference *H. G. Cook* – – – – 793
James, was Engineer to Trinity House 1858–1863, *T. Matthews* – – – – 2060–2

WATERFORD:
Harbour Board, *see that title.*
Steamship Company, reference *Capt. W. S. Wade* – – – – – – – 3675
References *Capt. W. S. Wade, M. Lynch, Sir W. Watson*– – – 3872, 4718, 5757, 5875

WATSON, SIR WILLIAM, D.L., member of Commissioners of Irish Lights: – 5681–6051

Advisory Committee:
Actuated by parochial spirit – 5688, 5692–4
New works objected to by, 5821, 5828–9, 5831–40
Proposals for lights withdrawn by, – 5732–3, 5824–30
Tends to prevent desirable expenditure 5688–90, 5693–4
Works well – – – 5687–92, 5842–3

Watson, Sir William, D.L.—*cont.*
Attended Bull Rock experiments *Sir R. Ball* 6031a
Board of Trade, efficiency of control of, over Lighthouse Boards – – – 5797–5803
Central Lighthouse Board would not be economical – – – 5685–7, 5696, 5704, 5959
Difficulty in comparing expenditure of Lighthouse Boards – – – – – 5850–1
